T. S. Griffith asked him about the value of apple pomace for feeding dairy cows, and he said it was valuable feed in connection with other feeds.

Federal Land Banks Will Charge Farmers Five Per Cent Interest

The farm loan board announces that the interest rate on all loans made to farmers throughout the country by federal land banks will be five per cent.

A rate of four and one-half per cent on bonds to be issued by the land banks also is officially announced.

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unusued portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction, and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

Leadership That Rings True May Be Found in the Pacific Northwest.

It will help every farmer to read and study the illuminating report in this issue of the methods and achievements of the organized dairy farmers of the Chicago district.

> "It became our good fortune," says the secretary of that victorious association, "to demonstrate to the whole world that the farmers can, will and did stick together solid enough to go out and for the first time in the history of the dairy industry bargain their product."

If we analyze this remarkable fight and victory we find that success turned on two controlling factors—the loyalty of the members and the intelligent devotion of their leaders. Character of leadership was everything.

It is safe to say that these leaders were not playing politics. It is safe to say that they were not giving their time and thought to boosting stock-swindling schemes like the Northwestern General Trading company. Instead of aiding a coterie of unscrupulous jobbers to plunder their members out of hundreds of thousands of dollars sunk in worthless stock, as was done by C. B. Kegley, master of the state grange, and L. C. Crow, president of the farmers' union, the Illinois leaders were indefatigable in the praiseworthy work of enriching their members—making life more pleasant for the wives and children out on the farm, and inspiring thousands of farm producers with new zeal, courage and love of their great industry.

Surely, leadership of this true quality may be found in the Pacific northwest.

The Real Foundation

Dean E. J. Iddings of the animal husbandry department of the University of Idaho sounded a keynote at the recent live stock convention in Spokane when he declared that the actual foundation of the live stock herd was neither the sire or the dam, but "the man behind the herd." His sentiments were echoed by others among the speakers.

Success in any line of endeavor depends in no small part on whether the person in that particular line is in sympathy with it. This is doubly true with the live stock business. No man can succeed with cattle unless he likes cattle. No man can succeed with horses unless he likes horses. Desire for profit is not enough. There must be human sympathy from which must go a kindliness in treatment that wheat-growing or lumbering or merchandising does not require.

One Hundred Per Cent

The report of a cooperative creamery in Washington shows that during the last year it made 100 per cent gain over the previous year. That is, it took in twice as much money and paid out to its members twice as much.

This is a splendid showing, but no one should be deceived by it into believing that all there is to do to double profits is to start a cooperative association.

Cooperation must have time to develop. It does not grow to success in a night or a year. It is new to most people, and the methods which are necessary are not well received by some members at times. A hard struggle and a patient waiting is needed to develop cooperative spirit.

Common School of Agriculture

A serious gap exists in the chain of practical country education. Our higher schools, our agricultural colleges, are doing a wonderful work. In the grade schools of the country and in some of the cities the seed of agricultural interest is being sown in childish minds. But between these extremes, this beginning and completion, there lies a field of immense importance; there should be available for every farming community a common school of agriculture, open to big boys and girls and to their fathers and mothers alike; a place where no human being is barred by entrance requirements, other than the ability to read and write English and the desire to learn.

As far as possible this school should be held in connection with an experiment station, and it should be open 12 months in the year to those men and women who need more than the smattering of farming lore offered by the present country school, but who are not in a position to enter an agricultural college for even a three-month continuous course. It should be possible for these farmers of today, the men and women who are now on the land, to avail themselves during spare hours of that great body of knowledge already available for the farmers of tomorrow, the boys and girls who can take a three or four year course.

The Family Garden.

The possibility of the farm garden is more often overlooked than recognized. It is too frequently not developed on a well-thought-out plan. It is too often looked upon as of little or no consequence.

The truth about it is, however, that it can be made one of the most profitable parts of the farm. Not that it will bring in much cash. Usually it would bring in very little. But it would, if properly planned and worked, produce "good things to eat" for every month in the year. By judicious use of a hothouse certain of the early vegetables may be ready for use almost as soon as the snow is gone. Others may be made to follow as the season develops. The same vegetable may be made to cover a considerable portion of the summer by planting at intervals. Late varieties may be ready for use in the fall, and some may be stored away in the cellar or root house for use during the winter. Half an acre of good land dedicated to a garden is a profitable venture.

The Egg-Laying Contest

The holding of egg-laying contests was a first step in the right direction, in that it recognized poultry as a commercial factor. When we consider that poultry products are worth $600,000,000 a year in the United States we must recognize that laying contests are valuable, for they stimulate economical production.

The all-northwest contest at Pullman has greater value than others because it is held for a year, and this gives a fairer test of real quality.

But after it is over we shall not expect the results to prove absolutely the superiority of any one breed over others. We have a number of good breeds and they are worthy of preserving. But there is room for improvement in every breed and this is far more important than it is to try to place one breed over another.

There are thousands of acres of land in the towns of this country in the form of vacant lots and back yards that should be put to work growing something useful. Likewise, there are thousands of acres of fence corners, ditch banks and the like on the farms of the country that years of idleness have made peculiarly ready to produce crops of real value.

Nature establishes a balance when nobody interferes.

Washington Gleanings

The organization of a Clarke county potato growers' union has been effected.

Dairymen in Clarke county have organized and will register their cows for a testing association.

First wool clips sell at 40 cents. The 1917 market at North Yakima opens 10 cents higher than last year.

The can department of the Pacific American Fisheries company of Bellingham expects to turn out 115,000,000 tin cans this year.

There has been a big jump in Yakima valley shipments. The increase this year is estimated at 10,000 more carloads than last year.

In order to encourage songbirds to locate in Olympia, students in the manual training department of the Olympia schools will build birdhouses.

C. W. Rearick of Kelso, Cowlitz county, has applied for a patent on a new potato planter. The new machine is said to have been a success in trials at Kelso.

The Silver Creek National Farm Loan association was formed at Silver Creek, Lewis county, recently with about 13 members, and they will ask for over $20,000.

Stanley Coffin of Coffin Brothers, Yakima county sheepmen, has purchased 200 purebred Romney sheep in Australia, according to a cablegram received by his brother.

A. J. Hosler, a recent arrival from Ohio, has purchased the Durkee farm of 467 acres, three and one-half miles northwest of Pullman, paying $43,199.50 for the place.

Mrs. Mary Goff of Littell, Lewis county, has leased her 137-acre farm to Harvey Schultz, who will engage extensively in dairying. He has just received a carload of Holsteins.

The 10th national farm loan association in Yakima county has been organized by farmers in the Moxee district. Applications for loans aggregating $31,500 were applied for at the first meeting.

County Agricultural Agent C. F. Monroe of Snohomish county reports to the state college that in the last year 22 silos, with an aggregate silage capacity of 1600 tons, have been built in his county.

Organizations of the prune and potato growers of Clarke county have been completed. The prune men will issue recipes for cooking prunes in various ways and will start a nation-wide publicity campaign in behalf of the Clarke county prune.

Sheep shearing will begin generally in the Yakima valley in the last week of March and continue in full swing for about a month. This includes the section from North Yakima to the Columbia river. In Kittitas county the shearing will run a month later.

Tracts aggregating 10,000 acres of timber, grazing and irrigable lands on the Klamath Indian reservation are to be put on sale. The land generally sells around $10 an acre. The Indians now have 11,000 acres under irrigation and 140,000 acres more can be irrigated.

What Others Say

Ohio Farmer: The general farmer should take more interest in poultry than he does.

Southern Agriculturist: To provide a living at home is safety whatever the weather or the war may be or do.

Kimball's Dairy Farmer: Never was it so advisable, so necessary, to grow large yields of all farm produce as now.

Farm and Fireside: Successful farming is largely a matter of good judgment and of "taking time by the forelock."

The Farm Journal: Those who have been contending that women would not know what to do with the ballot if they got it, have another guess.

Savings and Farm Loan Bonds

Important Feature of New System Has Been Generally Overlooked

By N. W. DURHAM, Chairman Spokane Committee of Federal Farm Loan Board

When the federal farm loan board was in Spokane I discussed with Commissioner Charles E. Lobdell, one of its members, an interesting feature of the new system that has been generally overlooked in all articles and utterances that I have read on this subject.

That is the savings feature of the law—the plan whereby thrifty people remote from banks, and this includes the farmer boys and girls, will be encouraged and aided to save up their dimes and quarters for the purchase for farm loan bonds.

These farm loan bonds, as I have previously explained, will be exempt from all taxation—national, state and local—will be secured by farm land mortgages, dollar for dollar, and will probably bear 4 1-2 or 5 per cent interest.

"I consider this one of the most beneficial provisions of the law," said Commissioner Lobdell, "and believe that it will have a far-reaching influence on national thrift. I look forward to a day when hundreds of thousands of farmers' wives, and farm boys and girls as well, will be saving up their pennies and dimes to buy a $25 bond."

I suggested that it would be a fine thing for the schools to take up.

"Yes," said Mr. Lobdell somewhat reluctantly, "that is, provided it could be done in a way not to embarrass poor boys and girls who might be unable to acquire a bond. I was a poor boy myself and have not forgotten how keenly these distinctions are felt.

"Could not that difficulty be overcome," I asked, "if the schools merely encouraged pupils to acquire bonds with their own earnings?"

"I think it could," he replied, "and the influence on industry and thrift would be very great. Boys and girls would be alert to find various ways of earning little sums."

The provision of the law that encourages savings and their investment in bonds is found in section 11, defining the powers of national farm loan associations. Power is granted each local association—

"To issue certificates against deposits of current funds bearing interest not longer than one year at not to exceed 4 per centum per annum after six days from date, convertible into farm loan bonds when presented at the federal land bank of the district in the amount of $25 or any multiple thereof. Such desposits, when received, shall be forthwith transmitted to said land bank, and be invested by it in the purchase of farm loan bonds issued by a federal land bank or in first mortgages as defined by this act."

Suppose, for illustration, that a farmer's wife or daughter acquires a dollar by the sale of eggs, butter or vegetables; or a farmer's boy sells a pig of his own raising or earns a dollar or more by working for a neighbor, they can deposit their money with the local association and receive a certificate therefor.

The secretary-treasurer of the association sends that money, along with the savings of others in the community, to the federal land bank at Spokane.

When an individual has acquired $25 worth of certificates he exchanges it for a $25 bond, and he can go on in the same way acquiring additional bonds.

Or the plan can have much larger application. A farmer, for instance, who sells his wheat crop for thousands of dollars can invest the money in bonds. Or one who sells a calf for $15 can quickly and without cost take out a certificate for that amount. It is expected by the farmers of the law that this feature will develop great popularity and be put to very extensive use.

Liability for Losses.

John Woolever writes from Lantz, Wash.:

"In your reply to Norris Johnston, Council, Idaho, you say: 'This means that each member of the (farm loan) association is held liable to the extent of 10 per cent of his own loan, and no more. If his own loan is $100 and if losses result from a loan made by his association his $50 of stock may be taken toward making good that loss. If that should prove insufficient he could be assessed—another $50. After that his liability would cease.' We also think you should let the poor fellow up, after you get all he's got.

"Again: Ten members (our whole association) want $100 each, and no more, for which we offer 1600 or more acres of average, unencumbered farm land as security. You tell us we can "borrow as little as $100," but in order to get this we must borrow $2000 each to satisfy the demand of $20,000 or continue as we are, paying 8 per cent to 10 per cent. Why this unreasonable demand of $20,000? Is it possible that our Uncle Samuel can't see so small a loan as $1000? There must be a reason for this inconsistency. Please explain. We say finally; we will think, till we know better, that the "$50," above is a typographical error."

Mr. Woolever's confusion arises from a typographical error. The phrase "if his own loan is $100" should have read "if his own loan is $1000." A member of a farm loan association can not be held liable for possible losses beyond 10 per cent of the sum he himself has borrowed.

The $20,000 requirement is reasonable, all things considered. A farm loan association could hardly be justified on a smaller basis. Your remedy is to get more members into your association.

Add to Whitman Forest.

President Wilson, on recommendation of Secretary of Agriculture Houston, has issued an order adding 50,000 acres to the Whitman national forest in Oregon, much of which is privately owned lands, mainly on the divide between the John Day, Powder and Burnt rivers.

$1150 F. o. b. Racine
Mitchell Junior—a 40 h. p. Six
120-inch Wheelbase

Mitchell SIXES

$1460 F. o. b. Racine
7-Passenger—48-Horsepower
127-inch Wheelbase

Mitchell Junior—$1150

Now Added to Mitchell Line

Many buyers prefer a 5-passenger car. Such a car has ample room with a 120-inch wheelbase. Few such cars are that long. And a 40-horsepower motor gives them ample power.

To meet that demand we build Mitchell Junior, which sells for $1150. It is our big, 7-passenger Mitchell in a little smaller size. So you now pay only for the room and power you need.

Saving Every Waste

Note how John W. Bate, our efficiency engineer, is saving every waste. These two Mitchell sizes form a new example.

He has built and equipped here a model plant, which now covers 45 acres. It is designed to build the Mitchell at the lowest factory cost. About 98 per cent of the Mitchell is built under his methods. Our factory cost has been cut in two.

Our new body plant this year brings another big saving—hundreds of thousands of dollars. Nowhere else in the world could a car like the Mitchell be built at so low a cost.

Extras That Result

These savings show in Mitchell extras. There are hundreds in the car.

There are 31 features which nearly all cars omit. And each is a thing you'll want.

There is 100 per cent over-strength in every vital part. Over 440 parts are built of toughened steel. Many parts are oversize. Steering and transmission parts are built of Chrome-Vanadium. The gears we use are tested for 50,000 pounds per tooth.

There are springs which never have broken — the Bate cantilever springs. In two years of use, on many thousand cars, not a single leaf has broken.

There is beauty and luxury which few cars can afford. This year alone we add 24 per cent to the cost of finish, upholstery and trimming. Our new body-plant savings pay that.

See These Extras

Before choosing a car for years to come, learn what these extras mean. See the 31 features—like a power tire pump—which hardly a car includes. See the beauties and luxuries which distinguish the Mitchell.

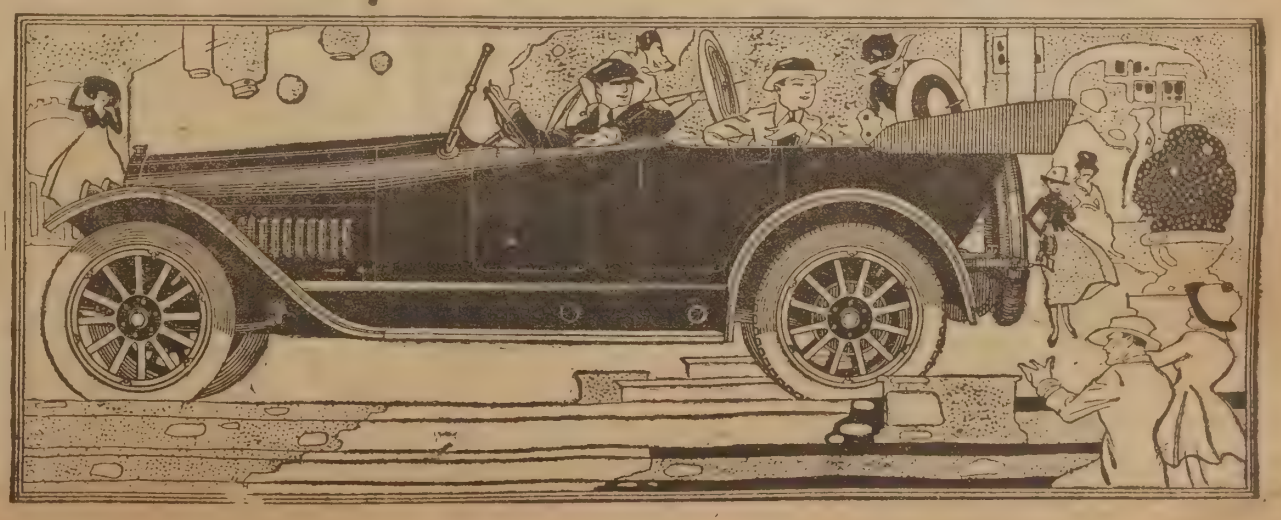
The vast over-strength, in all probability, means a lifetime car. It means safety, low upkeep, small repairs.

See what Mitchells give as compared with cars built in wasteful ways. The facts are bound to win you to the Mitchell.

If you don't know our nearest dealer, write us for his name.

MITCHELL MOTORS COMPANY, Inc.
Racine, Wis., U. S. A.

TWO SIZES



Mitchell—a roomy, 7-passenger Six, with 127-inch wheelbase. A high-speed, economical, 48-horsepower motor. Disappearing extra seats and 31 extra features included.
Price $1460, f. o. b. Racine

Mitchell Junior—a 5-passenger Six on similar lines, with 120-inch wheelbase. A 40-horsepower motor—¼-inch smaller bore than larger Mitchell.
Price $1150, f. o. b. Racine

Also all styles of enclosed and convertible bodies. Also demountable tops.

Mitchell, Lewis & Staver Co., Pacific Northwest Distributors.

8120 Lincoln St., Spokane, Wash. East Morrison and E. First Sts., Portland, Ore.

Hybrid No. 123 Unsatisfactory

Klickitat Man Says Smut Is Great Trouble With Hybrid Wheat; Forty-fold Retains Lead in that Section of the State

BICKLETON, Klicitat county, Wash., March 10.—Spring has not arrived yet; the snow is mostly gone, but it freezes hard nights. No spring work is being done yet with the exception of two weeks' plowing in February. The leading products here are wheat, barley, sheep, cattle, hogs, horses, oats, hay, potatoes and poultry. Grain and live stock are increasing yearly in importance. One kind of wheat, hybrid No. 125, has not proved a success here. It smuts worse than other wheat and but very little is raised any more. Fortyfold and bluestem are the favorite. Some Arcadia is raised with good success. I think the coming season is promising for most everything except fall grain at the present time, and it is doubtful whether it will make a stand or not. Farmers are getting excellent prices for their products, but when they buy anything it takes all the profit to pay for it, so it is about a stand off.

BERT H. FAULKNER.

Conditions Are Normal.

CHEHALIS, Lewis County, Wash., Wash., March 5.—Fall plowing is done in September, October, November or December, according to the weather conditions and the inclination of the farmer. There is plowing in the spring sometimes as early as January, with seeding from February to June. There is no summer fallowing, as in eastern Washington. Dairymen cut some hay in June, but, owing to weather conditions, it is not usually safe to cut hay until early in July. Wheat and oats are harvested in August and early September. Corn for ensilage is ready in September and October. The spring is a little late, but as considerable plowing has been done, conditions will be about normal. We have few fall crops. A little wheat is fall-sown and green feed for milch cows is sown in September and the two following months. So far as noticed the fall crops are in usual condition. J. C. BUSH.

Season About Normal.

STEVENSON, Skamania County, Wash., March 1.—Some snow is on the ground and the weather is cold. The season is about normal and March is coming in about as usual, clear, with some wind. Considerable plowing was done during the mild weather in February, but no seeding as yet. No summer fallowing has been done in this section. March is generally the month when gardens are made and the crops planted here, such as oats and potatoes. We have had a very fine winter and the season is about our usual one.

W. T. JACKSON.

More Apples Grown.

OMAK, Okanogan county, Wash., Feb. 26.—The 10 leading products in this county are horses, cattle, hogs, sheep, poultry, fruit, wheat, corn, potatoes and alfalfa. Live stock is the leading industry. In the lower altitudes fruit is in the lead. Fruit is rapidly increasing, also poultry and dairying. There are several successful dairies in the county. All conditions seem to favor successful crops. On account of the new trees coming in bearing it is estimated that the apple crop will be 100 per cent larger than last year.

J. O. WOODS.

Cattle Lead in Okanogan.

TWISP, Okanogan county, Wash., March 8.—It is a question which is in the lead in this county, the beef or dairy cattle. We know beef cattle are found in larger herds, but the greater number of herds are dairy cattle and it is hard to tell which is in the lead. Alfalfa is about next in importance, while fruit growing takes fourth place. Great interest with attractive profits are connected with the fine horses raised in this county. More people depend on poultry for their groceries and pin money than any other product. The wheat business seems very flattering just at present. Oats are a staple crop of much importance. The hog man is playing lucky now and several of them are found here. The humble spud is grown with great success and at present, in commercial value, is almost equivalent to legal tender. The indications are that the coming season will be a very promising one for this season.

GEORGE LA RUE.

Pay for What You Want.

CASTLE ROCK, Cowlitz County, Wash., March 3.—Weather conditions in this county have been backward this spring in the lower region of the Cowlitz river and its tributaries in the valleys which have for a soil formation what is known as the sandy loam. Plowing is generally done in the late fall and winter months, giving plenty of time for preparing the ground for sowing and planting the crop, and if done properly will give plenty of time for the healthy growth before the dry season begins. On the upland a different order prevails. Plowing is done as early in the spring as possible; water stands on the ground and in the soil later than in the sandy loam, but despite the later seeding crops seem to grow about as soon and are harvested nearly at the same time. No summer fallowing is done in this section of the country, as it is too hard work to clear land and let it go for every other season as they do on the East Side, which will be done away with when a plan can be devised to retain the humus and nitrogen in the soil with a crop each year. We are planning on a large potato acreage the coming season. As prices go up the farmers are rustling to get every available piece of land into working shape. Buyers are paying $72 a ton, the best figure ever paid on the Cowlitz river. And the end is not reached, as many of our growers have seed to buy, which will come high, as seed seems to bring a better price. Just like eggs a neighbor of mine has been bringing to the store and selling at the regular price of 25 cents a dozen; but if you were to go over there and tell them you wanted a setting of eggs the price would be about double. So it goes in all things. If we show a keen desire to have a certain thing, then is the time we have to pay for it. The farmers in this county are in readiness for the coming season. The winter has not been very hard, and they have brought their stock through looking fine. Fall crops are looking fine. Prices have been high for what has been sold, but brought cash; interest money has been paid, and in a great many cases the principal whittled down. The farmers' associations that have been formed are composed principally of men and women that are not cramped for money, but are asking for same to improve their farms a little faster than they could ordinarily do by the money as they earned it.

C. C. BROWN.

Snow Protected Crops.

LITTLE ROCK, Thurston county, Wash., March 9.—Spring plowing sometimes starts in January if the winter is mild and continues as late as the last of May or the first of June. Some places seeding can be done in January, while in wet places, where it overflows or in marshy ground, seeding has to wait sometimes as late as June. Fall plowing starts in September and continues until December. Harvesting starts in July and sometimes runs as late as October. Spring is about three weeks late this year and owing to the snow being on the ground later than last year work is not as far along as former years. There seems to be nothing the matter with the fall seeding. The ground generally was covered with snow when the coldest spells were on.

LEE KEGLEY.

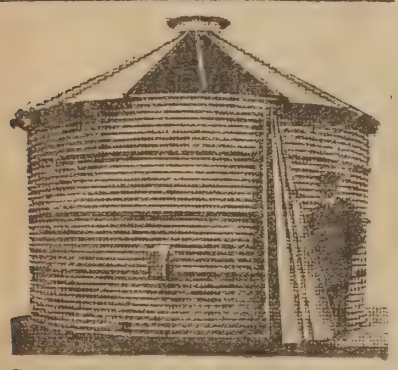
Farm Work Waits.

OTHELLO, Adams County, Wash., March 4.—At the annual school election J. B. Finkbeiner was elected as director for three years and the vote to change the schoolhouse site from the present location to the new site at Bruce carried. Snow is falling today, and the ground is frozen, with farm work at a standstill. Elden Kelly, living south of Othello, killed a coyote in his barn one day last week, and James McManamon at Deadman lake killed one recently that came into his yard during the day. Both acted strangely, and no doubt were afflicted with rabies.

A. O. LEE.

In a Quandary.

"You seemed much affected by Spenson's hard luck story."



"I don't deny it. Spenson saw me get a $10 bill changed and I was racking my brain to think up a good excuse for not leading him a quarter."—Birmingham Age-Herald.

Magazine prices are advancing sharply. Any day now we may be forced to withdraw our splendid clubbing offers. A tip to friends of The Washington Farmer.

White paper and practically everything else that goes into the making of papers and magazines has advanced tremendously in cost. Some of the best known publications have doubled in price. Others will follow suit. We do not know when the letter or telegram will come which will force us to withdraw the unusual clubbing offers below. We are, therefore, giving marked prominence to this announcement in order that our wide circle of friends may benefit from the decided saving which it gives. Our urgent advice is to assure yourself of a splendid assortment of reading matter by acting at once on one of the offers below and thus get the benefit of the present low prices. You will never get these clubs for less money. You may have to pay a great deal more. ACT NOW by using the coupon provided.

OFFER NUMBER 1—$3.50 FOR $1.75.

The **Washington** Farmer 3 years, special rate now	$1.50
Every Week, one year	$1.00
People's Home Journal, one year	.50
Today's Housewife, one year	.50
Value	$3.50

OUR SPECIAL PRICE FOR ALL FOUR, $1.75.

OFFER NUMBER 2—$2.50 FOR $1.25

The **Washington** Farmer 3 years, special rate now	$1.50
Every Week, for one year	$1.00
Value	$2.50

OUR SPECIAL PRICE FOR BOTH TOGETHER, $1.25.

OFFER NUMBER 3—$3.00 FOR $1.95.

The **Washington** Farmer 3 years, special rate now	$1.50
Twice-a-Week Spokesman-Review, one year	$1.00
Today's Housewife, one year	.50
Value	$3.00

Our Special Price for All Three, $1.95

In remitting you may send your personal check, stamps, draft or money order. If your subscription is paid ahead you can accept any one of these offers and your subscription will be advanced three years.

Cow Testing

Linn County Forms Association

The Linn County Cow-Testing association met at Albany, Ore., March 7 and completed organization and elected officers. Professor Barr of the O. A. C. delivered a short, but instructive, address, and a number of matters pertaining to the questions of feed and dairy profits were discussed. The following officers were elected: President, H. J. McInnis; vice president, George Connor. H. E. Selby, a graduate of the O. A. C., is the tester, and work has already commenced. Three of the members, R. L. Burkhart, J. M. Dickson & Son and George Connor will do official testing in addition to the regular association work.

The following is a complete list of the members: Elza Morgan, J. M. Dickson & Son, W. D. Pate, Shedd; E. D. Steen, Z. J. Brown and L. K. Cheadle, Lebanon; Orland Zeek and R. L. Patterson, Lacomb; Thomas Spillman, U. G. Smith, George Conner, R. L. Burkhart, A. P. Mishler, Henry Stewart, D. J. Hulbert & Son, J. L. Anderson, A. R. Forster and Mr. McInnis, Albany; Martin Cummings and J. A. Daugherty, Halsey; Ashton & Sons, Tangent.

TWENTY COWS

Average 500 Pounds Butter.

For the year 1916 Warren Gray, the Jersey breeder, of Jefferson, Ore., had 20 registered Jerseys in the Marion County Cow-Testing association and they averaged a little over 500 pounds of butter. None of them milked the full year, and he took the run of the herd as they come fresh.

Mr. Gray has 16 completed official records. Perhaps the most remarkable, all things considered, is that of Rose Ixia. She began at 14 years old and produced 396 pounds of fat, or 465.9 pounds of butter. At her next freshening, when 15 years old, she was put on test again and produced 477.64 pounds of butter. Lady Isabel Mowatt, another of Mr. Gray's cows, is now 16 years old. Her daughter, My Mowatt, has produced 641 and 643 pounds in two consecutive years. My Mowatt's daughter, Bobby's Fancy Queen, made a record of 423 pounds as a 2-year-old and is on test again as a 4-year-old. She is expected to qualify for a gold medal. Her daughter has freshened and is a good prospect, but will not be tested until next year. Her calf is a heifer. Mr. Gray has two more daughters of the old cow, one with a record of 482.34 pounds of butter as a 2-year-old and is on test again as a 3-year-old, with much promise. The old cow's youngest daughter began at 1 year and 10 months. She promises to make a great record. Mr. Gray believes in "families" of Jerseys, if you have the right family.

WILL OFFER HOLSTEINS.

Clarence Evans, the well-known Poland China breeder of Halsey, Ore., has allowed his herd of Holsteins to grow until he has decided to hold a Holstein sale about the first of June, when a nice lot of females and a few young bulls will be disposed of. Like many other swine breeders, Mr. Evans has fattened and sent quite a number of hogs to market and is short of breeding stock ready for service, but has some nice litters coming on.

Babcock Demonstration.

County Agriculturist B. W. Cooney has been domonstrating the use of the Babcock test as applied to the farmers' herd in Klickitat county. It was found in one herd that the owner had seven cows testing below 3 1-2 per cent, it being a very east matter to show the owner that he was keeping the cows and that the cows were not keeping him.

Holstein Sale at Snohomish.

The fifth semi-annual sale of the Western Washington Holstein Breeders' association will be held at Snohomish April 13. Indications point that this will be one of the best sales held in the northwest, as the consignors are promising to send some of their best record animals.

Airplanes on Sail.

Airplanes, ready for delivery, are on sale in a Broadway (New York) store.

A HIGH PRODUCER.

The above photo shows Imp. Castilian Lady 266628, a Jersey cow owned by C. E. Long of Buhl, Idaho, that is a great producer. Mr. Long's entire milking herd was in the Buhl cow testing association last year and had the highest average of any herd—399.8 pounds of fat, or 470.57 pounds of commercial butter per cow. Castilian Lady produced 713.3 pounds of butter and was the highest producer in the herd, but she is by no means the best show animal.

Raise Your Calves on

Blatchford's Calf Meal

and Sell the Milk

More calves have been raised on Blatchford's Calf Meal than on all other milk substitutes combined.

100 lbs. makes 100 gallons of milk substitute, costing only one-third as much as milk.

Prevents scouring and insures the early maturity of sleek, handsome calves.

It is steam-cooked and no trouble to prepare or use.

Write for Pamphlet "How to Raise Calves Cheaply and Successfully with Little or No Milk." At dealers, or Blatchford Calf Meal Factory, Dept. 58 Waukegan, Ill

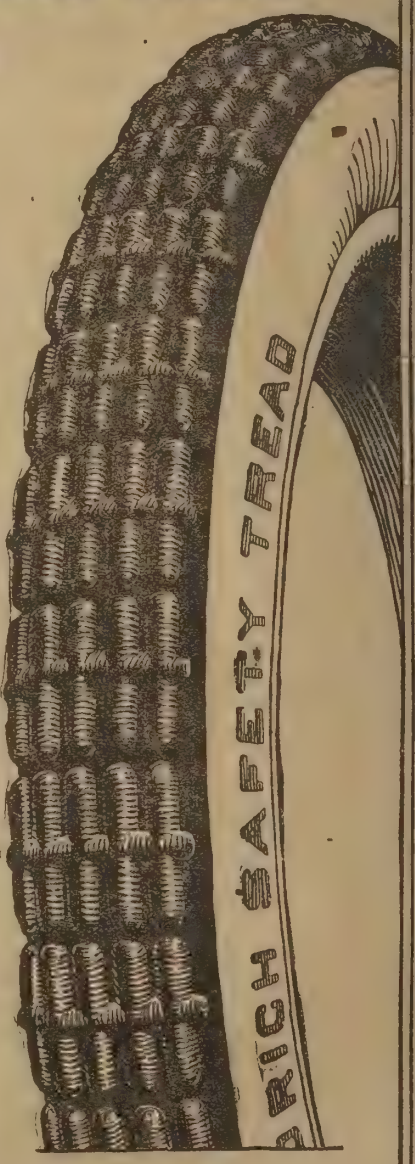
Fair List Prices — Fair Treatment

Bring Back Any GOODRICH BLACK SAFETY TREAD TIRES That Owe You —Anything—

FROM Maine to California, and on around the world, The B. F. Goodrich Company sends forth this all-including invitation:

Bring back any Goodrich tires you feel have failed to give you right service.

Goodrich will at once make good *all* their shortcomings—generously and gladly.



There are no strings to this offer—no conditions—no catch words.

THE GOODRICH SUPER-GUARANTEE

For a Goodrich Black Safety Tread Tire carries with it in the market an unwritten SUPER-GUARANTEE that it is the best fabric tire, the largest, oldest, and most resourceful rubber manufacturer can produce.

The very name of Goodrich pledges it to the best service a fabric tire can give—*style*, safety, *comfort*, durability, freedom from tire trouble, and mileage.

The buyer takes no risk of imperfection in it. A Goodrich tire must deliver the high standard of service Goodrich pledges for it, or Goodrich Fair Treatment squares the account in full.

"BEST IN THE LONG RUN"

Milk Producers Win Big Victory

Cooporation Brings Twelve Thousand Dairymen Success

(Continued from page three.)

ular, appointed delegates and officials of the association; in other words, stop fooling and get down to business. This meeting was held at the Hotel Morrison on September 8, almost every local sending delegates.

"During the time between these two delegate meetings your committee had been busy investigating conditions and holding conferences with the buyers, the result of which, together with the price voted at the former meeting, was fully reported to the delegates assembled at the September 8 meeting.

"After much discussion by the delegates at that meeting, another vote was taken regarding the price to be asked for all milk, with the understanding that the average price was to control.

"Tellers were appointed and a roll call of the locals made. The vote varied on milk per 100 pounds from $1.90 to $2.25. The tellers retired to compare the vote and reported that the average vote per 100 pounds was a trifle over $2 and the average price voted per can was a trifle over $1.60. A motion was promptly made and carried without a dissenting vote, that the price be fixed at $2 per 100 pounds and $1.60 per can. Your committee so announced.

"Your committee then notified all dealers that this was the price which would be insisted upon to the extent of repeating the spring fight if necessary. Richmond Smith company reported almost the next day that they were signing up contracts for can milk at our price and on the 15th of September the Borden company announced that they would pay the association price as fixed by your committee of 190, but that they would not make a six months' contract. But we are very glad to report that so far as your committee could learn, not a single member accepted their proposition. In a few days the Bowman company announced their price as fixed by the association, averaging $2 for the six months. The same day the Bordens sent out a bulletin that they would guarantee to pay as much as that. They were then called up over the telephone and asked what was meant by this bulletin. They reported that they would guarantee to pay all of our members delivering milk to them not less than the price we asked. On this assurance, their milk and the milk of all other dealers paying our price was released."

This winter rate, averaging $2 per hundred, was based upon the following monthly scale, for milk delivered at bottling and condensing plants for the six months ending April 1, 1917:

October	$1.90
November	2.10
December	2.10
January	2.05
February	2.00
March	1.85
Average	2.00

This is for 3-5 milk, with 3 cents added for each one-tenth of a point above and 3 cents deducted for each one-tenth of a point below.

For can milk, the following prices were agreed upon for the same six-month period, eight-gallon cans, f. o. b. Chicago:

October	$1.60
November	1.70
December	1.70
January	1.60
February	1.55
March	1.45
Average	1.60

Still better prices will be demanded for the coming summer. We are informed by the official organ of the association that:

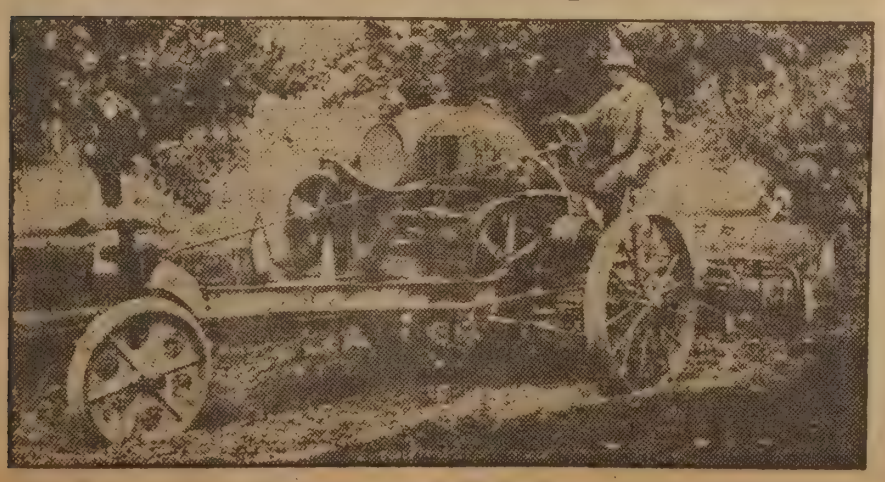
"At a conference of delegates from the locals of the Chicago dairy district held in the Methodist church block on Thursday, February 2, to determine the price at which the milk producers of this district could offer their milk for the six summer months ending September 30, it was unanimously decided to make this offer at the average price of $2.12 per 100 pounds and $1.68 per eight-gallon can, scaled as follows, per 100 pounds: April, $2.40; May, $2; June, $1.60; July, $2.12; August, $2.30; September, $2.30; and per eight-gallon can: April, $1.90; May, $1.60; June, $1.30; July, $1.68; August, $1.80; September, $1.80.

"Of the 214 locals of which the association is composed, nearly all were represented. This may seem an excessive price for this six-month period, compared with what has been paid in past years for the same period; yet, if the price of the feed that is going into the making of milk during the first half of this period is taken into consideration, it will be readily seen that this price is not excessive."

The association has a campaign committee, and it reports that it "had charge of all field work during the controversy of last spring, with the result that dairy farmers all through these 21 counties and districts who heretofore had been separated and split apart from one another were banded together into one great army of men, determined to protect their rights."

The secretary of the association declares that in point of importance the Chicago dairy district takes the lead. "While the New York district, composed of seven states, leads in numbers, with nearly 30,000 members, while we have 12,200, mostly in Illinois, with a fine following in southern Wisconsin and northern Indiana, the volume of business handled for the year, as well as the variety, has been far beyond anything ever contemplated or attempted by this or any other milk producers' association in the past.

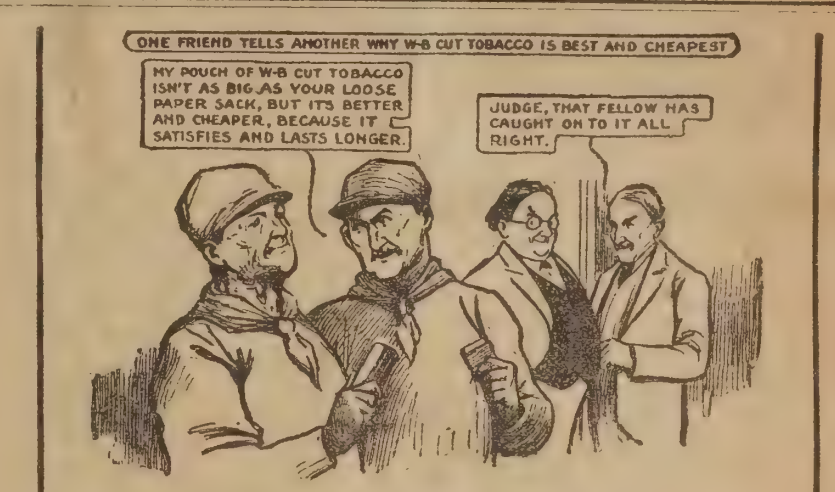
"Not only have we made history in the class of farmers' organizations, but we have become pace-setters for every dairy center in the United States."



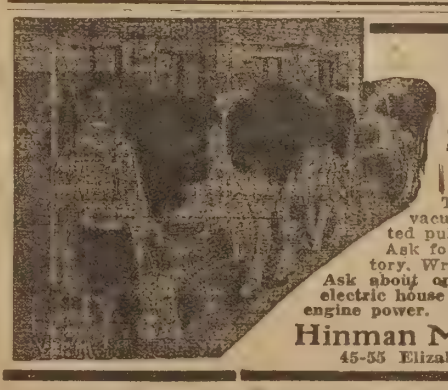
The case is well summed up in these words of the secretary, which make a fitting conclusion for this article:

"It became our good fortune to demonstrate to the whole world that farmers can, will and did stick together solid enough to go out and for the first time in the history of the dairy industry bargain their product."

Do You Know That



It never pays to be stingy?



A Small Tractor Cultivating an Orchard

Feeding Tests

Show Cost Per Pound of Pork

Professor R. C. Ashby, now of the University of Minnesota but formerly of the State College of Washington at Pullman, has prepared some interesting figures showing the results of hog feeding at the Minnesota experiment farm. He calculates the cost per hundred pounds of pork produced from certain specified feeding, calculating the feed at varying market values.

The following is Professor Ashby's report:

116 Pounds to 204 Pounds.

During 85 days, February to May, 1915, we fed 23 pigs on a ration of shelled corn, shorts and oil meal. Average daily gain was .97 pound per pig. They consumed 520 1-4 pounds total grain for 100 pounds gain.

Corn at 75 cents, shorts at $26, oil meal at $36, made each 100 pounds of gain cost $7.186. With shorts at $34, oil meal at $44 and corn at 85 cents, gains cost us $8.314 per 100 pounds. On $1 corn they cost us $9.484 per 100 pounds.

We fed 24 hogs for 64 days in winter with an average daily gain of 1.39 pounds per pig. With 75-cent corn, $26 shorts and $55 tankage, 100 pounds of gain cost $7. With $34 shorts, $60 tankage and 85-cent corn, it cost $7.974 for 100 pounds gain. With corn at $1, it cost $9.074 for the same. They took 482.16 pounds total grain for 100 pounds gain.

Using oil meal instead of tankage, we fed eight pigs for 64 days, and they averaged 1.17 pounds each per day. With shorts at $26, oil meal at $36 and corn at 75 cents, they cost us $7.434 for 100 pounds gain. With $34 shorts, $44 oil meal and 85-cent corn, it cost $8.647 for 100 pounds of gain, and with corn at $1, it cost $9.766 to produce 100 pounds of gain. In this case 531.18 pounds of total grain were required to produce 100 pounds of gain.

145 Pounds to 284 Pounds.

Sixteen pigs were fed 98 days and averaged 1.41 pounds daily gain per pig. With 75-cent corn, $26 shorts and $55 tankage it cost $8.063 to produce 100 pounds gain. With 85-cent corn, $34 shorts and $60 tankage 100 pounds gain cost $9.162 and when corn costs $1, the cost of 100 pounds gain cost us $10.559. Here it took 510.5 pounds total grain to produce 100 pounds gain.

Corn Versus Barley.

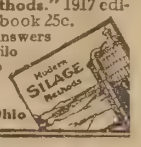
We fed 12 pigs 98 day, from October to January, six of them ate corn, shorts and tankage and increased from 86 pounds to 229.8 pounds, with an average daily gain of 1.46 pounds per pig. With 75-cent corn, $26 shorts and $55 tankage, these pigs produced 100 pounds of gain for $6.322 with 85-cent corn, $34 shorts and $60 tankage their gains cost $7.189 per 100 pounds, and boosting corn to $1 put their cost of gain to $8.186 per 100 pounds. They made 100 pounds of gain for each 433.6 pounds total grain.

Six pigs were fed ground barley, shorts and tankage. They increased from 86 pounds to 222 pounds, with an average daily gain of 1.38 pounds per pig. With 80-cent barley, $30 shorts and $60 tankage they put on 100 pounds gain for $8.825. With 90-cent barley, $34 shorts and $60 tankage it cost $9.788 for 100 pounds of gain. When the barley was charged at a dollar per bushel the gain cost us $10.68 per 100 pounds of gain. Five hundred one and three-tenths pounds total grain were required for each 100 pounds of gain.

SUMMARY.

Where hogs weigh near 200 pounds and corn is worth 80 cents per bushel, the further increase in weight will cost more than the market now pays for it. Hogs that are weighing from 100 to 135 pounds offer a fair prospect for profit, if fed for the winter market. In any case they must be thrifty to feed well. Anything under 100 pounds in weight should certainly be fed if one has or can get the feed. The cost of gain increases rapidly as a hog passes the 175-pounds weight. When risk is added to the cost of gain it leaves a very small margin on anything but light hogs. Whatever you are feeding feed liberally. It never pays to stunt a pig that is fitting for market.

Breaking Colts.



P. A. Frakes, the veteran Holstein breeder at Scappoose, Ore., has a unique way of breaking colts or half wild horses to stand tied. Instead of fastening the rope to the halter he simply slips it through the halter ring, takes it back and ties it in a loop over the back, behind the fore legs. When the horse thus tied begins to pull back he feels the rope draw over his back and is glad to jump forward. He soon gives up pulling back and stands tied without trouble.

Long Neck; Few Joints.

In spite of the length of the giraffe's neck, there are only seven joints in it.

Purebred Registered HOLSTEIN CATTLE

Twenty million dairy cows in the United States, and five million of that number unprofitable! Surely one great public benefactor is the dairyman who, by changing bad cows for good, seeks to produce two quarts of milk in place of one produced before. This progressive type of farmer, all over the continent, is either grading up his common cows with a purebred Holstein bull, or he has already installed the profitable purebred registered Holstein cows in his barns. He is adding to the wealth of the nation and to himself as well. Slowly but surely proper understanding will eliminate the unprofitable dairy cow.

Veterinary

Dr. S. B. Nelson

I have a cow that took sick shortly after freshening. She was feeding on dry bunch grass pasture. After calving was kept on alfalfa pasture and we noticed her eating with difficulty. She soon quit eating and drinking altogether, but gave the same amount of milk. She kept this up for about two weeks and then started to eat a little again. She has had several of these spells. J. M.
Wallula, Wash.

The trouble with your cow is an intestinal one, and the fact that she gets over it shows it to be recurrent. I am going to advise you to give your cow a pound and a half of epsom salts in two quarts of water. The next day give her one full quart of raw linseed oil. Two days later begin giving her one ounce of compound tincture of gentian in one pint of water. Give this for 10 days to two weeks.

I have a young cow that has been fresh six weeks that gives bitter milk. It is more noticeable in the cream and butter and the butter becomes very rancid in just a few days after churning. The cow seems to be healthy and in good condition. She was not this way last year. F. W. B.
Olalla, Wash.

I would advise giving a pound and a half of epsom salts in three quarts of water to the heifer, provided she is a good sized cow. It not, just give her one pound of the epsom salts. Give her also one tablespoonful of fluid extract of phycolacca in a little water once daily. If the bitterness does not stop after three or four or five days after this treatment I think that it would be wise to wash out the inside of the udder with a 2 per cent solution of boracic acid in boiled warm water. Dip the ends of the teats in tincture of iodine, then boil the syringe. Use the glass end of a 5 per cent ink dropper to put up into the teat. Boil it thoroughly before using it. Be very careful not to get any infection into the udder. One or two treatments would be of value. The udder should be lightly massaged while the liquid is in it and then the liquid should be milked out.

What is best to do for a horse that has large stomach worms? They are about eight inches long. What can I do for lice on a horse? R. S.
Nahcotta, Wash.

Give your horse one teaspoonful of powdered sulphate of iron in his feed night and morning for a week. The next morning have given to your horse one quart of raw linseed oil with one ounce of turpentine well shaken up in the oil. For the lice on the horse there is no better treatment than to boil a little tobacco, the clipped stems if you can get them, in water until a light brown liquid is formed, then on a nice, warm, sunshiny day wash the horse all over with this liquid. You can blanket him until he dries, which is often times advisable. A second treatment five or six days later will be sure to get the young lice that were in the eggs at the first treatment.

I feed my cows one quart of oil meal and two quarts of shorts twice daily and all the alfalfa hay they eat, but they do not seem to be doing as well as they should. Have I been feeding too much linseed meal or would shorts and bran be better? We used to get good results with the latter, but they are too high now to feed.
Gig Harbor, Wash. M. G. W.

I would refer you to the very splendid article in the recent Washington Farmer by Professor Nystrom of the State College of Washington, in which article he discusses the proper feeding of dairy cows. I think that the information you desire is carefully given in that article and would refer you to it.

Please tell me what to do for blackleg in cattle. C. F. L.
Leahy, Wash.

The best thing to do to prevent blackleg is to vaccinate all youn stock once in the spring and once in the fall. Blackleg vaccination is proof against the disease in approximately 99 per cent of cases. Once in a while one of the vaccinated animals dies because you are giving the disease in a mild form and sometimes even this is too strong for some animals. You can obtain the government vaccine free of cost, with instruments for use by writing to Dr. S. B. Nelson, department of veterinary science, state college of Washington, Pullman.

Virtually Means War

Submarines Sink American Ships

The sinking of the American steamships City of Memphis, Illinois and Vigilancia, announced Sunday, by submarines virtually means war with Germany. Fourteen from the Vigilancia are missing, as there are some of the men from the City of Memphis. The president is contemplating a call for an immediate session of congress to hear an address asking for authority to adopt aggressive measures against the submarine menace. Already American ships are being armed to defend themselves; the next move must be to send warships with orders to seek out submarines and clear the transatlantic lands.

Of the three ships destroyed, two were unloaded and were homeward bound, and were American-built and manned largely by American citizens.

Call Off Railway Strike.

The fear of a railroad strike has passed. The railroad managers Sunday night told President Wilson they would grant the employes' demand for an eight-hour basic day rather than hamper the government at this critical time. Monday the delayed decision of the supreme court on the Adamson law was handed down, holding the law to be constitutional and valid.

This means that the brotherhoods have won an important victory. It is assumed they would be awarded pro rata time for overtime on the basis of an eight-hour day, which they have been assured.

Notwithstanding that the foreign situation remained tense during the last week as for several weeks past the threatened railroad strike took precedence over it in matter of news.

Following the postponement of the supreme court's decision in the Adamson law case, which was to try the constitutionality of the measure passed last fall to avert the strike at that time the officers of the railroad brotherhoods declared that a strike would begin on eastern lines at 7 o'clock Saturday evening, March 17, and would become effective over the entire country by Wednesday of this week. Owing to the serious foreign relations, which have appeared likely to involve this country in war at any moment, President Wilson called upon the railroads and their employes to reach some agreement by means of which the strike could be averted at this time. As a result of a conference between representatives of the president and the railroad men and their employes postponement of the strike was made for 48 hours, pending further negotiations.

Abdication of Emperor Nicholas.

The abdication of Emperor Nicholas on behalf of himself and the heir apparent, Grand Duke Alexis, in favor of Grand Duke Alexandrovitch and the later abdication of the Grand Duke Michael himself, is the astounding news of the week from Europe. The revolution originated with the progressive members of the duma. Thus falls the autocracy which has held Russia in its grip since the beginning of history. The house of Romanoff has ruled the empire for 400 years.

Just what form the new government of Russia will assume is indefinite. For the moment entire authority rests with the 12 members of the duma, executive committee, and the cabinet headed by Prince Lvoff, who, according to some forecast, will be president of the new republic.

The difference which threatened to create a serious split between the duma committee and the committee of workingmen, soldiers and deputies have automatically disappeared since, with the abdication of Grand Duke Michael as regent, the question whether Russia should remain an empire or compel its antiquated government to yield to a new government is now solved.

Elections to Decide.

Later dispatches say the decision whether Grand Duke Michael Alexandrovitch shall occupy the Russian throne, abdicated by his brother, Emperor Nicholas, is left to a plebiscite of the Russian people, according to a manifesto issued by the grand duke. This is taken in some quarters to mean that Grand Duke Michael does not intend to accept the regency temporarily, but only after the holding of elections.

This revolution is looked upon as the victory of the war party, and is meaning a greater activity on the part of the Russians against the Germans.

The empress and crown prince of Russia are now safe in Finland, and the emperor is at the Snetogorsky monastery in Pskoff.

The Motor Car
On the Farm

New Legislation.

Every two years the legislatures of the states of the northwest meet and invariably, of late years, they bring out a "new model" automobile code. Therefore, it behooves every owner of a car to keep watch of the changing laws in order that when they go into effect he may be prepared to abide by them. The legislatures of the present year have been no exception to the rule. They have rebuilt the auto codes of their states, making changes in such matters as license fees, speeds allowable, character of license plates, and so on.

Tire Mileage.

Many motorists in reviewing tire mileage records often credit the satisfactory performance to the casing, to the exclusion of the tube, forgetting or overlooking the fact that if the tube had not acted its part faithfully the casing could not have established so good a record, says the American Chauffeur.

If the casing is right, of course the work of the tube is very simple. It does not have to withstand pressure and wear. It has only to hold air and keep on holding air.

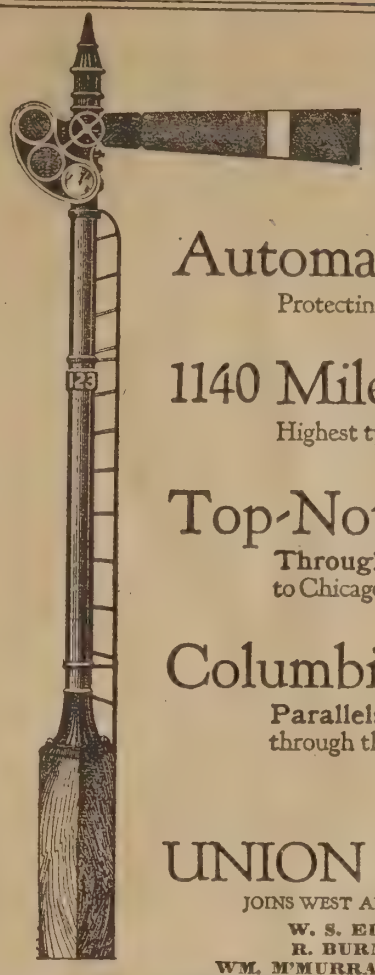
That is why so many motorists think "a tube is a tube," and let it go at that.

Tubes cost relatively little, but poor tubes can easily become the most expensive part of your equipment. Too many dealers will sell good casings and low-grade, low-profit tubes, which cost many times their price by losing pressure and so wearing out the casings.

Good tubes add life to any tires, and good tubes are just as important as good casings. Much more tire trouble than is commonly supposed can be traced to poor tubes, rather than to poor casings.

Some motorists could actually afford to throw away the tubes they are using and replace them with quality tubes. They would save money in the end.

Air, being a gas, very slowly permeates almost any kind of a solid. Rubber used in making tubes must neither harden nor crack, but must recover from its stretch in a casing, even after long use.



Magnitude of Fruit Industry.

The magnitude of the fruit industry of Yakima valley is a thing not easily grasped. According to figures compiled by F. E. De Sellem, horticultural inspector for Yakima county, 4000 owners have 45,600 acres planted; $20,000,000 is the value of the investment; $7,000,000 is the value of the 1916 crop of 11,000 carloads; $1,100,000 is invested in warehouses and cold storage; $1,000,000 was paid last year for boxes and nails; $122,000 was paid last year for spray material; $150,000 was paid for 80 carloads of wrapping paper; $1,200,000 was paid to 3000 transient laborers employed for a period of 100 days; $250,000 was paid for 50,000 tons of ice for refrigerator cars; 20 shipping agencies market the product, at a cost of $700,000 for handling charges at 10 cents a box.

SHOW FRUIT

To Put Up Fresh Strawberries.

To the Editor of the Farmer: I wish to know how to put up fresh, ripe strawberries in alcohol so that they will preserve their full size, the same as they are when picked from the vines. J. W. LATT.

Olympia, Wash.

The following recipe was issued by the department of agriculture of Ottawa, Canada:

Fluid No. 1.

Formalin, one pound; water, 44 pounds; alcohol, five pints.

Allow the mixture to stand. Should there be any sediment, pour off the clear liquid and filter the remainder through filtering paper. This 2 per cent solution of formalin has been found very useful for preserving strawberries so as to give them a natural appearance.

Fruit that has been preserved in this way is poisonous and should not be used for edible purposes.

FORCING RHUBARB

Three-Year-Old Vigorous Growers.

Fred Burglehaus of Sumner, Washington, warns growers that production of rhubarb is now somewhat in excess of consumption, and that the canneries must be looked to to take care of this surplus.

Field culture of rhubarb reqquires a warm, well-drained loam, with plenty of plant food available. Each crown division planted should contain at least one vigorous bud, and if the crowns are frozen before planting, all the better. A dust mulch should be maintained throughout the season, as rhubarb is a water-loving plant. Nitrogen in some form must be provided in ample quantities—for instance, nitrate of soda, at the rate of from 300 to 600 pounds to the acre. Barnyard manure, if well rotted, is excellent, as it introduces humus as well as available nitrogen. From 30 to 40 tons of short stable manure, or 6 to 10 tons of sheep manure, is about the right allowance per acre of this class of fertilizer.

"The first year's crop should not be pulled," Mr. Burglehaus explains. "A light pulling may be made the second year, but always leave plenty of foliage for the plant's own use. Refuse from trimming should be distributed over the field. I do not believe there is any profit in rhubarb selling under 2 cents a pound, except where it is sold to the canneries. A good plantation should yield from 15 to 20 tons to the acre, and should be in good bearing condition for at least 15 years."

One of the biggest mistakes made in forcing rhubarb, Mr. Burglehaus believes, is the use for the forcing houses of weak crowns, already worn out in field culture. "It should be evident enough to any one," he continues, "that if a plant can not succeed under the natural conditions of the open field, it can not be expected to thrive in the abnormal environment of the forcing house. Three-year-old, vigorous crowns should be used. Heat and darkness are essentials as far as the house itself is concerned, and a lantern or lamp in a boarded-in corner of the cellar will provide these conditions for several hills for family use. Heat should range from 50 to 60 degrees. I do not believe that forcing rhubarb is a paying business in itself—it should rather be carried on in connection with field culture."

The Farm Garden

Article 4

Garden Tillage

Soil Must Be Rich and It Must Be Put in Good Condition and Kept So Throughout the Season.

Soil can be made too rich for gardening, but where that of one garden is too rich that of most of the others in the neighborhood is not rich enough.

In placing stable manure on the garden plot two things must be kept in mind: (1) The comparative exhaustion of the native fertility of the soil and (2) the degree of moisture that may be maintained during the period in which the manure will undergo decomposition. Too much is as bad as not enough. It means that unless there is abundance of water to last throughout the season the garden will "burn"; the large amount of plant food in the fertilizer will tend to give the plants a luxurious early growth, but the depletion of the moisture later will cause a sudden reversal. Who has not seen, for example, a bunch of wheat grow up about some decaying vegetable matter—grow up luxuriously the first part of the season only to dry up before the grain has an opportunity to ripen. But where moisture is plentiful the manure should be applied freely, 20 to 30 tons per acre not being excessive.

Plow It Under Deep.

Fertilizers as a rule should be plowed well under the surface. The old proverb, "Necessity is the mother of invention," applies to vegetables as well as to supposedly more inventive men. Vegetables tend to develop a root system to meet their particular needs, and it is therefore the tendency of a plant, where the plant food is on the surface, to develop a root system that does not penetrate the soil. This necessitates perpetual surface moisture, which is virtually impossible in the average garden.

On the other hand, if the food is from three to eight or 10 inches below the surface, there is a tendency toward the development of a penetrating root system which reaches to the more permanent moisture supply. Those vegetables also which root deep by nature are enabled to utilize very little of the plant food that is on the surface, and if it is not found well below, where the fine feeder roots are grown, the plant must necessarily suffer a degree of starvation.

Cooked potatoes and cabbage and turnips are more rapidly converted into animal tissues than are unprepared vegetables. In like manner the soil elements which nature converts into plant tissues in the garden are more readily so converted when the soil is well pulverized and moist. The walls of the lungs of an animal are full of minute blood vessels, where the blood comes almost into direct contact with the air in the lungs, that it may receive oxygen therefrom. In the well tilled garden soil the minute rootlets of the vegetables are enabled to come into direct contact with the food elements of the soil and carry them upward to be converted into vegetable tissue.

Therefore, plow the garden soil deep. Stir the subsoil as much as possible. Pulverize the soil so the plant roots may go down deeply and readily, more moisture be held in storage and a greater degree of aeration be maintained. Then keep the surface constantly cultivated to insure against unnecessary loss of moisture and baking.

HOT BED WITHOUT GLASS.

The Farmer has received this query: "I want to make a hotbed for some flowers, and would like to know if burlap would answer the same purpose as glass"—J. C. G.

The purpose of a hotbed is to create and maintain warmth for the growing of plants earlier than they could be grown in the colder open ground. The purpose of the glass sash cover is to admit the sunlight while yet protecting the plants from the lower temperature outside.

In a climate or locality where it is not vitally necessary to protect the plants from cold during the day time, the glass is not necessary, though with it a better more even temperature could be maintained. In such case the use of burlap or other covering at night would serve the purpose, though anything which would darken the hotbed during day time would be impracticable.

It is possible to shelter the bed sufficiently in many cases to eliminate the necessity of glass covering, and the burlap could be used practically in providing part of this shelter without shutting out the sunlight.

But where the temperature is even occasionally as low as frost or nearly so at any time during the eight or 10 best hours of the day, the use of a glass covering is considered almost imperative.

EVAPORATED APPLES

Finds Ready Market for Products

J. F. Irby, a fruitgrower of the Vera district of the Spokane valley of Washington, reports gratifying success with an apple evaporator which he erected in November. He handled 100,000 pounds of apples during the season and is prepared to operate on a larger scale the coming season.

EVERY SEED YOU PLANT

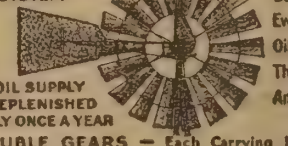
corn, cotton, oats, wheat, alfalfa — any legumes—flowers, garden stuff; in fact, every seed should be treated with

All Crop Farmogerm

the wonderful, money-saving method for supplying nitrogen to your soil. It will make nitrogen available quickly for any crop where nitrogen is deficient.

Nitrogen is the most valuable and expensive fertilizer element. Get yours for practically nothing by inoculating every seed you plant with All Crop Farmogerm. Prices, 5 acres, $5.00; 1 acre, $1.50; garden size, 50c; flower pot size, 25c.

Send 10 cents for sample and booklet describing this wonderful product.



If you are planting legumes only, use our specific culture.

Agriculture
and the Farming Business
By Oscar H. Benson, U. S. Department of Agriculture, and George Herbert Betts, Cornell College, Iowa.

This book accomplishes what has not previously been done for the farmer—brings together in one simple, non-technical volume a wide range of practical, scientific information directly related to every-day problems of the farm.

It serves as a clearing house for all the mass of valuable scientific material pouring from the presses. Simplifies in form and statement, without reducing in scientific accuracy, the teachings and discoveries of expert authorities, agricultural colleges, experiment stations, and United States department of agriculture. Deals with almost every typical interest and problem of the modern farm.

It contains something of interest and value to every member of the farm family. It will also prove equally valuable to the city dweller who dreams of one day moving to the farm, or who desires to farm a city lot.

Illustrated with frontispiece in color and 235 pictures. 900 pages, 8vo. cloth, $3.50 net. At all Booksellers, or sent on approval by

Is America Farming?

Comparison With Other Countries Says No

European countries do better farming than America does, if grain yields per acre may be taken as an indication.

This is the first deduction made by Professor J. S. Jones, director of the University of Idaho experiment station, in a paper presented at the university during farmers' week recently. He cited figures on comparative yields, as follows, to prove the point:

Wheat—In 1879 the average yield of wheat per acre in Germany was 17 1-4, and in the United States 13.7 bushels. In 1909, 30 years later, the average yield per acre in Germany had risen to almost 31 bushels, but in the United States to only 15.4 bushels. The percentage of increase in Germany was 77 per cent, and in the United States only 14.4 per cent. From less than one-tenth the acreage of the United States grain crop, Germany in 1909 produced nearly one-fifth as much wheat.

Barley—During the same 30 years as above, Germany's increase in barley yield per acre was 67 per cent, while that of the United States was only 1 1-4 per cent.

Oats—In 1879 the average oats yield per acre in Germany was 32.5 bushels, and in this country 28 bushels. In 1909 Germany's average yield had increased to 59.5 bushels per acre, and that in this country to only 30.2 bushels. Germany's increase was approximately 86 per cent and that of the United States less than 6 per cent.

Collective Yields of Wheat, Rye, Barley and Oats—In 1879 the average yield per acre covering these four grains was within one bushel of the same in Germany and the United States. In 1909 Germany had forged ahead nearly 18 bushels per acre. The percentage of increase in the United States was 6.6 per cent; in Germany it was 80 per cent. The average yield in Germany had risen from 21.8 bushels to 39.5 bushels, while in this country the average yield had increased from 20.4 to 21.6 bushels.

"During this period it is to be remembered that the German farmers were cultivating lands that have been in cultivation for years," said Professor Jones. "We were adding to our cultivated lands vast acreages of virgin prairie soil."

All Europe Leads Us.

All of western Europe, which includes all Europe except Russia and Turkey, leads the United States in much the same manner that it was shown Germany alone does. In 1907 the acreage of wheat, oats, rye, barley and potatoes in the United States was 88,546,000; in western Europe it was 176,727,000. On these acreages the United States produced 1,874,635,000 bushels; western Europe produced 7,608,957,000. From only twice the acreage of the United States, western Europe produced four times the amount of grain and potatoes.

Minnesota in 1907, with nearly 1,000,000 more acres in wheat than Germany and France, produced only a little over one-half as many bushels of wheat. Minnesota, North Dakota and Kansas combined in the same year grew practically the same acreage of wheat as did France, yet France grew more than twice as many bushels. The average yield of wheat in Minnesota is steadily decreasing, which is equally true in North Dakota and Kansas. The average yields of wheat in both Germany and France are steadily increasing.

Look for Explanation.

"Let us look for a satisfactory explanation," says Professor Jones in concluding this remarkable comparison.

Professor Jones believes that he has found the explanation. He believes there is a very practical way to increase the yields of grain crops in this country, as has been done in Europe. This explanation, this "practical way," will be given in next week's issue of The Farmer.

CORRECTS STATEMENT

Condensery Prices Paid for Milk.

To the Editor: In your issue of February 22 there appeared under the heading of "Wants a Uniform Price" a letter from me wherein the following statement was made: "The condenseries in Lewis county pay us now from 10 cents to 25 cents less per hundredweight than they pay in King, Snohomish and Whatcom counties, which is not giving the farmers in Lewis county a fair deal, and the milk is all used for the same purposes, etc."

I find upon investigation that the above statement is in error, the prices paid for milk at the several factories having been uniform for several years back, and in common justice to the condensers interested and myself I desire to correct the statement referred to above, as it was not my desire to wilfully mosrepresent present conditions in the least. HUGH G. CORP.

Forest, Wash.

Market for Vegetables.

The representatives of Libby, McNeill and Libby at North Yakima, Wash., have received word to canvass farmers for delivery of vegetables to the cannery the company will build at North Yakima this year. Spinach, beets, beans, asparagus, tomatoes and other vegetables are desired.

Hens Lay Well During Winter

Idaho Man Tells How He Cares for Them to Get Results

To the Editor of The Farmer: I have seven hens and 43 pullets which averaged 15 1-2 eggs per chicken during the month of February. I do not say that every chicken laid, but that is the average. I have five Ancona pullets, four pullets from Rhode Island Red hens crossed with a Blue Andalusian rooster, and they were the first pullets to lay. The rest are Blue Andalusians. They wanted to sit winter and summer and can not be beat for a table fowl.

I have a chicken house made from cheap cull lumber bought at the sawmill for $6 per 1000. The house is 14x24 feet, with a shed roof made of cedar shakes; the cracks in the sides and ends are all battened. It is built north and south, and in the north end I have built a roosting place that is tight, with an extra tight roof, which is all inside of the main building, tight up in the corner with the open end inside of the building, with a drop curtain. The south end of the building is open also, and is covered with woven chicken wire and also has a drop curtain. The curtains are all made of flour sacks sewed together, but neither of the curtains have been down this winter. The frame of the building is made of poles and the roosts are made of peeled willow.

I have dirt on the ground floor and put wheat on the straw for the hens to scratch in and work for the other grain. I have used the main body of the house for a scratching shed. I fed cracked corn and whole corn at times, mixing the cracked corn with bran and shorts, giving one measure of cracked corn with two measures of bran and shorts, wet with warm water on cold mornings, not getting it too wet. The water was hot enough so that the mash was warm to the hand. Sometimes I put in a teaspoonful of red or cayenne pepper. At noon and night they got grain; about three times a week a peck of sliced cull apples were set in for them, and they would quit all other feed for their apples. This is all the green feed they have had this winter. Other winters they have had carrots and some cabbage, but none this winter.

Feeds Them Fish.

I keep oyster shells in a hopper all the time, and also some bran and shorts. About twice a week I boiled a mess of perch with the bran and shorts mixed in while fish is boiling, and hot enough to make almost crumbly. I also put a tablespoonful of salt into two gallons of this mash. I have used warm water all the time. I have had no patent foods or utensils and I have never had an incubator. I have not lost one chick from disease that I know of. In fact, I have lost but four or five that I thought were sick in the 11 years.

Feeds Chicks Second Day.

I feed my little chicks the second day, and the first feed is corn meal, wet a little, with a dash of red pepper in it. I put the feed on a board for the first week, and then turn the hen loose until it is too cold. I never feed enough so that they will have any left to run over but I feed them often at first. Crumbled bread, corn or wheat bread is given after the first week and also cold boiled potatoes whenever I have it.

The house is protected from all north winds by being in a cove on the south side of a hill, and if there is any sunshine they get it.

I never disturb the flock, but if I go in to the henhouse and don't talk to them they will get up in a corner, as much as to say, "Is it you?" But as soon as I start to talking it is all right.

Here is one thing to remember, that it takes just as much feed to get eggs when feed is high as it does when feed is low, and I did not receive any more for eggs this winter than I have during the winter of the last 11 years.

Fumigates Frequently.

I use sulphur to fumigate, and I put a small teacupful on paper and put under the roosts, then touch a match to the paper and the sulphur will burn for half an hour or so. I do this every two or three weeks. I also put stove ashes in the henhouse for them to dust in, and scatter a little air slacked lime in the litter winter and summer. The hens have the run of the place in the summer time. O. C. SHIPMAN.

Black Lake, Idaho.

Ancient Farming

Herodotus, in the year 450 B. C., said that good cultivation yielded two-hundredfold in the Valley of the Euphrates. Even in that land of Eden, poor cultivation yielded but fiftyfold.

In 1898, the average Wheat yield per acre in New York State was 21.2 bushels; in 1907, 17.3 bushels per acre; in 1912, but 16 bushels.

European yields are more than double.

Isn't it time for our farmers to get down to business methods? Home Mixed Fertilizers will help.

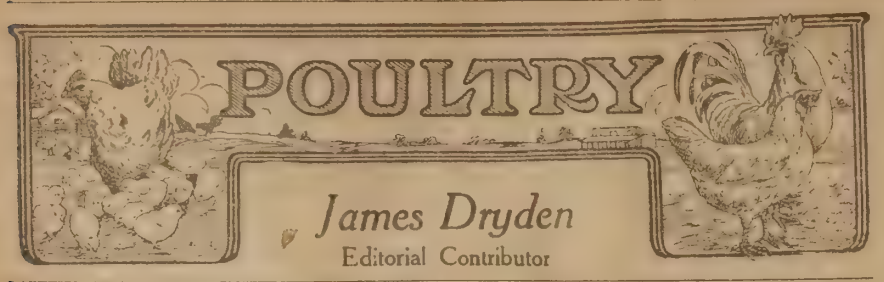
Satisfaction Guaranteed or Your Money Back



JUST LIKE BALL BEARINGS!

It's the combination of the highest-grade petroleum grease and powdered mica—special process. Better lubrication—cooler bearings—and the grease lasts twice as long.

STANDARD OIL COMPANY (California)

MICA AXLE GREASE

Good meat qualities come by inheritance, just like egg-laying qualities.

Hogs at $10 a hundred means $20-a-hundred chickens. The public seems willing to pay the difference.

More attention will be given to meat chickens before long. The opportunities in the future may be as great in breeding for meat as for eggs.

The market for poultry is excellent. A few Plymouth Rocks to sell now will make some money. A 6 1-2-pound Plymouth Rock hen would bring $1.30. A 3 1-2-pound Leghorn at 18 cents would bring 65 cents, a difference of 67 cents in favor of the Rock. This is more than the difference in the cost of feeding the two. Were the prices 10 cents for Rocks and 9 cents for Leghorns the difference would be about 35 cents. This would more nearly represent the difference in the cost of feeding the two hens for a year. Assuming that each lays the same number of eggs in a year, the Plymouth Rock would be the most profitable to keep when the prices were 20 cents and 18 cents, respectively. If the prices should drop to 10 and 9 cents the difference would just about pay for the additional cost of feed for the Rock. J. D.

Running the Incubator.

It has been shown very clearly in experiments at the Oregon station that the method of running the incubator is responsible not only for the number of chicks that hatch, but also in a large measure for the quality of the chicks hatched. It is not sufficient, therefore, to hatch the chicks; that is easy; but they must be hatched right, and that is harder. The experiments showed, for example, that the weight of the chick was increased or decreased as the humidity in the machine was greater or less. Further, the amount of moisture in the machine during incubation affected the chemical composition of the chick in certain particulars.

The lesson is that the successful incubator operator must exercise great care in running the machine. Chicks that have not been incubated properly will not live and grow well, and the mortality will be large. The failure to successfully rear the chicks is not all the fault of the rearer or of the brooder; it often goes farther back to the incubator.

There are three things that are important: First is the temperature. There must be steady, uniform temperature. The operator must exercise the greatest care in holding the temperature as steady as possible. Chicks may be hatched even though the temperature fluctuates up and down a degree or two every day, but they will not be hatched as well. The operator should understand his machine. He should test the different sections of the egg tray to see if the temperature is fairly uniform all over the tray. This should be done with a number of thermometers before the eggs are put in. This is one of the first requisites of a good incubator, a uniform temperature in different corners of the egg chamber.

If the incubator is heated with a coal oil lamp, the burner should be in good condition, and, if not, a new one supplied. A new wick should be put in. It pays to use good oil. Cheap grades of oil produce smoke and soot and very often fires. Besides good oil, though it may cost more, may be the cheapest because it will furnish more heat. This is the second requisite for keeping a uniform temperature—a good burner and wick and good oil.

The temperature of incubation is 103 degrees at the top of the eggs. It is a good plan to start the machine at 102, then gradually raise it to 103 by the end of the first week; then maintain it at 103 throughout the hatch. It may be allowed to run half a degree higher on the 19th day and until hatch is off.

How much variation above or below 103 can the eggs stand? is a question often asked. They will stand considerable. It may run down to 100 and up to 106, and still the eggs will hatch, but when the temperature goes up and down the conditions are not the best for successful hatching. The question should not be what the eggs will stand, but what temperature will hatch the best chicks.

The question of good chicks is important for the man who buys day-old chicks. The chicks may look all right, even though they have been injured in the incubator by variations in temperature, but in a few days in the brooder they will begin to die. This is where the risk in buying day-old chicks comes in, or one of the risks, and the man who buys chicks should know something of the conditions under which they were hatched. J. D.

Gooding Community Club.

One of the beneficial results of the visit of the Second district president, Mrs. G. W. Lamson to the Gooding, Idaho, Woman's club, was the formation of the Woman's Community club, composed of the Woman's club, and other women from the city and surrounding country. Mrs. Samson pointed out that this should be composed of country women, city women, foreign women and young women. The good things which the country should have and has not as yet, will be the aim of this community club. It was also decided to form a parent-teacher association.

Hens Must Have Feed.

A productive hen requires from 70 to 80 pounds of feed a year. If she gets only 40 to 50 pounds, she will simply satisfy her body requirements. She will not lay eggs. The scantily fed hen is a poor investment. It is only the liberally fed hen that yields the profit.

Lays One Day in Five.

According to the United States census, Missouri's 21,000,000 hens lay 111,000,000 dozen eggs annually. If this is true, the average hen lays about 63 eggs a year.

Chickens

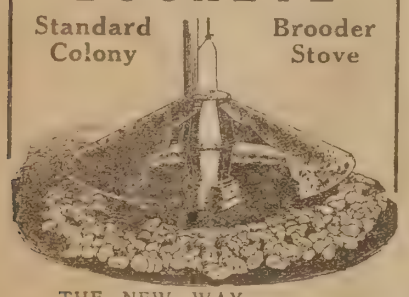
Help Solve High Cost of Living

R. S. Tandy of Jefferson, Ore., has a chicken story that not only illustrates how to help solve the high cost of living, but gives farmers and poultrymen who have the opportunity of raising cheap poultry feed much to ponder over. Mr. Tandy lives on a small lot, about 50 feet wide. He had 17 hens during 1916, besides two or three bought for setters and fattened and killed as soon as their hatching duties were over. During the year he purchased $44 worth of feed. This part of the record was easily kept. The feed was supplemented only by the grass cuttings from the lawn in summer and an insufficient amount of kale in winter. On the other side, all eggs used or sold were credited at the current prices when laid. Sixty-six dollars' worth of eggs were thus produced, besides those used in raising 50 chickens. The chickens were begun to be eaten when they reached good frying size, and when the year closed there were only 35 hens and two cock birds.

Mr. Tandy only gave a little time to his "poultry farm," as he could spare from his real estate business. The hens were kept in a small poultry house at the back of the lot. They were allowed to run out an hour or so each afternoon in good winter weather, but were kept inside at all times in the summer, as the lot is taken up with a garden.

Mr. Tandy's hen house has only open wire netting from the ground up about four feet on each side. Boxes for laying are along the back of the house, a self-feeder holds whole oats, and oyster shell grit is kept before them all the time. A little alfalfa meal is kept before them when kale is scarce. The floor is kept covered with straw and a little wheat thrown in each morning to induce scratching and exercise. The roosts are set over a false floor about four feet high and that floor covered with straw. Mr. Tandy only cleans the roosts once a week, though he realizes they should be cleaned oftener. He pours a little coal oil over each end of the roosts when cleaned, letting it run down to the middle, and is never troubled with mites. New straw is, of course, put on the false floor when cleaned.

Mr. Tandy has now a fine flock of mottled Anconas in one pen, and just hens, with White Leghorn and Barred Rock blood, showing in the other. Counting chickens at a fair value his eggs cost him almost exactly 12 cents a dozen, and his family had strictly fresh eggs and healthy, fat broilers all summer. The little chicks were hatched in a box eight by three feet and with a roof over half the box, and were kept there until old enough to put in the coop. The high cost of eggs or poultry has no terrors for him. If he can produce eggs at this low cost, is it not possible to make a profit on the farm poultry? H. A.



FEEDING FORMULA
Brings Excellent Results.

Use of the following feed formula by Charles Rothwell of Corning, N. Y., resulted in the production of considerably more than 100 eggs per hen in his back yard poultry pens last year, according to his recent report:

A dry mash composed as follows (kept before them at all times): Cottonseed meal, 100 pounds; corn meal, 50 pounds; wheat bran, 50 pounds; alfalfa meal, 15 pounds; charcoal, 10 pounds; calt, three pounds. They were kept busy with scratch feed, fed in deep litter composed of equal parts of the following grains: Oats, wheat, barley and cracked corn, except in hot weather, when the corn was eliminated.

The exact number of eggs laid by these hens in the last year is as follows: January, 59; February, 132; March, 358; April, 558; May, 650; June, 566; July, 574; August, 478; September, 150; October, 59; November, 54; December, 34, a total of 3652 eggs in the year. Ten of the hens were killed for family use. Assuming that the market value of these eggs would average 30 cents per dozen, the total value of the eggs would be $101.30. The cost of feed consumed by the hens during the year was $34, a trifle over $1 per head. Deducting this from the value of eggs produced, leaves a profit of $67.30, or an average of a little over $2 apiece per hen.

Our Duty to Smoke Out Swindlers

(Continued from page five.)

report and his joint report with Mr. Delivuk to the farmers' union."

"Did you know how much was due on notes and whether the same was a collectable asset?" "The sum due was then reported and the notes were said to be good."

"Did you know that 75 per cent of the notes were past due?" "No."

"They did not tell you that?" "No."

"Get any special rates on merchandise by being an employe of the company?" "Never was an employe of the company.

"Did you ever receive any commission on stock sales?" "Never sold any stock."

"We notice on the books, under date of August 13, 1913, that C. B. Kegley was paid $40 under the heading of 'commission.' Can you explain that?" "Yes, I sold Gale Smith a share of stock at that time. I had purchased the share in 1910. I had two shares, and needed only one, and sold him the other."

Attorney Garrecht said the records show that Kegley had purchased but one share of stock in the company, and asked why this was.

"At St. John, Wash., a man named Barber made a complaint that a salesman for the Northwestern had jobbed him. He said that the salesman had charged him $75 for a share of stock and that after he went home he found that its par value was but 20. He then offered to sell the stock for par, $20, and I asked him to hand it over."

"That stock was not transferred to you until March, 1915," sad Attorney Garrecht. "No, I delayed in having a transfer of it made."

"Prior to that were you not a stockholder?" "During the time I was dealing with the company I was a stockholder."

This is a sort of an investigation that led C. B. Kegley to declare that "a personal investigation of the resources and liabilities, methods of business and quality of merchandise for the Northwest General Trading company" was on a basis that "satisfied" him of its sound, financial and cooperative basis and through the proposed plan of a distributing center, with each subordinate grange, and the active cooperation of the patrons, can be made to fill the need of the wholesale supply house for the grange members."

The Washington Farmer does not believe that such an examination or such an endorsement will commend itself to the members of the grange. Moreover Mr. Kegley was not a stranger to the Northwestern General Trading company. It has already been shown by his own testimony that he bought a share of stock for $20 upon the complaint of a man who charged that he had been cheated by having the stock sold to him for $75 and that he sold this stock three years later to Gale Smith, the president of the company, for $40, but did not have these transactions indicated on the books of the company for a number of years.

If it was merely a blunder which led C. B. Kegley to give an endorsement which caused many members of the grange, as well as many farmers outside of the grange, to lose money in the swindling trading company, it is the kind of a blunder which should forever debar a man from occupying a position of supreme influence in a great order like that of the grange.

Here are two letters read in evidence in the trial of the Northwest General Trading company that clearly indicate the value to the swindling company of the endorsement of farm leaders:

The following letter from C. L. Davies, manager of the Portland branch of the Northwestern, to Gale Smith, president of the company in Spokane, was read:

"PORTLAND, Nov. 7, 1914.—Dear Gale: Mr. Kegley and his bunch have finally indorsed the company. It took a long time to bring them over. I was up at Washougal yesterday and had a talk with Mr. Wing, one of the executive committee, and signed him up for a share of stock. He is the one that was bucking our proposition last spring at Washougal. We have him in line now; are getting him out and putting him to work undoing what he did last spring. That is the way to fix these fellows that knock. When they kick the brick wall down make them get in and built it up again.

"I am joining the grange down here and am going to be initiated tonight. I will be some granger, believe me. Heretofore when I wanted to arrange a meeting I would get in for a few minutes and then they would kick me out. But I am going to be in a position where I can go to their grange meetings and stay until the last dog is hung.

"I am glad to hear that you are getting things lined up there with a bunch that are capable of getting the business. I trust that you will be able to run onto some new proposition that will be of benefit to us. CLYDE."

F. B. Sears was at the head of the membership department of the Northwestern General Trading company:

""SPOKANE, Nov. 10, 1914.—Mr. Crabb, Sawyer, Idaho.—You understand this is a cooperative company issuing catalogs to members only. The membership numbers at this time nearly 8000 of the most progressive and enterprising people of this Inland Empire. By far the greater portion of these people are trading with the company, buying their merchandise, clothing, hardware, groceries, shoes, farm implements, vehicles, wagons, etc., through the company and report a saving of from 25 to 35 per cent on practically all kinds of merchandise. The company has prospered very rapidly, and in five years the membership has grown to nearly 8000 and the total assets to a third of a million of dollars, and the stock is selling for $75, nearly four times its original value.

"You will notice by the enclosed circular the executive heads of the Washington Farmers' union have investigated the company, its management and system of business very thoroughly and have unanimously indorsed the proposition. This of itself is going to enhance the value of the stock and should double the membership. The state grange of Washington also took the same action and unanimously indorsed the company. Five shares is the most we can sell to one person and represents an outlay of only $375 and makes you a part owner in the wholesale mercantile company that is today in the foremost rank of any institution of its kind in the west and getting larger every day. Northwestern General Trading company.

By SEARS."

The assumed justification of Kegley in muddying the waters and declaring that any criticism of himself is a criticism of the grange is becoming thinner and thinner, and the grange folks are seeing through it pretty easily.

At the request of a reader early in 1915, The Farmer began the investigation which has resulted in the conviction of the swindling officers of the Northwestern General Trading company. Because of its insistence that an investigation should be made by the authorities, The Farmer drew upon itself the enmity of those swindlers and of those who have indorsed them.

A farm paper can render no service more valuable to its constituency than in smoking out fraudulent schemes, especially when these schemes assume the garb of cooperation. In fact, it is a duty we owe to our readers to do this, whether it is a misnamed cooperative trading concern, or a scheme of manufacturers or middlemen to extort exhorbitant prices from producers, or a put-up job on the part of unscrupulous live stock breeders to sell at auction purebred breeding stock at fictitious figures.

The Farmer is confirmed in its well considered belief that C. B. Kegley has proved himself unworthy of the trust imposed upon him as master of the State Grange and should give place to a man of clear brain and rugged honesty, who would not advise farmers to buy stock in a swindling concern which robs them of $500,000 of good money.

Let These 11,000 Farmers Answer

For every question you have regarding the "Big Bull" Tractor, for every argument that any one may advance against it, there are a thousand answers from the men who make up the **supreme court** of authority on the merits of the **"Big Bull"**—the eleven thousand and more farmers who now own and operate

"The Bull With the Pull"

Bull Tractor on Cameron's Ranch, Seven Miles East of Sunnyside, Wash.

Seeking Higher Priced Wheat

Tell-Tale Story of a Chemical Analysis For the Grain Grower

By THOMAS T. KERL
Coeur d'Alene, Idaho

A few years ago I had a conversation with a prominent wheat grower of Walla Walla. He said in substance "we have a soil that is permanently fertile. I have grown wheat in the Walla Walla country for 50 years and I can get just as big crops now as I did years ago. It is all a matter of the season and the work done in putting the wheat in."

Is this really the truth? Or is it only seemingly the truth?

There is, of course, wide fluctuation in the yield of wheat in different seasons and depending upon the care in preparing the ground, but I am inclined to think that, if one really could make a fair comparison of a 10-year average of wheat production with a 10-year average, 30 or 40 years ago, there would be shown a striking decrease in fertility and yield where wheat growing has been the one farming operation.

Decrease in Fertility.

Some recent chemical analyses shown me by Professor Olson of the Agricultural college at Pullman, Wash., seem to me to be pretty good proof of decrease in fertility.

The college farm has been run for 16 years with no summer fallowing, but with a rotation in which red clover, alfalfa, and corn have been used. When these crops are grown there is an accumulation of nitrogen in the soil. The question then naturally arises, is there any more nitrogen in the wheat grain when grown on ground that has produced, the year preceding, one of these crops, than there is in the wheat that is produced from ground that has been rotated wheat, summer fallow or wheat, oats, summer fallow.

The analyses seem to show this conclusively. In the 1914 crop, the following analyses may be compared:

	(1)	(2)	(3)
Red Russian	2.61	1.79	1.43
Winter fife	2.14	1.85	1.54
Hybrid 143	2.54	2.12	1.49

The figures in column (1) are percentages that result where the nitrogen content of the soil has been kept up by legumes, manure and cultivation of various crops. The figures in column (2) are results obtained where wheat was sown in ground that had previously grown corn. The figures in column (3) represent percentages in wheat grown on land handled in the ordinary way without legumes or cultivated crops in the rotation. There is a decrease in nitrogen content from 20 per cent to 82 per cent in some cases apparently due to the fact that in the poorer cases the nitrogen was not in the soil. The percentages given are not haphazard analyses but averages from many analyses.

For the year 1915 average analyses of wheat grown in the Inland Empire in the ordinary rotations show a percentage of 1.65 of nitrogen. The lowest analysis was 1.38 per cent and the highest 2.07 per cent. For the same year, the wheat grown on the college farm at Pullman where nitrification of the soil has been secured by suitable rotations showed 2.11 per cent as low for nitrogen and 3.03 per cent for high.

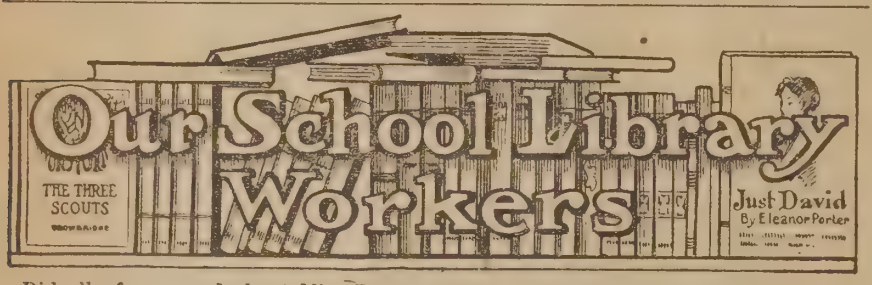
The significance of the nitrogen analysis is this: if the percentage is multiplied by 6.25 the protein in the wheat is approximately secured. If this produce is again multiplied by 5, the wet gluten percentage is shown. Bakers and millers are shouting for more gluten in the flour. The more gluten in the flour the more water will the flour absorb and hold and the better the bread will rise. Millers now are making gluten tests and are paying from 5 to 10 cents and even more per bushel for wheat with a high gluten content. Basing price on nitrogen content is a sound commercial proceeding. At our large grain centers there should be chemists to analyze the nitrogen in wheat and the nitrogen content of wheat should be a larger factor in determining the price than it is today. A good chemist can make 40 to 50 nitrogen analyses a day.

If the farmer knew that he was going to be paid according to nitrogen content as well as mere pounds, he would soon rotate his ground in crops to produce the higher quality.

Not until the American farmer nitrogenizes his soil by suitable rotations of crops will the maximum protein be in our bread.

David Chitlow of Richfield, Conn., an expert chemist for bakers, in a recent address makes this statement—"There has been a steady decline in the protein and gluten values of standard bread making flours produced under the type groups of Minneapolis flour from 1894 to November, 1916."

"In the middle of the 90s northwest wheat flours of patent flour grade, contained over 13 per cent of protein and dry gluten with the ash practically constant at .43 per cent. By 1904 the gluten had receded to 11 per cent for the same group of flours; and today and for some time past, the percentage of protein and dry gluten has been between 9 and 10 per cent. Non-rotation of crops is partly responsible for the lower gluten, etc."



In our wheat districts are grown probably from 20 to 40 varieties of wheat. The tendency is to increase the varieties in the vain hope of getting a variety that will naturally have a higher glutent content.

The theory is that to improve the quality of wheat all that is necessary is to change the seed occasionally. It is believed that wheat will deteriorate after being grown in the same land for a great number of years. The chances are that the farmer who tries to improve his wheat by new seed alone is running down the wrong road.

Such a method is, in the grain growing business, very much like it would be in the stock business, if a farmer in the Palouse were to import a prize herd of Shorthorn cattle from the oppulent east and then winter them on straw and timothy hay. There is not any doubt about Shorthorn cattle being a good kind of cattle, but they must be fed plenty of food 365 days in the year and there must be great variety in the food.

If a plant deteriorates in a given district with years of cultivation, it may safely be said that there is something in the climate that is not favorable or there is a lack in some of the elements in the soil that go to make up a plant. These elements are potassium, calcium, magnesium, iron, sulphur, nitrogen, phosphorus. To determine just what element is lacking in a soil is not an easy matter, but seemingly nitrogen and possibly sulphur are lacking in sufficient available quantities in many of our wheat soils. At any event it seems quite certain that by building up the nitrogen in the soil we can get very marked improvement in the quality of the crops produced.

Maybe, when farmers feel full of Falstaffian bragadocio, they will do well to remember the tell-tale story of the chemist's analysis.

Did all of you read about Miss Dorothy Rauch of Chewelah, Wash., in last weeks' paper? And about Loyal Snyder of White Swan, Wash., in the issue of March 8th?

Well, Miss Dorothy has Master Loyal feeling pretty glum at this writing—though Loyal is not the least bit inclined to acknowledge defeat. He is saying little, but we incline strongly to the belief that he is busily sawing wood.

Dorothy has 16 subscriptions to her credit and Loyal 12. By the time Loyal has 16, Dorothy will no doubt have several more—then again she may not. It's a real race and grows more and more interesting each week.

And pray don't any of you make the mistake of supposing that this race is wholly between Dorothy Rauch and Loyal Snyder. There is Bessie Webb, for instance, with 10 subscription; Mildred Glasgow with 9, Dorothy La Rue and Lester Ruark each with 6 and Violet Leachman and Eva Bond with 5 and 3, respectively.

Just supposing that Eva Bond, with only three subscriptions, should suddenly make up her mind to win that gold prize, even with big odds against her. Wonderful things are done by grit and determination. Come to think about it, did any of you ever hear of any big accomplishment that didn't come from grit, determination and hard work? So those who are low today may be high tomorrow.

Maybe Loyal Snyder isn't the only one who is keeping mum, but keeping busy as well. Knowing the way Mildred Glasgow makes thing hum when she puts on that winning smile of hers and gets after Farmer subscriptions in earnest, we should not be a bit surprised if she climbed right up with Dorothy and Loyal before May 1st.

Then there is Bessie Webb—bright, alert and already in third place. Bessie, too, may have a fine lot of surprises up her sleeve. And who can tell what plans may be afoot over Mayview way by Dorothy La Rue, Lester Ruark and Violet Leachman?

Surely, it is a fine race—and its interest grows because you can't begin to guess who will win. Here is the way the subscriptions stand at present.

Dorothy Rauch, Chewelah, Wash., 16.
Loyal Snyder, White Swan, Wash., 12.
Bessie Webb, Ford, Wash., 10.
Mildred Glasgow, Bossburg, Wash., 9.
Dorothy La Rue, Mayview, Wash., 6.
Lester Ruark, Mayview, Wash., 6.
Violet Leachman, Mayview, Wash., 5.
Eva Bond, Valley, Wash., 3.

New Schools in the Library Contest.

Mountain Home school, Benton county, Miss Myra Renshaw teacher.

Valley Heights school, Benton county, C. A. Parker teacher.

Valley View school, Benton county, Miss Marguerite Lynn, teacher.

HONOR ROLL.

Chewelah school, Dorothy Rauch; **Sunset School,** Joe Mills, Victor Hofford, Ralph Gibbons; **Bolles Junction school,** Marie Stewart, Harvey Brittain, Melvin Stewart, Walter Mikkelson.

In connection with this week's honor roll it is worth noting that the boys considerably outnumber the girls. Perhaps the example set by Loyal Snyder is having a good effect.

Real $25 Value

Suits and Overcoats

$15.00

Order Suits by Mail

Our new mail order department brings our immense stock of ten thousand suits and overcoats direct to your home. It is now possible to purchase from us at the same low price and with the same guarantee of fit and service as the thousands of our customers in the city.

Save $10.00

Buy your clothes the modern upstairs way, the money-saving way. Ten thousand suits to select from—blue serges, pencil stripes, clay worsteds, tweeds, cassimeres, velours—any fabric you may fancy, all hand tailored, at a saving of $10.00 to you.

Selling clothes upstairs on the second floor is a radical change from the old way—the low rent, the inexpensive fixtures, the cash selling plan and the fact that we are willing to accept a small profit—these are the reasons why we are able to save $10 to every purchaser.

Thousands of men in the northwest have taken advantage of our selling plan and proven to themselves that they save money—you can do the same.

Hillside Farming

Between Benches and the Bottoms

In the ordinary course of western Washington pioneer farming the rich and comparatively level river bottoms and delta lands are the first to be cleared and put to work. In time these are all taken up, and the level benches are drafted into the service of mankind. Still farther along in the progress of farming evolution, all of the level land available has been put into crops, and the rise in land values has started adventurous men and women with a hunger for tilling the soil to experimenting with hillside land. In Europe this point has long since been passed, and the terraced hillsides are looked upon as a regular part of the producing area.

With this in view, it is well to consider this statement from a recent bulletin issued by the state college experiment station:

"Green manuring prevents washing, adds organic matter to the soil, prevents leaching and affords winter pasture."

There are some of the requirements of the case, in a nutshell.

One of the great difficulties in using hillside land has always been to prevent erosion and leaching, by which the soil itself or its soluble plant food is washed away. A cover crop of vetch or rye "sown in the fall and plowed under in the spring, when the rye is about eight or 10 inches high," will not only hold the soil together physically and prevent the leaching of plant food, but will furnish fall and spring pasture and add humus to the soil.

Here in the northwest, particularly in those parts of Oregon and Washington west of the Cascades, it may well occur that in the long run and with proper handling, these sloping lands, with their superior drainage and, in the case of southern slopes, their increased warmth, will prove more valuable than some of the bottom lands.

LOAN ASSOCIATIONS

Keep County Agriculturist Busy.

Charles A. Cole, county agriculturist, returned from Eatonville, having finished the dissemination of information on the new farm loans in the Tacoma Eastern district. Eatonville, Kapowsin, Benston, Alder and Ashford have formed an association, he said, and already have asked Uncle Sam for $30,000 for farm extension purposes, and expect to ask for a total of $50,000.

The county agriculturist and his assistants are getting about as fast as they can, talking to farmers and ranchers, telling them the details of the new help which the government has provided. The three days' agricultural institute at Eatonville, at which 1400 persons were in attendance, greatly helped this work, said Mr. Cole.

Longbranch already has formed an association, as has Sumner, said Mr. Cole.

Pure Bred Jersey Bull.

County Agriculturist O. T. McWhorter is aiding three dairymen from the Mount Pleasant district in Clallam county to locate a pure-bred Jersey bull to be purchased on a cooperative basis. A bull organization was also looked upon with favor in the South Bay district.

INDIAN FARMERS

Take More Kindly to Leadership.

As an item in the report of R. B. Coglon, county agent leader in Washington, County Agriculturist H. B. Smith of Okanogan says: During the week the county agent held live stock meetings at Nespelem. J. M. Johnson, superintendent of the Colville agency, informs me that my activity in promotion of cooperative marketing of over 5000 head of cattle on the reservation has started a movement of great financial value to the Indians. I talked through two interpreters to the Nez Perce and Colville tribes and after the meeting talked to the chiefs and leading stockmen individually. It surprised me to discover that many full-blood Indians owned from 50 to 200 head of cattle. One Indian shipped 300 last year, but not one sold for over $55 and were not sold by weight. Mr. Johnson told me that if these cattle had been sold over the scales they would have brought $10 more. The superintendent told me that after the meeting he had talked to the leading stockmen about cooperative shipping of cattle and had found most of them interested and apparently willing to try the new plan, and that in his opinion the more skeptical Indians would adopt the plan when they discovered the success of the first shipments by the leading and more progressive stockmen. In one way the plan will be introduced more easily among Indians than whites, because the former all follow a few leaders.

Do You Know That

A man is as he thinketh in his heart?

Potatoes

Better Crop by Fall Planting

C. R. Campbell of Bellevue, King county, believes in planting potatoes early. In fact, Mr. Campbell is convinced that he can get a better crop, other things being equal, by planting in the fall than in the spring.

"Of course, fall planting must be done on land that is well drained, and you must use whole potatoes—if you cut your seed it is pretty apt to rot before growing time in the spring. And here is another point—don't be disappointed if your fall-planted potatoes don't come up much ahead of those planted in the spring. They will be ready for the table probably two weeks earlier and will bear a heavier crop. The best crop of potatoes I ever got was from a fall planted field, which was given no fertilizer."

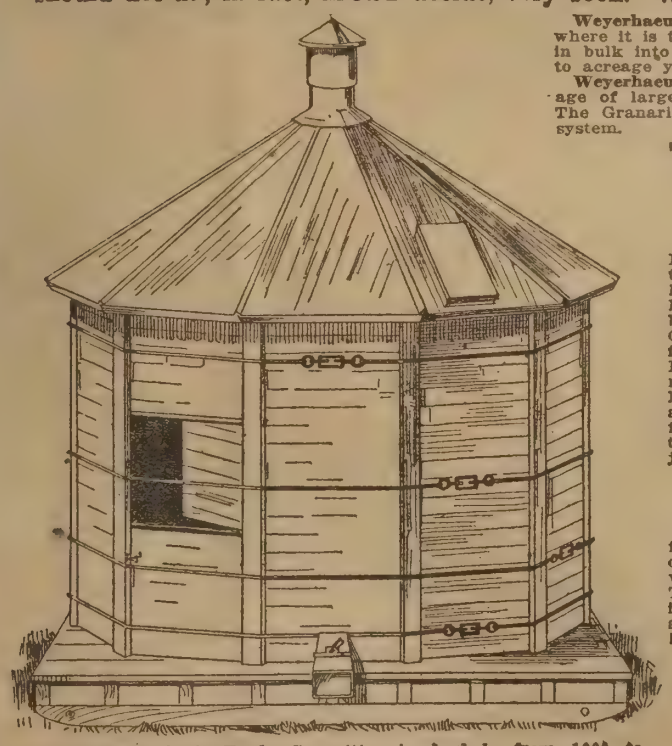
In contrast to this method with potatoes, Mr. Campbell admits that his general garden goes in rather later than those of his neighbors.

"People tell me that you must get seeds into the ground early in order to take advantage of the abundance of spring moisture," Mr. Campbell explains. "Well, maybe they are right, but I don't plant my garden till the ground is warm, and I don't irrigate it, either. I believe that a plant is like an animal and that a bad setback early in growth is never fully recovered from. If the seed bed is properly prepared and subsequent tillage is what it should be, fairly late planting is best, in my experience at any rate, for Puget sound."

Weyerhaeuser Grain Tank, in use with stationary thresher rig. Sheaves are hauled to thresher, located near tank, and grain threshed at once direct into tank.

BULK Your Grain

WITH THE



Weyerhaeuser Granary, in use with combine rig. One wagon is loading at the combine while other is discharging at the granary.

Weyerhaeuser Fir Grain Tanks and Granaries

"Swat the Sack," is a motto grain producers of the Northwest are discussing in earnest right now. It is a question that YOU should decide; in fact, MUST decide, very soon. WHY NOT DECIDE NOW? WHY NOT INVESTIGATE AT ONCE? WRITE US.

Weyerhaeuser Grain Tanks are for the Farmer who stores his GRAIN where it is threshed; tanks hauled to center points and grain threshed in bulk into tank direct. Tanks hauled from summer fallow acreage to acreage you cultivate—no tanks lie idle.

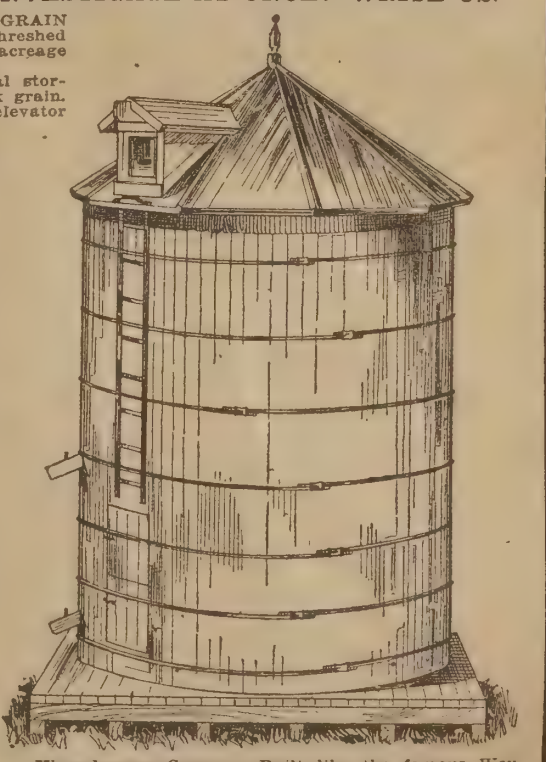
Weyerhaeuser Granaries are for the Farmer who wants central storage of large capacity and for converting flat warehouses to bulk grain. The Granaries are stationary and constitute your own home elevator system.

Weyerhaeuser Grain Tank—Capacities in bushels from 1000 to 2000. Diameter, all capacities, 14 feet. Filling spout placed in scuttle of roof for main fill; ventilator at apex is sleeved to lift off for spout to fill to brim; after filling replace ventilator. Doors give access to assist run of grain from spout and to shovel out all floor grain. Doors also enable occupancy for other purposes when not holding grain.

The Practical Way to Bulk Your Grain Is the Weyerhaeuser Way

The Weyerhaeuser Grain Tanks and Granaries are BUILT RIGHT. Designed only after most rigid investigation and with a foundation of years of Weyerhaeuser experience in making the famous Weyerhaeuser Silo for Farmers of the northwest. 200,000 bushels bulked in Weyerhaeuser tanks in 1916. The Grain Tank must be simple of construction so that farm labor, even at the busiest season, can erect it. It must be easily moved or easily knocked down and reerected. It must be strong and last indefinitely. It must allow easy access of men, have proper filling arrangements, and allow quick running of the grain from the spout. It must be constructed of such material and in such a way that there shall be no injury to the grain. Lastly, it must be of a

Price That Is Right



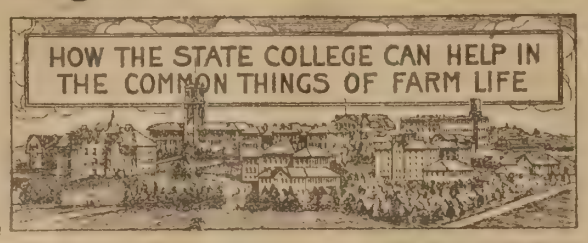
All these conditions the Weyerhaeuser products fulfill. The MOST VALUE for the PRICE CHARGED of any Grain Tank on the market. No sweating with the wooden tank. Perfect protection to grain. The WEYERHAEUSER BULK GRAIN WAY in a word is LOW as to FIRST cost, and for DURABILITY and LENGTH and PERFECTION OF SERVICE IS INCOMPARABLE.

Write Us for Folder "BULK YOUR GRAIN"--Free

Weyerhaeuser Timber Company

Manufacturers of Weyerhaeuser Grain Tanks and Granaries and of the Famous Weyerhaeuser Silos.

EVERETT, WASH.



Weyerhaeuser Granary—Built like the famous Weyerhaeuser silo. Capacities in bushels, 3000 to 8000. The granary is filled by elevator through dormer. Two spouts for drawing out grain. Doors at bottom to allow access for cleaning out floor grain, etc. Your own home elevator at low cost.

The Hinged Doors Allow Its Use for Other Purposes After Grain Is Hauled

New Washington Live Stock Ear

Time at Hand To Lay Broad and Deep the Foundations For Future of the Industry

VI.

We are on the verge of the period of animal husbandry in the state of Washington. Live stock represents a distinctive stage in the progress of agriculture and has done so in all lands and in all the historical ages. We are here and now entering upon that stage. No that we have had no live stock in the past. Herds and flocks were here before wheat. The dairy industry has had its devotees in the state of Washington for a quarter of a century. But what, with hops and fruit and wheat and range live stock at different times at in different places dominating the local situation, it is not until lately that the foundations of the real animal husbandry are being laid broad and deep. The change of system is by no means easy, and the college is a sort of clearing house through which the change may come about more easily.

There is the whole problem of feeding which must be economically done, if feed is to be turned into meat or milk or energy in the most economical and profitable way. What is the relative value of roots and grains and the different legumes and grasses? What function does each of the types of feed perform and what feeds are especially adapted to the particular region in which the farmer lives? What balance must be maintained among the feeds and what is the cheapest feed to buy to supply the particular deficiency? for in every region there is a surplus of this kind and a shortage of that. For given results, what quantities of the different kinds of feed, such as ensilage or roots should be provided.

The college men can help you in these problems, no matter how small your farm may be.

The ordinary bulletins will help you, and when you are puzzled to understand the subject on which you desire information, ask for specific help. For example: You have determined to feed for the market a carload of steers. You write to Professor Hislop as follows: "I live at such a place. I desire to feed a carload of steers, 2 or 3 years old, as the case may be, which I now have or expect to buy. I have an abundance of alfalfa. The steers are fat and I would like to turn them off, if the market is right, about such a time. The possible concentrated feeds are at such and such a price. What quantity of alfalfa and what of concentrates shall I feed, and how shall I increase it from time to time?"

Not only will you get help in this matter, but it is possible for you to keep the professor advised of the progress of events, for the sake of additional help or suggestions which he may make.

In the matter of breeding you may need and can have similar help from the college for the asking.

E. A. BRYAN.

NEXT WEEK IN THE FARMER DR. BRYAN WILL TAKE UP THAT MOST IMPORTANT SUBJECT OF FARM MANAGEMENT. IT IS INTERESTING TO NOTE THAT THE IMPORTANT DIVISION OF THE UNITED STATES DEPARTMENT OF AGRICULTURE ON FARM MANAGEMENT ORIGINATED WITH A WASHINGTON STATE COLLEGE MAN, PROFESSOR W. J. SPILLMAN.

"EGG CIRCLE"

Is Formed by Poultry Growers.

Chester C. Farr, county agricultural agent for Snohomish county, reports the formation of an "egg circle," made up of some 25 Snohomish county poultrymen. By selling all of their eggs through the one sales channel, the egg circle people are enabled to get from 2 to 5 cents per dozen premium on the product.

Mr. Farr reports, also, the formation of two potato clubs, one in connection with the Snohomish County Fruitgrowers' association, the other organized as an agricultural development committee of the "community club" by some of the producers near Granite Falls. Dr. W. W. Goodrich is president, J. H. Curtis vice president and W. R. Farr secretary-treasurer of the latter organization. Both potato clubs have adopted the long white potato as their standard, and will attempt to help their communities turn out a uniform market potato.

SMUTTY WHEAT

Is Opposed to "Sample Grade."

The Portland Merchants' exchange has gone on record as strongly opposed to the grading of smutty wheat as "sample grade" by the federal grain standardization bureau, and recommends "that such grain, after cleaning, take the grade to which it is entitled on basis of moisture test, weight test and other grade specifications, the dockage for smut to be shown on certificate of grade."

FARM LOAN OFFICES.

The members of the Farm Loan association of Brewster, Okanogan county, have signed up for $36,400, this amount will at least be doubled if it continues to grow as rapidly as it has the last few days. The following officers are elected to head the new organization: L. E. Price, president; A. F. Holden, vice president; A. E. Holden, secretary-treasurer. The board of appraisers are L. E. Price, U. H. Myers and J. M. Terry. The directors are: M. D. Smith, A. F. Holden, J. M. Wilson, F. E. Thompson, John Gordon, J. M. Terry, U. H. Myers and L. A. Dale.

Pit Silo

Was Built in Sand 30 Feet Deep

To the Editor of the Washington Farmer: I noticed in the issue of February 22, 1917, an article on pit silos, in which the writer says if there is sand or gravel where a pit silo is to be dug it will not work.

I built a pit silo two years ago right in pure sand, 30 feet deep. The way I did it was to plaster it from the top down as we took out the sand. I first built a wooden mold 12 feet in diameter and leaving a space of six inches and leaving the outer row of staves six inches shorter. This makes a rim or curb 12 feet in diameter, six inches thick, with a footing of 12 inches wide and three inches thick. Next a building was built over the curb and a hay carrier installed. We had a big mining bucket to take out the sand with. We dug down two feet in solid formation and only a foot a day in loose formation and plastered up what we dug out the same day. The plaster was made of screened sand two parts and cement one part. After we were down 50 feet and four inches we put in a concrete bottom. Next the silo was painted with a mixture of cement and water, about equal parts.

To remove the ensilage we had a bucket made of sheet iron about three feet and six inches in diameter by three feet and eight inches deep. It was hung with two rods and a timber, the rods being fastened about 18 inches from the bottom at each side of the bucket. This gives it a hang about the same as a barrel churn and makes it easy to empty. The wooden beam and the rods taking the place of the barrel churn stand. We take out about 800 pounds of ensilage at a pull. We use a hay rack with a tight bottom to deliver the silage to the feeding troughs.

FRED ERFURTH.

Miles, Wash.

Rare Luxury of Shower Baths for the McLeod Jerseys

This is a view of the McLeod dairy home near Bellingham. In the center, toward the back of the picture, is to be seen the small bungalow built by Mr. McLeod in order that his farm help may enjoy actual home life. There are in reality, therefore, two homes supported by his 10 acres.

By BECKY BJERKE.

A particularly important feature of the barn equipment of the McLeod dairy near Bellingham is the arrangement of a water system whereby a cow can be given a shower bath if she comes in muddy. City water is piped into the barn. For every two cows there is a faucet to which a hose it attached for washing down.

Just eight years ago David McLeod purchased 10 acres of uncleared land three miles from the heart of the business district of Bellingham, Wash., erected a small house for his family and built a small barn for his three cows, horse and small covered buggy. He began his dairy business by delivering three quarts of milk on a Wednesday morning. By Saturday every pint that he had to sell from his three cows was spoken for.

Mr. McLeod cleared the land and put it under cultivation as early as possible. He used care in the selection of his cows, in breeding, in handling the milk, in arranging for a permanent feed supply and in every business detail.

Business Methods Pay.

The result of these efforts are evidenced by the success of the business. The state dairy inspector recently graded the dairy at 92 1-2 per cent, the highest in the county, and one of the few over 90 per cent dairies of the state.

From the small beginning of three cows Mr. McLeod has built up a dairy milking 24 cows daily, all Jersey breed. No cow is "boarded" that does not produce at least 7000 pounds of milk a year. One cow has given 10,000 pounds of milk for two years, and is still holding her record.

Every foot of Mr. McLeod's 10 acres is under cultivation, oats, peas, vetch, and corn all being grown for filling the silo. A modern eight-room house has been built, with hot and cold water, bath, laundry, built-in cupboards, large pantry, storeroom, and wired for electricity.

A cozy three-room bungalow has been built on the place for the hired man and his wife.

The cow barn is a model of cleanliness. It is well lighted and well ventilated. The stalls have wooden floors, Mr. McLeod believing that cement floors are too cold for cows to lie upon. The side walls and wide passages are of cement.

Each day, now by auto delivery, Mr. McLeod delivers 55 gallons of milk to Bellingham consumers. He is known as the Bellingham babies' dairyman because he has more babies on his route than any other dairyman in the county. Last year while Whatcom county was experiencing the worst storm of years and traffic of all kinds was at a standstill for weeks, he saw that every baby on his route had its daily fresh milk.

Sturges Steel Churns

Make Butter With Ease

Drawn steel barrel—smooth as a bowl—easy to clean. Cannot soak up moisture—saves work and time. Just what every housewife wants. Good for a lifetime use. Beautifully finished in red and blue. Ask your dealer or write us for circular No. 28X

Sturges & Burn Mfg. Co.
508 South Green Street

Live in the Country

And No Anti-Alien Law Will Be Needed

By PAUL E. TRIEM

On a rich and prosperous little farm west of the Cascades, which once supported a man and his wife, their sons and daughters and from one to four hired men, a little brown, silent couple from across the Pacific are now doing all the work that is being done. They are tenant farmers, thrifty, law-abiding, unobtrusive—and yet they are not commonly considered a real asset to the neighborhood. They and others of their kind have come in, one by one, till many of the farms in the region are leased and operated by the Japanese.

Let us pause again to call attention to the industry, the frugality and the unobtrusiveness of these little brown men and women. In so far as these qualities go they are ideal neighbors. But their ideals are not our ideals, and under conditions which, partially through their choice and partially through the restrictions of our laws, make it impossible for them to become citizens, their economic position is that of skimmers of the virgin fertility from some of our most valuable lands. And this undesirable function they perform in several ways.

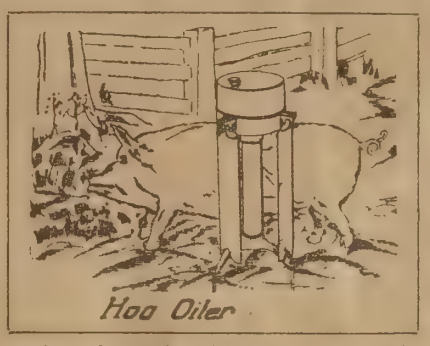
It is to the interest of every tenant farmer, for instance, no matter what his nationality, to get the greatest present profit from the land he is working. This makes against the maintenance or increase of soil fertility—has been found to do so unmistakably in older communities than ours. Of even greater though less conspicuous importance, however, is the change in social and community conditions, occasioned by the immigration of a class whose sole ideal is to get ahead financially. The effect is noticeable in the very front yards of these rented places, from which every vestige of beauty, every flower and shrub, every touch of the loving hand of the home builder, has been shorn away. It is not that these alien farmers do not love beauty—they come from one of the most artistic nations in the world. But they are here to make money, as we understand and value it. Children old enough to work in the field go out in the morning and toil down the long rows beside father and mother. The little ones too young for this are left penned in the house, or idling about by themselves in the back yard.

> Teach the land owner the high privilege of country living—and this matter of alien farming will adjust itself without the enactment of laws prejudicial to the amity of nations.

This question of the economic intermingling of two races essentially alien is not one to be solved by hasty laws, breathing the race hatred of their creators. It is in the final analysis a community problem, to be solved by community education and community cooperation.

Teach the land owner the high privilege of country living; teach him to farm at a profit, and to make a real home, not merely a habitation in the country. Teach him, if he is too blind or too selfish to consider these things, that the inevitable result of a general influx of peoples of lower social and domestic ideals than our own must be to lower land values and the rentals from land; with such an educational campaign as this the matter of alien farming will adjust itself without the enactment of any laws prejudicial to the amity of nations.

There is much for us to learn from these brothers of a darker hue— industry and frugality and content with wholesome employment among other things; but in learning these lessons we must not be blind to the danger of lowered ideals and living conditions. Social gravity is as inexorable as is physical gravity, and it is only by constant watchfulness that an individual or a nation is able to maintain and gradually to increase its nobility of character, its true "civilization."

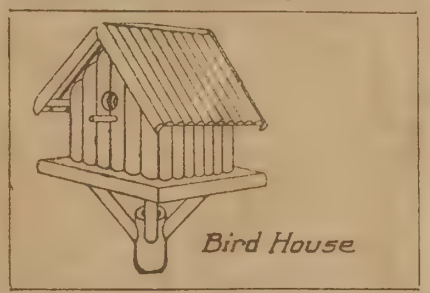


"Spacious and fair is the world; yet, oh! how I thank the kind heavens
That I a garden possess, small though it be, yet mine own.
One which enticeth me homewards; why should a gardener wander?
Honor and pleasure he finds, when to his garden he looks."—Goethe.

Inventions

By C. J. LYNDE, Macdonald College, Quebec.

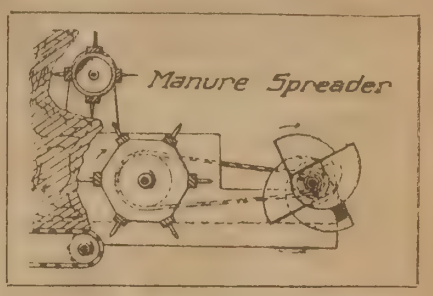
Hog Oiler.



Each rubbing post of this oiler is connected at the top with a plunger, which is forced in when the hog rubs

against the post. This movement sends a charge of oil over the plunger and down the outer face of the post to the hog's back.

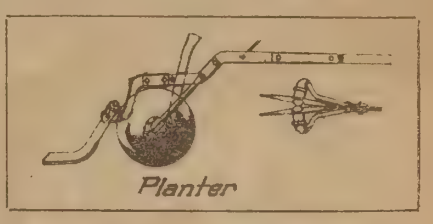
Bird House.



A good birdhouse should be well ventilated, cool and somewhat moist; otherwise, the young birds do not thrive. These desirable qualities are

obtained here by making a double house; the inside house has a slat bottom and a water-tight roof; the outer one is covered with bark to exclude heat, but is not water tight.

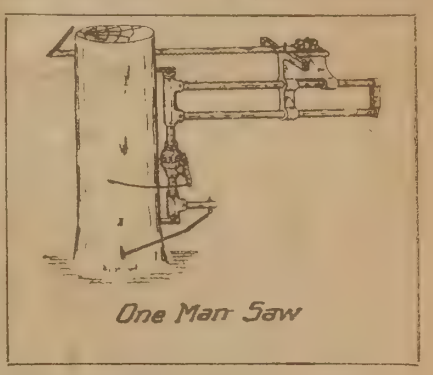
Spreader Attachment for Fertilizer Distributers.



The new feature here is the rear spreader, which has oblique blades and is so placed that the greater part of

the manure thrown back by the beaters falls on these blades and is spread laterally. The blades are so curved that the straw does not cling to the front edge.

Planter.



The advantage claimed for this planter is that the seed is dropped in front of the axle of the furrow-

opening disks and thus falls into the furrow before loose earth can roll in.

Timber Felling Mechanism.

This device enables one man to fell a tree. The carrier at one end of the saw slides on a guide which is

free to swing horizontally against the tension of springs. The pull of the springs tends to swing the saw out of action and thus produce a desirable springy cut.

A Group of Men and Boys Interested in Solving the Problems of Farm Power

The above photograph was taken before the Holt building in Spokane, Wash., during the "winter school" at which about 300 farmers assembled to study the caterpillar in its application to farm power problems.

Ups and Downs of a Bunch Grass Boy

By JOE L. ASHLOCK

(Copyright, 1917, Joe L. Ashlock.)

CHAPTER III.

DURING the first year or two on our Big Bend farm, nearly 25 years ago, our nearest neighbor, William Bundschue, lived five miles away. From this place we hauled water from an 80-foot well. Father dug a well and struck water at 56 feet. Then Tom Kirkland moved in a mile south. With well water of our own and a neighbor a mile away, we felt that we were living in a crowded city.

Mother and I were left on the farm one summer while father went to Walla Walla to work in the harvest fields for a "grubstake" to last through the winter. He left us with an old "squaw pony" we called Chub. Chub was the right name for this horse, which was as broad as long, almost, and so gentle that it didn't know what scare was. Uncle Sam, mother's younger brother, came out and stayed a few weeks with us, and we three, mother, Sam and I, actually rode Chub at once. Mother rode pretty well up on the horse's neck, Sam rode somewhere about the middle and I was perched, barelegged, as far back as I could get without slipping over Chub's tail.

Chub disappears from memory somehow and is replaced by Billy, a white pony specked with gray. Billy, like Chub, was gentle. He was loaned to mother and me by Jim Odgers, then editor of the Coulee City News, and afterward editor of a paper in Davenport.

The first real "cayuse" I had was Rowdy. This was when I was 11 or 12, I think. Father bought Rowdy from Tom Ferguson, a pioneer stockman of the Grand Coulee country, who, in turn, had gotten the horse out of Chief Moses' band. Rowdy bore the triangle-dot brand of the Indian chieftain. He had one eye that was white, a buckskin hide, a streak of black down his spine, a snort like a fire engine, and beneath his tame exterior there lurked a hive of devils. He was a pretty serious proposition for a 12-year-old boy without a saddle and only a rope bridle.

Rowdy was my first and greatest teacher, I think. He taught me courage, persistence, coolness, quick-thinking and actual cunning of a kind to match his. Time and again he pitched me over his head or slipped from under me. Going at a swift gallop, he would shy at something unseen by me, whirl about like a top and take the back trail with the speed of a cannon ball. Often he left me in the trail behind. Once he did this and father caught him a month afterward on another range, 25 miles away. I do not think my parents realized how much this cayuse punished, actually terrorized, me. He was gentle and trustworthy as a kitten when handled by a grownup and they laughed at me when I said he was wild.

Growing up without brothers, sisters or playmates, I came to regard my ponies, the cattle, and the horses as companions. Coyotes were enemies. So were badgers, for they dug holes into which swiftly running cayuses often fell, to the sorrow of horse and rider. Badger holes were a terror of the range. Every cowboy who rode the hills lived in fear of badger holes, and felt that sooner or later it would be his turn to go into one. We did not fear the open-mouthed holes particularly, for a horse could see them, and quite invariably would leap them safely. But the badgers had a vicious habit of running a burrow close to the surface of the ground, and occasionally threw up "mounds" which were perforated in many directions with their burrows. These mounds would cave in under the flying hoofs of a pony. Striking a badger mound, horse and rider would go down with the quickness of an explosion. In such a case the great dread was that one would be struck by the saddle horn as the horse rolled over him. The boys were amazingly lucky, however. I myself never got anything worse than a hard squeeze and a bad scare as the pony rolled over me.

The summer I was 13 mother and father, after many debates as to the safety of their plan, left me alone on the place while they drove overland one hundred and seventy miles to the Walla Walla valley for a load of dried fruit—principally prunes, peaches and apples, with a less amount of canned fruit. I had my dog, two cats, a pony, a good sized flock of chickens, some pigeons and a 22-calibre rifle with which to amuse myself while they were gone. I had a little money, 50 cents or a dollar, maybe, which I spent for ammunition.

For a long time I milked the six cows morning and evening, put the milk away in the cellar, skimmed off the cream and fed the skimmed milk to the chickens and calves, reserving the cream for myself and dog. The cats were catching squirrels and I judged they could get along without any cream.

I thought with some satisfaction when I began to run things on the ranch that now, for once, my dog and I would have all the cream we wanted. We did. I gave Shep his cream in a gallon can, filling it half full at times. At first he would wag his tail joyously when he saw the cream can coming. Then he ceased to wag it. By and by when he saw the can half full of rich cream sitting before him he would look at me with reproach in his soft brown

(Continued on page thirty.)

Hang Contest Editor!

Ouch! Discovered at Last! A Plea for Mercy

By THE CONTEST EDITOR

Indictment On Four Counts.

To the Contest Editor:

I have been figuring on going into your contest, but finding out that you are running a skin game you will never get one cent from me. You didn't think anyone would ever figure up more than one of your puzzles. Now I have got proof enough to hang a man like you, and, more than that, you will never get another subscription from me.

Your February 23rd puzzle answer was 6873.

Your February 20th puzzle answer was 6991.

Your January 23rd puzzle answer was 6989.

Your March 6th puzzle answer was 6945.

And we lost one of the dates for which the puzzle answer was 6943. Now if you call that a fair deal—nit!

ARTHUR LAMB.

Stites, Idaho.

The foregoing letter is published to give our more good-natured contestants a fair idea of the trials and tribulation of a Contest Editor.

Enclosed with the above letter were four copies of the puzzle chart from which the Contest Editor's traducer had made the counts which are given in his letter.

Now, just a word with Arthur. You say that it was never calculated that anyone would figure up all the charts as they appeared from week to week. The fact is, Arthur, that more than 200 of our contestants did total every chart, and more than half of that number arrived at the same conclusion on every count, as will be shown by the report of the contest soon to be published. And not one of them ever found the same total in any case that you give in your charges of dark and devious methods.

The truth is, Arthur, that three of the charts which you enclose as clipped from the paper, were printed from precisely the same plate and the fourth chart was engraved from the same drawing from which the others were made.

What shall we do about it, Arthur? We are anxious to satisfy you as to our integrity because we suspect that down around your home town you are probably known as a pretty fairminded type of citizen, and, maybe, one of the last persons in the community to think ill of your neighbors. Tell us, will you, what we shall do about it? Shall we accept your conclusions as given above, or shall we find consolation in the verdict of the other two hundred well-meaning contestants who have counted all the charts, reported their findings and never thought of charging us with a crime.

We might refer you, Arthur, to some of your neighbors about Stites, who have obtained results which agree perfectly with what we hold to be the correct solution.

Did it ever occur to you, Arthur, that there might have been anything wrong with your mathematics? Now be fair. Do you think your figures are infallible? We don't want your money, but we desire to know because, really, we are anxious to rehabilitate ourselves in your good estimation.

Had Nice Time, Haven't We?

Well, any way the contest is over and just as soon as the tie-deciding puzzles, made necessary by the rather large number giving the correct solution, are returned the results will be published and the prizes awarded.

The Contest Editor has enjoyed it because, let it be understood, there have not been many letters received like the one which heads this column. Our contestants—more than 3000 of them—have been good-natured, warm-blooded folks who have made the Contest Editor feel like quitting this old city job and getting back to the farm again among "regular" people. Many of them have said in submitting their solutions that in event they did not win they felt that the Farmer was worth all they had paid, and that they particularly appreciated the low subscription price for which they have been able to obtain the best farm journal in America, a special rate put into effect for the purposes of this contest.

This contest has been a great get-together meeting, and the Contest Editor feels like he had shaken the hand of everyone of you, although he has met personally less than a half-dozen of those competing. Thank you, and may we meet again.

FIGURED AND FIGURES.

Friends and family I could not muzzle,
But every week I figured that puzzle.
My first and lowest figure was six-nine-five-four;
When I counted again behold I found some more.
The largest number that I found was six-nine-seven-one,
To be that much out, believe me, that's no fun.
Three numbers each I figured alike;
Now tell me, dear friends, which one is it like.
To be sure I send them in all three,
The editor to answer that question for me.
Once I counted one-two-two-one numbers in that chart,
I did not know if I was right or if I was some short.
I tried again and found one-two-two-two;
That looks to me like if it was true.
Girls and boys, don't get the blues,
But settle down and figure the tows.
I got one-two-eight twos the first time;
The second time I found one hundred and twenty-nine.
Please go ahead and figure the threes;
It seems like counting a swarm of bees.
My first is two-nine-three, the second two-nine-four,
So I will send each, one,three and four.
Number four will be next in order;
There are seventy-three without a border.
Dear friends, from the fives you can't get free;
For weeks the fives played a game with me.
But at last I have conquered thee,
Of the same two hundred and six I see.
Number six that plays no trix—
It's no trouble to count the six—
Eighty-three, that one is done;
To count the sevens, that's no fun.
I have found one hundred and ninety-one;
In my opinion that's a fine sum.
Here it goes for number eight;
Eighty-five, and that's no fake;
This is not all, but here comes the nine,
Two hundred and fifty-one times nine,
Is the finish of this rhyme.

MATHILDA DIEDRICH.

Jerome, Idaho.

MOUSE TRAVELS HOW FAST?

To the Contest Editor: In the Farmer of March 1 I see it stated that a fly in proportion to its size walks 13 times as fast as a man can run.

This leads me to an experience I had yesterday on a trip to Nine Mile to get my mail.

As the day was pleasant and sleighing never better, after having proceeded on our trip about four miles, the horses trotting leisurely along, I noticed a field mouse running ahead of the off horse on the hard and well-beaten smooth path made by the sleigh runners.

I drew my companion's attention to the mouse ahead of the horse, and urged the team on a little faster. It was now that the real sport began. Mr. Mouse began to run for dear life, finally climbing up out of the sleigh track up the snow bank and made for tall timber.

As eyewitnesses we could follow him for 40 or 50 rods. Not being in possession of a speedometer we could not tell how fast we were going, but judge at the rate of five or six miles per hour. I presume that by consulting the encyclopedia the speed would be obtainable.

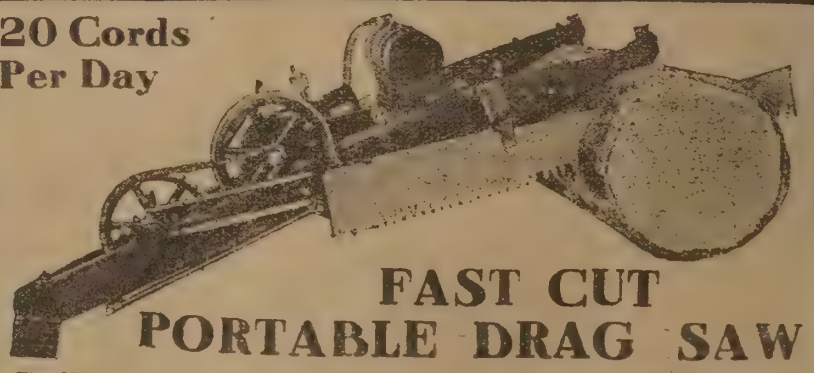
This might be a good question for the Contest Editor, should he be short of material.

We find the Farmer very instructive as well as amusing. Especially the 60 contest questions keep up a guessing. In our neighborhood meetings invariably the first question is, "Have you entered the Farm Information contest?"

"To be sure I have, but am puzzled on the 24th question."

"Why, that's an easy one—it's a 'jay.'"

In this way we all learn something to improve our knowledge. By running up against what seems incomprehensible we are made wise.



E. W. F. GIESSELMAN.

All the World's a Stage, and All the Men and Women Merely Players

Claims $25,000,000.

Above is the photograph of the former Colombian president, General Raphael Reyes, who has arrived in Washington, D. C., to press the claim of his country for $25,000,000 for the loss of land necessitated by the Panama canal. General Reyes is of the opinion that the money should be paid promptly.

Millionaire Yachtmen to Aid Navy

Frank D. Roosevelt, in the center of the above picture, is the first assistant secretary of the navy and has enlisted the aid of scores of millionaire yachtmen and shipping men of New York, as well as many tugging, towing and wrecking companies and maritime departments of great railroads for submarine defense in the event of hostilities between the United States and Germany. In the above group is shown: Upper left hand corner, C. L. Poor; lower left, Vincent Astor; upper right, Robert E. Tod, and lower right, P. A. S. Franklin.

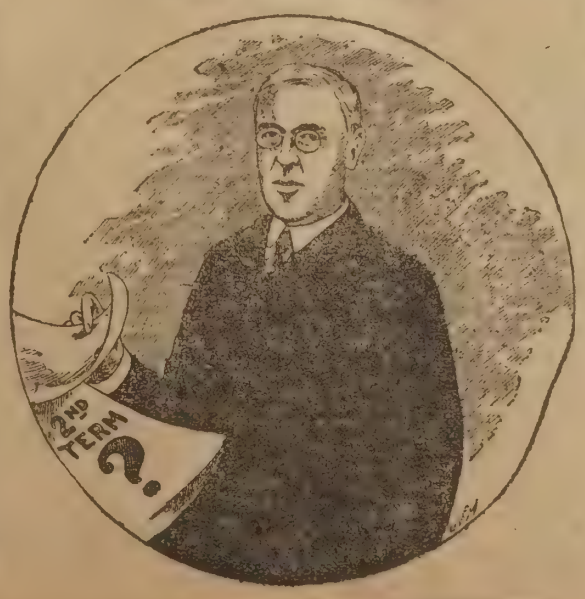
Kaiser's Chief Adviser.

Americans arriving from Berlin, who were in a position to see what was taking place behind the screen, regard General von Ludendorff, the first quartermaster general of the German imperial army, as the person most responsible for the German policy. General von Ludendorff, the Americans say, appears to have the brain that conceives the military plans.

Relieving the New York Militia

The above photograph shows the police boats which have been put in charge of the bridge guarding in New York. Note the powerful machine gun on the deckhouse. On the lower deck the ship is equipped with one-inch rapid-firing guns and two more machine guns like the one in the photograph.

Women of the Ghetto Battle With Police



Spurred on by anarchistic speeches of their leaders, more than 1000 women and boys of the Ghetto swarmed down on New York city hall and attempted to force an audience with the mayor in an effort to lower the prices of food. After numerous arrests the riot which had assumed serious proportions, was finally stopped.

6971 Is the Correct Solution in the Figure Puzzle

All those who submitted the correct solution of the first puzzle are entitled to submit a solution of the second. As more contestants are tied on the solution of the first puzzle than there are prizes, all those who submitted any other than the correct solution are eliminated. Two extra charts will be mailed to those who are eligible to entry in second puzzle. Only one solution of the second puzzle may be submitted. Once submitted the solution can not be changed. Solutions of this puzzle must be forwarded not later than April 3, 1917, as shown by postmark on envelope. In event of ties on this problem a third problem will be submitted and should there be ties on it each tied contestant will receive the full amount of the prize tied for.

THIS IS THE SECOND, OR TIE DECIDING PUZZLE.

START YOUR LINE ON THIS SIDE OF CHART

THE PROBLEM

The problem is to draw a continuous line through the greatest number of dots.

You must begin at a dot on the extreme left hand side of the chart.

Each section of the line must pass through at least three dots before branching off into another direction.

The dot where the line changes its direction is to be counted as the first dot in the part of the line you are then drawing as well as the third, or last, dot in the preceding section. In summing up the total number of dots your line passes through, however, merely count this dot as one. Invariably follow the dotted lines.

The direction of your line must be changed only at the point where there is a dot, and not at an intersection of two dotted lines where there is no dot.

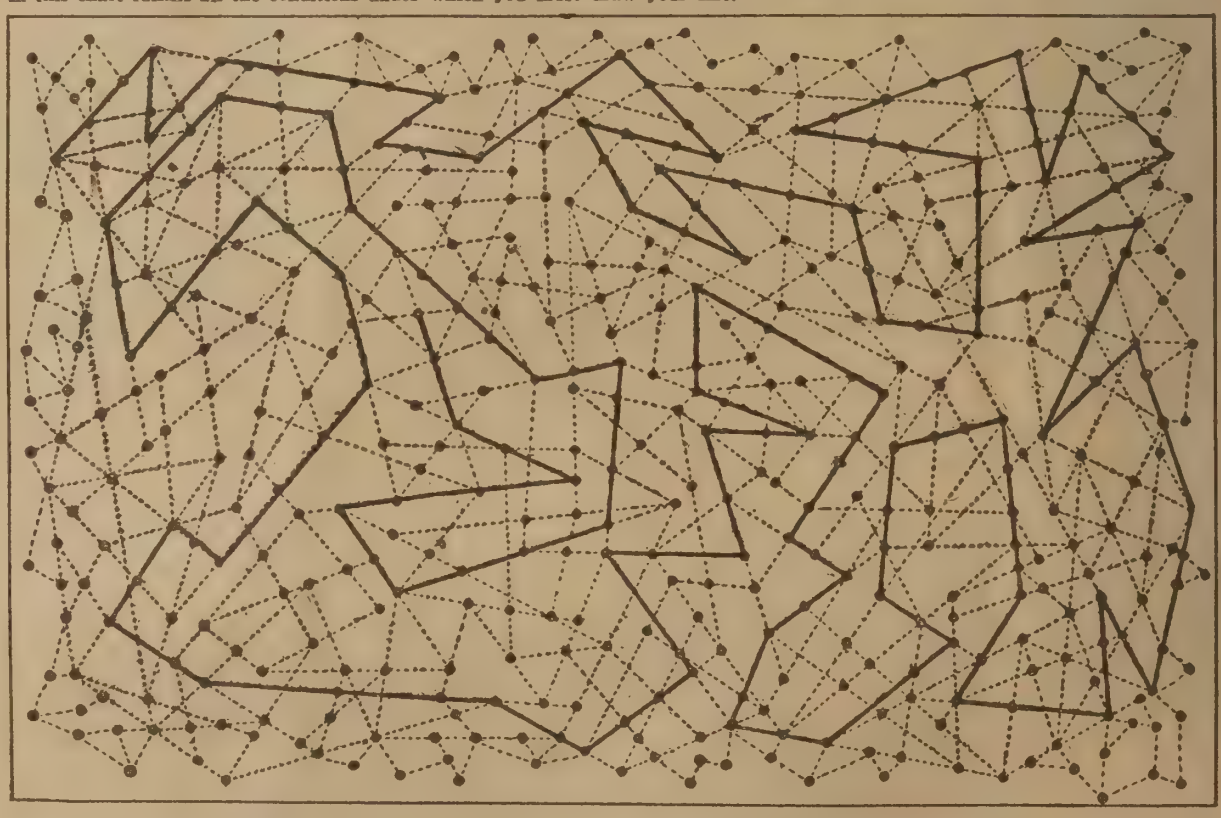
If you do not follow a dotted line for its full length, when you enter upon it, the remaining part of that dotted line can not be used or followed again, even though you enter upon it at the opposite end, or at any intermediate point of such intersection. The dot at any intersection belongs to either line until the line being drawn passes through it in one direction or the other.

This last rule, however, does not prevent your following a dotted line which intersects the unused part of another dotted line and counting the dot that may be at the point of such intersection. The dot at any intersection belongs to either line until the line being drawn passes through it in one direction or the other.

Your line must not touch any dot more than once. It must not cross itself or be anywhere retraced.

The points where you start and end must not be connected.

Draw your line so it will not wholly obliterate the dotted line it follows.



Any solution not conforming to these rules will be regarded as incorrect, and any error in stating the number of dots the line passes through will make a solution void.

The winning charts will be subject to inspection after the awards are announced.

SHOULD TWO TIED CONTESTANTS WHO ARE ASSOCIATED IN BUSINESS TOGETHER, PERSONALLY ACQUAINTED, OR WHO HAVE HAD ANY COMMUNICATION IN REGARD TO THIS PROBLEM. SUBMIT THE SAME SOLUTION, AND NO ONE ELSE SUBMITS ONE SIMILAR TO IT, ONE PRIZE ONLY WILL BE AWARDED TO THOSE SUBMITTING THE SOLUTION, IF IT BE A PRIZE WINNER, UNLESS THEY CAN SHOW CONCLUSIVELY THEY WERE NOT AWARE THE OTHER OR OTHERS WERE WORKING ON IT, AND THEY HAD NO ACCESS TO EACH OTHER'S WORK.

Send blank and chart in a sealed envelope to Contest Editor, The Washington Farmer, Review Bldg., Spokane, Wn. Do not send working papers unless called for, or enclose any letters or notes.

The small chart below is printed for the purpose of giving a practical illustration of how the line shall be drawn. The line in this chart fulfills all the conditions under which you must draw your line.

Read This Carefully

This blank must be attached to the chart after you have drawn your line across it, and the two forwarded to the Contest Editor. Do not forward this entire advertisement, but cut out the chart neatly and this blank around the border and place them in a sealed envelope, whether delivered in person or mailed to the Contest Editor. The two, should be pinned together.

Solution Blank

To The Farmer Contest Editor:

Having submitted 6971 as the solution of the first puzzle, I herewith submit my solution of the second puzzle, as follows:

Total dots connected .....

Name ..... **Address** .....

IMPORTANT NOTICE: State below the exact amount you paid in connection with the solution 6971. Do not include what was paid with any other solution, if you submitted any other.

Amount paid with 6971.

WHEN KNIGHTHOOD WAS IN FLOWER

or, the Love Story of Charles Brandon and Mary Tudor, the King's Sister, and Happening in the Reign of His August Majesty, King Henry the Eighth.

By EDWIN CASKODEN (Charles Major).

Copyright, 1898, The Bobbs-Merril Co.

CHAPTER XII.

I had not been long in the room when a knock at the door announced the girls. I admitted them, and Mary walked to the middle of the floor. It was just growing dark and the room was quite dim, save at the window where Brandon sat reading. Gods! those were exciting moments; my heart beat like a woman's. Brandon saw the girls when they entered, but never so much as looked up from his book. You must remember he had a great grievance. Even looking at it from Mary's side of the case, certainly its best point of view, he had been terribly misused, and it was all the worse that the misuse had come from one who, from his standpoint, had pretended to love him, and had wantonly led him on, as he had the best of right to think, to love her, and to suffer the keenest pangs a heart can know. Then you must remember he did not know even the best side of the matter, bad as it was, but saw only the naked fact, that in recompense for his great help in time of need, Mary had deliberately allowed him to lie in that dungeon a long, miserable month, and would have suffered him to die. So it was no wonder his heart was filled with bitterness toward her. Jane and I had remained near the door, and poor Mary was a pitiable princess, standing there so full of doubt in the middle of the room. After a moment she stepped toward the window, and, with quick-coming breath, stopped at the threshold of the little passage.

"Master Brandon, I have come, not to make excuses, for nothing can excuse me, but to tell you how it all happened—by trusting to another."

Brandon arose, and marking the place in his book with his finger, followed Mary, who had stepped backward into the room.

"Your highness is very gracious and kind thus to honor me, but as our ways will hereafter lie as far apart as the world is broad, I think it would have been far better had you refrained from so imprudent a visit; especially as anything one so exalted as yourself may have to say can be no affair of such as I—one just free of the hangman's noose."

"Oh! don't! I pray you. Let me tell you, and it may make a difference. It must pain you, I know, to think of me as you do, after—after—you know; after what has passed between us."

"Yes, that only makes it all the harder. If you could give your kisses——" and she blushed red as blood—"to one for whom you care so little that you could leave him to die like a dog, when a word from you would have saved him, what reason have I to suppose they are not for every man?"

This gave Mary an opening of which she was quick enough to take advantage, for Brandon was in the wrong.

"You know that is not true. You are not honest with me nor with yourself, and that is not like you. You know that no other man ever had, or could have, any favor from me, even the slightest. Wantonness is not among my thousand faults. It is not that which angers you. You are sure enough of me in that respect. In truth, I had almost come to believe you were too sure, that I had grown cheap in your eyes, and you did not care so much as I thought and hoped for what I had to give, for after that day you came not near me at all. I know it was the part of wisdom and prudence that you should remain away; but had you cared as much as I, your prudence would not have held you."

She hung her head a moment in silence; then, looking at him, almost ready for tears, continued: "A man has no right to speak in that way of a woman whose little favors he has taken, and make her regret that she has given a gift only that it may recoil upon her. 'Little,' did I say? Sir, do you know what that—first—kiss was to me? Had I possessed all the crowns of all the earth I would have given them to you as willingly. Now you know the value I placed on it, however worthless it was to you. Yet I was a cheerful giver of that great gift, was I not? And can you find it in your heart to make of it a shame to me—that of which I was so proud?"

She stood there with head inclined a little to one side, looking at him inquiringly as if awaiting an answer. He did not speak, but looked steadily at his book. I felt, however, that he was changing, and was sure her beauty, never more exquisite than in its present humility, would yet atone for even so great a fault as hers. Err, look beautiful, and receive remission! Such a woman as Mary carries her indulgence in her face.

I now began to realize for the first time the wondrous power of this girl, and ceased to marvel that she had always been able to turn even the king, the most violent, stubborn man on earth, to her own wishes. Her manner made her words eloquent, and already, with true feminine tactics, she had put Brandon in the wrong in everything because he was wrong in part.

Then she quickly went over what she had said to me. She told of her great dread lest the king should learn of the visit to Grouche's and its fatal consequences, knowing full well it would render Henry impervious to her influence and precipitate the French marriage. She told him of how she was going to the king the day after the arrest to ask his release, and of the meeting with Buckingham, and his promise.

Still Brandon said nothing, and stood as if politely waiting for her to withdraw.

She remained silent a little time, waiting for him to speak, when tears, partly of vexation, I think, moistened her eyes.

"It is my turn to ask forgiveness.

"Tell me at least," she said, "that you know I speak the truth. I have always believed in you, and now ask for your faith. I would not lie to you in the faintest shading of a thought—not for Heaven itself—not even for your love and forgiveness, as much as they are to me, and I want to know that you are sure of my truthfulness, if you doubt all else. You see I speak plainly of what your love is to me, for although, by remaining away, you made me fear I had been too lavish with my favors—that is every woman's fear—I knew in my heart you loved me; that you could not have done and said what you did otherwise. Now you see what faith I have in you, and you a man, whom a woman's instinct prompts to doubt. How does it compare with your faith in me, a woman, whom all the instincts of a manly nature should dispose to trust? It seems to be an unwritten law that a man may lie to a woman concerning the most important thing in life to her, and be proud of it, but you see even now I have all faith in your love for me, else I surely should not be here. You see I trust even your unspoken word, when it might, without much blame to you, be a spoken lie; yet you do not trust me, who have no world-given right to speak falsely about such things, and when that which I now do is full of shame for me, and what I have done full of guilt, if inspired by aught but the purest truth from my heart of hearts. Your words mean so much—so much more, I think, than you realize—and are so cruel in turning to evil the highest, purest impulse a woman can feel—the glowing pride in self-surrender, and the sweet, delightful privilege of giving where she loves. How can you? How can you?"

How eloquent she was; It seemed to me this would have melted the frozen sea, but I think Brandon felt that now his only hope lay in the safeguard of his constantly upheld indignation.

When he spoke he ignored all she had said.

"You did well to employ my lord of Buckingham. It will make matters more interesting when I tell you it was he who attacked you and was caught by the leg under his wounded horse; he was lame, I am told, for some time afterward. I had watched him following you from the gate at Bridewell, and at once recognized him when his mask fell off during the fight up by the wall. You have done well at every step, I see."

"Oh, God! to think of it! Had I but known! Buckingham shall pay for this with his head; but how could I know? I was but a poor, distracted girl, sure to make some fatal error. I was in such agony—your wounds— believe me, I suffered more from them than you could. Every pain you felt was a pang for me—and then that awful marriage! I was being sold like a wretched slave to that old satyr, to be gloated over and feasted upon. No man can know the horror of that thought to a woman—to any woman, good or bad. To have one's beauty turn to curse her and make her desirable only—only as well-fed cattle are prized. No matter how great the manifestation of such so-called love, it all the more repels a woman and adds to her loathing day by day. Then there was something else worse than all"—she was almost weeping now—"I might have been able to bear the thought even of that hideous marriage — others have lived through the like—but—but after—that—that day—when you—it seemed that your touch was a spark dropped into a heart full of tinder, which had been lying there awaiting it all these years. In that one moment the flame grew so intense I could not withstand it. My throat ached; I could scarcely breathe, and it seemed that my heart would burst." Here the tears gushed forth as she took a step toward him with outstretched arms, and said between her sobs: "I wanted you, you! for my husband—for my husband, and I could not bear the torturing thought of losing you or enduring any other man. I could not give you up after that—it was all too late, too late; it had gone too far. I was lost! lost!"

He sprang to where she stood leaning toward him, and caught her to his breast.

She held him from her while she said: "Now you know—now you know that I would not have left you in that terrible place, had I known it. No, not if it had taken my life to buy your freedom."

"I do know; I do know. Be sure of that; I know it and shall know it always, whatever happens; nothing can change me. I will never doubt you again. It is my turn to ask forgiveness now."

"No, no; just forgive me; that is all I ask," and her head was on his breast.

"Let us step out into the passageway, Edwin," said Jane, and we did. There were times when Jane seemed to be inspired.

When we went back into the room Mary and Brandon were sitting in the window-way on his great cloak. They rose and came to us holding each other's hands, and Mary asked, looking up to him:

"Shall we tell them?"

"As you like, my lady."

Mary was willing, and looked for Brandon to speak, so he said: "This lady whom I hold by the hand and myself have promised each other before the good God to be husband and wife, if fortune ever so favor us that it be possible."

"No, that is not it," interrupted Mary. "There is no 'if' in it; it shall be, whether it is possible or not. Nothing shall prevent." At this she kissed Jane and told her how she loved her, and gave me her hand, for her love was so great within her that it overflowed upon every one. She, however, always had a plentitude of love for Jane, and though she might scold her and apparently misuse her, Jane was as dear as a sister, and was always sure of her steadfast, tried and lasting affection.

After Mary had said there should be no "if," Brandon replied:

"Very well, Madame Destiny." Then turning to us: "What ought I to do for one who is willing to stoop from so high an estate to honor me and be my wife?"

"Love her, and her alone, with your whole heart, as long as you live. That is all she wants, I am sure," volunteered Jane, sentimentally.

"Jane, you are a Madam Solomon," said Mary with a tone of her old-time laugh. "Is the course you advise as you would wish to be done by?" And she glanced mischievously from Jane to me, as the laugh bubbled up from her heart, merry and soft as if it had not come from what was but now the home of grief and pain.

"I know nothing about how I should like to be done by," said Jane, with a pout, "but if you have such respect for my wisdom I will offer a little more; I think it is time we should be going."

"Now, Jane, you are growing foolish again; I will not go yet," and Mary made manifest her intention by sitting down. She could not bring herself to forego the pleasure of staying, dangerous as she knew it to be, and could not bear the pain of parting, even for a short time, now that she had Brandon once more. The time was soon coming—but I am too fast again.

After a time Brandon said: "I think Janes' wisdom remains with her, Mary. It is better that you do not stay, much as I wish to have you."

She was ready to obey him at once.

When she arose to go she took both his hands in hers and whispered: "'Mary.' I like the name on your lips," and, then glancing hurriedly over her shoulder to see if Jane and I were looking, lifted her face to him and ran after us.

We were a little in advance of the princess, and, as we walked along, Jane said under her breath: "Now look out for trouble; it will come quickly, and I fear for Master Brandon more than any one. He has made a noble fight against her and against himself, and it is no wonder she loves him."

This made me feel a little jealous.

"Jane, you could not love him, could you?" I asked.

"No matter what I could do, Edwin, I do not, and that should satisfy you." Her voice and manner said more than her words. The hall was almost dark, and—I have always considered that occasion one of my lost opportunities; but they are not many.

The next evening Brandon and I, upon Lady Mary's invitation, went up to her apartments, but did not stay long, fearing some one might find us there and cause trouble We would not have gone at all had not the whole court been absent in London, for discovery would have been a serious matter to one of us at least.

As I told you once before, Henry did not care how much Brandon might love his sister, but Buckingham had whispered suspicions of the state of Mary's heart, and his own observations, together with the intercepted not, had given these suspicions a stronger coloring, so that a very small matter might turn them into certainties.

The king had pardoned Brandon for the killing of the two men in Billingsgate, as he was forced to do under the circumstances, but there his kindness stopped. After a short time he deprived him of his place at court, and all that was left for him of royal favor was permission to remain with me and live at the palace until such time as he should sail for New Spain.

CHAPTER XIII.

The treaty had been agreed upon, and as to the international arrangement, at least, the marriage of Louis de Valois and Mary Tudor was a settled fact. All it needed was the consent of an 18-year-old girl—a small matter, of course, as marriageable women are but commodities in statecraft, and theoretically, at least, acquiesce in everything their liege lords ordain. Lady Mary's consent had been but theoretical, but it was looked upon by every one as amounting to an actual, vociferated, snorous "yes;" that is to say, by every one but the princess, who had no more notion of saying "yes" than she had of reciting the Sanscrit vocabulary from the pillory of Smithfield.

Wolsey, whose manner was smooth as an otter's coat, had been sent to fetch the needed "yes;" but he failed.

Jane told me about it.

Wolsey had gone privately to see the

(Continued from preceding page.)

princess, and had thrown out a sort of skirmish line by flattering her beauty, but had found her not in the best humor.

"Yes, yes; my lord of Lincoln, I know how beautiful I am; no one knows better; I know all about my hair, eyes, teeth, eyebrows and skin. I tell you I am sick of them. Don't talk to me about them; it won't help you to get my consent to marry that vile old creature. That is what you have come for, of course. I have been expecting you; why did not my brother come?"

"I think he was afraid; and to tell you the truth I was afraid myself," answered Wolsey with a smile. This made Mary smile, too, in spite of herself, and went a long way toward putting her in a good humor. Wolsey continued: "His majesty could not have given me a more disagreeable task. You doubtless think I am in favor of this marriage, but I am not."

This was as great a lie as ever fell whole out of a bishop's mouth. "I have been obliged to fall in with the king's views on the matter for he has had his mind set on it from the first mention by De Longueville."

"Was it that bead-eyed little mummy who suggested it?"

"Yes, and if you marry the king of France you can repay him with usury."

"'Tis an induceemnt, by my troth."

"I do not mind saying to you in confidence that I think it an outrage to force a girl like you to marry a man like Louis of France, but how are we to avoid it?"

By the "we" Wolsey put himself in alliance with Mary, and the move was certainly adroit.

"How are we to avoid it? Have no fear of that, my lord; I will show you."

"Oh! but my dear princess; permit me; you do not seem to know your brother; you can not in any way avoid this marriage. I believe he will imprison you and put you on bread and water to force your consent. I am sure you had better do willingly that which you will eventually be compelled to do anyway; and, besides, there is another thought that has come to me; shall I speak plainly before Lady Bolingbroke?"

"I have no secrets from her."

"Very well; it is this. Louis is old and very feeble; he can not live long, and it may be that you can, by a ready consent now, exact a promise from your brother to allow you your own choice in the event of a second marriage. You might in that way purchase what you could not bring about in any other way."

"How do you know that I want to purchase aught in any way, Master Wolsey? I most certainly do not intend to do so by marrying France."

"I do not know that you wish to purchase anything, but a woman's heart is not always under her full control, and it sometimes goes out to one very far beneath her in station, but the equal of any man on earth in grandeur of soul and nobleness of nature. It might be that there is such a man whom any woman would be amply justified in purchasing at any sacrifice—doubly so if it were buying happiness for two."

His meaning was too plain even to pretend to misunderstand, and Mary's eyes flashed at him, as her face broke into a dimpling smile in spite of her.

Wolsey thought he had won, and to clinch the victory said, in his forceful manner: "Louis XII will not live a year; let me carry to the king your consent, and I guarantee you his promise as to a second marriage."

In an instant Mary's eyes shot fire, and her face was like the blackest storm cloud.

"Carry this to the king: that I will see him and the whole kingdom sunk in hell before I will marry Louis of France. That is my answer once and for all. Good even, Master Wolsey." And she swept out of the room with head up and dilating nostrils; the very picture of defiance.

St. George! She must have looked superb. She was one of the few persons whom anger and disdain and the other passions which we call ungentle seemed to illumine—they were so strong in her, and yet not violent. It seemed that every deep emotion but added to her beauty and brought it out, as the light within a church brings out the exquisite figuring on the windows.

After Wolsley had gone, Jane said to Mary: "Don't you think it would have been better had you sent a softer answer to your brother? I believe you could reach his heart even now if you were to make the effort. You have not tried in that matter as you did in the others."

"Perhaps you are right, Jane. I will go to Henry."

Mary waited until she knew the king was alone, and then went to him.

On entering the room, she said: "Brother, I sent a hasty message to you by the Bishop of Lincoln this morning, and have come to ask your forgiveness."

"Ah! little sister; I thought you would change your mind. Now you are a good girl."

"Oh! do not misunderstand me; I asked your forgiveness for the message; as to the marriage, I came to tell you it would kill me, and that I could not bear it. Oh! brother, you are not a woman—you can not know." Henry flew into a passion, and with oaths and curses ordered her to leave him unless she was ready to give her consent. She had but two courses to take, so she left with her heart full of hatred for the most brutal wretch who ever sat upon a throne—and that is making an extreme case. As she was going, she turned upon him like a fury, and exclaimed:

"Never, never! Do you hear? Never!"

Preparations went on for the marriage just as if Mary had given her solemn consent. The important work of providing the trousseau began at once, and the more important matter of securing the loan from the London merchants was pushed along rapidly. The good citizens might cling affectionately to their angels, double angels, crowns and pounds sterling, but the fear in which they held the king, and a little patting of the royal hand upon the plebeian head, worked the charm, and out came the yellow gold, never to be seen again, God wot. Under the stimulus of the royal smile they were ready to shout themselves hoarse, and to eat and drink themselves red in the face in celebration of the wedding day. In short, they were ready to be tickled nearly to death for the honor of paying to a wretched old lecher a wagon-load of gold to accept, as a gracious gift, the most beautiful heart-broken girl in the world. That is, she would have been heart-broken had she not been inspired with courage. As it was, she wasted none of her energy in lamentations, but saved it all to fight with. Heavens! how she did fight! If a valiant defense ever deserved victory, it was in her case. When the queen went to her with silks and taffetas and fine cloths to consult about the trousseau, although the theme was one which would interest almost any woman, she would have none of it, and when Catherine insisted upon her trying on a certain gown, she called her a blackamoor, tore the garmet to pieces, and ordered her to leave the room.

Henry sent Wolsey to tell her that the 13th day of August had been fixed upon as the day of the marriage, de Longueville to act as the French king's proxy, and Wolsey was glad to come off with his life.

Matters were getting into a pretty tangle at the palace. Mary would not speak to the king, and poor Catherine was afraid to come within arm's length of her; Wolsey was glad to keep out of her way, and she flew at Buckingham with talons and beak upon first sight. As to the battle with Buckingham; it was short but decisive, and this was the way it came about: There had been a passage between the duke and Brandon, in which the latter had tried to coax the former into a duel, the only way, of course, to settle the weighty matters between them. Buckingham, however, had had a taste of Brandon's nimble sword play, and, bearing in mind Judson's fate, did not care for any more. They had met by accident, and Brandon, full of smiles, and as polite as a Frenchman, greeted him.

"Doubtless my lord, having crossed swords twice with me, will do me the great honor to grant that privilege the third time, and will kindly tell me where my friend can wait upon a friend of his grace."

"There is no need for us to meet over that litle affair. You had the best of it, and if I am satisfied you should be. I was really in the wrong, but I did not know the princess had invited you to her ball."

"Your lordship is pleased to evade," returned Brandon. "It is not the ballroom matter that I have to complain of; as you have rightly said, if you are satisfied, I certainly should be; but it is that your lordship, in the name of the king, instructed the keeper of Newgate prison to confine me in an underground cell, and prohibited communication with any of my friends. You so arranged it that my trial should be secret, both as to the day thereof and the event, in order that it should not be known to those who might be interested in my release. You promised the Lady Mary that you would procure my liberty, and thereby prevented her going to the king for that purpose, and afterwards told her it had all been done, as promised, and that I had escaped to New Spain. It is because of this, my Lord Buckingham, that I now denounce you as a liar, a coward and a purjured knight, and demand of you such satisfaction as one man can give to another for mortal injury. If you refuse, I will kill you as I would a cut-throat the next time I meet you."

"I care nothing for your rant, fellow, but out of consideration for the feelings which your fancied injuries have put into your heart, I tell you that I did what I could to liberate you, and received from the keeper a promise that you should be allowed to escape. After that a certain letter addressed to you was discovered and fell into the hands of the king—a matter in which I had no part. As to your confinement and noncommunication with your friends, that was at his majesty's command after he had seen the letter, as he will most certainly confirm to you. I saw this for my own sake, not that I care what you may say or think."

This offer of confirmation by the king made it all sound like the truth, so much will even a little truth leaven a great lie, and part of Brandon's sails came down against the mast. The whole statement surprised him, and, most of all, the intercepted letter. What letter could it have been? It was puzzling, and yet he dared not ask.

As the duke was about to walk away, Brandon stopped him: "One moment, your grace; I am willing to admit what you have said, for I am not now prepared to contradict it; but there is yet another matter we have to settle. You attacked me on horseback and tried to murder me in order to abduct two ladies that night over in Billingsgate. That you can not deny. I watched you follow the ladies from Bridewell to Grouche's, and saw your face when your mask fell off during the melee as plainly as I see it now. If other proof is wanting, there is that sprained knee upon which your horse fell, causing you to limp even yet. I am sure now that my lord will meet me like a man; or would he prefer that I should go to the king and tell him and the world the whole shameful story? I have concealed it heretofore, thinking it my personal right and privilege to settle with you."

Buckingham turned a shade paler as he replied: "I do not meet such as you on the field of honor, and have no fear of your slander injuring me."

He felt secure in the thought that the girls did not know who had attacked them, and could not corroborate Brandon in his accusation, or Mary, surely, never would have appealed to him for help.

I was with Brandon—at a little distance, that is—when this occurred, and after Buckingham had left, we went to find the girls in the forest. We knew they would be looking for us, although they would pretend surprise when they saw us. We soon met them, and the very leaves of the trees gave a soft rustle in response to Mary's low, mellow laugh of joy.

Extremes.

Report says a revival has broken out in the Unitarian church, a sympathetic consequence of Billy Sunday in Boston.

Fine! And no danger! A bonfire on the ice is always safe.—Life.

YOUR FLAG!

This is the time for every American to hoist "OLD GLORY" to the breeze!

Realizing that in this time of national stress and strain the patriotic readers of The Washington Farmer will want to show their colors, we have arranged to offer large sized, fast color American flags in connection with subscription orders. Size of flags 3x5 feet, full 48 stars. Supply is limited. Flags will go to the first who ask for them.

The flag will be sent with new or renewal subscription to The Washington Farmer for 3 years, both for only $2, which is the regular 3-year subscription rate of this paper. If you are paid ahead your subscription will be extended three years.

In ordering kindly use this coupon.

The Washington Farmer, Room 37 Review Bldg., Spokane.

Enclosed find $2 (your personal check, stamps or money order), for which send me American flag as advertised and **The Washington Farmer** for 3 years.

Wasted in the Kitchens

Sum of $700,000,000 Worth of Food Products

Secretary of Agriculture Houston estimates that $700,000,000 worth of food products are yearly wasted in the kitchens of the United States. Seven dollars for every inhabitant—$35 for the average family.

But what about the far greater waste on the farms—millions upon millions of tons of good food that the hard-working producers can not save or market profitably under our existing imperfect marketing and distributing mtthods? Luscious peaches dropping to the ground; millions of bushels of good apples and other fruits; berries drying on the bushes; and root crops wasted in quantities that would make the German people, the French and the British marvel at our national extravagance?

Then we are wasting yearly some 15,000,000 tons of one of the very best food products this country produces. Our dairymen are feeding high price products and then the nation is wasting what science proves to us is the best part of the cow's gift to mankind—the skim milk.

A recent able article by John Phillips Street, chemist of the Connecticut agricultural station, ought to be read in every American home and taught in every school. Mr. Street is at a loss to understand the ill-founded prejudice against skim milk. He thinks it may date back to the time when cream was separated from the milk by gravity and skimmed milk was necessarily old milk. But there can be no reason for it today, when separation by centrifugal force leaves the skimmed milk fresh. Mr. Street continues:

"In spite of the delicious taste of cream it is not the most valuable part of the milk, as some apparently intelligent people appear to believe. The exact contrary is, in fact, the case. The part of the milk left after the cream has been removed contains practically all the protein, sugar and mineral salts. In the ordinary mixed diet, moreover, a sufficient amount of fat is supplied by meat, butter, lard, etc., so that the loss of this ingredient from the milk is of relatively little importance. Protein, on the other hand, being the most costly of the food elements, is the one most likely to be lacking in inexpensive meals, although generally used to excess by those who can afford it.

"Skimmed milk is the cheapest available source of animal protein at the present time. Whole milk is cheaper than either meat or eggs as a source of protein; but skimmed milk is even cheaper, costing, under normal market conditions, only half as much as meat, and skimmed milk cheese, if we could have it, would be cheaper still, and much better for some purposes than the whole milk product.

"At least 1,600,000,000 pounds of butter are made annually in this country, and from this are obtained about 28,000,000,000 pounds of skimmed milk. About 2,000,000,000 pounds in addition are obtained from the sale of cream. This gives us an annual supply of 30,000,000,000 pounds of cheap, nutritious and digestible food, which nevertheless is banished, both by law and public opinion, from the table and kitchen to the barnyard.

"A recent government bulletin made it abundantly clear that the days of cheap meat are past, and that this food is likely to grow scarcer than more plentiful. It is plain, therefore, that we can not very well afford to let 30,000,000,000 pounds of an animal protein food go to waste every year, or serve only as a cattle food, particularly now when the nations of Europe are engaged in destruction instead of production, and are looking to us to supply their deficiencies."

No more important problem is before the American people than the finding of ways to prevent the existing enormous waste of a great part of nature's bounty. Its solution will mean increased prosperity for the farm and better living conditions for the people in the cities.

Downside First Is Best.

Most every one when washing a painted wall starts from the top and goes down, with the result that the water running down on the dry wall below leaves water streaks, which are hard and sometimes impossible to remove, says a writer in the New York Evening Sun.

I find that by starting from the bottom this is overcome, for even if the water happens to run down the wet wall it leaves no streak.

This hint was a valuable help to me and I cheerfully pass it along.

Too Wise.

Visitor—How much rent do you pay for this dump?

Subdubs—I own it.

Visitor—Ah, I knew you were too sensible to rent such a place.—Pathfinder.

Enough.

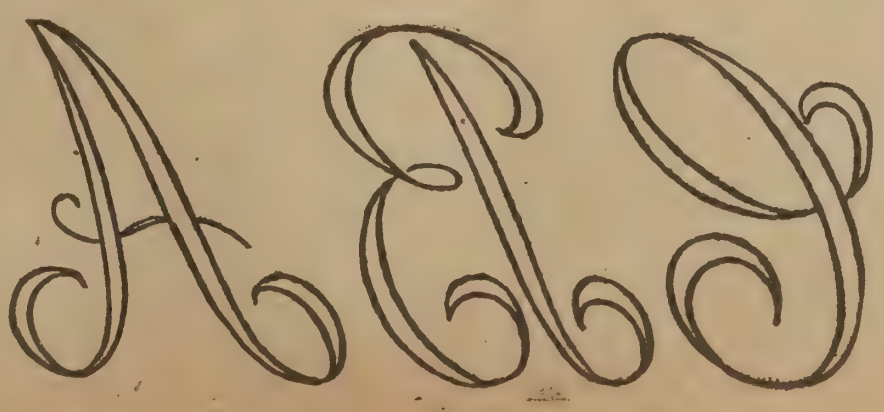
Henshaw—I hear he was operated on. What did he have?

Gee Whiz—Money.—Life.

Initials for Embroidery in Script Style

TO TRANSFER THIS DESIGN

Put some soap in a pint of hot water, stir and remove soap. Saturate design with mixture, then remove excess moisture by partially drying design. Place material on a hard, flat surface and lay the design, face down, upon the material. Cover with two folds of newspaper and, with a tablespoon, rub, pressing hard, until the design is entirely transferred.



In all alphabets which I have given, and they are so useful, I have kept in mind the importance of simplicity. There are no letters as a decoration which stand out in lovelier relief than those of simple design. The beauty of any letter or combinations of letters is clearness, neatness and pretty arrangement.

Cord effects are sought because they are plainest. This is done by padding heavily. Never draw the padding cords too closely, for all padding cord will shrink and draw the goods. Pad the letter sufficiently heavy to bear the embroidery floss in what is known as the winding effect, which is wound as a spool of thread, from right to left, with no roughness or padding on the wrong side. White embroidery floss of a linen quality, or the mercerized, is the best for making letters. Always soap the fabric with white soap under an initial before embroidering. It aids one in washing the color from the finished design. Soak it in tepid water containing a few drops of lamp oil, and your letter will be clear and white when laundered, without any trace of ink thereon.

Sincerely yours,

Winifred Worth

Favorite Mottoes

What is the quotation or what are the words which have helped you in the journey of life?

Send it to the editor of The Farmer and let it help another.

To the Editor: In my case the motto, "A square deal makes friends," also the quotation from Lincoln, "The better part of one's life consists of his friendships," is most worthy of mention.

A. E. SKARP.

Westmond, Idaho.

And He shall judge among many people, and rebuke strong nations afar off; and they shall beat their swords into ploughshares, and their spears into pruninghooks: nation shall not lift up a sword against nation, neither shall they learn war any more.

But they shall sit every man under his vine and under his fig tree; and none shall make them afraid: for the mouth of the Lord of hosts hath spoken it.

DRUDGERY OR DELIGHT?
Homemaking May Be One or Other.

A school friend of mine once wasted a lot of good pity on me because I had chosen to live on a farm and spend my life in what she frankly called drudgery. The pity only amused me. It is true, I was often tired and help was sometimes hard to get and not always helpful. Still, I loved my work and felt my skill increasing daily. To me home-making as it becomes possible in farm life, was the most delightful work.

My friend was musical and spent hours practicing scales and exercises. I have seen her almost faint under the strain of long concentration. Yet she felt that in the pursuit of art all effort was well directed. She could not understand that my attitude was very similar to her own. My art was not music, but home-making. The pursuit of the one is just as sweet and satisfying as that of the other.

There is one saying of Washington Irving that I love to think of because it exactly expresses my thought: "In America, literature and the elegant arts must grow up side by side with the coarser plants of daily necessity." That is even the arts must be democratic. We must not place the musician, the artist, the author on a pedestal and worship them while we despise the humble artist whose creations are the foundation of human health and well-being. The idea of drudgery is inseparable from art. Only practice can make perfect and practice means continual repetition. Whether this drudgery becomes delight or not depends entirely on the art pursued. It is all in the mind.

Drudgery becomes delight when home-making becomes an art, when the home-maker feels herself to be what she is, a member of the most ancient and therefore most honorable profession open to women.

Remembering this definition of drudgery, how full of meaning are the words of Margaret Fuller:

"Drudgery is as necessary to call out the treasures of the mind as harrowing and planting those of the earth."

Swiss Roundjager.

If you want to try something different in the meat line on the farm, cut this out and keep it until the next "butchering day." It will be sure to please you:

Very lean beef (cured) chopped coarse, 4 lbs.
Lean pork, 6 lbs.
Suet, 3 oz.
Saltpeter, 1 1-2 teaspoonfuls.
Allspice, 1 1-2 teaspoonfuls.
Caraway seed, 1 1-2 teaspoonfuls.
Sugar, 1-2 ounce.
White pepper, 3-4 ounce.
Cloves, 1 teaspoonful.

Says H. S. Eakins, Colorado Agricultural college.

Do You Know That

Honesty is the best policy?

Going After the Cows

What Happened When I Was a Little Farm Girl of Ten

To the Dear Girls of the Family Circle: Whenever I open the pages of the Farmer and turn to our own page various pictures come to my mind.

Sometimes I think of a little 10-year-old barefoot girl, with brown hair and eyes to match. She watches the clock, of a hot summer afternoon, and when the hands show nearly 5 o'clock she takes her sunbonnet and with a patient little sigh starts off down the road.

She does not mind the first part of the walk much for there is a farm house once in a while, but after she passes the last one and enters the woods, leaving the road and following only a path, she begins to feel lonely.

The path winds through the trees till it disappears in a swift though shallow creek. Now the advantage of being barefoot is evident, for the path, lost in the stream, finds itself again on the other side and it is that path she must follow.

The stream is fed by springs which gush from the banks on either side, making the water very cold.

There are rapids just at the fording place and sharp slippery rocks on the bottom. How the little girl dreads to wade in! She is only 10 years old and she wonders what would happen if she lost her footing and slipped down in the deepest place, and she wonders if she could get up all alone. She thinks about many things as she stands on the brink of the cold stream with her toes in the water. But she knows that on the other side of the creek somewhere around in the woods are 20 cows feeding, and she has been sent to find them and drive them home.

So she draws a deep breath, throws back her sunbonnet, letting it hang by the strings that she may have an unobstructed view of the fording place, holds up her little skirts so they will not get wet and bravely wades in. The rocks are sharp and hurt her feet cruelly and the water is high above her knees in places and so cold and swift that it almost takes her off her feet, but she reaches the other side, climbs the hill and listening hears away off among the trees the tinkle, tinkle, tinkle of several bells. This is no fenced enclosure, but wild, unsettled hills and valleys, where wolves howl on winter nights.

The feeding ground is free for all and several small herds are driven there every day, and each herd has a bell cow. It is up to the little girl to select her own bell from all the others that are tinkling or she will be led to the wrong herd. After carefully listening she locates her bell and finds she must leave the beaten path because the sound of the bell is on the other side of thick trees and scratchy bushes which leave ugly marks on her little bare legs. If that old bell cow would be decent enough to keep moving till she was found it would help some, but after a hard scramble through brush and thorns in the direction where our little girl thinks she hears the bell she finds she is mistaken and often must stand still and wait for the guiding tinkle to direct her in her search.

At last she gets her eyes on the old bell cow and feeding near her she may find the rest of the herd. Not always, though, because quite frequently there are some venturesome young heifers which seem to take pleasure in straying away and concealing themselves in a cluster of trees.

They must all be found and so she patiently seeks them, tired, hot and dusty though she becomes, and fearful, too, as the sun sinks lower and the shadows lengthen.

At last the whole herd is rounded up and counted, and with the old bell cow leading, is started homeward.

Her trials are not over though by any means because some of the herd are always finding clusters of tender grass off to one side and are sure to lag behind and must be kept moving.

After a hard scramble through the brush and branches the little girl gets her cows down to the fording place and compels the last reluctant cow to leave the cool shady water. Again she gathers up her skirts and follows the cows through the cold stream. The worst is over now, for there is no more brush or scratchy thorn apple trees, and for her much abused feet there is the beaten path and finally the soft, sandy road. This little girl knows that the barnyard gate will be open and her father will be standing there with two shining milk pails. She knows he will look at her kindly and listen as she tells him about her trials with the cows, will pat her shoulder and say "too bad" if she shows him an extra bad bruise on her bare feet. He will not scold her even if there is a cow or two missing sometimes, but will tell her she is "a good girl" and that he knows she has tried to find them all and now she must run in the house and get her supper.

You see, my dear farm girlies, I know all about it because I was the little girl.

A. W. B.

Patterns

2004—Junior Dress: Cut in three three sizes, 12, 14 and 16 years. It requires 5 yards of 36-inch material for a 14-year size. Price, 10 cents.

1975—Lady's Dressing Sack: Cut in six sizes, 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 3½ yards of 44-inch material fo ra 36-inch size. Price, 10 cents.

1982-1992—A Good Suit for Sport and School: The patterns are cut in three sizes, 16, 18 and 20 years. The skirt requires 3½ yards of 36-inch material for

a 16-year size. The blouse requires 3¼ yards. The skirt measures about two and one-third yards at the foot, with plaits drawn out. Two separate patterns, 10 cents for each pattern.

1977—Lady's Apron: Cut in four sizes, 34, 38, 42 and 46 inches bust measure. It requires 7¼ yards of 36-inch material for a 38-inch size. Price, 10 cents.

2003—Lady's Dress: Cut in seven sizes, 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It requires 6¾ yards of 36-inch material for a 36-inch size. The skirt measures about three yards at its lower edge. Price, 10 cents.

Kitchen Helps

Save Housewife Labor and Time

The following are extracts from a bulletin on The Farm Kitchen, by Carrie L. Pancoast, of the agricultural extension service of the University of Missouri:

Pans, skillets, and all other utensils should be selected with smooth surfaces so that they may be easily and quickly cleaned. Flat bottomed, shallow utensils require less time and fuel than tall rounded or grooved ones.

A garbage pail with a lid which may be raised by pressing a foot lever is most convenient. If expense must be considered a bread box into which an ordinary pail may be set proves quite satisfactory as it can be covered, thus lessening the attraction of flies.

Have in the kitchen a high stool or a combined high stool and step ladder. A woman should not waste her strength standing at tasks which she can do just as well or better sitting.

Good scales in the kitchen will enable the housewife to determine whether she is getting honest weights for money expended.

A steam cooler preserves the flavor and mineral matter of food and requires but little watching. It is used successfully also in canning.

Soldier Blue to Replace Navy.

Soldier blue is seen just now so often that it seems probable this softer, more becoming shade may in time wholly supersede the dark marine tone. Partly because of dye shortage, partly because anything remotely resembling military dress is almost sure of success, this color is being used a great deal and a very pleasant change it makes. Organdie blouses trimmed with fine white lace collars and cuffs, silk dresses and street suits are all to be found of soldier blue.

To Mend a Bath Towel.

Do not darn a bath towel. When such a towel shows signs of a hole, loosen the tension of your sewing machine, and, with lengthened stitch, run it back and forth across the towel. This makes a neat repair and prolongs the life of the towel.

A Good Nail Bleach.

The best manicure acid is made by putting a tablespoon of lemon juice in a cup of hot water. It removes stains from the fingers and nails and softens the cuticle about the nails in a satisfactory way.

To Retain Color in Vegetables.

When vegetables are cooked with the cover off they will retain their color in much of its original freshness.

TEACHER IS READING A STORY TO HER CLASS

Dear Aunt Nellie: My best friend is what I am going to tell you about. My best friend is Ellsworth Pratt, a boy of 9. He is fat, but I like him. He is in the fourth grade and he sits by me. Ellsworth lives about a quarter of a mile from school. He brought a book from his house to school. Our teacher reads it to the class. It is about two little dogs named Jackie and Petie Bow-Wow. It is funny.—Ward Rowe, Box 17, Rochester, Wash.

CLARA HAS SPENT MANY HAPPY HOURS WITH ROVER

Dear Aunt Nellie: My subject is "My Best Friend." He is a dog. His name is Rover. He will bite at strangers if they show they will harm you. He is a faithful friend, indeed, and will serve me faithfully if he is treated right. We used to have fun with him. I would pretend I was crying, and he would come and lick my hand and try to soothe me. He has beautiful brown eyes that are so intelligent, and when he is hurt so pitiful. If he serves me, I should serve him and give him good food and drink and a warm place to sleep. Dogs are good to drive cows to the barn and also to go with one on walks.—Clara Olson, Bothell, Wash.

RUNS THE GASOLINE PUMPING ENGINE IN SUMMER

Dear Aunt Nellie: I thought I would write and tell you about our ranch. It is located eight miles northwest of Othello. There is a creek one-half mile west of the place. I am 14 years of age. I have two sisters. The oldest is Derla; the next is Frances, but I am the oldest. We have 107 head of sheep, one old dog and a pup. The old dog is a good sheep herder. We have 15 head of cattle and about 20 head of horses. In the summer I run the stationary gasoline pumping engine. It is a 10 horsepower Galloway. We have a 1916 model Ford touring car, and I can run it anywhere. I go to town in half an hour. My birthday is September 7.—Dea T. McManamon, Box 93, Othello, Wash.

CAN GET BACK NOW BEFORE SUNDOWN WITH THEIR CAR

Dear Aunt Nellie: Papa takes the Farmer, and I enjoy reading the letters. I am 14 years old. My birthday is May the 8th. I live one mile from school. My teacher's name is Miss Estella Vane. I live on a 800-acre farm. We have 11 head of horses. Papa did have 27 hogs before he sold and killed them. He has only 11 now. My two brothers and papa have 40 head of cows and calves. I have four cats and one dog and a pup. The dog's name is Spot, and the pup's name is Jerry Willard. He is black and white and curly. We have about 50 pigeons. My brother has two goats. Their names are Billie and Nannie. Papa has a car. Before we got it it took us all day to go to town, but now we go down in the afternoon and get back before sundown. We live 12 miles from town.—Bonnie Scoggin, L. B. 2016, Pomeroy, Wash.

ALWAYS ENJOYS READING THE COUSINS' LETTERS

Dear Aunt Nellie: This is the second time I have written to the Children's Corner. I enjoy reading the other cousin's letters. I am 10 years old and am in the seventh grade at school. My birthday is August 23. I have one sister at home; also three brothers. Then I have one sister and two brothers that are away from home. I live on a farm, and have such fun! We have three cows, but only one is milking. We have five or six horses and three colts.—Alice E. Ritchey, Chesaw, Wash.

FIRST SURPRISE WHEN SHE WAS JUST THREE YEARS OLD

Dear Aunt Nellie: My first surprise was on Christmas. I remember I was 3 years old. We had a Christmas tree. The tree was about four feet tall. I got a cup and saucer. There was a banana in the cup. I got a little broom and a number of other things.—Elizabeth Bowen, Oroville, Wash.

ONE OF OUR LITTLE BLUE-EYED COUSINS

Dear Aunt Nellie: I am 10 years old and in the fourth grade. I live on a 30-acre farm. We have five sheep and eight calves. I have five sisters and two brothers. We got a sled for our Christmas. I got a big doll, two feet tall. I have brown hair and blue eyes. —Reva Ada Lamb, Box 162, Coulee City, Wash.

WE HOPE THAT THEODORE WILL WRITE TO US AGAIN

Dear Aunt Nellie: I have been reading the letters from the boys and girls of the Children's Corner, so I thought I would write, too. I was 13 years old October 25. We live on a farm of 141-4 acres and have a cow and 13 chickens. I go to school and I am in the seventh grade. My teacher's name is Miss Eva Wolford. I like her very much. I have two brothers and one sister. My brother's names are Wener and Leander. My sister's name is Vera. Wener is 11, Leander is 7, and Vera is 9 years old.—Theodore Carlson, R. 1, Box 8, Shelton, Wash.

DORTHEA HAS NEVER WRITTEN TO US BEFORE

Dear Aunt Nellie: I have never written to the Children's Corner before. I am 9 years old and in the third grade. I go two miles to school. My teacher's name is Mrs. Schold. There are 15 children going to school. I have light hair and blue eyes. I am four feet two inches tall.—Dorthea Hicks, Coulee City, Wash.

VESTA AND SISTER RIDE HORSEBACK TO SCHOOL

Dear Aunt Nellie: I have been reading other children's letters in the Children's Corner. I enjoy reading them. I am 10 years old and in the fourth grade. I like to go to school. My teacher's name is Miss Carver; I like her fine. I also go to Sunday school. There are about 12 in our class. My teacher's name there is Mrs. Parker. I have four sisters and one brother, the oldest sister is married. We live on a farm. We live three miles and a half from school. My sister and I ride horseback to school.—Vesta Johnson, Mansfield, Wash.

COUSIN ETHEL HAS TWO LITTLE WHITE KITTENS

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 9 years old and my birthday is October 22. I have four sisters and three brothers. One of my brothers goes to school with me. He is in the seventh grade and I am in the second grade. My teacher's name is Mr. Oldham. There are five children in my class. We live on a farms. We have cows, horses, pigs, chickens, four cats and a dog. We have five inches of snow here. I have two white kittens.—Ethel Mortensen, Cathcart, Wash.

WE WANT ETHEL TO WRITE TO US AGAIN SOME TIME

Dear Aunt Nellie: I like school too. I am in the second grade. I am 8 years old. I will be nine in March. I have one brother and two sisters. I like my teacher. Her name is Miss Shuts. I have a little colt. I live of a farm of 160 acres. We have some nice chickens and eight cows.—Ethel Short, Molson, Wash.

READS THE CORNER EVERY TIME THEY GET THE PAPER

Dear Aunt Nellie: I have been reading the Children's Corner every time we get the paper and I like it very much. I am in the fifth grade and I am 12 years old. My birthday is the tenth of October. My teacher's name is Mary McDougall; she is a very good teacher. I go to a big schoolhouse. There are 100 pupils in our school. I have two and one-half miles to walk to school. I do not ride. I live on a 30-acre farm. There are 16 cows and two horses. We have two calves and just 22 chickens.—Ruby Ware, Box 55, R. F. D. 1, East Stanwood, Wash.

GETTING UP LATE FAILED TO MAKE THE DAY BETTER

Dear Aunt Nellie: I am going to write about "my worst day." "Mama," I said one evening, "I have been getting up at 6 o'clock all winter long, and sometimes I feel so sleepy! You have been feeling so well all week, and as tomorrow is Sunday, why can't I stay in bed tomorrow morning until I get ready to get up?" "Well, daughter," mama replied, "you may if you wish, but I do not think it will do any good." I had always gone to bed about 8 o'clock, but as I did not have to get up so early the next morning I sat up that evening and read until half past 9. The next morning I awoke about 6 o'clock, but, as I did not have to get up, I turned over and tried to go to sleep again. It was raining, and I could hear the rain beating on the roof. Listening to the rain, I soon fell asleep. When I awoke again it had stopped raining. I turned over in bed and looked at the clock. "Half past 9," I exclaimed. "Why, I will only have half an hour to clean up my room and get ready for Sunday school." I got up, dressed, washed, and combed my hair, which took me about 15 minutes. I hurried through my work and ran downstairs. I found a cold breakfast awaiting me, as the rest of the family had gone to church. I was feeling disagreeable, and the sight of a cold breakfast made me more so. I reached Sunday school about 10 minutes late. I had always gone to Sunday school early, as I did not like to enter after it had been called to order. After Sunday school I went immediately home, as I was feeling so disagreeable that I spoke crossly to everyone who spoke to me. Everything seemed to go wrong that afternoon and I was very glad when evening came. I never again asked to stay in bed in the morning, but got up at 6 o'clock. —Gladys May Plemon, Burbank, Wash.

CHUM HAS MOVED AWAY, BUT THEY WRITE OFTEN

Dear Aunt Nellie: I will choose for my subject "My Best Friend." My best friend and I used to chum together, but now we live away from one another, though we write often to each other. From the first day I knew her we chummed together. She was our nearest neighbor. We went to and from school together and were always in the same grade. She is a very pretty girl with blue eyes and brown curly hair and a sweet, pretty face. She is a month older than I am, but we are the same height. She is a very jolly girl. When we were small we would play with dolls and have picnics together. Of course we would both invite our sisters to join us in our fun; back of our place there was a pretty green grove, and here we would hold our picnics and have so much fun. We would play all day, and at noon we ate our lunch with our big sisters and then she would come to my home, and I would go to hers. I believe we loved each other more than any other friend.—Alvina Murawski, Box 5, Northport, Wash.

MOTHER RAISES RHODE ISLAND RED CHICKENS

Dear Aunt Nellie: I am 12 years old and in the seventh grade. I have one sister whose name is Frances, and one brother whose name is Dea. They are both going to write to you. I enjoy reading the Children's Corner. I go to the Deadman school. My teacher's name is Mrs. Lee. We have two dogs, three cats, a bunch of sheep and several head of cattle and horses. I like the stock. I live on a farm of 160 acres. My mother raises lots of Rhode Island Red chickens. My birthday is July 8.—Derla McManamon, Othello, Wash.

VISITS AUNT ON COEUR D'ALENE RESERVATION

Dear Aunt Nellie: This time I am going to tell you about our trip to visit my aunt Mary last summer. She lives at Coeur d'Alene reservation. First we went through Davenport and then Reardan, Medical Lake, Cheney, Spangle, Waverly, Latah and Tekoa. We started from Medical Lake to the Coeur d'Alene reservation, and made it in one day. We went 62 miles a day in a hack with our own team. We had a nice visit. I can make light bread, bake cake, embroider, hemstitch and do beadwork. I have dark brown hair and dark brown eyes. I weigh about 106. I am a Christian girl. My papa is an elder and interpreter. We have a nice missionary. His name is Gerard M. Van Pernis. We have a new organ in our church. We are Presbyterians. We live on a 100-acre ranch. It is my own allotment. I am going to tell you about my school room. There are five rows of desks, four blackboards. The schoolhouse stands by the main road. One of my pet horses got the prize for two years. My teachers' name is Henry Markishtum. I think the Children's Corner is growing. For a half year I have read the Children's Corner every time the paper comes.—Sallie Selina Garry, Miles, Wash.

VELMA MAKES US GUESS WHO HER BEST FRIEND IS

Dear Aunt Nellie: My best friend has dark hair and eyes. She is just my height, 5 feet and 21-2 inches, although she is grown up. I know you would think her a best friend, too, Have you guessed who she is? Well, she is my mother. I am 13 years old, and my birtday is May 4. Carlyle, my brother, is 9, and sister Carmen is a year younger than I am. We have lots of fun coasting and playing in the snow. Sometimes we help papa feed the cattle, of which we have about 165. Carlyle has a Shetland pony, and he thinks her the best ever. She is a cute little roan.—Velma Batie, Twisp, Wash.

PLAY BLACKBOARD GAMES WHEN IT IS VERY COLD

Dear Aunt Nellie: I have read many of the letters in the Children's Corner, but this is the first time that I have written to you. I live in the country and walk a quarter of a mile to school. There are 11 children in my school—four boys and seven girls. I am in the seventh grade. I am 12 years old. I have a sister who is 11 years old and a brother who is 10 months old. My sister is in the sixth grade at school. We have lots of fun at our school. There is some ice by our schoolhouse and we skate on it and go riding on our sleds. When it is too cold to go outside and play we play games on the blackboard.—Dorothy Blaisdell, Creston, Wash.

WINIFRED JONES WRITES A STORY WITH A MORAL

Dear Aunt Nellie: I am very fond of making up stories. This is one I made up at school. This is the title: "What the Snail Taught the Boy." Once a boy was walking along the road when all at once he saw a poor snail. The boy was just about to step on it, when suddenly it lifted its body on a stone and said, "My dear friend, I am not doing you any harm, am I?" The boy looked down in astonishment and said, "No, my friend." "Well, then," said the snail, "why do you want to do me harm?" Then the boy hung his head. He stood there a long time, then turned and went away. The boy's parents were poor, and when he reached home he said, "I was walking down the road and I saw a snail. I was anxious to step on him on purpose, when he said, 'Am I doing you ary harm?'" But before the boy had time to finish telling his story his mother said, "Go and get some paper and a pencil, and we will make a pennant that has this motto on it: "Be to others kind and true, as you wish others be to you.'" Then the boy and his mother made it and hung it on the rough wall. The small family always kept that as the greatest thing they had. This story may interest my dear cousins. I may write again. I have written before, so I know you know me.—Winifred Elizabeth Jones, Box 59, R. F. D. 1, Auburn, Wash.

HAVE A VICTROLA IN THE SCHOOL WHERE RUTH GOES

Dear Aunt Nellie: I am 8 years old and in the third grade. I have three brothers, but no sisters. My brothers' names are Edward, Harold and William. We live on a 40-acre farm. We have seven cows, five calves and one dog. We have a cat and 39 chickens and one pig. We go to school every day. We have a Victrola in our school. My teachers' name is Miss Hintz.—Ruth Zuaschka, Everson, Wash.

HAD A BASKET SOCIAL AT THEIR SCHOOLHOUSE

Dear Aunt Nellie: We had a basket social at our schoolhouse the 2d of February. I have lots of fun coasting while I'm not at school. We coast down a hill just above our house. We have lots of fun picking berries and flowers in the summer time. We like to hunt cows, too. Sometimes one of my neighbors and I hunt them. Our cow has a calf now. It is red and has a white foot. I would rather live in the country than in the city.—Nellie Salvage, Addy, Wash.

TEDDY LOVES HIS MOTHER BECAUSE SHE IS SO KIND

Dear Aunt Nellie: My best friend is my mother. She takes care of me when I am sick. She cooks my meals and gets my lunch ready to take to school. She washes my clothes and tries to keep me clean, but sometimes I get dirty. I try to keep as clean as I can so she won't have so much to do. I love her because she is good and kind to me and she wants me to grow up to be a good boy.—Teddie Taylor, Riverside, Wash.

PLAY IN CREEK THAT RUNS BACK OF THE HOUSE

Dear Aunt Nellie: I am 9 years old and in the fourth grade. My teacher's name is Miss Ada English. She is awfully nice. I live on a 40-acre farm. A large creek runs right back of our house. In summer we go swimming and wading. My birthday is the 27th of February. I have many pets, a large dog named Bingo and a kitten. My calf's name is Lilac. I love to read the letters in the Children's Corner.—Myrtle Veronica Faye, Monroe, Wash.

HAD A SURPRISE PARTY ON HER EIGHTH BIRTHDAY

Dear Aunt Nellie: I am a girl 11 years old and in the fifth grade. My teacher's name is Miss Sill and I like her very much. I am going to tell about "My First Surprise." It was my birthday when I was 8 years old. When I came home from school that afternoon I saw some of my friends at my house. After a while some more of my friends came and then I knew it was a surprise party. We had a lot of fun that time.—Addie Russell, Deer Park, Wash.

BLANCHE IS A LITTLE FOURTH OF JULY GIRL

Dear Aunt Nellie: I am 9 years of age. I will be 10 July the fourth. I am in the fourth grade. My teacher's name is Esther Hanson. I have two sisters and one brother. I live on a 320-acre farm. In the middle of the summer we have headers. I help mama cook for the headers. I have a dog and a cat for pets.—Blanche Bell, Mold, Wash.

The Washington Farmer is glad to announce the receipt of letters for the Childrens Corner from the following during the last week: Daisy Alberta Laird, Martha Arndt, Lillo Pollastruni, Pearl Smith, Gladys Cary, Viola Augst, Lyda Augst, May Drew, Myrtle Sodorff, Grace Willoughby, Graham Potter Charles McDonald, Josephine Edna McAndrew, Esther Carslin, Selena Deno, Margaret Cox, Kenneth Duncan, Mabel Ervin, Jeannette Samson, Paul Helme, Berthold Canrad.

Cheer Up

Put on a smile and keep it there;
Don't look so glum and blue.
You'll feel a whole lot better
When the long, hard winter's through.
And then, besides, we may yet get
Into that awful fray,
And our bones bleach on Europe's fields,
So let's cheer up today.

Sidelights

Aw, Gwan!

I've often heard that fleas were black,
I don't believe that's so;
For Mary had a little lamb
Whose fleece was white as snow.

The Difference.

"What's the difference between a socialist and a plutocraft?"

"There are many, but the leading one is that the former fights for his principle and the latter for his interest."—Baltimore American.

An Affair of Honor.

Farmer Swett—"You say you belong to the army of the unemployed? Well, my friend, I guess I kin give you something of a job today."

The Wanderer—"What! An' have me be a deserter from de army? Ye don't know military ethics, do ye?"—Puck.

That's So, Too.

"Why," said a youngster to his elder brother, "do herrings have so many more illnesses than other fish?"

"Who says they do?" asked the youth addressed.

"Why, this book says that thousands upon thousands are cured every year."

One Woman's Wisdom.

The Widow—Have you read the will?

The Lawyer—I have tried to, but it is in your late husband's handwriting and I can't make anything out of it.

The Widow—Well, if you are unable to make anything out of it, there can't be much in it for the rest of us.

The Real Loafer.

The teacher was trying to picture the outcome of laziness and idleness. He drew a terrible picture of the habitual loafer, the man who hates work, and his ultimate fate.

"Now, Charlie," he continued to a little boy who had been looking out of the window and whose mind was far from the lesson of the hour, "tell me who is the wretched, miserable individual who gets clothes, food and lodging and gives nothing in return?"

"Please, sir," he replied, "the baby."—Credit Lost.

Severe Test.

A young man in quest of a situation entered the apartment.

"Well," kindly said the captain of finance, "there's an opening in the bank for the right young man, and there have been several applicants for it already. Are you energetic and willing to learn?"

"Try me, sir."

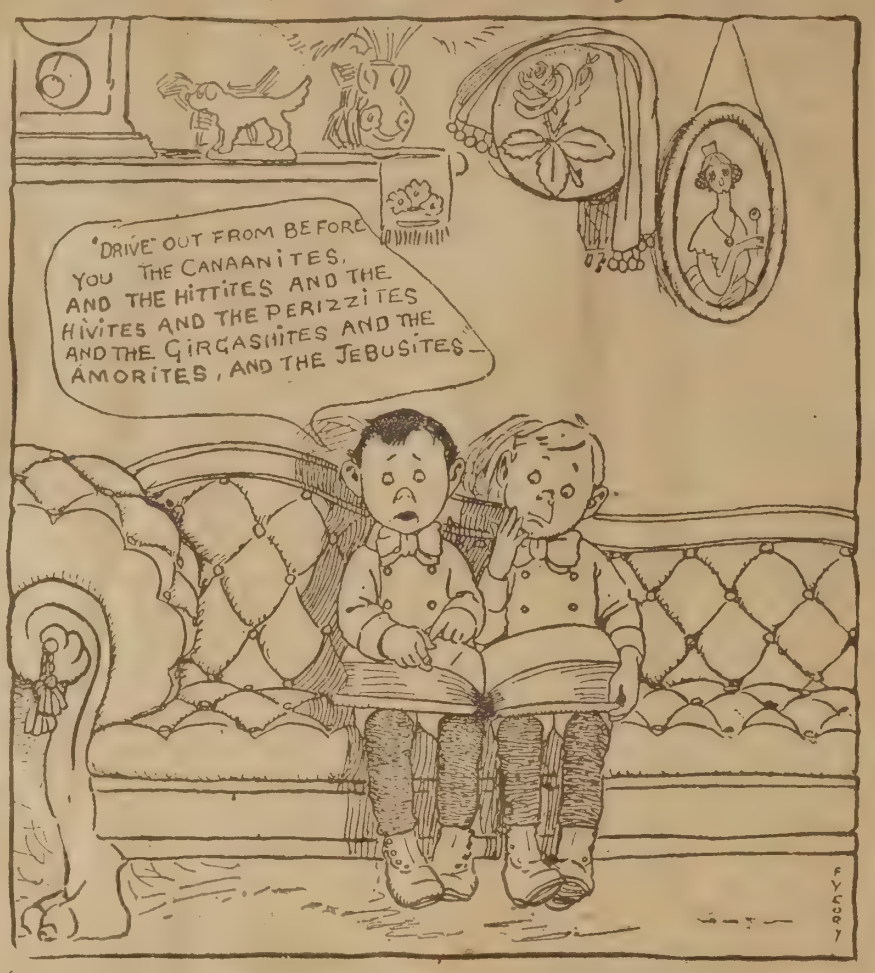
"That's good for a starter. Do you gamble?"

"No, sir. I have a mother to support and can't risk my earnings that way."

"Ahem! Now"—here the great man squared himself before his applicant, an indication that the most important question was now to come—"do you ever go fishing?"

"Yes, sir," replied the young man, without hesitation. "Was fishing yesterday."

"Ah! And what kind of a catch did you make?"



"Good!"

"You're the young man I've been seeking. All the others answered up all right until I put that last question, then they lied!"

Pass It On

Have you had a kindness shown!
Pass it on, pass it on!
'Twas not made for you alone,
Pass it on, pass it on!
Let it travel down with years,
Let it wipe another's tears,
Till in heaven the deed appears.
Pass it on, pass it on!

"Ben Bolt", Twentieth Century Version

—From the Indianapolis Times.

Don't you remember the gospel, Ben Bolt,
The gospel that Pa made us learn?
Some parts sounded queer, but, stricken with fear,
We committed 'em, rather than burn.

Ups and Downs of a Bunch Grass Boy

(Continued from page eighteen.)

eyes. I may say that I got to feeling much the same way about cream—and have never felt right toward it since that summer.

I got pretty lonesome, all right, though I did not admit it when mother and father returned in the fall. Many times I wandered aimlessly about the place boo-hooing and sobbing just because I was lonely. For a long time I lived mainly on young chickens, cream, vegetables from our garden and biscuits, which I made. I began to long for salt pork—ham in particular. Shep's appetite was failing. He would not even smell of his cream, and I judged he wanted a bone. We had many chickens, and I wondered if I could trade some of them for a ham, giving me some salty pork and Shep a bone. I saddled Rowdy and rode 10 miles to Coulee City and asked Jim Hunter, the big merchant of the town, if he would trade me a ham for a lot of chickens. He said he would. Riding back home I went around by Tom Kirkland's, a mile south of our place, and asked him if he would take my chickens to town the next time he went. He would. So I sacked up a couple of dozen young frys, Tom hauled them to town and Hunter delivered to me the ham. The very smell of the ham put new life into me, as it did into the dog.

The hens quit laying as summer advanced, and it was not long before I had to eat my ham without any eggs. That summer I was reading a story of oriental plot, one of whose most thrilling characters was a Sikh called Runjeet Singh. Anything which Runjeet Singh did not like he called "vile pig," "accursed son of a monkey," and so on. The story took quite a grip on my imagination. So, as the egg production of the hens began to dwindle, in imitation of the haughy Sikh, I hissed to them that they were vile pigs, accursed hens and troublesome monkeys. But it was moulting time and they were indifferent to my oriental objurgations.

Late in summer fires broke out in the mountains back of the Columbia river, surrounding on three sides the Big Bend country. Many animals were driven out. It does not seem possible that they swam the Columbia river; nevertheless, several bears and a number of cougars came into our neighborhood. One morning I discovered tracks in the road dust not far from the house, as big as a saucer—a cat's paw many times magnified. For a wonder the beast had not attacked the cows or calves during the night. A day or two later Charley Gifford, while working in a new well, looked up and saw a huge, yellow, cat-like head 20 feet above him. He climbed out, got his rifle, followed the beast a short distance and shot it. It measured nine feet from tip to tip, and was quite lean, evidently having suffered from hunger.

NEXT WEEK THE BUNCHGRASS BOY TELLS OF HIS LONGING FOR RUNNING WATER AND LAKES WHICH BURNED LIKE THE DESERT THIRST, AND HOW BY THE TIME HE WAS 14 YEARS OLD HE HAD RIDDEN AS FAR SOUTH AS WILSON CREEK, NORTHWARD AS FAR AS THE GRAND COULEE AND EAST TO WILBUR, 16 TO 25 MILES AWAY.

"THIS TERRITORY, BEING UNFENCED, WAS THEN MY RANGE, MY PLAYGROUND, BUT THE GREATEST WONDER IN MY PLAYGROUND WAS THE GRAND COULEE AND STEAMBOAT ROCK IN THE MIDDLE OF ITS FLOOR-LIKE BOTTOM."

THEN HE TELLS HOW WITH A BOY COMPANION: "WE STRUCK THE HEAD OF THE LADD TRAILS, WHICH LED BY A PRECIPITOUS AND HAIR-RAISING ROUTE DOWN INTO THE GRAND COULEE. IN GETTING DOWN THE LADD TRAILS THE FIRST TIME I CAME NEAR LOSING MY LIFE."

Lingering Respect.

"Do you skate?"

"No. When I think of how precious ice was last summer, I can't persuade myself to use it for any such frivolous purpose."—Washington Post.

Do You Know That

The highest conception of riotous living is a hog eating potatoes and onions?

Land Branch, Canadian Pacific Ry., 93 Ninth ave., Calgary, Alberta.

MONTANA FARM—1108 ACRES; 450 IN cultivation, balance cut-over river bottom; no overflow; no underbrush; good pasture; black loam soil; 3 sets buildings; 7 miles from Kalispell, in Flathead county; school on farm; on main road, R. F. D. and phone line; the best part of the best county in state. You can't beat the quality and you can't beat the price. $38 per acre. Terms. A. L. Robinson, Kalispell, Montana.

STOCK RANCH, 240 ACRES, ABOUT 13 miles east of Lebanon, Ore.; two sets of buildings, plenty of fruit for two families; on county road; about 20 acres under cultivation, balance pasture, with some timber; good soil; plenty of spring water; price $7500; would consider improved acreage near any good school town up to $4000; terms on the balance. S. R. Tondy, Jefferson, Ore.

440 ACRES, ELEVEN THOUSAND DOLlars, $2000 cash, balance all time you want; good improvements; 100 acres meadow; Cheney district.

A section, all in cultivation, $35 per acre, only $4000, balance one-third crop; good wheat land. J. S. Langlois, Ritzville, Wash.

THOUSANDS OF ACRES OF FINE LAND. Irrigated, logged-off and general farming land; along the new lines of the Chicago, Milwaukee & St. Paul Ry. Write or call for free booklets. Immigration bureau. C. M. & St. P. Ry., 2nd and Cherry st., Seattle, Wash.

160 ACRES, 3 MILES N. OF MEDICAL Lake, Wash., and 1 mile from Ry. siding; all ready for crop; black loam soil; very fertile; fenced; small house; good well; very close to neighbors; $75 per acre.
WM. MULHALL, FENN, IDAHO.

160 ACRES; 6½ MILES FROM COUNTY seat, Vale, Ore., and one mile to station. A1, fenced. Two miles from oilfield; no improvements; clear. Price $8000; half cash, bal. time, 8 per cent.
M. L. PHELPS, BOISE, IDAHO.

$80 ACRES WHEAT LAND, IN HORSE Heaven, near Kennewick; fenced; some buildings; two wells; unusual bargain at $9 per acre. Write for particulars. Keystone Lumber Company, Tacoma, Washington.

FARM LANDS OBTAINED THROUGH foreclosure of mortgage offered at rare bargains and on easy terms. Send for list. Pennsylvania Mortgage Investment company, Spokane, Washington.

NORTHERN PACIFIC RAILWAY LANDS in eastern Montana at $2.50 to $18 per a. Suitable for farming or grazing. Easy terms. For information write or see W. E. HOLT, MILES CITY, MONT.

160-A. RELINQUISHMENT; LEVEL VALley land; improvements; 10 feet to water; irrigation well and plant; 320 A. adjoining open under new homestead law. Box 332, Winnemucca, Wash.

FOR SALE—BY OWNER, TWO WELLimproved half sections, close to school, town and postoffice, in Alberta, Canada. F. L. Geis, Daysland, Alberta, Can.

CALIFORNIA FARMS, NEAR SACRAMENto for sale; easy terms. Write for list. E. R. Waite, Shawnee, Okla.

FREE BOOKLET, STATE AND U. S. LAND maps. Joseph Clark, Sacramento, Cal.

IRRIGATED LANDS—For Sale 663

FOR SALE—720 ACRES, WELL EQUIPPED; artesian wells; alfalfa, orchards, berries, grapes; 3 sets buildings, with baths and gas; locust grove; school; railroad terminates on farm; adapted to dairy or purebred live stock; also 1500 acres leased land; have seed, feed and equipment; part in crop; would put in all the crop desired; 8 miles from Lewiston on paved road; ideal climate; no finer farm anywhere; will sell all or divide. Daniels & Wallace, Lewiston, Idaho.

IN THE FAMOUS OKANOGAN VALLEY, IRRIGATED LANDS; abundant water; rich soil; transportation; range; free timber; 28 years to pay for water on federal farm loan plan of repayments; small payment down. A job if wanted.

GRAIN LANDS, producing 30 to 50 bu. wheat per acre, at reasonable prices.
DIVIDEND-PAYING STOCK RANCHES.
J. W. GRAHAM, TONASKET, WASH.

320 ACRES IRRIGATED LAND IN MOSES Lake country, adjoining C. & O. nursery, $60 per acre; especially adapted to orchard or alfalfa raising; unlimited water at 40 feet. No money down if purchaser will improve property and pay in 10 equal instalments, commencing one year from date of sale, with 6 per cent interest.
A. R. MEAD, ODESSA, WASH.

Grain and Produce Markets

Chicago Grain.

CHICAGO, March 17.—Notwithstanding that the railway labor crisis led to much nervousness and irregularity in the wheat market today, prices in the late dealings showed considerable strength, owing largely to assertions that the government was preparing measures to prevent cessation of traffic even if the president's appeal to the contending forces to get together failed. The close was unsettled, ranging from 1c decline to 1⅜c advance, with May at $1.84 to $1.84⅛ and July at $1.54⅞ to $1.55⅛. Corn finished ⅛c off to ⅛c up, oats down ¼c to ⅜c, and provisions at gains of 7½c to 30c.

Cash Quotations.

CHICAGO, March 17.—Wheat—No. 2 red—Nominal; No. 3 red, $1.87; No. 2 hard—Nominal; No. 3 hard, $1.87.

Corn—No 2 yellow—Nominal; No. 3 yellow, $1.07@1.08; No. 4 yellow, nominal.

Oats—No. 3 white, 56½@58¾c; standard, 59@59¼c.

Rye—Nominal.

Barley, $1@1.32.

Timothy, $3.75@5.75.

Clover, $12@18.

Pacific Northwest Grain.

PORTLAND, Ore., March 17.—Wheat—Firm; no trading; spot bids, 1 to 2 cents higher. Bluestem, $1.70; forty fold, $1.67; club, $1.66; red Russian, $1.62.

Barley—Unchanged.

TACOMA, March 17.—Wheat—Bluestem, $1.69; forty fold, $1.65; club and red fife, $1.64; red Russian, $1.60.

SEATTLE, March 17.—Wheat—Bluestem, 1.70; turkey red, $1.71; forty fold, $1.66; fife, $1.65; red Russian, $1.63; club, $1.66.

Barley, $38.50 per ton.

WILBUR, Wash., March 17.—Wheat—Bluestem, $1.52; club, $1.47. Oats, $37. Barley, $37.

WALLA WALLA, Wash., March 17.—Club wheat, $1.53; bluestem, $1.60; barley, $38-$39.

San Francisco Grain.

SAN FRANCISCO, March 17.—Wheat—Firm; no trading.

Barley—May, $2.20 bid, $2.25 asked; December, $1.57.

Live Stock Quotations.

At Portland.

PORTLAND, Ore., March 17.—Hogs—Receipts, 410. Firm. Bulk of packing grades, $14.10@14.35; heavy packing, $14.35@14.50; light packing, $14.10@14.25; rough heavy, $13.50@14; pigs and skips, $12.25@13; stock hogs, $11.50@12.25.

Cattle—Receipts, 52. Steady to strong. Steers, prime light, $9.25@9.60; prime heavy, $9.50@9.70; good, $8.90@9.25; cows choice, $7.75@8; medium to good, $7@7.35; ordinary to fair, $5.25@6.75; heifers, $6.50@8.50; bulls, $5@7.25; calves, $6@10.

Sheep receipts none; firm. Lambs, east of mountains, $12.90@13.10; lambs, valley, $12.50@13; lambs, shorn, $10.75@12.25; prime wethers, $11.75@12; choice ewes, $9.75@10; heavy ewes, $8.75@9.25.

At Seattle.

SEATTLE, March 17.—Receipts, 332 hogs, 4 cattle. Cattle and sheep steady; hogs, 10 cents higher.

Cattle—Prime steers, $9.75@9.85; medium to choice steers, $6.50@8.50; common to medium steers, $6.50@8.50; best cows and heifers, $8.25@8.60; medium to choice heifers, $8.25@8.60; medium to choice cows, $6@8.25; common to good cows, $4@7.50; calves, $6.50@9.50; best bulls, $5.50@6; common bulls, $3.50@6.

Hogs—Prime light, $14.50@14.65; medium to choice, $14.35@14.45; Smooth heavies, $13.35@14.15; rough heavies, $13.35@13.65; pigs, under 150 pounds, $10.10@13.15.

Sheep—Prime lambs, $12.50@13.75; good lambs, $12.25@12.50; wethers, $10.25@10.50; ewes, $9.10.

Spokane Union Stockyards.

Hogs—Receipts, 74; market strong. Prime light packing, $14.25@14.35; prime heavy packing, $14.35@14.50; rough heavy, $13.35@14.50; pigs, $12.50@13.25; stockers, $10.00@11.50. Bulk of sales, $14.40.

Cattle—Receipts, 153; market steady. Prime heavy steers, $9.50@9.75; prime light steers, $9.25@9.40; good steers, $8.50@9.00; prime cows, $8.00@8.50; good cows, $7.50@8.00; common cows, $6.50@7.25; best heifers, $8.25@8.75; bulls, $4.00@6.50; calves, $7.00@10.00; stockers and feeders, $6.00@7.50.

Sheep — Receipts, none; market strong. Prime lambs, $12.00@12.50; common lambs, $11.00@11.50; choice yearlings, $10.50@11.00; good yearlings, $9.50@10.00; best mutton ewes, $10.00@11.00.

Seattle Market.

SEATTLE, March 17.—With a perceptible strengthening of the market toward the week end the potato situation is today improved over a week ago.

Quotations by growers of eastern Washington of $65 f. o. b., as reported by brokers here, and $60 for Puget Sound potatoes is $5 better money than would have been considered possible on Monday.

That speculators have overplayed the market is now everywhere conceded. The most that is hoped for is that prices will fall no farther. Visions of $80, $90 and $100 spring clean-ups have faded.

A few New Zealand onions, the first of the new season to go on this market, are selling slowly at 8c. Some of the onions had sprouted en route and green shoots proclaimed the quality. Oregon is practicalyy sold out.

All Stayman Winesaps, Rome Beauties and Spitzenburg apples are about cleaned up on this market, and only Winesaps, Newtowns and Arkansas Blacks remain. The demand is for cooking fruit at $1@1.50.

After battling for a solid week for fresh ranch eggs for the April storage crop, jobbers report that the fight against rising costs as paid producers has been unequal, and cases of only 200 to 300 are reported into the coolers by the largest houses.

Butter is firm and scarce, but California markets are near and in good condition for the invasion of speculators. City creamery men therefore are resisting temptations to hoist the market.

BUYING PRICES.

Unless otherwise stated the following prices are fixed upon a jobbing basis and are average prices obtained in reports of transactions by jobbers.

The following prices are offered to the producer by the local dealers for delivery in round lots f. o. b. Seattle:

Eggs—Local, 26@27c per dozen.

Poultry—Live hens, fat, over 4 lbs., 20c per lb.; do 3 lbs. and under, 18c; old roosters, 11c per lb.; springs, 20@22c per lb.; ducks, 20c per lb; squabs, large, $3.50 per dozen; geese, fat, 12@14c per lb.; turkeys, live, 23@24c.

Butter fat—42c per lb.; dairy butter, 25c per lb.

Beef—Buying price: Prime beef, steers, 7@8c per lb; cows, fat, 7@8c per lb.

Hogs—Light, 13@14c per lb.; do heavy, 10@12c per lb.

Veal—Fancy light, 12@14c per lb.; do heavy, 9@13c per lb.

Hides—Salted, 20c per lb.; salt kip, 22c per lb; salted calf, 32@35c per lb; green hides, 16c per lb.; salted bulls, 15c per lb.; dry hides (short trim), 32@33c per lb.; dry calf (under six lbs.), 36c per lb.; bull and dry salts, 4c per lb. less; green bulls, 18c per lb.; dry butcher full wool sheep pelts, 22@26c per lb.

Seattle Wheat.

SEATTLE, March 17.—The situation in regard to the supply of cars has been of more force this last week in governing operations of grain buyers than the price. Dealers who were actively in the market have been unable to get hold of any cars for shipments east, although there seems to be little difficulty in getting a supply for moving grain from the interior to Seattle. There is much complaint among the millers as to the ability of exporters to secure cars in large lots on surprisingly quick delivery. The situation with regard to holders of grain in the interior has not changed. Farmers as a rule have fixed upon a minimum price at which they will sell and it is now controversial whether they would release holdings even at $1.75. Eastern mills have created a fair demand for prompt shipment. Unless the car situation cleans up soon last season's wheat is likely to be still moving east by the time the new crop reaches the market.

On 'change here traders have held back, owing largely to the uncertainty of delivery. Prices have undergone little change in consequence, as activity is lacking. Opening the week at $1.67 bid and $1.70 asked for bluestem and Turkey red, quotations eased through the week with almost imperceptible fluctuations, excepting in the cheaper grades of milling wheat, which advanced 3 cents toward the week-end.

Farmers of eastern Washington were so well cleaned up on last week's high bids of $1.60 that it is estimated that there is not more than 3 to 5 per cent of the holdings now in their hands. The 1916 carryover it is stated has been sold out. Farmers who have grain are quoting $1.75. With no prospect of getting cars buyers have taken the position that it would be poor business policy to accumulate a lot of wheat with no knowledge of where it would be held until such time as it could be started east.

Portland Market.

PORTLAND, Ore., March 17.—Rush orders for eggs from Montana and British Columbia evidently sent in anticipation of a railway strike, have cleaned up the local market and put prices higher. Storers had to meet this outside competition and receipts did not equal the demand. Dealers had no difficulty in obtaining 27 cents, and single case lots brought half a cent more.

There was similar buying in the butter market, which raised country creamery extras to 26 cents. City prints stood at the old price. The butter make is still under normal.

Higher prices have checked consumption of poultry, especially chickens, and sales dragged in the latter part of the week.

Dressed meats are firmer with pork selling at the record price of 18 cents.

Wool dealers announce that contracting has ceased in all sections, asserting that the prices demanded by growers are prohibitive. Buyers who visited the Yakima section have returned and report that growers are determined to hold a little while longer. But little effort is made to contract in eastern Oregon, as it is known the growers will hold back for the sealed bid sales.

Mohair shearing has started in the southern counties and a few early clips have been bought at 50 cents.

The best price now bid for spit tops in the northwest is 7 cents. In spite of the discouraging market outlook growers in this state show no inclination of reducing their acre.

The demand for potatoes is still poor, although conditions in some of the eastern markets are reported better.

In the following list of quotations the grain, hay, millfeed, hop, wool and hide prices are those paid to producers. The other quotations are prices from jobbers to retailers:

Oats—No. 1, $36.50@37.25 per ton.

Corn—Whole $51; cracked $52 per ton.

Millstuffs—Bran, $29 per ton; shorts $33.

Barley—No. 1 feed, $38; brewing, nominal; rolled, $42@43.

Hay—Buying prices, Timothy, eastern Oregon, $19@20; alfalfa, $14@16, grain, $12.50@14.

Eggs—Oregon ranch, case count, 27@27 1-2c per dozen; candled, 29c.

Poultry—Hens, 18 @19c; ducks, 22@24c; turkeys, live, 22@24c; dressed, 23@28c; geese, 12@14c.

Butter—City creamery, prints, 38@39c per pound; cubes, 35 1-2@36c.

Cheese—Oregon triplets, 23c; Young Americas, 24c.

Dresser meats—Veal, 35 1-2@36c; pork, 18c.

Hops—1916 6crop, 14 1-2c per pound.

Potatoes—Oregon, jobbing price, $3@3.50.

Onions—Jobbing prices: No. 1, 4@7c; No. 2, $6 per sack.

Wool—Eastern Oregon, fine, 30@35c; coarse, 40c; valley, 40c.

Beans—Oregon small white, 10c; California small white, 12 1-2c; large white, 12 1-4c per pound.

Hides—Salted hides (25 lbs. and up), 18c; salted stags (50 lbs. and up), 14c; green and salted kip (15 lbs. to 25 lbs.), 18c; green and salted calfskins (up to 15 lbs.), 27@28c; green hides (25 lbs. and up), 17c; green stags (50 lbs. and up), 13c; dry hides, 30c; dry salt hides, 25c; dry horse hides, $1 and $2; salt horse hides, $3 to $5.

Stocks of Wheat on Farms.

According to the March report of the United States department of agriculture, stocks of wheat still on the farm totaled 101,365,000 bushels on March 1, 1917. One year ago farm stocks of wheat totaled 244,448,000 bushels. The average farm value of this wheat was $1.644 per bushel on March 1, 1917.

Comparison for northwestern states are as follows:

	Stock on farms March 1, Bu.		Price Per Bu., March 1, 1917.
Washington	4,516,000	7,713,000	$1.44
Oregon	2,737,000	3,004,000	1.50
Idaho	2,110,000	3,933,000	1.45
Montana ...	4,871,000	10,545,000	1.57
Totals	14,234,000	25,195,000	

Nebraska had more wheat on the farms March 1, 1917, than any other state in the union—15,081,000 bushels. North Dakota was next with 11,011,000 bushels; Kansas, third, with 10,782,000 bushels; South Dakota, fourth, with 5,938,000 bushels, and Minnesota fifth, with 5,787,000 bushels.

Top Price for Wheat.

The top price reported for wheat in the Lewiston, Idaho, market was received by John Lambert for 4000 bushels of select Marquis wheat at $1.65 a bushel. This wheat was raised on the Lambert ranch on Waha prairie and the average yield is reported at 39 bushels to the acre.

BETTER PRICES BROADER MARKETS

Part Played in Problem by Transportation — National Treatment for a National Enterprise.

IN every part of the country the farmers are turning their attention to questions relating to the handling of their products after they leave the farm. Transportation is a part of this problem. The cost of reaching their markets and the ability to reach them promptly at the right time are important factors in determining the returns from their crops.

Low Freight Rates

Fortunately, the American farmer has at his command the lowest freight rates in the world. It costs no more to move a load of wheat 500 miles by rail than it does to haul it five miles from farm to station by team. A ton of farm produce of any kind can travel almost twice as far for the same charge on American railroads as on the government-owned roads of other lands.

The cheapness of transportation is not the whole issue. To meet the needs of the farmer transportation facilities must be ample. There must be plenty of tracks and cars and locomotives and sufficient terminals.

Billion a Year Needed

The railroads are anxious to provide means to take care of all the business they can obtain. But a vast outlay of money is required. A billion and a quarter dollars a year for the next ten years or more must go into railroads to provide the necessary transportation facilities.

During the past few years it has become more and more difficult to obtain, even in part, the money required for this purpose. This has been due partly to the poor promise of a satisfactory return on the investment; partly to the uncertainty created by numerous and conflicting regulations.

Regulate For All the People

Nobody seriously proposes that the public regulation of railroads shall be weakened. Certainly the railroads themselves do not. But it is a reasonable proposal that the regulation of this great national business should be handled by national agencies, on national lines, in the interest of all the people, and not by local agencies to serve local or sectional ends.

Regulation at cross purposes by 49 masters—48 states and the federal government—now imposes upon the railroads an annual burden of many millions of dollars of wasteful expense, from which the public derives no benefit. It is of primary importance to the farmer to cut down this waste in order that his products may be moved to market at the least expense and with the greatest possible expedition.

The farmer's interest demands free trade among the states.

Wheat Prices

Likely to Remain High This Year

If we can keep open our trade lines with Europe, and ships do not become too scarce, wheat and other farm products will continue to bring good prices in 1917. Potatoes may be an exception, as eastern reports say farmers are planning to put in a greatly increased acreage.

"With the present crop a failure in Argentina, and with unfavorable farm conditions in Europe, it may be the chance of the northwest, together with western Canada, to keep the whole world from going hungry," says the Northwestern National bank in its March letter. The bank continues:

"Very little wheat remains 'back in the country,' though eastern Montana is said still to have a considerable amount of grain in the hands of farmers, due to the heavy snows in that section which have prevented marketing.

"The question of good seed for the 1917 planting is a highly important one.

"The state universities are endeavoring to cooperate with farmers in this vital matter, and usually there are organizations of seed growers in the various states who publish seed lists with the object of bringing growers and buyers together. In Montana the seed situation is good. The 1916 spring wheat crop was ample and there was little injury from rust. In North and South Dakota the outlook is not so favorable. There is a sufficiency of seed in the hands of the farmers, but it is usually poor in quality. There is no reason, however, for farmers to run a risk on this account, for the agricultural colleges are offering opportunities for the purchase of good seed."

Broomhall's Liverpool cables report that Argentine wheat offers are light and American shipments increasing. Prices are advancing and the continent is absorbing American offers.

In France the weather continues unseasonable. The acreage is greatly reduced and growing conditions are unfavorable.

In Italy the weather conditions have been unfavorable since seeding.

Dryness is reported over a wide area of Spain and crop prospects are bad.

In the Balkan states crop prospects are unfavorable on a greatly reduced acreage.

In Australia further rains have fallen over a wide area and grain movement is retarded. Where wheat is stacked damage has resulted. It is believed that much of the grain is still unhoused as storage is limited. In England and Scotland the weather is against best developments.

All Russian advices agree that crop prospects are only fair. The winter has been dry, with abnormally light snow. Little is longer heard about the great Russian grain surplus that was going to be released if the Dardanelles were opened. The straits are still blocked, and there is every reason to believe that the Russians have consumed their surplus and are themselves on short rations.

In a sentence, all signs indicate a world shortage of wheat and other grains in 1917.

Curlew Valley Live Stock.

Almost every stockraiser in the north half of Stevens county was present at the Curlew Valley Live Stock association meeting at Curlew last week. M. O'Brien of Curlew was elected president, Dennis Peone vice president and John P. Helphrey secretary-treasurer. Resolutions were adopted asking state, federal and county aid in exterminating coyotes. The appearance of rabies in the county was announced, and concerted action in hunting, trapping and poisoning the animals was agreed upon. Arrangements were started for the making of a brand book for the county to facilitate the finding of estrays. A resolution was passed forbidding the use of any but purebred beef type sire on the open national forest range.

Fruit Men Go on Record.

Representatives of 12 shipping agencies in the Yakima valley are considering the advisability of packing unwrapped all C grade apples and fancy and extra fancy grades of all but the high standard varieties. Yakima shippers use about 80 cars of wrapping paper, which will cost $8.50 a hundredweight, as against $4.50 last year.

Hogs $15 a Hundred.

Record-breaking prices were paid in Spokane last week for hogs when the E. H. Stanton company gave William Martin of Lewiston, Idaho, $15 a hundredweight for a car of choice swine. The hogs weighed about 225 pounds.

Spokane Market.

The wholesale prices quoted in the list below are not the prices paid to producers or shippers; they are those charged by the Spokane commission houses to the retail trade for standard produce. The prices quoted for live stock, however, are the prices given to the producer:

Potatoes—Potatoes, $3.25@3.50 cwt; sweet potatoes, $6.

Seed Potatoes—Early Ohios, 4c lb; Early Rose, 4c lb; white potatoes, 4c lb.

Apples—Washington apples, cooking, 65@85c; eating, $1@1.25; Wageners, 75c@$1.30 box; Rome Beauties, $1@1.40 box; Winesaps, $1.75@2 box; Y. N. Pippins, $1.75@2 box.

Butter—Blanchard cartons, 43c lb; Medo-Maid, 43c lb; Cascade, 43c lb; Gold Coin, 36c lb; Gold Leaf, 43c lb; Better Butter, 43c lb; Hazelwood, 43c lb; Peerless, 39c lb; Jersey Belle, 42c lb; Attalia, 43c lb; Diadem, 43c lb; Jersey, 39c lb.

Cheese—Wisconsin full cream, twins, 28c; triplets, 22½c; Hazelwood full cream, triplets, 23c lb; Hazelwood Young America, 24c lb; Wisconsin limburger, 28@29c lb; brick cheese, 28c lb; domestic Swiss, 33c lb; Young Americas, 25c lb.

Eggs—Fresh local ranch eggs, $8@8.50 case.

Live Poultry—Springs, 17c lb; hens, 17@18c lb; old roosters, 9@10c lb; ducks, 13c lb; turkeys, 26@25c lb.

Dressed Poultry—Hens, 21c lb; springers, 20c; old roosters, 13c; ducks, 16c; geese, 14c; turkeys, 28c.

Hide Quotations.

Green cows and steers—25 lbs and up, 17½c; salted cured, 20c; green bulls and stags, 13c; salted cured, 16c; kip, 15 lbs. to 25 lbs., 23c; calf skins up to 15 lbs; 31c; dry flint hides, 34c; dry salted, 27c; dry calf skins, under seven lbs., 42c; dry sheep pelts, full wooled, 22@26c; dry shearlings, 10 to 75c each; green horse hides, $3 to $5 each; dry horse hides, $1 to $2.50 each.

Fruit for Canning.

The following prices are offered for good, sound fruit in the cannery campaign in the Spokane valley:

At 3 cents a pound, dewberries, gooseberries, English Morrella cherries, Early Richmond cherries and Duke and Late Duke cherries.

At 3 1-2 cents, Montmorency cherries.

At 4 cents a pound, strawberries and Royal Ann cherries.

At 4 1-2 cents, black currants.

For tomatoes the company offers $10 per ton; for green gage and egg plums, $15; for Italian prunes, $20; for Bartlett pears, $22.50; for Concord and other dark varieties of grapes, $30; for Damson plums, $40 per ton.

For good, sound cull apples, $7.50 a ton is offered.

And for beans prices would range from $32.50 to $80 per ton, according to variety.

Farmers' Society of Equity.

The annual meeting of the Bear Lake Farmers' Society of Equity was held at Montpelier, Idaho. Questions of interest to the farmers and the welfare of the society were discussed. A dividend of 8 per cent was declared payable to the stockholders. The following directors were elected for the ensuing year: John Quayle, Henry Teuscher, C. G. Keetch, E. P. Hoff, Harrison Tippets, J. A. Berry and J. W. Cook. The directors chose the following officers: G. H. Hall, president; Fred C. Evans, vice president; W. Woodruff Clark, secretary and manager.

Canadian Wheat Taken Over.

The Canadian council of agriculture has decided that the whole 1917 crop of wheat in Canada shall be taken by the British government. The price to be paid is put for No. 1 northern at Winnipeg, a minimum of $1.50 and a maximum of $1.90 a bushel. It is understood the dominion government will handle the business of buying from the farmers and insure transportation to the seaboard.

Grain Estimates in France.

The French minister of agriculture has published estimates of the acreage sown during the fall and winter of 1916 in wheat, spelt, rye, barley and oats. There is a total decrease in the acreage of wheat of over 2,000,000 acres as compared with the previous year. Spelt acreage remains about the same; a decrease of over 200,000 acres in rye; an increase of about 20,000 acres in barley, while the oats acreage remains about the same.

Form Bull Association.

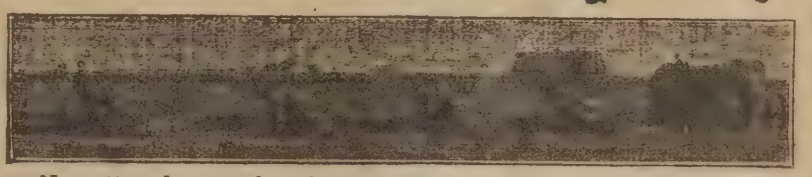
The Central Oregon Bull association has been formed, with George H. Beckman as president, Levi Ernst secretary-treasurer and E. S. Barnard member of board of directors. This represents the culmination of several months' effort. The above association adopted articles and by-laws and is being assisted in purchasing a Jersey bull of excellent quality. A block of this association will probably be formed near Terrebonne, where other farmers are being interested.

Growers Name Sales Chief.

Trustees of the Yakima Valley Fruitgrowers' association in central washington have selected P. V. Clark to succeed C. W. McCullah as sales manager, turning down outside offers to market their tonnage and unanimously deciding to market fruit through their own sales department.

Apple Forecast 8000 Cars.

Estimates from those prominent in the apple industry of the Wenatchee district in Washington placed the crop of 1917 at 8000 cars.



Assessors Uncover Potatoes.

It is understood at North Yakima, Wash., that the appearance of deputy assessors March 1 had more to do with the drop in the price of potatoes than any other cause, uncovering stocks in the hands of growers far larger than was expected, from 150 to 200 cars.

At $78 an Acre.

Ernest Robinson, a young rancher, has disposed of a wheat ranch two miles north of Davenport, Wash., to Miss Emma Lowry, who has land adjoining, for $78 an acre.

Go Get a Homestead Free this spring

No matter where you have been farming, a fortune awaits you if you go now and get one of the recently surveyed 160 acre homesteads in the rich districts reached by the Canadian Northern Railway, the newest transcontinental railroad of America, "The Road to Opportunity." Here you can make a fortune at growing grain and mixed farming, raising cattle, hogs and poultry.

Western Canada's improved, easily accessible markets and recent extension of railways makes conditions and opportunities of settlement excellent.

"You Can Do What Others Are Doing"

George Rupp says: "I came here from Hudson, Iowa. I can stand on my windmill and count no less than a dozen grain elevators. I can stand in my yard in the Fall and count as many threshing machines. My horses and cattle have run outside all winter.

(In 1915 Alberta produced 107,741,000 bu. of oats or an average of 56.35 bu. per acre. The total value of all crops in 1915 was $114,186,000.00.)

Mr. A. Taylor of the Rhein District in Saskatchewan, says: "I had 30 acres in wheat that averaged 50 bu. an acre, 315 acres in oats, that averaged 88 bu. ian acre, 20 acres in barley that averaged 50 bu. an acre."

(In 1915 Saskatchewan produced 195,042,000 bu. of Spring Wheat or 23.54 bu. average per acre—total value of all crops for the year was $382,845,000.00.)

W. Leat says of the Kenville District in Manitoba: "I had 203 acres of wheat that averaged 45.5 bu. an acre, 17 acres of oats that averaged 65 bu. 25 acres of barley that averaged 50.5 bu. an acre.",

(In 1915 Manitoba produced 96,062,000 bu. of Spring wheat or an average of 28.83 bu. an acre. Total value of all crops for 1915 was $201,100,000.00.)

Charles Draper says: "I came from Nebraska with no capital—and have not had a poor crop for seven years. Any man willing to work can succeed here."

Mr. G. D. Schnauffer says: "I came from Illinois in 1907. Today I am worth $30,000—I cleared $120 from the litters from one sow last year."

(In 1915 British Columbia produced 3,033,000 bu. of potatoes or an average of 247.23 bu. per acre; the total value of all crops was $11,550,100.00.)

Special Low Rates

Low round trip home-seekers' fares to Western Canada are in effect every Tuesday, March to Nov., inc. Also one-way low fares for settlers. Even if you have already selected your farm, it will pay you to travel to Western Canada via the Canadian Northern Railroad.

Grazing Land Grants

Grazing land grants may be procured at very low cost for a period of twenty-one years. Outdoor feeding of beef cattle on native grasses bring even better results than indoor feeding.

Good Roads

Bridges and culverts are built where needed, and roadways are usually graded up, although the land is just rolling enough to give good natural drainage.

Good Schools

The Public school system is well abreast of the times. One eighteenth part of the whole prairie section of Western Canada is set aside as a school grant. Land taxes are low and go mostly for schools.

Free Book

Be sure and write today for a free copy of "The Home-Seekers' and Settlers' Guide," full of complete and authentic information. *A fortune is waiting for you.*

"Fast Practice" in Public Sales

Denounced as One of the Greatest Shames in Live Stock History

The buyers as well as the breeders of purebred live stock are still looking for a satisfactory explanation of the following contradictory statements regarding the $21,500 calf sale at Portland last December.

October 2, 1916. B. Meyer, the breeder, offered the Holstein bull calf, Finderne Mutual Fayne Valdessa, to E. A. Stuart for $5000.

November 17, 1916, Mr. Meyer told Mr. Stuart that the animal had been sold. He failed to give the price, but Mr. Meyer's herdsman told Mr. Stuart that a Mr. Von Herberg was the purchaser and the price was $2500.

In his transmitting letter to Mr. Gue the auctioneer at the Pacific international stock show sale at Portland last December Mr. Meyer said: "I consign this bull to your sale without any restriction whatsoever." But in his answer to the Farmer's telegram of inquiry of February 4 Mr. Meyer says: "Bull was sent by me to the sale under the recommendation of Von Herberg, guaranteeing me $5000 at least, and all he would bring above it. What my herdsman said was not true."

When the Farmer sent another telegram asking Mr. Meyer to be more explicit he telegraphed this reply: "The bull was sold at auction for $21,500 to Mr. Von Herberg. After deducting commission, freight and expense I received the balance of my money in full. Exact amount what I got is my business."

E. C. Stone, the writer of the following letter, is the secretary-treasurer of the American Hampshire Swine Record association.

To the Editor: Your favor has been received and would have been answered sooner had I been in the office and had time to look after correspondence. I have been attending public sales almost every day for the past six or eight weeks.

One of the greatest shames in live stock history is the "fast practice" used in public sales. We mean by "fast practice" just the same thing as entered into the selling of the $21,500 bull calf at the Pacific International.

A few years ago the breeders of Poland China hogs and Duroc hogs were practicing the same game as was used in this calf sale. One of the common things was that I would go to your side and bid far beyond any possible price that a man could be expected to bid in order to make your sale a high average. In most cases I was not to move the animal from the place where purchased. If I did move the animal from the place it was your duty to come to my sale and buy as many hogs as I bought at your sale for as many dollars as I had bid in your sale. Thus you will see both of us would have a very high average price sale and yet we had done nothing more than trade hogs.

A young man with more money than brains will occasionally attend one of these sales. This reckless bidding was done for the purpose of catching this young man and causing him to spend long money for all the purchases that he made. It is not honest and for that reason does not work well.

The Poland China breed of hogs almost ruined itself in this kind of practice. The Duroc breed of hogs came on and followed up the same practice for a few years. A number of very prominent breeders lost their farms simply because they would have a public sale amounting to $15,000 to $20,000 and yet would not take in money enough to pay the sale expenses. After several years of such practice they hit the stone wall and from that time on most of their sales are held on the square with an occasional animal that some one may buy previous to the sale and then carry to a price beyond reason.

I entered the public sale business after all of these successes and failures had been made. I was determined to be in no way connected with any sale except the sale held absolutely on the square.

Today you will see sale reports published where hogs average in price $500 to $400 per head. Whenever you see those kind of prices you are to know without telling that some one has been buying a $21,000 bull calf. It isn't good sense, and it can not be practiced with success.

A very rare, occasional animal in any breed is worth $1000, in hogs some of them are worth $2000 to $3000, but none of them are worth $21,000.

Many an auctioneer and field man have come to me and pointed out how the breed of which I am the manager would fail and sink into the past history if I did not join their practice. My answer has always been and always will be when we can not sell hogs honestly then you will no longer find me in the business. I believe in holding public sales and let each man bid his honest money against the other man. If they refuse to bid, or the stock does not bring market price and expenses, then it is time to stop the public auction and sell your stock on the packers' market. I am not able to tell you how to stop this practice, unless you can get the attention of the secretary and manager of the several breeds. The belted breed of hogs will either have honest sales or no sales. Whenever they want to conduct their business in any other way they have the job of looking for a new secretary and a new business manager. We have succeeded beyond comment in our growth, and shows. No breed has ever made the gains that the Hampshire breed has made and I believe it is as much due to honesty as any other one thing. The bull calf never sold for $21,500. It is beyond reason, beyond good sense, and I am glad that the Carnation farms have exposed them. The public sale system is one of the greatest systems in the world, yet it is easy to corrupt. I shall be glad to hear from you further at any time.

E. C. STONE.

Secretary American Hampshire Swine Record association.

NEWS FOR BREEDERS

St. Mawes' Beauty, a junior three-year-old Jersey cow owned by Ed Cory, Carlton, Ore., completed a year's official record in January of 747.9 pounds of fat, or 877.9 pounds of butter. The record has just been published by the A. J. C. C. and places her second in her class in the United States, surpassing the former world's record held by Lass 74th of Hood Farm, but falling three pounds short of that made by Goldie's Nehalem Beauty owned by Clifford Reid of Portland, and finished about the same time. Beauty made a great record with her first calf of 690.4 pounds of butter, begun at one year and eleven months. She finished her year in prime condition, qualified for class AA and will be placed on official test again. She has probably freshened before this reaches the Farmer readers and is expected to crowd the record in the next class. H. A.

DISPERSAL SALE OF JERSEYS.

On April 11 W. G. E. Smith of Hood River will hold a dispersal sale of his Jersey herd. To these animals will be added Jerseys from the herds of W. S. Turner of Oregon City and J. B. Hyde of Portland. About 40 head will be entered in the sale.

Mr. Smith's herd traces to such sires as Journalist, Guenon's Gay Lad, Agatha's Flying Fox, Eurybia's Prince and Pedro, and on the dam's side to Eurybia, Dora of Deercombe, Ashland Fancy and Golden Marsh. The other herds offered have illustrious ancestry, also, several of the Hyde offerings being from the Charles Miller herd, which was dispersed a few years ago.

SEGIS WALKER PIETERTJE LAD.

To the Editor: I regret to have to announce the death of Segis Walker Pietertje Lad, 119777, on February 25, he having been shot owing to an accident from which recovery seemed impossible.

It was a great loss to me personally and no doubt to this part of the country. Segis Walker Pietertje Lad has been grand champion Holstein bull at three state fairs, and has never been defeated. His dam also was grand champion at the Gem State fair in 1915, the only time shown. The sire of Segis Walker Pietertje Lad was King Segis IX., a son of King Segis from a 28-pound 4-year-old daughter of Johanna Rue III.'s Lad. Fortunately I had on hand a yearling son of his from a 30-pound show cow, Daisy Pioneer Clyde, a daughter of Sir Clyde, with 30 pounds in seven days, and 123 pounds in 30 days. She was grand champion female at the Gem State fair last fall, her yearling daughter junior champion and the bull calf above mentioned first premium senior calf, being full brother to the junior champion heifer.

To use one the daughters of Segis Walker Pietertje Lad I recently secured a son of Johanna McKinley Segis, the 40-pound son of King Segis. This calf's six nearest dams average over 30 pounds and his dam is a daughter of Rag Apple Korndyke.

New Plymouth, Idaho.

ABERDEEN-ANGUS SALE.

At the Aberdeen-Angus Cattle society's sale of bulls, conducted by Messrs. Macdonald, Freser & Co., in Aberdeen, Scotland, 380 bulls averaged $207.48, compared with $156.12 for 387 head last year.

Top was $918, paid by Colonel Ogston of Kildrummy, for a Trojan Erica bull from Ballindalloch. G. Petrie, Glenlogie, paid $765 for another Trojan Erica from Ballindalloch, and Colonel Ferguson of Pittour, paid the same figure for a second prize Witch of Endor bull from Mr. Penny of Skillymarno.

SHORTHORN SALE AT INVERNESS.

The annual sale of Shorthorn cattle at Inverness, Scotland, saw an average of $194.94 made for 80 bulls. J. A. Gordon-Oswald, Aigas, Beauty, headed the list with Alias Challenger, a red roan, sired by Tulip Chieftain, bred by Maswilliam, Garbity, and out of Spring Flower by Prince of Orange. He won the champion prize, and was purchased by Stewart Lochdhu for $510.

BUYS REGISTERED ANIMALS.

C. F. Sawyer, breeder of registered Percheron horses, who owns a farm three miles east of Palouse, has bought five registered animals from Sam Wade & Sons of Lostine, Ore.

NEW BERKSHIRE ASSOCIATION.

The Rogue Valley Berkshire association is a newly formed live stock association in southern Oregon.

DUROC-JERSEY SWINE

A GOLDEN OPPORTUNITY

7——Durock Jersey Gilts——7

These are my tops. I had reserved them for my own use. Owing to recent business changes, I have decided to offer them for sale.

They are sired by Sprongs Prince, he by Topeka, dam Capitol Belle. On the dam side they are out of a granddaughter of Advance Wonder, tracing back to the great show sires, Proud Advance and Crimson Wonder. They are 7 months old, weigh 200 lbs. in breeding condition. They will be sold either open or bred.

WE WILL PAY SALARY

to farmer with rig or saddle horse. The publisher of The Washington Farmer wants men to secure and renew subscriptions to this paper in various farming districts throughout the state. We are paying good salaries to those who can do the work and are offering these positions only to farm owners or renters.

We want to hear only from those who will be willing to give our proposition a fair trial for at least a month and who will put in good, hard licks for good pay. For men with these qualifications the opportunity is a splendid one. This work isn't easy; but you can do it and earn a good salary. We give you full instructions and the right kind of help.

You will be able to earn a salary of from $25 to $150 per month or even more, dependent upon the amount of time and effort you can give to the work. Salary check will be sent promptly at the end of each month.

We will not consider an applicant who does not live on a farm and who does not have a rig, saddle horse or automobile. In writing us tell whether married or single, whether you own or rent your place and give the names of two merchants with whom you trade. There isn't any red tape about our proposition, but we must know something about those workers we put on our payroll to receive a monthly salary check.

Give full details in your first letter to The Washington Farmer, Review building, Spokane, Wash.—Adv.

Canada Offers 160 Acres Land Free to Farm Hands

Bonus of Western Canada Land to Men Who Assist in Maintaining Needed Grain Production.

The demand for farm labor in Canada is great. As an inducement to secure the necessary help at once, Canada will give **one hundred and sixty acres of land free as a homestead** and allow the time of the farm laborer who has filed on the land to apply as residence duties, the same as if he actually had lived on it. Another special concession is the reduction of one year in the time to complete duties. Two years instead of three as heretofore, but only to men working on the farms for at least six months in 1917. This appeal for farm help is in no way connected with enlistment for military service, but solely to increase agricultural output. A wonderful opportunity to secure a farm and draw good wages at the same time. Information as to low railway rates may be had on application to

VOL. XL. MARCH 29, 1917. NO. 13.

Farm Bank Soon Ready for Business

Officers Are Appointed for Spokane Branch, and Rate of Interest Fixed at 5 Per Cent

By N. W. DURHAM, Chairman of Spokane Committee on Land Bank.

Northwest district farm bank officers, left to right: Above, vice president, C. E. B. Roberts, Idaho; president, D. G. O'Shea, Montana; secretary, G. C. Jewett, Washington. Below, fifth director, A. W. Cauthorn, Oregon; treasurer, G. M. Dreher, Washington; registrar, Turner Oliver, Oregon.

Now that the federal farm loan board at Washington has appointed the five directors who will organize and temporarily manage the Spokane district federal land bank it seems probable that the institution will be ready within a few weeks to make loans. No definite announcement can be made yet, however.

Appointments are now made for all of the 12 district banks, the bank at Berkeley, Cal., being the last to be announced from Washington. Individual members of the national board will now visit the 12 bank cities to direct the local boards in their duties and start the banks going.

Technically the national board exceeded its authority in designating the particular duties of the local directors. In naming the Spokane district board, for example, the national board specified who should be president, who vice-president, who secretary and who treasurer, when the law says the five directors—"Shall choose from their number, by majority vote, a president, a vice president, a secretary and a treasurer."

Undoubtedly the local board will comply technically with this requirement by ratifying the action of the national board. The law says:

"They (the local boards) are

Last Chance--$200--Last Chance

READ HOW TO WIN IT IN OUR BIG

FARM INFORMATION CONTEST

Don't Let It Escape. Get Our Contestant's Helpful Outfit and Start at Once. On April Fifth This First Prize Drops to $175.

Read the Rules—Answer These Questions

41. What great general requested that his heart be buried in one place and his body in another?

42. A wagon box ten feet long, three feet wide and twenty-four inches deep will hold how many bushels of wheat?

43. What member of Wilson's cabinet has the same name as an important city in Texas.

44. What day of the week was July 4th, 1909?

45. Why is the cow a useful farm animal? (Confine your answer to 100 words.)

$800—IN CASH to Be Paid—$800

We will positively give EIGHT HUNDRED DOLLARS in cash awards (and more in event of ties) to the winners. As explained in the rules which follow, there will be five questions run in every issue of the Farmer for 12 weeks. The last five questions will appear in the issue of April 19.

Open to Four States

Contestants must be residents of Washington, Oregon, Idaho and Montana.

Five Questions Each Issue

The contest will be composed of 60 questions. Five will be run in each issue of the Farmer for 12 issues.

Answers to each question except No. 45 can be given correctly in from one to 10 words and will be given a score of 100 if correct. Answers to question No. 45 will be limited to 100 words each, and will be graded as to the common sense and general knowledge of farm conditions shown by the contestant without regard to spelling, grammar or penmanship. As with the other 59 questions, a perfect answer to No. 45 will be scored 100.

Perfect Score Is 6,000

The contestant who comes nearest to a score of 6000 and complies with all the conditions of the contest will receive the first prize; the next nearest, second prize, and so on. In case of a tie each tying contestant will receive the full amount of the prize.

There are 35 prizes as follows:

$150 is amount of First Prize. **$50** is amount of Third Prize. **$10** is amount of Fifth Prize.

$100 is amount of Second Prize. **$20** is amount of Fourth Prize. **$5** each, Sixth to Tenth Prizes.

$2 each Eleventh to Fifteenth Prizes. **$1** each, Sixteenth to Thirty-fifth Prizes.

OTHER RULES

The answers will be passed upon and graded by a fair-minded, thoroughly competent judge.

Two weeks will be allowed for sending in answers after April 19, 1917, date of the issue containing the last five questions.

Remember, your failure to answer all the questions will not necessarily exclude you from the contest. There are 60 questions to be answered and it is not reasonable to suppose that all our prize winners will attain a perfect score. Your answers must all be sent in at the same time. Do not send any answers until you have completed the full list or as many as you can answer.

Those who use our CONTESTANT'S HELPFUL OUTFIT will be able to send in their complete set of answers without delay, there being no need of their waiting for the questions as they appear in The Farmer from week to week down to the final issue of April 19. In order to get as prompt returns as possible from those contestants who use our CONTESTANT'S HELPFUL OUTFIT, extra inducement is made in the prize awards. SEE ENLARGED PRIZE LIST.

Announcement of prize winners will be made and prize checks mailed as soon after close of contest as possible.

If any point is not clear, do not hesitate to write the Farm Information Editor.

All answers must be mailed on or before midnight, May 3, 1917, as shown by post-office dating stamp on your envelope.

ORDER COUPON—If your subscription is paid ahead, the time paid for herewith will begin at the date to which you are now paid.

FARM INFORMATION EDITOR,
Review Building, Spokane, Wash.

State .....

Notice—Amount of remittance to be either $1 for one year's subscription to the Farmer or $1.50 for three years' subscription.

Answer this question: Are you now a subscriber?.....
If you wish paper sent elsewhere, fill in name and address.

A Valuable Aid to Contestants

One complete CONTESTANT'S HELPFUL OUTFIT, including all of the 60 questions and instructions and helpful warnings as to answers which would be wrong, and the correct answers to some of the most difficult questions, is truly a big help to the contestant.

To each contestant who sends in a new renewal or an extension of his subscription at the time of registering for the contest, this complete CONTESTANT'S HELPFUL OUTFIT will be sent in combination.

We feel that those beginning on the contest will find these suggestions as to what to avoid distinctly useful. This equipment supplies in convenient form everything needed to enable you to apply your ability to the best advantage, and will contain information enabling you to answer the most difficult questions correctly.

Puts Questions in Reach of Children

This CONTESTANT'S HELPFUL OUTFIT puts the solution of the questions in the reach even of the children, it being the purpose to make it possible for everybody in Washington, Oregon, Idaho and Montana to compete. This outfit includes, besides general information about the plan of the contest, the following:

Guide against wrong answers, which includes either correct answers of more difficult questions or easy references as to where to find the correct answers; and blank forms on which to write your answers in such a way that there can be no confusion when your answers are taken up by the judge for scoring.

It will be worth considerable to you to be assured that your answers are reaching the Farm Information Editor in such form that he will know in every instance exactly what question you intended to answer. This CONTESTANT'S HELPFUL OUTFIT will make it possible for you to

Begin Work at Once

On account of the large number certain to send for our CONTESTANT'S HELPFUL OUTFIT, thus making it possible for them to answer the entire 60 questions without delay, it is deemed advisable to offer some special inducements to secure prompt returns from this particular class of contestants. By securing the early replies of those who are thus supplied with the entire 60 questions, we will be able to have their papers carefully scored before the final rush of answers toward the end of the contest.

Understand, it is not absolutely required that those who use our CONTESTANT'S HELPFUL OUTFIT send in their replies at once, but, in order to induce them to get in early, the following plan for enlarging the awards to those prize winners whose answers come in early is offered:

ENLARGED PRIZE LIST—$800 IN PRIZES—ENLARGED PRIZE LIST

For those who use our CONTESTANT'S HELPFUL OUTFIT.

Thirty-Five Prizes	Amt. of prize if winner sends in answers during 1st period, Feb. 1- Feb. 21	Amt. of prize if winner sends in answers during 2d period, Feb. 21 Mch. 14	Amt. of prize if winner sends in answers during 3d period, Mch. 14 April 5	Amt. of prize if winner sends in answers during 4th period, April 5 April 19	Amt. of Prize for winner who does not send in answers before April 19
First Prize	$300.00	$225.00	$200.00	$175.00	$150.00

Fruit Paper Prices Boosted; Government Investigates

If the fruit growers of Washington, Oregon and Idaho have to pay the price for wrapping paper now being asked by the paper manufacturers, it will cost them from $500,000 to $750.-000 more to pack their fruit this year than it did last year.

The United States department of justice is now beginning an investigation of the situation with a view of learning the cause of the sudden and enormous increase in the price of the fruit wrappers, which has increased over last year from 50 to 100 per cent, according to the various grades of paper used. Announcement of the increase has been made simultaneously by all the big manufacturers.

Prices which a year ago ranged from $4 to $6 per hundred are this year quoted at from $8 to $10.

In one case of special high grade paper a price of $10.50 per hundred has been quoted.

Federal Attorney Francis A. Gerrecht, of the district of eastern Washington, is cooperating with the fruit growers' associations of the northwest in the investigation. In the meantime growers are refusing to contract for their paper, and are considering ways and means by which the quantity of paper required could be cut down if the abnormal prices persist throughout the season.

Growers report that last fall and early winter, when taking up the matter of paper contracts for the 1917 season, they were informed by the paper companies that prices could not be quoted at that time, though the contracts could be made with guarantee that the paper could be delivered at a price later to be determined.

The uniformity of action by the companies in announcing the boosted price has led to wide-spread suspicion that a trade combine has been formed. This suspicion has led to the formal investigation by the fruit growers' organizations and the department of justice.

The Spokane Fruit Growers' association, which numbers in its membership the great bulk of the local associations of the four northwestern states, has empowered C. J. Webb, assistant manager, to conduct the preliminary investigation on behalf of the growers which it represents. Mr. Webb is cooperating with District Attorney Garrecht.

"As Soon as Possible Consistent With Good Business"---- Farm Bank's Message to the Farmers

"The federal farm loan system will give the man on the farm an opportunity to finance his own affairs without profit to anybody on earth."

This is the message to the farmers of the northwest from President Daniel G. O'Shea of the northwestern district bank now in process of organization at Spokane. And he continues it:

"If any profit is made in the conduct of the business of the bank, it will be returned in dividends to the stockholders in the local farm loan associtaions, who are the borrowers. If the rate of interest is placed so low that no such dividends can be returned (and the minimum rate of interest possible is the aim of the directors), that in itself will be the greater profit to the borrowers.

"The interest rate at which business will be begun has been fixed at 5 per cent, and applies alike in every state in the union. Loans may be taken for periods of from five to 40 years, and paid off under amortization provisions whereby each annual payment not only covers the interest, but reduces the principal a given amount. The 36-year period promises to be most popular. On a 56-year loan of $1000 the annual payment would be $60.44, which is practically equal to interest on a similar loan at 6 per cent, yet it not only pays the interest, but at the end of the 36 years will have wiped out the entire debt. As long as the borrower makes this annual payment, his loan is not callable to annoy him and his mortgage can not be foreclosed.

"Loans may be made only for the purchase of land, for paying off indebtedness incurred prior to the organization of the bank or the local association, for equipment for the conduct of the farm, for purchasing live stock or machinery, for erecting additional buildings or for otherwise improving the farm.

"Under the provisions of the law local organizations are required, and these organizations will of necessity prove a stimulus to cooperation and development along many other lines of community betterment than merely financial.

"It has been suggested that the working of the farm loan bank is so hedged about by regulations and restrictions that it will be inoperative or nearly so. This is not true. While it will require some time to perfect the organization and put it into complete operation, the system will gradually expand until, I am sure, it will be adopted generally throughout the country to the great benefit of the farming, and hence the general public.

"The board has arrived in Spokane without so much as an office. A great mass of mail has piled up during the past weeks when there was no one authorized to receive it and reply to it. We have all the details of location and organization to attend to; all this correspondence to consider and answer; all the foundation to lay upon which we must work in the future. We are proceeding deliberately and carefully, but we will put the bank into condition to begin making actual loans as quickly as possible consistent with sound business policy, out of which must grow the far-reaching good that it is destined to accomplish."

How to Succeed in Growing Peas

Practical Student of Subject Gives Specific Directions

The Farmer has been asked by many of its readers for definite information on how to grow peas. For the following directions, applicable in general to all cases, though local conditions may influence soil working and time of seeding, credit is due Agriculturist J. R. Shinn of Spokane county, Wash., who has made pea growing his specialty:

(1) Where spring plowing is necessary, as is largely the case this year, double disking prior to plowing is advisable. Disking after plowing is also advisable if time can be allowed for weeds to come up so that they may be killed. Harrowing and seeding should follow immediately. Early preparation of land is esstential to best success.

(2) Peas will be planted this year with the grain drill, the same as wheat or oats, using the oats side of the feed. Extreme care must be taken that the drill does not crask the peas.

(3) Peas should be sown 100 to 180 pounds to the acre. Most seed companies contracting crops require 180 pounds to the acre.

(4) Seed must be innoculated. "So important is innoculation that it may be regarded as of equal importance with the seed itself," says Mr. Shinn. Innoculation consists of putting into the ground with the seed certain bacteria, which have the power of taking nitrogen from the air for plant food. Without these bacteria the nitrogen can not be taken by the roots; without the nitrogen the peas will not thrive.

How to Innoculate Seed.

Take soil fresh from gardens where peas were successfully grown. Sprinkle the peas with water and shovel about till they are thoroughly moist. Sprinkle the soil, over them and continue to shovel them about till they have taken all the dirt they will. Sow immediately, without allowing them to be exposed to the sunlight. "Experience has taught us that there is no more dependable method than that of using soil from garden areas, where peas have grown successfully for a number of years," Says Mr. Shinn.

Commercial preparations for innoculation may be secured at a cost of from 50 cents to $1.50 an acre. Preparations may also be secured from college or university experiment stations or the U. S. department of agriculture at nominal cost. Special directions for their use could be secured from the same sources, differing as between the different preparations.

Bearing branch of a pea vine.

SPECULATION IN WOOL
Brings Warning to Producers.

President J. E. Cosgriff of the American Wool Improvement association, in a statement recently, urged producers of wool, especially the small farmer with a few sheep, to make a study of the wool situation and market conditions. He declared that the intermountain section is now filled with many buyers whom it would be proper to class as speculators. Producers can not protect themselves in their selling unless they know wool and wool market conditions, urges President Cosgriff.

Washington Portraits No. 8.

J. R. Ayers.

Judging from his experience of two and a half years in the dairy business in Benton county, J. R. Ayers of Kennewick says that a good combination in the farming line for that county is asparagus, strawberries, potatoes and dairying. "Asparagus brings returns in March, strawberries in April and May, potatoes during the summer and fall, while the dairy cows bring returns all the time," writes Mr. Ayers.

The next in the series of Washington portraits will be that of D. A. Lenocker of Schrag, and will be given in next week's issue of The Washington Farmer.

More Millions for Farm Education

Congress Also Provides for Home Economics and Industrial Training

Much news of a purely sensational character has detracted attention from one of the most important and far reaching measures passed by the last congress and approved by the president February 23, 1917. This is the Smith-Hughes vocational act, introduced in the senate by Hoke Smith of Georgia and in the house by B. M. Hughes, also of Georgia.

This act provides for the promotion of education in agriculture, in home economics and in the trades and industries as well as cooperating with the states in the training of teachers of vocational subjects.

For every dollar appropriated by congress another dollar must be appropriated by the state or by the community, and all this money must be used for salaries of teachers and none of it for buildings, lands, equipment or for such supplementary education as is necessary in order to meet the requirements of the act.

Beginning with the year ending June 30, 1918, an appropriation of $500,000 is made by congress to cooperate with the states in paying the salaries of teachers of agriculture and another appropriation of $500,000 for teachers of trades and home economics. Each of these amounts is increased year by year until 1926, when each amount will reach the sum of $3,000,000 and remain at that figure annually thereafter.

For the purpose of cooperating with the states in preparing teachers of agricultulre and home economics for the fiscal year ending June 30, 1918, $500,000 is appropriated, which is increased to $1,000,000 in 1921 and annually thereafter.

This total of $7,000,000 with the additional $7,000,0000 from the states will make a perpetual fund of $14,000,000 annually, providing for an education which "should be of less than college grade and be designed to meet the needs of persons over 14 years of age who have entered upon or who are preparing to enter upon the work of the farm or of the farm home," and "to meet the needs of persons over 14 years of age who are preparing for a trade or industrial pursuit or who have entered upon the work of a trade or industrial pursuit."

For the purpose of cooperating with the states in paying the salaries of teachers, supervisors, or directors of agricultural subjects there is appropriated for the use of the states for the fiscal year ending June 30—

1918	$ 500,000
1919	750,000
1920	1,000,000
1921	1,250,000
1922	1,500,000
1923	1,750,000
1924	2,000,000
1925	2,500,000
1926	3,000,000

and annually thereafter the sum of $3,000,000.

These sums are alloted to the states in the proportion which their rural population bears to the total rural population of the United States, not including outlying possessions, according to the last preceeding United States census: Provided, that the allotment of funds to any state shall be not less than a minimum of $5000 for any fiscal year prior to and including the fiscal year ending June 30, 1923, nor less than $10,000 for any fiscal year thereafter.

For the purpose of cooperation with the states in paying the salaries of teachers of trade, home economics, and industrial subjects there is appropriated for the use of the states for the fiscal year ending June 30:

1918	$ 500,000
1919	750,000
1920	1,000,000
1921	1,250,000
1922	1,500,000
1923	1,750,000
1924	2,000,000
1925	2,500,000
1926	3,000,000

and annually thereafter the sum of $3,000,000. These sums are allotted to the states in the proportion in which the urban population bears to the total urban population of the United States according to the last preceeding United States census; a minimum of $5000 being provided up to and including 1923 and a minimum of $10,000 thereafter. Not more than 20 per cent of the money appropriated shall be expended for salaries of teachers of home economics subjects.

For the purpose of cooperating with the states in preparing teachers, supervisors and directors of agricultural subjects and teachers of trades and industrial and home economics subjects, there is appropriated for the fiscal year ending July 30—

1918	$ 500,000
1919	700,000
1920	200,000
1921	1,000,000

and these sums are allotted to the states in proportion which their population bears to the total population of the United States, according to the last preceding United States census. The allotment of funds to any state shall be not less than a minimum of $5000, for any fiscal year prior to and including the year ending June 30, 1919, nor less than $10,000 for any fiscal year thereafter.

The following table, prepared by The Farmer, gives the maximum amounts which each of the four states of the Pacific northwest may expect from the Smith-Hughes vocational act of congress for the three years 1918, 1919 and 1920. The figures for the remaining six years will have to be revised by the census of 1920. These sums are double the amounts obtained from the federal government, as each dollar appropriated by the federal government is contingent upon another dollar given by the state.

Year.	Agricu'al Teachers' Salaries.	Trades Teachers' Salaries.	Salaries Preparing Teachers.	Total.
		Idaho.		
1918	10,000	10,000	10,000	30,000

1921	27,250	35,500	24,800	87,550
1922	32,700	42,600	24,800	100,100
1923	38,150	49,700	24,800	112,650
1924	43,600	56,800	24,700	125,200
1925	54,500	71,000	24,800	150,300
1926	65,400	85,200	24,800	175,400

State Board.

In order to secure the benefits of the appropriations any state shall, through the legislative authority thereof, accept the provisions of this act and designate or create a state board, consisting of not less than three members and having all necessary power to cooperation with the federal board for vocational education in the administration of the provisions of this act.

In any state the legislature of which does not meet in 1917, the governor may accept the provisions of this act and receive its benefits until the legislature of said state meets in due course and has been in session 60 days.

Any state may accept the benefits of any one or more of these respective funds and may defer the acceptance of any one or more of these funds provided that, after June 30, 1920, no state shall receive any appropriation under this act unless it has previously taken advantage of at least the minimum amount appropriated for the fund or funds it desires.

Federal Board.

A federal board for vocational education is created to consist of the secretary of agriculture, the secretary of commerce, the secretary of labor, the United States commissioner of education and three citizens of the United Staets to be appointed by the president, one of the three citizens being a representative of the manufacturing and commercial interest, one a representative of the agricultural interest, and one a representative of labor. The three citizen members shall receive a salary of $5000 per annum.

An appropriation of $200,000 annually is made to carry on the work of the federal board in making investigations and reports to aid the states in the furtherance of vocational education.

To secure the appropriations made in this act plans prepared by the state board shall be approved by the federal board.

Salaries Only.

For each dollar of federal money expended for salaries the state or local community shall expend an equal amount for such salaries and all this money shall be devoted exclusively to the payment of salaries.

In order to receive the benefits of the appropriations made by the act the state shall provide in its plan for agricultural education—

That such education shall be that which is under public supervision or control;

That the controlling purpose of such education shall be to fit for useful employment;

That such education shall be of less than college grade and be designed to meet the need of persons over 14 years of age who have entered upon or who

(Continued on page fourteen.)

Pure Bred Live Stock

Big Industry Injured by Inflated Prices

A letter received from T. W. Bartley of Fernwood farm, Moscow, Idaho, says:

"I want to congratulate you upon the paper you are getting out. I find much of interest and value in it and feel that it covers the whole field of farming and rural life in Idaho.

"Was especially pleased at the stand taken on the sale of the $21,000 bull calf at Portland, and hope you will be able to smoke out those who are trying to conceal the facts. Have no doubt it was a fake sale, and Mr. Stuart is to be commended for calling your attention to the facts in his possession. Such methods, if allowed to continue, will destroy the value of such sales and very materially injure the cause of pure-bred stock.

"I am a breeder of pure-bred live stock and hope soon to have some surplus stock for sale, but do not hesitate to say that prices of pure-bred live stock are too high, and these high prices are preventing many people from engaging in the business. All prefer pure-breds to scrubs or grades, but when they attempt to buy foundation stock find prices that seem to them prohibitive. Speculators have got into the business, are paying unreasonable prices for foundation stock and are attempting to inflate prices so they may sell to the public and make a profit from the stock so purchased."

Farm Loan Association.

The farmers of the Kennewick valley, Washington, have organized a farm loan association. H. H. Peter, Joseph Gerards, Ole Brue, W. H. Fratzer and Don Cresswell were elected directors. Mr. Cresswell was chosen president and Mr. Kratzer, secretary-treasurer. Mr. Gerards, Mr. Brue and Mr. Cresswell were the three members chosen to constitute the loan board. The association has a membership of 13.

ETERNAL VIGILANCE.

To Keep Records Above Suspicion

The following letter is from A. Graham Galbraith, the secretary of the American Suffolk Horse association:

To the Editor: The association that I have the honor to represent as secretary has never conducted any sales of purebred stock, and not having had much experience in this line of work, I do not feel that I am in a position to offer any suggestions for the elimination of the so-called "wash sales." Unquestionably it is a matter to be deplored that there are people identified with purebred stock, the highest branch of the live stock industry, who have not that high personal honor that should be associated with the best, and as most of the breed associations have a large and varied membership about all that their officers can do is to frown upon all questionable transactions and by ternal vigilance keep all their pedigree records above suspicion.

A. GRAHAM GALBRAITH,
Secretary of the American Suffolk Horse Association., De Kalb, Ill.

NOT GENERAL

Sales at Fictitious Prices.

Wayne Dinsmore, secretary of the Percheron Society of America, writes:

To the Editor: I do not believe that wash sales at fictitious prices are at all general among live stock men, but the proposition of preventing anything of this kind is, I believe, impossible of solution. If you can remodel human nature, and make all men honest, you may be able to accomplish your aim.

My observation has been that stockmen themselves administer the punishment necessary to deter others from making fictitious sales, for if wash sales are made, the news soon gets out, and men become suspicious of any party who is involved in anything of this kind, and decline to have anything further to do with public sales held by the offending party.

There is probably a littel of this going on in all breeds of live stock, but I think there is very little of it in the Percheron breed.

WAYNE DINSMORE, Secretary.
Chicago, Ill.

GENERALLY HONEST

Tricky Chap Does Not Last Long.

If the Farmer is not mistaken, the author of this letter, C. S. Plumb, secretary-treasurer of the American Kerry and Dexter Cattle club, is the author of the well-known "Types and Breeds of Farm Animals."

To the Editor: I note the information you send regarding the sale of Finderne Mutual Fayne Valdessa. Live stock sales must be conducted largely on the basis of confidence in the integrity of those identified with them. I think any person familiar with the sale ring realizes that it is impossible to prevent boosting prices when men agree among themselves to do so. The character of a sale depends upon the character of the auctioneer, and also the characters of the consignors to the sale or sales. I have been patronizing the sale ring to some extent for over 25 years, and on occasion have felt that I have been made to pay too much, and others have felt the same. Yet I think the average man at the sale is honest, and that the tricky chap does not last long. As no stream can rise no higher than its source, so the auction ring conditions can not very well rise above the standards of the people who create said sales and support them.

I think crookedness in live stock selling should be punished by the law just as crookedness would be in anything else. C. S. PLUMB.
Columbus, Ohio.

HONOR OF BREEDER

Foundation of Live Stock Business.

The following letter is from R. M. Wood, the secretary of the Standard Delaine Merino Sheep Breeders' association:

To the Editor: The foundation of the purebred live stock business is the integrity of the individual breeder. Upon his honor must rest the entire industry, for he alone knows what is the pedigree of every animal he produces. The buyer must take the breeder's word for the breeding of the animal. Likewise in an auction sale. The buyer must rely upon the honesty of the seller as to any representations made. There are practically no legal methods by which he can be protected.

A sale conducted by a single breeder depends upon his honor and reputation. The success of a combination or association sale also is based upon the consignors and the faith they can command from the public. The comparative absence of scandal or even criticism bespeaks the high plane upon which purebred livestock sales have been conducted for many years in this country.

The least suspicion of jobbery will ruin for a long time even the possibility of any men connected with such sale ever holding a successful sale. Fake sales, but none but those concerned. R. M. WOOD, Secretary.
Douglas, Wyo.

Registering Association.

R. C. Johnston, secretary-treasurer of the American Angora Goat Breeders' association, writes:

To the Editor: As our association does not auction or sell live stock in any way, being merely a registering association, we can not give you any rules governing auctions.

I knew E. A. Stuart very well when he lived at Lawrence, Kan., and you can give him my kindest regards.

R. C. JOHNSTON,
Secretary-Treasurer.
Lawrence, Kansas.

Loan Association Formed.

The Newman Township Farm Loan association base been organized in the Spokane valley with $50,000 subscribed. J. E. Bell is president and J. M. Simpson secretary-treasurer.

Farm Loan Bank Soon Ready

Officers Are Appointed and Interest Rate Fixed at Five Per Cent

(Continued from page one.)

further authorized and empowered to employ such attorneys, experts, assistants, clerks, laborers and other employes as they may deem necessary, and to fix their compensation, subject to the approval of the federal farm loan board."

We have said that these five directors will temporarily manage the bank. Its permanent management will be in the hands of nine directors. The various local farm loan associations in Washington, Oregon, Idaho and Montana will choose six of the nine directors, and the national board will appoint three.

Selection of Final Board.

These nine directors will not be chosen until the federal farm loan bank has put out $2,000,000 in mortgage loans. The method of their selection is as follows:

"At least two months before each election the farm loan commissioner shall notify each national farm loan association in writing that such election is to be held, giving the number of directors to be elected for its district, and requesting each association to nominate one candidate for each director to be elected.

"Within 10 days of the receipt of such notice each association shall forward its nomination to said farm loan commissioner. Said commissioner shall prepare a list of condidates for local directors, consisting of the 20 persons securing the highest number of votes from national farm loan associations making such nominations.

"At least one month before said election said farm loan commissioner shall mail to each national farm loan association the list of candidates. The directors of each national farm loan association shall cast the vote of said association for as many candidates on said list as there are vacancies to be filled, and shall forward said vote to the farm loan commissioner within 10 days after said list of candidates is received by them. The candidates receiving the highest number of votes shall be elected as local directors."

May Mean Changes.

The national board will have the power to continue in service three of its five appointees, but two of the original directors will have to take their chances of election before the farm loan associations.

The wisdom of so large a board as nine members is open to question. In all probability they will be scattered over the four states in the district, and the expense of gathering for board meetings will be large, even if the non-office-holding directors should be paid only their traveling expenses and per diem. This is a feature of the law that should be watched with a view to possible amendment.

The Farmer receives numerous letters asking how soon the Spokane bank will be ready to make loans on farm lands. It is impossible to answer these inquiries definitely. Our readers, however, may be assured that we shall watch this matter closely and keep them informed constantly of developments.

Interest Rate 5 Per Cent.

It has been officially announced that the system will start business with a mortgage interest rate of 5 per cent, a rate that will be very alluring to farmers who now pay 7, 8 or 10 per cent. Even in New England, where farm loans are made on the lowest rates in the country, farm owners are eagerly awaiting the opening of the bank at Springfield, Mass. Leonard G. Robinson, who has been appointed president of the bank, says the interest rate on farm mortgages in Maine, New York and New Jersey ranges from 7 to 8 per cent exclusive of commissions.

"As the farm mortgages become standardized and the investing public becomes more familiar with them, it is probable that the interest charge to the farmer may go below 5 per cent," Mr. Robinson said. "The bonds will be investments of the soundest possible nature, the repeated examinations will insure their security; they are exempt from federal, state or municipal taxation and they will constitute first-class collateral for banks and other similar institutions.

"It is to be expected also that the life insurance companies will invest to a large extent in land bonds. They have done so in the past, but in some instances their experience has been unsatisfactory from causes which the new system eliminates. They have invested large sums of money in certain localities to the exclusion of others. As an instance, the investments of life insurance companies in farm mortgages in Iowa in 1914 amounted to $139,000,000. In the same year investments in Connecticut reached only $75,000, while in Massachusetts and New York there was an aggregate of $10,000 each, in Maine $5900 and none in New Hampshire and Rhode Island."

In the view of Mr. Robinson the farm loan plan will equalize the credits in all parts of the country. He pointed out that in some localities it is comparatively easy to borrow on farm mortgages, but that in others the funds are entirely absorbed in local improvements, buildings, road construction and other activities.

Is America Farming?

Comparison With Other Countries Says No

Last week, under the above heading, The Farmer published figures given by Professor J. S. Jones of the agricultural experiment station of the University of Idaho, showing that European countries had made rapid and great increases in their average yields of grain per acre during the past quarter of a century, while in the United States there had been comparatively little increase. In wheat yields per acre, Germany increased in 30 years 77 per cent; the United States only 14.4 per cent. In barley her increase in average yield per acre was 67 per cent; the United States only 11-4 per cent. In oats Germany's increase in yield per acre was 86 per cent and that of the United States less than 6 per cent.

Below is given what Professor Jones believes to be the true explanation of the almost unbelieveable facts cited in last week's article.

"Early in the 19th century (in 1805 to be exact), an Englishman by the name of Thayer wrote a book which pointed out the value of root crops in English agricultural practice. The English farmers adopted the suggestion. Over 2,000,000 acres of root crops, mostly turnips, are now grown in Great Britain in rotation with 6,500,000 acres of cereal crops. It is said that German agricultural economists had Thayer's work translated and urged upon their own farmers the adoption of the British practice. Their efforts met with little success. The German farmer realized that to grow roots successfully deep plowing would have to be practiced. Deeper plowing would result in bringing more stones to the surface and they in turn would have to be carried off the fields, too much effort for the benefits to be derived seemed to be the conclusion of the German farmers.

French Pioneering.

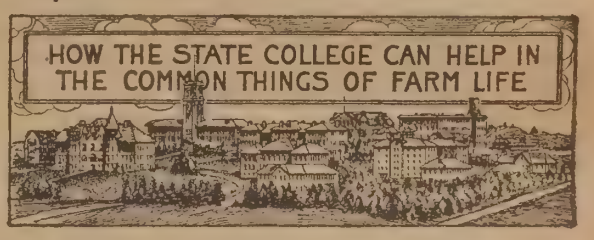
"In the meantime French scientists had discovered the indirect value of sugar beet growing upon cereal crops. Napoleon's attention being directed that way, he immediately ordered his minister of the interior to see that 90,000 acres of sugar beets were grown in various districts. The year 1811 was the beginning of the sugar beet industry in France. It has revolutionized agriculture in France because of the increased yields of the cereal crops which are grown in rotation with the beets. Not until a system of government aid to sugar factories similar to that adopted by the French was put into operation, however, could the German farmers be induced to increase their meager acreage of beets.

"Before the introduction of beet culture, four cereal crops were grown in succession. They were followed by one year of fallow. Plowing to a depth of three or four inches only was the common practice. It is said that in Germany one-third of the total area of level land was regarded as being too poor to cultivate and cereal crops were yielding on the better lands but little more than 12 bushels per acre. The introduction of sugar beet culture changed this. The successful growing of that crop forced deeper plowing and thorough cultivation. The succeeding grain crops quickly showed a remarkable increase in yield. The conversion of the German farmer was complete. They would not think for a moment now of returning to the old system of farming, and what is true of the German farmer is equally true of the farmers of other western European countrues.

Fertilization by Roots.

"If we study the root system of the sugar beet, the real reason of the value of the root crops in the rotations appears. The mass of fine roots found on the mature beets, break off when the main root is lifted at hearvest time. This mass of organic matter, left well below the surfact, is capable of rapid decay and produces almost as marked results in increasing soil fertility as a light application of barnyard manure.

"Unfortunately we have no extensive data to draw upon to show in a similar manner the beneficial effects of root crops in rotation systems in this country. Data available from 115 farmers reporting, shows that, although above the average before the introduction of root crops, increased their average yields of small grains very decidedly by the introduction of the root crops. The percentage increase for corn, oats, wheat and barley ranges from 27.6 to 52 per cent.



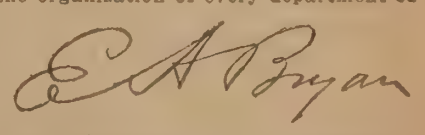
Objections Are Raised.

"I think I hear some one objecting that the farmer with from 160 to 320 acres of wheat land, can not think of introducing such a crop in his rotation. That objection may be well taken, but something has to be done to get rid of wild oats and other troublesome weeds. The growing of a few acres of

(Continued on page twenty-three.)

Have You Prepared Your Farm Plan?

Production of Milk, or Fruit, or Grain, or Hay or Live Stock or of Mixed Husbandry



The newest of all the departments in the agricultural colleges is that of farm management. We, at the State College of Washington, are rather proud of the fact that the conception, organization and development of that division of the United States department of agriculture originated with a Washington State College man, Professor W. J. Spillman, now head of the division of farm management, U. S. D. A. After Mr. Spillman had accepted the invitation to leave the department of agriculture of this college and become a member of the U. S. D. A., after having been with us for eight years, he found, on looking over the agriculture of the whole country, especially of the south, a cloudy sky. In his new position he felt ill at east—without chart or compass. He went into the office of that prince of secretaries, James Wilson, and said, "Mr. Secretary, what is it you wish me to do here in the department?" "That is the very thing we sent for you to tell us," replied the secretary. "We wish you, in your lines, to be our adviser, and we will hear and determine whether we will accept and follow your recommendations." "Oh, is that it?" said Spillman, and went forth to consider and recommend. And the result was, in the end, the great division of farm management and the extension of its results to the common farmers.

Every man has some sort of plan for the management of his business, but not infrequently the plan and its execution are defective. One of the simplest of all the systems is that of the big wheat farmer, who exploits the soil on a large scale and ships its riches to the uttermost parts of the earth and spends the winter in California on the proceeds. This system is very like mining. But for the great mass of farmers this is impossible and although dealing with smaller units, their problems are more complex and difficult.

It is essential to correct management of any system of farming that the general scheme be settled upon—whether milk production, or fruit production, or grain production, or hay production, or meat production, or mixed husbandry. And if mixed husbandry is settled upon, it is still necessary to determine where the emphasis shall be placed—what shall be the most important crop or crops. If the farmer is a beginner in this state or contemplates a new deal—a new kind of farming—nothing could be wiser than to seek a personal interview with the head of the agricultural department of the college and go over the whole matter in detail. The money spent in traveling expenses would be more than repaid by the help he would receive.

But if he already is in up to the neck in his business then it is largely a study of the organization of his system, the proper proportioning of it, the adjustment of stock to crop, of crop to land, of labor to the work to be done, and of accounting which will show the results. In all of these he can get general and special help from the college. He will find that many things must be arranged on a unit system. If, for example, he wants to keep some cows and has just enough to occupy half the time of a milker and expects to use the other half in an entirely different kind of farm labor, he will find the adjustment unprofitable. He must reduce it to the unit system. And so in the organization of every department of the work. Then must be the proper proportion between land and work, stock and machinery and live stock and labor. It all must form a single system. In the formation of that system he can get help from the college.

In the next instalment Dr. Bryan declares that "The orchard and the garden belong with every farm home," a sentence that will bear rereading and deep thought. Comparatively few farmers, especially in the wide-stretching grain producing lands of the Pacific northwest, have any adequate conception of the part that the farm garden can play in the living for the whole family.

To The Washington Farmer: I will say that it is a splendid farm paper and I think all farmers should read it. It would do them good. I can not praise your paper too highly.

This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

Farm Money at Five Per Cent!

The official announcement by the federal farm loan board at Washington that the uniform mortgage rate under the new farm loan system will be only 5 per cent is the biggest piece of news heard by the American farmers in many a year.

Five per cent farm money! A rate undreamed of a few years ago. Five per cent money for the little farmer as well as the big—only 5 per cent on a $100 loan if a borrower wants that sum.

And this low rate accompanied by advantages not given under the old private system: The borrower's option to take his loan for any period he may desire, from five years to 40 years; to pay off the principal in small semi-annual instalments, and in larger instalments, or in total after five years, if he so desires.

Paying Off a Loan.

When it was thought that the rate would be 5½ per cent The Farmer printed an amortization table based on that rate for a loan of $1000, payable in 20 annual instalments. We now give a similar table computed on the 5 per cent rate:

Total Annual Payment.	Interest.	Applied on Principal.	Principal Still Unpaid.
$ 80.24	$ 50.00	$ 30.24	$ 969.76
80.24	48.49	31.75	938.01
80.24	46.90	33.34	904.67
80.24	45.23	35.01	869.66
80.24	43.48	36.76	832.90
80.24	41.65	38.59	794.31
80.24	39.72	40.52	753.79
80.24	37.69	42.55	711.24
80.24	35.56	44.68	666.56
80.24	33.33	46.91	619.65
80.24	30.98	48.26	570.39
80.24	28.52	51.72	518.67
80.24	25.93	54.31	464.36
80.24	23.22	57.02	407.34
80.24	20.37	59.87	347.47
80.24	17.37	62.87	284.60
80.24	14.23	66.01	218.59
80.24	10.93	69.31	149.28
80.33	3.83	76.50	.....
Total.. $1604.89	$604.89	$1000.00	.....

Take, for illustration, the case of a farmer who now has his place mortgaged for $1000 at 8 per cent. His annual interest charge is $80. If he allows the mortgage to run, with frequent renewals, for 20 years, he will pay out $1600 in interest and still owe the original $1000 of principal.

But the farmer who borrows $1000 from a federal farm loan bank for 20 years, on the amortization plan, will have annual payments of only $80.24 and be whittling down all the time his principal of $1000. At the end of the 20 years he will have paid out, all told, $1604.89—only $4.89 more than the farmer with the old line mortgage would pay for interest alone—and at the end of the 20 years his principal debt will be wiped out; his farm will be free.

Interest Is Decreasing.

The foregoing table affords an interesting study. The reader will note that while the sum he pays each year stands fixed for the full 20 years, namely $80.24, the sums paid for interest and reduction of the principal are fluctuating.

His first year's $80.24 is divided by assigning $50 as interest and $30.24 for reduction of the mortgage debt. But in the 20th year only $3.83 is needed for interest, and the balance of the $80.33 ($76.50) goes to the extinguishment of the mortgage. The interest item keeps on decreasing from year to year; the amortization item keeps on increasing every year.

The broad general effect of the new system will be a hastening of western development, for the west will enjoy the same low rate that is given the east. It will encourage thousands of farmers to go forward with improvements long wanted, but deferred because money rates were high. It will enhance the equity of the farmer who is deep in debt, for those who are paying now 8 or 10 per cent will soon be able to shift to the low government rate and start then on the hopeful task of wiping out their debts.

As the system becomes more generally understood, and communities familiarize themselves with the steps to be taken to organize and conduct farm loan associations, we anticipate a revolution in the farm mortgage business of the United States.

Wool Industry Needs Stimulus

It is a significant fact that the United States government is expending several thousands of dollars conducting a "wool demonstration" car throughout the states where sheep are grown or should be grown. Two purposes are back of this work: The increase of wool and mutton production and the improvement of the grade of wool placed on the markets of this country.

"In the northwest one of the big problems is to establish the sheep on the farm," said a representative of the government to persons visiting the wool car, "for increase of flocks on a decreasing range is hardly probable or even possible."

When sheep are high priced as they are now is a poor time for the average farmer to attempt to stock his ranch with more than a very few head, but many farms would find it profitable to acquire a small flock, not alone for the profit from wool and meat, but for the benefit to be derived in the way of weed eradication and soil improvement.

The Spelling Bee

The spelling bee, long a forgotten institution in this feverish life of 20th century America, is coming into its own. Hundreds of boys and girls throughout the state of Washington have been thumbing their spellers as they, and incidentally their fathers and mothers, have never thumbed them. Spelling was becoming a lost art. Now it is to be reinstated in its rightful place as one of the essentials and fundamentals of education.

Many, perhaps most, of the fundamentals of education are only to be mastered by laborious effort. The "natural" spellers are usually those individuals whose interest in the printed word leads them to make the effort essential to memorizing hundreds and thousands of symbols. The rest of us won't make this effort if we can get out of it. Most of us, under the present system, have been able to escape the drudgery; and most of us, as a consequence, spell by desperation and the grace of God, and write but indifferently. All hail the spelling bee! May it quickly come again into its own.

The orchard is often looked upon as a thing grown at too great cost to be destroyed, but an orchard that is not kept clean and thrifty and profitable is not only a detriment to the farm on which it is situated, but to the other farms where there is an earnest effort to raise fruit.

There never was before in the history of this country so much power in the hands of the people. Radical actions by the few who formerly held the power led to the uprising that placed it more in the hands of the many. There should now be a strong effort on the part of the people at large to avoid radical actions which would lessen the virtue of the transfer.

Washington Gleanings

"Pigs is pigs" in Wahkiakum county. Recently a Chester White sow owned by Joseph Longtain, a farmer living in the Elochoman valley, became the mother of 19 pigs, 13 of which are living.

From $50,000 to $60,000 will be spent by the Yakima county commissioners in maintenance of six trunk lines of roads in that county this year. These roads radiate from North Yakima and extend to the county boundaries.

A company of several prominent Eureka flat wheat producers has been formed for the purpose of building an elevator at Pleasant View. The elevator will have a capacity of 130,000 bushels and will be 95 feet high. The building and contents will cost $30,000.

Members of the Kent Commercial club are calling on farmers in the valley with contracts to grow cucumbers, cabbage and cauliflower for a large pickle factory, which it is proposed to locate here. The factory is assured if enough raw material is guaranteed.

W. H. Paulhamus has been reelected president of the Puyallup and Sumner Fruitgrowers' association. Mr. Paulhamus has served the association in this capacity for nine years. H. H. Ellerding was reelected as vice president and T. H. Ridley as secretary-treasurer.

The Utah-Idaho Sugar company has accepted its full quota of 7500 acres and has 650 contracts with owners in the Yakima valley for the growing of sugar beets for the coming season. The acreage is scattered all the way from Prosser to Ellensburg in fields of 10 to 100 acres in size.

F. M. Rothrock of Spokane, sheepman, has purchased 30 sections of land in Yakima county, on the west side of the Columbia river, close to Priest rapids, for a sheep range. The price is said to have been $30,000. Mr. Rothrock also has purchased 1200 ewes, the market value of which is $15 each.

Farmers and business men of St. John and vicinity have organized the St. John Elevator company. The capital stock is $25,000, all subscribed for. E. C. White, J. R. Mulkey, P. L. Nelson, Will R. Heglar, Harry Terhune were selected as incorporators. There are about 45 stockholders in the new company.

Dr. Robert Prior has bought 12,000 acres of logged-off lands between Ahtanum and Cowiche creeks, adjoining the Rainier forest reserve, for $50,000. Dr. Prior already owns large tracts in that section and holds others under lease. His new purchase will give him 27,000 acres of range for sheep.

One of the largest and most modern dairy barns in the vicinity of Auburn, in King county, has just been finished on the ranch of Charles Schalkenbach. It is fitted up with all modern dairy conveniences and water is piped throughout the building from a 600-foot astesian well recently sunk.

What Others Say

Indiana Farmer: Spring work in the orchard is the kind of work that pays good dividends.

Hoard's Dairyman: There is something in clover hay that supplies what the gluten feed lacks.

Rural New Yorker: Some men think they are far ahead of the procession just because they are driving the hearse!

American Agriculturist: Looking ahead and nearer home, there would seem to be abundant reasons for American farmers to work for abundant crops.

Farmer and Stockman: Looking for a new overseer once, George Washington said the man must be, "above all, Midaslike, one who can convert everything he touches into manure, as the first transmutation toward gold; in a word, one who can bring worn-out and gullied lands into good tilth in the shortest time."

Five Books Free

DO YOU want to save money on your stump blasting? Do you want to get the stumps out cleaner—split them up better—and cut down the quantity of powder required? Our Stump book, "Better Stump Removing," tells and shows how to do it.

OR do you want your fruit trees to grow faster, yield sooner and bear bigger crops. Our Tree book, "Better Orchard Tillage," shows how you can secure these results by blasting when planting.

IF you want to save fertilizer and grow bigger crops, send for our Crop book, "Better Farm Tillage." It tells how blasting will make the subsoil mellow several feet deep and release new plant food for your crops.

ARE there rocks on your farm? Our folder, "Better Boulder Breaking," shows how a few minutes' work will get them out of your way forever.

DOES your farm need draining? Our Ditch book shows how to blast clean, smooth ditches of any size—the easiest, quickest way of making them.

GIANT FARM POWDERS
STUMPING — AGRICULTURAL

Here are some of the reasons why you should insist upon Giant Farm Powders for all farm blasting.

1. They are made especially to suit Western farm conditions, by a Western company with 50 years' experience.
2. They are the *genuine* Giant Powders—the product of the manufacturers who originated the name. The fact that other explosives are often called "giant powders" indicates the high quality of the genuine.
3. They go further than ordinary dynamites. They exert their strength over a wide area, cracking, splitting and heaving out stumps, roots and all, rather than shattering and throwing them high in the air.
4. They will not freeze at ordinary temperatures, standing 32° for days without requiring thawing.
5. They are being used by thousands of farmers, scores of whom state that the Giant brands "give better results"—"save money"—"have wider breaking power"—"shoot the roots"—and "are always uniform in strength and action."

There are two of the Giant Farm Powders: Giant Stumping Powder, for wet work, and Eureka Stumping Powder, for dry work. Eureka costs less and many careful blasters use it for wet work, too.

Ask Your Dealer

Your local dealer probably has Eureka and Giant Stumping Powders and other Giant blasting supplies. If he does not have them, write us. We will see that you are supplied promptly through the local dealer with whom you prefer to trade, through a dealer in a nearby town who has a magazine, or direct from our nearest distributing point.

The Giant Powder Co. Hom Office **San Francisco**
CONSOLIDATED *"Everything for Blasting"* ESTABLISHED 1866
Branch Offices: Seattle, Spokane, Portland, Salt Lake City, Denver

Make This Test

Get a 25 or 50 pound case of either of the Giant Farm Powders. Get at the same time a case of any other dynamite or stumping powder.

Blast with each. Keep track of the quantities used. Figure the cost. You will find—as farmers everywhere have found—that the Giant Farm Powders save farmers time, work and money.

To make it easy for you to secure Giant Farm Powders we print a trial order form in the coupon at the right. Fill it out and we will have our nearest distributor supply you with a trial case at the lowest market price.

Mail the coupon below or a post card and get one or all of the Giant books. You will find them valuable. They contain illustrations of the most economical ways of doing farm work with Giant Farm Powders.

Rush of Farm Work Expected

Work of Both Seasons Must Be Done in a Few Weeks—Late Spring Follows Fall in Which Work Was Curtailed.

GARFIELD, Whitman county, Wash., March 20.—We have had good sleighing since November 10 without a break except near town. All the fields are hid under the snow. No danger of freezing. Much wheat was sown very early and it may be smothered because of the bad snow drifts. Owing to the abnormal dry fall much was left unseeded; also much fall plowing was done. If spring ever opens up work will be rushing day and night as we are fully a month late. There should be plenty of moisture for there is still from a foot to two feet of snow, but no rain so far. Grain and fruit are the main crops. Every farmer has his own horses, a few cows, hogs, orchard, garden, berries, poultry, etc., and most all of them market some of these byproducts. A great deal is made from cows and poultry. Feed is getting mighty scarce and it's a long time until grass is ready. Much fruit is raised, but it costs so much and pays so poorly many orchardists are getting discouraged. Spring plowing is usually done in April and seeding from April to the middle of May. There is less farm work being done than I ever knew of at this time of the year, on account of deep snow.

M. KIDWELL.

Sow Vetch in the Fall.

GIG HARBOR, Pierce County, Wash., March 19.—As Pierce county, or that portion of it lying along the Sound, has a mild winter climate, farming operations can be carried on almost continuously throughout the winter. We have had a normal winter, with a somewhat scant precipitation of moisture. This has rendered it possible to do much seeding even during the month of February. Under such conditions it is possible to get along without much fall plowing, although more of this might still be advisable. Some oats was sown in February, and seeding of all kinds went along quite briskly in the early days of March. An especially large acreage of early potatoes is being planted, owing, of course, to the extraordinarily high prices of that produce this season. No doubt the planting of late potatoes will be somewhat overdone, but that is not likely to be the case with the early potato that gets into the market in June in this section. Comparatively little land is adapted to the early crop. Wet valley soils and springy hilltops can not be planted very early, and they, of course, are the great potato producers. Such crops as were fall-planted seem to be coming out well. Our farmers are getting into the way of sowing considerable spring vetch, but sowing it in the fall. This gets a good start in the fall, grows some even during the winter, comes on rapidly in the spring, and can be cut and cured for hay, pastured, or turned under for corn and root crops. Being a legume, this adds much to the fertility and humus in the soil when so turned under. By taking off our early spring crops and plowing immediately afterward, we manage to give our land the equivalent of a pretty good summer-fallowing without losing a crop.

W. D. BOYNTON.

Seeding Is Delayed.

EPHRATA, Grant County, Wash., March 16.—Farming operations have begun in the south part of Grant county. The farmers are busy now in seeding spring rye and spring wheat. This season is considerably later than most seasons, and the farmers are very anxious to get their crops in at once. There will be no seeding done in the northern part of Grant county for several weeks, owing to the snow which is still on the ground. There was very little fall wheat sown in this county, and what was sown did not get up. It seems to be coming through the ground in good shape, and it looks as if it would be a good stand.

H. W. REAUGH.

Seeding Late This Year.

NEPPEL, Grant County, Wash., March 20.—Wheat seeding is a little late this season, with very little fall seeding done on account of the dry fall. February 10 is the earliest that any spring seeding ever has been done. No spring plowing has been done for immediate seeding, as it dries out unless irrigated. Fall plowing is out of the question, as it is like dry ashes and does not fall away from the plow mold. Fall seeding starts usually the latter part of August if in rains. Fallowing is done usually in May, while the ground is still moist. Other conditions are about normal. The Neppel cheese factory is under construction. Silos will be constructed for winter fodder with alfalfa that is raised here in abundance. Moses Lake Farm Loan association has a strong organization and one of the best. The fruit has a fair prospect, as nothing has been damaged yet. MARTIN PENHALLICK.

Farm Labor Needed.

SPOKANE, Spokane County, Wash., March 21.—The ordinary farm work of Spokane county usually begins by the 1st of April on most of our farms. During the last season this work was much delayed, and it was not before the middle of April that active spring plowing and seeding began. This year there will be an abundance of spring work, owing to the fact that last fall the ground was so dry that fall plowing was not practiced by many farmers. One of the first crops to be planted this spring will be peas, and this is closely followed by the seeding of oats. Since Spokane county has such a vast acreage of peas to put in, we will look forward with anxiety to the opening of spring. During ordinary seasons the harvesting of our crops usually takes place in the following order: Winter wheat is the first crop to be harvested, and this usually comes about the 1st of July for hay. A week or 10 days later the crop is harvested for grain where the binder is used. Following the winter wheat comes the harvesting of peas, and closely following the pea crop comes the harvesting of oats. Farm work in this locality will be rather abnormal this season, owing to the lateness of spring and the great amount of land which will have to be prepared for seeding peas. There will be a great demand for farm help throughout the south end of Spokane county. It is a little too early for us to tell what condition the wheat crop will be after it comes out of the winter, since the snow is covering a great deal of the land. J. R. SHINN.

Rush of Work to Come.

FAIRFIELD, Spokane County, Wash., March 20.—Spring plowing and seeding ordinarily commence about March 20, but from present conditions it will be a month late this year. There wasn't a great deal of fall plowing done last fall on account of the long dry spell, so the farmers will be hard put to it when the work does start. There is very little summer fallowing here now, but those who do still summer fallow plow any time during June. They first disk the stubble and wait then for the weeds to start before plowing. Fall wheat, for the most part, seems to be coming through in normal condition. Harvest usually starts with fall wheat by July 15 to 20. Peas are harvested about July 20 to August 1, and oats from August 25 to September 1.

ROY G. ADAMS.

Much Work to Do.

MEAD, Spokane County, Wash., March 17.—As a usual thing, plowing commences the last of February and the first week of March, and the seeding of oats follows soon after. It will be two weeks before any work of this kind will be done this season. Fall seeding usually commences in August and continues until well into October. Summer fallowing is commenced in May. The cutting of alfalfa starts in June, and wheat for hay about July 4; wheat to thresh the 1st of August. There will be more than the normal amount of work to do this spring, as there was but little fall plowing done, and some of the late-sown wheat will have to be reseeded. GEORGE HINGSTON.

No Fruit Blossoms Yet.

RAINIER, Thurston County, Wash., March 19.—Our equinoxil storm has set in now. Very little rain since February 1. The weather has been cold, with frosty nights, with some snow and cold, raw winds. Some seeding has been done and general early spring work. The spring will be late and there are no fruit blossoms yet. Farm work commences on the uplands and black soil about March 10, on the heavy clay soil April 1 to May 1. Fall plowing and seeding usually commence about September 15, but last fall it was too dry for any to be done before the last of October, consequently very little was done, and what seeding was done looks pretty small now. Lots of winter plowing was done, so there will be a heavier spring crop put in. Harvesting of grain crops starts about July 15 and continues until September 15.

L. F. DAVIS.

Spring Work Is On.

LA CONNER, Skagit county, Wash., March 12.—The first plowing in this section was done about the first of February on the meadows, other land being too soft to do anything with. The past week has been an active one in this section in the beginning of spring work. The weather has been fine and the teams and tractors were nearly all in motion. This line of work will be rushed from now on as the weather will permit. As far as can be seen at this time, spring work in the various departments will be about normal. All fall crops, with very few exceptions, are coming out of the winter in a fine condition. It is a little early to tell much about the cabbage crop, as they have not been uncovered; that is, those that were covered entirely last fall.

I. W. ALEXANDER.

High-grade Fertilizers Are Best Values

THE WARNER TRAILER

You can easily afford to own a motor car if you can make it earn its upkeep. The WARNER TRAILER doubles the usefulness of the automobile.

Carries any load up to 1250 pounds safely—and at automobile speed.

Does not skid or jolt—tracks perfectly—and can be backed. THE WARNER TRAILER is designed and built by automobile engineers of wide experience—men who have studied the light haulage problem from every angle.

It has a specially designed body—mounted on regular automobile springs, axles and wheels, and is attached to the automobile by a shock-proof drawbar that prevents any possible injury from sudden starts and stops.

Write for the illustrated folder telling the complete story. Order your WARNER PRAIRIE SCHOONER now.

Are We at War?

Congress Called For April 2

President Wilson has called congress to meet in extraordinary session on April 2, two weeks earlier than originally planned, and it is understood that when that body assembles he will ask them to declare officially that a state of war with Germany exists and has existed for several weeks. It is expected also that he will lay before congress a definite plan for both aggressive and defensive warfare against Germany, as it is admitted that that country's sinking of American ships without warning and without rescuing of their crews and others aboard constitutes actual warfare against the United States.

While no definite plans have been made known at Washington it is believed that the president's cabinet is in unanimous accord with his determination to put the entire United States navy and army into service to protect American interests and lives on the sea and it is believed that both the president and his cabinet are agreed that the time for making aggressive warfare against Germany has come.

Whether this country should make war alone or form alliances with England and her allies is known to be one of the questions President Wilson and his advisers are considering. Also whether steps should be taken to place an actual army on European soil to assist the allied armies of France and England is a question being considered, but which will necessarily have to be determined following developments of the next few weeks.

It seems apparent, however, that this government will throw its entire sympathies and material support on the side of the allies. One of the leading features of such support undoubtedly will be the supplying of large sums of money to the governments of England and her allies for the purchase of food supplies and munitions. The clearing of the sea lanes of submarine and the sending of supplies to the enemies of Germany and her allies, both as to food and munitions will be another effective means of waging warfare.

Whether or not this country would deem it advisable to send men to the European battle fields it appears practically certain that if a state of war is declared to exist a large volunteer army or a large army under a compulsory military training bill, which might be hurriedly passed by congress, would be called. That it would require several months to train a large army for service in Europe is admitted. Former President Roosevelt has expressed a desire to be commissioned to organize an expedition, which, he declares, he could put into the trenches of Europe within five months.

Another question asked is: What steps would Germany take against this country if war is declared? Pressing need for men in Europe to combat the French, English, Italian and Russian armies, it seems, would make it wholly impracticable for her to consider sending an army to American soil, even could she run the gantlet of English and United States navy blockade with an expedition to this continent. That an unrestricted submarine campaign would be waged against all American commerce and naval vessels, both in American and European waters, seems assured.

What part Mexico would play in the situation is also a problem that is considered. Many express the belief that the Mexican border must be strongly protected in case of war, it being freely predicted that Mexico will ally herself with Germany and render whatever aid is possible by harrassing this country.

LOGGED-OFF LAND

West Side Conditions Different.

To the Editor of the Washington Farmer: Noticing in two or more issues of the Washington Farmer of the logged-off land special to be sent by the G. N. R. R. through northern Idaho and eastern Washington, the thought has occurred to me that if they draw conclusions from clearing logged-off land in those places and apply them to western Washington they will be away off on what it costs to clear land west of the Cascades. Any one who has seen both places and existing conditions will know that to take the cost of clearing an acre of logged-off land in eastern Washington as an acreage cost and apply those figures to western Washington will give prospective settlers a misleading idea of the cost of clearing land in any of the coast counties. It they want an average for the whole state just come to Whatcom or any county on the coast and tackle some of our fir and cedar stumps that range from four to 12 and more feet through, also where there are windfalls of the same size or some places where the vine, maple and alden are so thick it bothers a rabbit to get through. Why, there are stumps in Whatcom county and in all the coast counties that it takes a box of dynamite to pull them apart enough to enable them to be pulled out by a donkey engine, then there is the stump to be burned and the enormous hole to be leveled off.

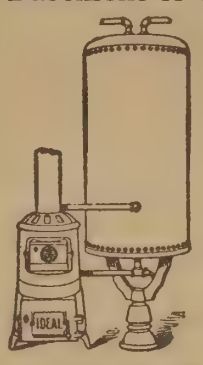
If this logged-off land special is to be run for the purpose of trying to determine the average cost of clearing logged-off land there by giving prospective settlers an idea of what it costs to clear land in this glorious state of Washington, we cordially invite them over on our side of the Cascades and go to it. FRED COLE.

Acme, Wash.

Whitman Grange for Farm Agent.

Whitman Pomona grange No. 2, in session at Ewartsville, went on record unanimously in favor of a farm agriculturist for the county.

Ideal heat keeps out spring rawness!

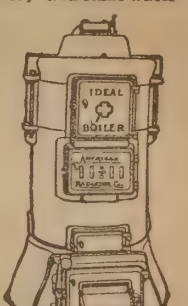


It is better for the family to keep a little heat going *all* through your home during these chill and damp spring days. Raw, wet weather is dangerous to health. *IDEAL heating keeps whole house warm and dry!* Only a small fire in the IDEAL Boiler is necessary to make *every room* as balmy as June.

AMERICAN RADIATORS & IDEAL BOILERS

So don't delay finding out about IDEAL heating by writing to us or asking friends who have IDEAL-AMERICAN radiator heated homes. Thousands of farm families in every state say that IDEAL heating is the one best feature in their homes for economy, labor saving, cleanliness, durability, and complete comfort satisfaction. The comfort of the home makes the success of the farm!

Basement or water pressure not necessary—don't wait!



Our IDEAL Hot Water Supply Boilers will supply plenty of warm water for home and stock at small cost of few dollars for fuel for season.

IDEAL Boiler is set in cellar, side-room or "lean-to;" and same water is used for years. Put an IDEAL Boiler and AMERICAN Radiators in your house this year. Call up the nearest heating contractor and ask him to give you an estimate. Don't put off any longer, suffering the chills and ills of old-fashioned heating methods during these raw springs and severe winters.

A No. 4-22-W IDEAL Boiler and 420 ft. of 38-in. AMERICAN Radiators, costing the owner $280, were used to heat this farm house. At this price the goods can be bought of any reputable, competent Fitter. This did not include cost of labor, pipe, valves, freight, etc., which vary according to climatic and other conditions.

IDEAL Boiler fuel pots mix the air and coal gases as in a modern gas mantle, extracting ALL the heat from the fuel.

Let us send you valuable book (free)

Write today for copy of "Ideal heating." Fully illustrated and gives valuable heating information which we want you to read carefully. Puts you under no obligation.

Sold by all dealers. No exclusive agents.

Boise Valley February Tests

At the Boise Valley Cow Testing association there were 411 cows under test in February, including 31 herds, according to the report of H. H. Beier, official tester of the association. The average butterfat per cow was $27.95 pounds. The high cows of various breeds were:

Holstein	Bonny Oaks	F. O. Johnson	71.3 pounds
Guernsey	Belle	H. A. Wines	65.4 pounds
Jersey	Rose	Leo Marsters	54.7 pounds
Shorthorn	Bob	M. F. Pratt	50.3 pounds
Brown Swiss	Swiss	F. Marsters	41.8 pounds
Red Polled	Bessie	M. F. Pratt	36.6 pounds

Six other cows produced over 50 pounds of butterfat during the month.

COW TESTING

Montesano Association Figures.

H. P. Hansen, tester for the Montesano (Wash.) Cow Testing association, reports for February: Although the dairymen were handicapped by all sorts of bad weather during the month, the cows in most of the herds made a creditable showing. It is interesting to note the record made by Murphy Bros.' herd. Although the greater number of animals of the herd are grades they are of a very high quality, a purebred Jersey sire having been used for several generations.

The following are the cows producing over 50 pounds of butterfat during the month:

Owner of cow.	Lbs. of milk.	P.C. fat.	Lbs. of B. fat.
E. L. Brewer, Jersey...	944.3	6.63½	62.62
Parker Askew, Jersey..	1005	5.9	59.3
Murphy Bros., Jersey..	1170	5	58.5
Murphy Bros., Jersey..	1145	5.1	57.4
E. L. Brewer, Jersey...	962.1	5.55	53.41
J. H. Taylor, Jersey....	1038.4	4.922	51.11
J. H. Taylor, Jersey....	956.4	5.261	50.33

Pioneer Tests.

Twenty-nine cows of the Pioneer Cow Testing Association of Buhl, Idaho, met the requirements for admittance to the honor roll for the 29-day period ending March 1. The grade Holstein owned by Gustav Kunze heading the list with 69.9 pounds of butter fat to her credit. During the month an order for a car load of tested Jersey or Guernsey cows was received, also two requests from parties wishing young cows. None of the dairymen, however, have any stock for sale. The list of cows producing over 55 pounds of butter fat for the month are given:

Owner and Breed.	Milk.	Test.	Bf.
Gustav Kunze, Hol.....	1705	4.1	69.9
C. E. Long, Jer.....	1297	5.1	66.1
A. A. Stauffacher, Hol	1951	3.34	65.1
David Rees, Hol.	1348	4.7	63.3
R. B. Sherman, Guer..	1131	5.6	63.3
David Rees, S. H.....	1635	3.5	57.2
A. A. Stauffacher, Hol...	1827	3.12	57.0
Geo. A. Childs, Jer.....	1116	5.1	56.9
S. Honderich, Hol.....	2612	2.16	56.4
John Kaeser, Hol.	1522	3.7	56.3
C. D. Irwin, Jer.....	893	6.3	56.2
A. A. Stauffacher, Hol...	1742	3.19	55.5
Gustav Kunze, Hol.....	1348	4.1	55.2

Jefferson Tests.

During the month ending February 28 there were 112 cows producing over 30 pounds of fat in the Jefferson County Cow-Testing association of Washington. There were four herds totaling 45 cows which average over 30 pounds of fat for the month. The following table gives the records of cows producing over 50 pounds of fat for the month:

Owner and breed.	Lbs. Milk	Lbs. Butter Fat	Feed Cost
Geo. Hendricks, P. B. H...	1584	66.52	$11.20
Glendale Creamery, Gr. J.	1641	65.64	17.50
H. L. Hansen, Gr. H.....	1845	64.57	18.45
H. L. Hansen, Gr. H...	1956	64.54	18.45
H. L. Hansen, P. B. H...	1827	58.46	18.45
Glendale Cream.., P. B. J.	1170	57.33	16.50
Glendale Creamery, Gr. H. (Swanson Farm)	1353	56.82	8.50
Geo. Hendricks, Gr. H...	1161	55.72	11.20
Burt McConaghy, Gr. H...	1467	53.46	14.20
H. L. Hansen, Gr. H....	1709	52.81	17.60
Robert Cook, Gr. H.....	1179	51.87	10.90
Glendale Creamery, Gr. J.	1020	51.00	12.09

PROFIT PER COW, $123.

J. W. Vandervelden of Roy, Ore., has 13 cows on test in the Washington County Cow Testing association, some of them pure bred and some grade Jerseys. Their total milk for ten months was 88,154 pounds and their butter fat 4694.05 pounds, or 5317.62 pounds of 5 per cent butter. Several of the cows had their dry period during the ten months. The average profit for the ten months was $123.87 per cow. This is above the cost of feed. Mr. Vandervelden's work is all done by his own family, but, even if this was not the case, he estimates the value of the manure and calf to pay for the labor.

CONTAGION SPREADS

Through Contact With Disease.

Professor H. L. Blanchard of the experiment station of the state college at Puyallup, Wash., was speaking about the comparative prevalence of abortion in cattle, now and formerly.

"About 22 years ago, there was a big epidemic of abortion in our part of the state," he commented. "At that time my lane ran right down the center of my farm, so that my cattle didn't come into contact with any of the others in the neighborhood, and as long as this lasted I wasn't troubled. Then, without thinking, I shifted my lane over beside the line fence, and one day when I looked down into the pasture, I saw my cattle from the next farm all in together. That was the beginning of trouble, and it took me just three years to get back where I was before that day. You might say that I lost three years' time, so far as returns from the dairy were concerned."

Professor Blanchard states that care of the cow, following delivery of the calf, is important, as this tends to keep the tissues in a condition to resist infection. He suggests washing with a solution of any mild disinfectant in warm water, utilizing a piece of hose and a funnel for the syringe. This simple precaution is also of service in case of laceration, and tends to prevent the formation of adhesions and misplacements.

The Man for Guernseys.

D. H. Looney of Jefferson, Ore., who won both grand championships on Guernseys at the A. Y. P. stock show who has been breeding Guernseys continuously for a good many years, says: "The demand for pure bred dairy cattle is naturally affected by the condition of the dairy industry, and dairying is affected by the price of dairy products. The scarcity of the Guernseys and their growing popularity make their sale good. They are bringing as much as, or a little more than, ever before. For myself, I must say I am unable to supply the demand and I do not know any other Guernsey breeder in the northwest who can."

D. H. Looney, Jefferson, Ore.

Clallam County Tests.

During the 30 days ending February 18, there were 120 cows in the Clallam County Cow-testing association of Washington, producing over 30 pounds butter fat and seven cows producing over 50 pounds fat. There were four herds totaling 55 cows which averaged over 30 pounds fat for the month. The following table gives the records of cows producing over 50 pounds of fat during the month:

Owner and Breed.	Milk Lbs.	Fat Lbs.	Cost Feed.
Edwin Pettit, P. B. J....	1239.0	64.42	$10.53
Edwin Pettit, P. B. J....	1110.0	56.61	10.53
Edwin Pettit, P. B. J....	828.0	50.50	10.53
P. A. McNamara, Gr. J..	1050.0	52.50	8.97

American preserves are need in Argentina.

DE LAVAL

The First, the Best Known and the Greatest

CREAM SEPARATOR

Better Now Than Ever Before

THE first practical continuous cream separator, the De Laval has easily maintained its original success and leadership for nearly forty years. Step by step, year after year, by one improvement after another, the De Laval has led in every single step of cream separator development and improvement.

The first belt driven, the first steam turbine driven, the first of every kind of hand turnable, the first disc bowl, the first blade bowl, the first bottom or suction feed, the first split-wing feed, the first feed-through-the-discs, the first self-centering bowl, the first automatically oiled—all these and a hundred other features of separator development and improvement have been conceived by De Laval inventors and perfected by the De Laval Company, most of them to be cast aside for something still better in the ever onward advance of De Laval construction.

The New 1917 De Laval

And now, in the De Laval machines for 1917, a number of new and still further improvements have been made, which make the De Laval machines of today much better in many respects than they have ever been before.

Their capacities are greater per dollar of cost; they skim cleaner under the more difficult conditions of separator use; they are equipped with the most improved speed regulator, thus insuring the proper speed necessary for complete separation; they are even better lubricated, and the bowl construction is even more sanitary than ever.

In other words, superior as the De Laval machines have always been to all would-be competitors and utilizers of abandoned De Laval features, the De Laval machines of 1917 are improved and superior in every way to all previous types and models of De Laval construction.

All these improvements and new features are described and explained in the new 1917 De Laval catalog now ready for mailing, but some of them are difficult to describe and make fully understood by words.

Be Sure to See a New De Laval

The new De Laval machines themselves best explain their new and superior features, and their use does this more completely and convincingly than even an examination of them. Every local agent is glad to afford opportunity for examination, and better still, for home test of a new De Laval machine.

But the demand for the new machines is a month ahead of the possible supply under the present difficult conditions of manufacture and freight distribution. More De Laval machines by half have been made in 1917 than ever before, but the De Laval works are now ten thousand machines behind actual orders, and the demand is ever increasing.

Hence, the importance of securing a machine quickly if your local dealer happens to have one, and of ordering well ahead if he does not. And likewise, the importance of waiting patiently a little for a machine if need be.

A new De Laval catalog will be gladly sent on request, and if you don't know your nearest local agent please simply address the nearest De Laval main office as below.

PEA RATION FOR PIGS

Shown to Be the Most Fattening.

By Fred Schroeder.

Experiments being conducted on the Washington State college farm with a pea ration for pigs shows that the hogs are fattening more quickly than on other standard rations. Fifty hogs are being used in the experiment being conducted by Benton M. Bangs, whose work in supervising the experiment will entitle him to master's degree in agriculture.

The animals are divided into four lots, and are being fed as follows: Lot 1, barley 60 per cent, shorts 30 per cent and oil meal 10 per cent. Lot 2, peas 60 per cent, shorts 30 per cent, tankage 10 per cent. Lot 3, peas, 60 per cent, shorts 30 per cent, oil meal 10 per cent. Lot 4, barley 60 per cent, shorts 30 per cent, tankage 10 per cent.

Lot 2, handfed, is showing the best results, with lot 3 second, both being a major ration of cleanings or cracked peas. The hogs are being weighed every week, the experiment being conducted over a period of eight weeks, being now in the last week.

SHEEP SALE

Clearing Houses for Small Breeders.

The secretary-treasurer of the American Hampshire Sheep association, writes:

To the Editor: This association, as you know, went on record at its last annal meeting as being in favor of holding an annual sheep sale somewhere in the east or middle west. The executive committee have since considered the advisability of making it a great national affair to include as many other breeds as may wish to join with us in the movement.

It is the purpose of this sale to make a clearing house for the small breeder who has not flock enough to make extensive advertising profitable, and provide also a place where the man who desires to purchase one or a carloan, may come and actually see the animals he is buying.

This should prove a valuable school. Of this we must use care, however. No inferior animals should ever be consigned to this sale. It will work as a boomerang if we do. Send only the good ones and have them in good flesh. I do not mean by this "high show" fit, but in good working flesh. At the National Wool Growers' sale at Salt Lake City last September, Hampshires averaged nearly $80 per head. Only good ones were there. We do not expect such prices as these here, but, if the sheep are good, the prices will be satisfactory.

COMFORT A. TYLER,
Secretary-Treasurer.

Detroit, Mich.

Veterinary

Dr. S. B. Nelson

I have a cow that has lumps all over her back, known as warbles, which hatch in the spring and become very annoying to the animal. Is there anything that will exterminate them in the dormant state? L. S. B.

Greenacres, Wash.

No, I do not know of anything that will exterminate them in the dormant stage by applying it to the cow's back. Some people have advised squirting a little gasoline into the warbles, but that is not a very satisfactory thing to do. I think the best thing is to daily squeeze the lumps until the warble's larva pops out. Then destroy it by crushing. Next year during the summer season when the warble bot fly is flying paint the parts of the body, such as the legs and neck, where the fly deposits its eggs with some substance containing a heavy oil. It does not matter much what kind of a heavy oil is used. Some people use linseed oil and some people use fish oil—anything to keep the egg from sticking to the hair.

1. What are the requirements under the laws of Washington for owner, to comply with in placing stallion for public service? 2. About four weeks ago I lost an eight-month-old calf that had always done well since birth. It appeared to get stiff and lost all control of its hind quarters, could not stand or even move hind feet. Had a good appetite all the time. Now I have another calf in the same condition.

Smyrna, Wash. T. C.

1. The state laws of Washington require that any stallion which is offered to the public for service must have been examined by a registered veterinary practitioner and must have had an examination of soundness. The law prescribes what constitutes soundness. Then after this veterinary practitioner makes his report to the commissioner of agriculture at Olympia the commissioner sends to the owner a certificate of soundness giving the owner permission to place the stallion on the public stand for service.

2. It is possible that the disease affecting your stock is hemorrhagic septicemia, although I am not sure of my diagnosis, but there are some of the symptoms which would indicate this trouble. I would recommend to you that you thoroughly disinfect the quarters where you are feeding your young animals. Use for this purpose first one part of corrosive sublimate to 1000 parts of water. Three days later whitewash the entire inside of the calf quarters. Whitewash floors, walls and everything you can reach. For the latter, the whitewashing, you could use a cheap spray pump. For the first disinfecting with the corrosive sublimate you should use an old broom. That is the best advice I can give you in this case.

I have a heifer giving milk since July, 1916. She seems to be in good health, eats well and is lively. At times I notice an enlargement like an enlarged vein in her teats and then there are small clots of blood in the milk. What is the remedy for grubs that form just under the skin on a cow's back?

E. W. M.

Ford, Wash.

Try painting the teats with tincture of iodine when the condition comes on which you mention. Also give her one teaspoonful of hyposulphite of soda in one quart of water once daily. Regarding the grubs, the best treatment is to squeeze out the grubs catching them in some scall vessel turned upside down over the abscess and then crush it. That prevents the formation and development of the warble fly. Then next summer during June and July apply to the cow where the warble lays its egg along the legs, shoulders and part of the back, some oily substance, such as linseed oil and tar, or fish oil and tar. This will prevent the fly from laying its eggs and causing the trouble.

I have a mare that is slightly windbroke. Is there a cure? H. I. J.

Winlock, Wash.

There is no specific cure for a windbroken horse. Cut the animal's feed down one-half, lessen the hay fed even more than this if possible. Sprinkle the hay and the grain with water. Give one ounce of Fowler's solution of arsenic once daily for a couple of weeks, rest a couple of weeks and continue the treatment.

Is it best to breed 2-year-old mares or wait until they are older?

Twin Falls, Idaho. J. A. P.

Some breeders believe that it is a wise thing to breed a good large 2-year-old mare so that she will foal at 3. They believe that it broadens her and makes her larger. Other breeders prefer to breed at 3 and foal at 4. I think the larger percentage of breeders prefer the first.

I had a mare choke on dry beet pulp and whole oats; called a veterinarian at once but was unable to get him. In the meantime oil was given her and in five minutes' time she started to breathe fast. Later the veterinarian came and at first sight said the mare had pneumonia. I told him we had given her oil and he said some of it must have gone to the lungs as they were rattling bad by that time. He did not try very much to remove the choke but the next day tried and stopped because it made breathing much harder. The next day they got the choke out and I think she would have died soon but with the veterinarian's care lived 17 more hours. The veterinarian said on examination of the lungs that the oil killed her. Can a horse die with pneumonia in 58 hours?

Milltown, Wash. SUBSCRIBER.

Yes, a horse can die in 58 hours and less with pneumonia. Sometimes they die as soon as eight or 10 hours in very severe cases.

Reports Big Litters.

John B. Peterson of Montborne, Wash., reports that the pigs on his place this spring are averaging 13 1-2 pigs to the litter. One sow had 14, another 15 and another 16. They were sired by his boar "Red Dandy."

ABSORBINE
TRADE MARK REG. U.S. PAT. OFF.

Reduces Bursal Enlargements, Thickened, Swollen Tissues, Curbs, Filled Tendons, Soreness from Bruises or Strains; stops Spavin Lameness, allays pain. Does not blister, remove the hair or lay up the horse. $2.00 a bottle at druggists or delivered. Book 1 M free.

TOBACCO SPRAY

After Two Years' Experiments.

F. A. DeSellem, fruit inspector for Yakima county, Wash., has for the last two years been making some experiments with nicotine sulphate as a spray for scale and codling moth. These experiments have not been carried far enough to warrant final conclusions, but they at present seem to justify the prediction that in the near future tobacco spray will take the place largely of lime-sulphur and arsenate of lead. Its value seems to be that it not only kills the scale and codling moth, but aphis and other insects as well. It is also claimed that it checks, but does not entirely prevent, the spread of blight.

Mr. DeSellem summarizes his conclusions in a bulletin he has published as follows:

"1. While we are not ready to make a final statement, the work during 1915 and 1916 indicates that nicotine sulphate acts as a material check to the work of the codling moth.

2. At the present prices for nicotine it would not be advisable to substitute nicotine sulphate for arsenate of lead in codling moth control alone, but where aphis and sucking insects are to be controlled the omission of lead will result in a considerable saving.

3. In the above demonstrations when nicotine sulphate and arsenate of lead have been used side by side the former has proved as efficient as the lead in codling moth control and has kept the trees free from all sucking insects.

4. Trees sprayed with nicotine sulphate showed much higher percentages of extra fancy and fancy fruit than the trees sprayed with lead. The fruit was more highly colored.

5. Observations during the seasons of 1915 and 1916 indicate that the nicotine acts as a material check to the spread of San Jose scale.

6. In the nicotine sprays the addition of soap is advisable.

7. It does not seem necessary to use nicotine stronger than 1 to 800 for codling moth, and 1 to 1024 has given nearly as good results.

8. It is expected to continue the work under the most severe conditions this coming season." G. L.

The Farm Garden

Article 5

THE CABBAGES

A Few Facts About the Cabbage Family, Including Cauliflower, Brussels Sprouts and Kohl-Rabi.

Cabbage, cauliflower, kale, Brussels sprouts, kohl-rabi, radishes and turnips belong to what is known in garden science as the mustard family, but with the exception of the two latter they might well be termed "the cabbages."

They all require the richest of soil, with the exception of cauliflower at one particular stage in its growth; they can endure considerable cold; none of them is able to combat extreme heat, and with the exception of the radish and the turnip, they require comparatively long seasons, except where specially early varieties of cabbage have been developed.

Cabbage, cauliflower, sprouts and kohl-rabi should be started in the hot bed, but this is not essential if the season is long enough and the spring free enough from excessive cold.

Cabbage—One ounce of good cabbage seed will produce enough plants to set a quarter of an acre. The plants should be set in rows three feet apart and two feet apart in the row. A quarter of an acre will accommodate approximately 1800 plants. The soil should be rich and heavy, well fertilized and containing plenty of humus. Cultivation should be intensive. As the heads begin to form, unless the soil is very rich, it is profitable to work into the surface a quantity of sodium nitrate, depending upon the degree of soil fertility and the available moisture. An application of from 20 to 30 pounds on a quarter acre cabbage patch is recommended as a general average.

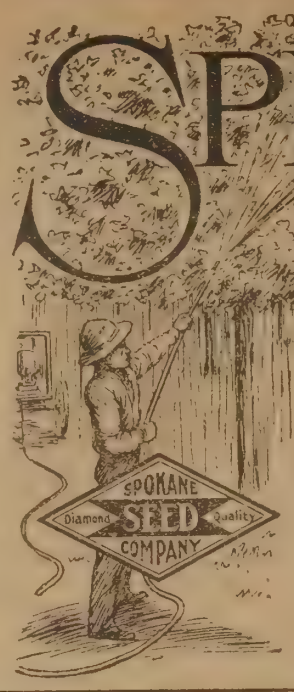
Cabbage must have plenty of moisture and must be planted where extreme heat may be avoided even though moisture is plentiful.

Cauliflower—In general, as to transplanting, soil requirements, cultivation and the like, the same rules should be followed for cauliflower as for cabbage. Prior to heading time cauliflower is almost as resistant to frost as is cabbage, but the heads are very sensitive, and a slight touch of frost means ruin. Partially as a protection from frost, but more essentially for blanching purposes, the outside leaves of cauliflower should be tied about the head as it begins to take form. The plant is also extremely sensitive to high degrees of heat.

A quarter of an ounce of seed will produce about 800 plants. The seed is comparatively expensive. Cauliflower cultivation is considered difficult, but with proper conditions and judicious care it may be made one of the most valuable vegetables of the farm garden.

Brussels Sprouts—In starting, transplanting and cultivating follow the same general methods as with cabbage. Sprouts are hardy. They require about the same space as cabbage. They are slow growers. It requires from 16 to 20 weeks from planting to produce the little heads that develop on the main stem where the leaves branch off. Brussels sprouts are also generally admitted to be difficult of successful production in this country, but where good soil, long seasons and plenty of moisture are had they also may become valuable adjuncts of the garden.

Kohl-rabi—This plant is also able to resist much frost and therefore may be planted in the open ground instead of the hot bed when not desired for early production. Kohl-rabi is one of the least common of garden vegetables. Its edible part consists of an enlargement of the main stem, its nature and flavor being much the same as that of the heart of a cabbage head. If not transplanted from the hot bed it should be sown in rows and thinned to stand five to eight inches apart. Rows should be 15 to 20 inches apart. Half an ounce of seed will produce 1000 plants, or probably 400 feet of row after thinning.



What Is Humus?

The Farmer has been asked to explain the meaning of the term "humus," as used so frequently in discussions of of soil problems.

Humus is the substance formed in the soil by decaying vegetable matter, such as leaves, stubble, roots, manure, crop plowed under and so on. Humus not only comprises elements of plant food itself, but it has the power of holding the necessary nitrates of fertile soil to prevent their escaping through washing or other means. It also has the effect of a sponge in absorbing and holding moisture in position and form available for the use of growing plants and aids in keeping the soil porous. Humus is indispensible to plant growth. Poor crops are in many cases due to its lack.

Gold.

Gold was known from the earlier historic times, and is mentioned in the eleventh verse of the second chapter of Genesis. At first it was chiefly used for ornaments. The trade of the goldsmith is mentioned in the fourth verse of the 17th chapter of Judges, in connection with the overlaying of idols with gold leaf.

Worth While Offers

In the want ads of this paper you will find frequent attractive offers.

In answering advertisements don't fail to mention this paper.

New Spokane Incubators and Brooders
are sure hatchers. Built to suit Pacific northwest climate. Hot water or electric. Top raises like a lid, permitting turning of eggs without taking from machine. Seven styles and sizes. Prices, $7.50 up. Write for new catalog, which contains new ideas about chick hatching.

Spokane Incubator Company 3429 Haven St. Spokane, Wash.

At this writing, (March 19) eggs are 6 or 7 cents higher than they were a year ago. This extra price will go far toward paying for the extra cost of feed.

The demand for eggs for hatching and day old chicks of utility strains is unprecedented in the Pacific northwest, and the orders are being filled right at home. As good laying stock can be procured in this section as in any other section of the United States. If breeders will continue the good work and use the trapnest, Oregon, Washington and Idaho will soon be shipping out quantities of heavy laying stock to states in the east.

Give the farm boy a setting or two of eggs of some heavy laying strain. Then give him the coops and feed necessary and see what he can do with the pullets next fall and winter. But get them from good pedigreed layers. Don't discourage him by giving him some poor layers. The care of a pen of good chickens will show the boy that there is a relation between effort and results, and the results will be eggs and pocket money. J. D.

Records

In All-Northwest Laying Contest

The following are the pens in the all-northwest laying contest which have made the highest records from October 15, 1916, to March 1, 1917:

	Eggs.
J. A. Hanson, Corvallis, Ore., White Leghorns	299
Oregon Agricultural college, Corvallis, White Leghorns	289
Mrs. W. T. Thompson, Bozeman, Mont., White Orpingtons	265
Abercrombie & Witbeck, Kerrisdale, B. C., R. I. Reds	265
F. F. Solly, Westholme, B. C., White Leghorns	265
J. R. McRae, Milwaukie, Ore., White Leghorns	261
P. W. Harries, Seattle, Wash., White Leghorns	259
D. Tancred, Kent, Wash., White Leghorns	252
C. Daniels, Hoquiam, Wash., White Rocks	252
Hi-a-Hee P. Products Co., Grants Pass, Ore., Barred Rocks	251
Oregon Agricultural college, Corvallis, Barred Rocks	248
V. L. Garner, Wenatchee, Wash., White Wyandottes	242
Bliss & Bliss, Southworth, Wash., Barred Rocks	241
B. O. Longsdorf, Lebanon, Ore., White Minorcas	238
A. Unsworth, Sardis, B. C., White Leghorns	233
G. M. Brown, Los Angeles, Cal., Rhode Island Reds	237
J. D. Balmat, Spokane, Wash., White Leghorns	237
Auburn P. Farm, Auburn, Wash., Barred Rocks	227
George D. Adams, Victoria, B. C., White Wyandottes	226
Paul B. Towne, Tekoa, Wash., White Leghorns	224
Valley Farm, Boerne, Texas, White Leghorns	224
Oregon Agricultural college, Corvallis,	224

The highest record for the month was made by a pen of Barred Rocks owned b ythe Auburn Poultry farm, Auburn, Wash. The highest individual record for the full term was 86 eggs, made by a White Leghorn hen owned by K. Hammerbacher, Grants Pass,, Ore. The highest individual record for February was 22 eggs, made by a Barred Rock hen entered by William Coats, Vancouver, B. C.

Geese

Start With a Few and Increase

By JAMES DRYDEN.

A subscriber at Riverton, Utah, asks for "information on the raising of geese." I would refer this correspondent to an article in these columns of the issue of August 17, 1916. A farmers' bulletin on ducks and geese has been published by the United States department of agriculture, and a letter to the department would doubtless bring the bulletin, if it is still in print.

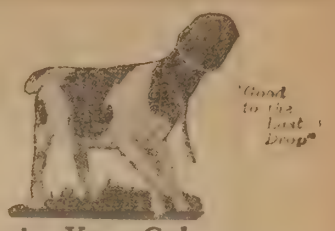
Another correspondent, in Oregon, wishes to know how much land would be necessary for 1200 geese. To give a proper answer to this question requires a rather wide knowledge of the subject. Literature on geese raising is not very extensive, and I know of no bulletin or other publication that gives the necessary knowledge for properly handling a flock of geese of this size. Besides, I know of no farm that raises this number of geese. That does not prove, however, that such a thing is impossible. It is possible. If it is possible to raise a dozen geese, it is possible to raise a hundred dozen. It is all a question of knowledge. Because a thing is not done, we are too often ready to say that it is impossible. The best way, however, to achieve the impossible is to begin with the possible. Start with a small number and increase. As geese live largely on pasture grasses, with little grain, they must have considerable range. I would say that 100 acres would be none too little for 1200 geese, according to what information I have. The idea would be to give them plenty of good pasture all summer, so that they can not eat the grass all off and foul the land. Then the farm would have to be divided into a number of fields, as it would be not be profitable to run that number of geese together.

Thomas Manion of Mount Carmel, Pa., owns a 30-year-old hen.

Blood Spots

Found in Eggs From Healthy Hens

Consumers of eggs are accustomed to finding occasionally an egg with a blood spot. This spot does not really mean that the egg is bad though the consumer is likely to refuse to use it. For that reason the poultryman who wishes to retain good customers candles the eggs and thereby makes sure that they are free from blood spots.



The question is frequently asked, what causes blood spots and what is the remedy. The cause is supposed to be drops of blood that enter the oviduct with the yolk and before the albumen is put on.

The organs concerned in the production or making of the egg are the ovary and oviduct. The yolk is formed in the ovary. There are hundreds of little yolks or ovules that are developing into full-sized yolks or awaiting the proper opportunity to develop. Each of these yolks is surrounded by a thin membrane called a follicle. As the yolk enlarges and reaches full size this follicle or sac bursts or ruptures, permitting the yolk to leave the ovary and enter the mouth of the oviduct. Sometimes when the sac ruptures there are drops of blood that enter the oviduct with the yolk. In the oviduct the yolk is enclosed or surrounded with the albumen and the drop or drops of blood are also enclosed.

Blood spots may come from hens that that are perfectly normal and healthy. J. D.

The YUBA GROUSER PLATE

(CAST STEEL) 55% CARBON.

IT IS as impossible now as it was three years ago to improve the basic design and principle of the *Yuba Ball Tread Tractor.* But, in studying every part of the machine under constant and strenuous service, we have discovered opportunities for minor changes.

The new tread or grouser plate is one of the interesting features of the new Model 20-35. It is made of high carbon steel, four times as strong as cast iron, twice as stout as ordinary steel. Double the wear of the pressed steel track is assured.

The former shoe, pressed from a steel plate, was unavoidably thinned and consequently weakened at the point of bend—the very place where the wear came. The new shoe is reinforced at this point by at least three times as much as high carbon steel.

It is boltless—no nuts to loosen, nothing to watch. It is self-cleaning. It has the maximum traction—will work in the softest soil. There is no opening for rubbish to work in between the treads.

The track upkeep of *The Yuba Ball Tread,* already less than that of other tractors, will be practically cut in two by the adoption of this tread shoe or grouser.

This is just one of the features of the New Yuba Model 20-35.

Donkey Is Some Lifter

Farm Information Contest Lifts the Veil

By FARM INFORMATION EDITOR

While our contestants are busy thumbing the Bible to ascertain whether the book of Hezekiah appears in the Old or the New Testament, I would like to discuss some of the other questions in the farm information contest.

"What boy's name is also the name of an animal and a device for lifting?" runs question No. 51. Somebody writes to remark that the question might have been phrased equally well, "What boy's name is also the name of two devices for lifting?"

That is probably true, granting that "Jack" is the name which answers the question. We have Bill Nye as authority that the donkey is about as successful a device for lifting as is the mechanical jack. In describing his experience as editor of the "Boomerang," at Laramie, Wyo., he said that his newspaper office was located over a livery stable.

"You could enter the office by an outside stairs," he said, "or you could just step inside the stable, twist the old gray mule's tail and take the elevator."

One question which seems to be a stunner to many of our contestants is No. 22, "Where is the key of the bastile?"

Some of our contestants write to assure us that the key is no longer in existence; that, in fact, it was destroyed together with the bastile. One contestant declares that he has read French history from cover to cover and has failed to find any trace of the old key. He put the question up to a college professor who had visited Paris and the site of the old bastile and was told that there must be some kind of "catch" in this question.

This college professor has evidently overlooked a very pretty little incident in American history, and should inform himself more thoroughly on details if he purposes to go on "professing." I wonder what George Washington would think if he were told that the key to the bastile was destroyed. I imagine he would become indignant at any suggestion that he had been a party to a fake exhibition.

The farm information editor must apologize to his contestants for question No. 39, "What brand of oil widely advertised in this paper is formed by combining a word meaning a very low temperature with a word meaning thin."

The answer to this question was appearing in The Farmer every week up to the time that this contest opened. Then the makers of Zerolene must have found that their advertising was selling them out of their product. Any way, Zerolene advertising was abandoned entirely in this paper, which makes it necessary to score all contestants 100 on this question without regard for their answers. Some seemed to satisfy themselves that "gasoline" answers the question, but it does not.

It is very enjoyable to receive so many sidelights on the contest, but I am somewhat annoyed at attempts to expose the identity of the farm information editor. Several contestants request his name, and two spinsters—who fail to state whether they have any money—request his photograph.

"I like your stuff," one of them writes, but experience has taught me to be chary of compliments. This is not a popularity contest and my conceit will be controlled until I am assured that I am not being "kidded." Speaking about popularity, I never forget the story told by Charley Case, burnt cork comedian, who recently committed suicide in New York, about his sister Mary.

"Don't you know," he began, "my sister Mary is the most popular girl in our town. Why, she attended one of these parties the other night where you have to kiss a girl or give her a dollar, and Mary came home with thirty-five or forty dollars."

Now is the time to get into the farm information contest, but I would advise that before starting you secure our contestant's helpful outfit, which is included with every new, renewal or extension subscription to The Farmer.

Those who gave the correct solution in the figure contest are now working the second or tie-deciding problem, and the awards will be announced just as soon as these charts are returned and time is given to size up the results.

More Millions

For Farm Education Are Provided

(Continued from page four.)

are preparing to enter upon the work of the farm or of the farm home;

That the state or local community or both shall provide the necessary plans and equipment for such education in schools and classes in the state;

That the amount expended for the maintenance of such education in any school or class shall be not less annually than the amount fixed by the state board with the approval of the federal board;

That such schools shall provide for directed or supervised practice in agriculture, either on a farm provided for by the school or other farm, for at least six months a year;

That the teachers, supervisors or directors of agricultural subjects shall have at least a minimum qualification determined for the state by the approval of the federal board.

In order to receive the benefits of the appropriations for the salaries of teachers of trades, home economics and industrial subjects, similar provisions are made, as well as for workers over 14 years of age who have entered upon employment in part time schools, and that the state or local community, or both shall provide the necessary plant and equipment.

The state treasurer is named as the custodian of all moneys received under this act

It is also emphasized that no portion of any moneys appropriated under this act shall be applied directly or indirectly to the purchase erection, preservation or repair of any building or buildings or equipment, or for the purchase or rental of land.

No portion of any moneys appropriated under this act for the benefit of the state shall be applied directly or indirectly to the purchase, erection, preservation or repair of any building or buildings or equipment, or for the purchase or rental of lands, or for the support of any religious or privately owned or conducted school or college.

Pull Big Stumps by hand

Clear your stump land cheaply—no digging, no expense for teams and powder. One man with a K can rip out any stump that can be pulled with the best inch steel cable. Works by leverage—same principle as a jack. 100 pounds pull on the lever gives a 48-ton pull on the stump. Made of Krupp steel—guaranteed against breakage. Endorsed by U. S. Government experts.

In answering advertisements don't fail to mention this paper.

This proves, more powerful than words, the great pulling power of the Chalmers. A short time ago a big steam hammer arrived at the Chalmers works. It weighed in excess of 30,000 pounds. After it was unloaded from a freight car it had to be moved to a building a quarter of a mile away. A Chalmers chassis, just finished, was taken from the factory and a towing rope attached. Several times the rope broke and the steel rollers placed under the hammer were crushed like eggshells. The Chalmers, however, hauled the load with ease, and the hammer was in place in an hour.

Specifications

Engine—6 cylinders, bore 3¼ ins., stroke 4½ ins., piston displacement 224 cu. ins. Power—45 h.p. (on the brake test.) Starter—Westinghouse 2 unit. Carburetor—Stromberg, horizontal, hot air heated. Clutch—Dry disc, asbestos on steel. Fuel feed—Stewart-Warner vacuum system. Ignition—Remy distributor, Willard 80 ampere hour battery. Tires—32 x 4, chain tread on rear.

National Agrarian Party

Within the Possibilities of Next Decade

By E. A. Bryan

The time is fast approaching when the formation of a national agrarian political party will be worthy of careful consideration. It does not require a close observer to perceive that economic questions are becoming the determining factor in political alignments. The wage-earning, labor union fraction of society has become pretty thoroughly organized, and already places the aspirations of the group above any past political connections or predilections. Though the farmers and the laborers in the various industries have some things in common, particularly the fact of physical labor, they have many interests which are not in common and which are diametrically opposed.

For example, the cost of food products; the farmer wishes it to be high that he may receive a legitimate reward for his labor; the laborer wishes it to be low that the outlay for living may be less. For example again, taxes. The wage earner wishes large public expenditure that work may be plenty and wages high. He will always vote for a bond issue for the construction of public works. On the other hand, the farmer is a payer of taxes and opposes this increase, as a rule.

The truth is that the farmer is a capitalist who is his own employer, and in almost every instance when there appears to be diverse interests between capital and labor he finds his personal interests on the side of capital, even though he is one of the most diligent workers in the world.

While 80 to 85 per cent of our people were yet engaged in agriculture there was no need of an agricultural political party. But now that there are scarcely 40 per cent of the population engaged in farming, now that commercial interest, banking interests, manufacturing interests, transportation interests and labor interests are so concentrated, so thoroughly organized and have such ready access to the public ear, the time approaches when this largest and most fundamental class must consider the means of its own protection and the advancement of its own interests.

The Patrons of Husbandry (the grange) and the Farmers' Cooperative and Educational union, by the terms of their organization are nonpolitical, and, as a matter of fact, their membership belongs to all political parties. They are chiefly educational and social, and confine their political activity chiefly to propaganda for certain specific economic ends, such as rural delivery or parcels post. Such organizations must continue their usefulness, but do not quite meet the requirement of a national agrarian party, always with a large congressional representation, the party always aligning itself for offensive or defensive legislation in the interests of its class.

In many countries with constitutional governments there are and there have been in the past agrarian parties. In few countries is the government so distinctly in the hands of one or the other of two great political parties. Rather, is it in the hands of one or the other allied groups of parties, as the government of Great Britain prior to the war was in the hands of the Liberals, composed of the liberal party proper, the Irish group, the Labor group, etc.

The "issues" between the republican and democratic party are no longer sufficiently radical or comprehensive to meet the demands of their adherents. The recent campaign and election show that the high tariff and free trade no longer represent a true dividing line even though it as yet remained the most distinctive feature. Two party names, these or others, may continue, but they are likely to be made up of groups, such as the labor group or agrairian group, free to align themselves, as interest may dictate.

Our labor friends have been loudly proclaiming "nonpartizanism," yet they form the most partizan of parties, acting with a solidarity and an organization unequaled by any other party of the day. "Nonpartizan" has been made a shibboleth to jar loose the membership of a dominant party. A distinctively "agrarian" party is easily within the possibilities of the next decade. When it comes it will likely be a state as well as a national party, for its issues will be as strongly affected by state as by national legislation. This fact may modify the attitude of the country toward the election of a president by popular vote, for while the majority of the population is urban the majority of the states is rural.

Ups and Downs of a Bunch Grass Boy

By JOE L. ASHLOCK

(Copyright, 1917, Joe L. Ashlock.)

CHAPTER IV.

LIFE on a Big Bend farm 25 years ago was not wholly a round of monotony for a small boy. It is surprising how interesting a place "home" can be, even though it consists of a one-room, unpainted cabin set in a 320-acre wheat field—which, sad to say, did not produce very much wheat. There were times, however, when the cows and calves, my pony, the dog, the cat and my pigeons became tiresome, and I longed for children to play with.

My great desire was for "a creek" and trees and shade. Father had taken up a "timber culture," and the law required that he should put out 10 acres of trees. With eagerness, I dropped the box elder seed, following his hoe. I pictured myself climbing through the leafy branches of the box elder trees, peering into bird nests, or sitting quietly in a comfortable fork listening to the twittering of the feathered things. There would be tree squirrels, too, storing nuts in the hollows of the trees. Father explained that box elder trees would not have "hollows" in them for a long time; that the bunchgrass squirrels did not climb trees, and that nuts did not grow on box elders.

My dreams never materialized, for the climate in that part of the Big Bend was unfavorable to the quick development of trees. We managed to make a few of them grow around the house. It was surprising how much they added to the comforts of the place.

My longing for running water and lakes burned like the desert thirst. Wilson creek was 15 miles away, and it was not practicable to ride that far; though I have ridden 10 miles to play around a small lake south of Coulee City in which there were many tadpoles. I made boats with sails and took them to the Coulee lake to sail them. My greatest discovery was Garland's lake, which was five or six miles southwest of our place in the "scab rock." The lake was a half mile long by an eighth mile in width, quite deep in places, and contained many patches of tall tules, among which the wild ducks swam. The Garland family lived on the edge of the lake in a "pot hole," one side of which opened on the lake. The Garland boys were three—Bert, Jasper and Grover. We used to hunt around the lake, finding ducks' nests and scaring up many killdeers. These birds, as they hopped about on their long, yellow legs and uttered their peculiar piercing cries, were most fascinating to me.

Also, which was less pleasant, we scared up rattlesnakes now and then. Not only were there rattlesnakes, but there were moccasins and "blue racers." Oddly enough, the ponies feared the blue racers more than any other serpent. I was riding Rowdy through the rocks near the water's edge one day, and a blue racer darted from the grass right under his nose. He reared and shied sidewise so violently that he nearly flung me from the saddle. The Garland boys said that blue racers sometimes wound around horses' legs, which was why they were so greatly feared by the cayuses, as well as other range-bred animals.

By the time I was 14 or 15 I had learned to ride pretty well, though was far from the "puncher" class. I had ridden as far south as Wilson creek, 16 or 20 miles away; northward as far as the Grand coulee, a similar distance, and east to Wilbur, 20 or 25 miles. This territory, then in unfenced bunchgrass, was my range, my playground.

After Garland's lake and the adjacent "scab land" of moist, grassy pot-holes and many shaded clumps of "sarvice" bushes, the greatest wonder in my playground was the Grand coulee and Steamboat rock in the middle of its floor-like bottom. About 18 miles north of my home we struck the head of the Ladd trails, which led by a precipitous and hair-raising route down into the Grand coulee. In getting down the Ladd trails the first time I came near losing my life.

Lew Ames and I were hunting for a horse one day, and our ride took us far up into the Coulee country. During the day we made for water three times, and each time found a "dry hole," for it was late in summer. By the middle of the afternoon we were suffering acutely from thirst. Our ponies also were suffering for water. Lew said the nearest water was down in the coulee, but to get to it we must go down the Ladd trails. We feared the trails, but we feared our thirst worse. Riding up to the precipitous edge of the coulee, we could see on its level floor, about 800 feet below, the sparkling water of a small, flowing stream. A mile or two up there was a break in the wall, and at this point were the Ladd trails.

We made the first "bench" all right, though I am sure we were gray with fear on the way down. At several points the path followed the very edge of a brink, a step away from which was a drop of 100 or 200 feet.

On the second bench the path forked, and we did not know which was the right path. We turned to the right, and this path proved to be merely a coyote trail down the "shell rock" heaped a hundred feet high against the base of the high precipice. In fear and trembling, we made our way out on the shell rock. Then danger began. Our ponies' hoofs kicked loose many stones, which began to roll down the steep descent. Rocks above the ones we started were loosened in turn, and by and by great boulders began to bound down. We dared not turn back, and scarcely dared proceed—but the latter was the only chance, for, by going ahead, we could keep the moving stones in our rear. Thus we managed to get to the bottom with only a bad scare.

And then we made for water as fast as our tough ponies could run; after which we headed for Tom Ferguson's ranch, getting there at supper time. Upon invitation, we partook of the beans, sour-dough biscuit, bacon, "spuds" and dried apples which Tom set before us. He asked us about our trip down the trails, and we told him, explaining that we had come down coyote trail "just for the fun of the thing." Tom swore loudly, and told us not to do it again or we "would get our damfool necks broke."

Poor, old, lovable, cheerful, kind-hearted but drinking Bob Pugh was one of the most-loved friends of my childhood. Bob lived in a one-room cabin a

A Million Letters Failed to Arrive

Carelessness in preparing letters for the mail caused many writers to wonder why they received no replies during the last year. No doubt many friendships were broken because letters went astray. No doubt many persons became much "peeved" on receipt of a second bill when they had sent the money in reply to the first.

The report of the postoffice department for the last year show that more than 1,000,000 letters reached the dead letter office in Washington because of improper address. Over 675,000 letters could not be delivered because of insufficient or illegible addresses; over 115,000 letters were mailed without any address whatever; over 220,000 letters were held for insufficient postage.

And perhaps, strangest of all, many of these oversights occurred on letters containing money. Nearly $2,225,000 reached the dead letter office in improperly directed envelopes. Much of this money was forwarded to the persons for whom intended or returned to the writers, but much of it could not be for lack of information even in the letters themselves.

Ups and Downs of a Bunch Grass Boy

(Continued from preceding page.)

couple of miles from our place. He could fiddle, sing, dance, tell funny stories by the hour, and, in moments of sobriety, could give rare good advice. In his housekeeping he was neat as a pin. He had a wonderful dapple-gray pony named Riley; a sow and some little pigs; a team of spirited horses, and 12 cats. He was Welsh, and the music of that race was in his voice and his soul—if only he could have let whisky alone! A rare good fellow was he, but his life was a tragedy. Since last I saw him, nearly 20 years ago, I have heard that he had "quit drinking," and again that he was dead.

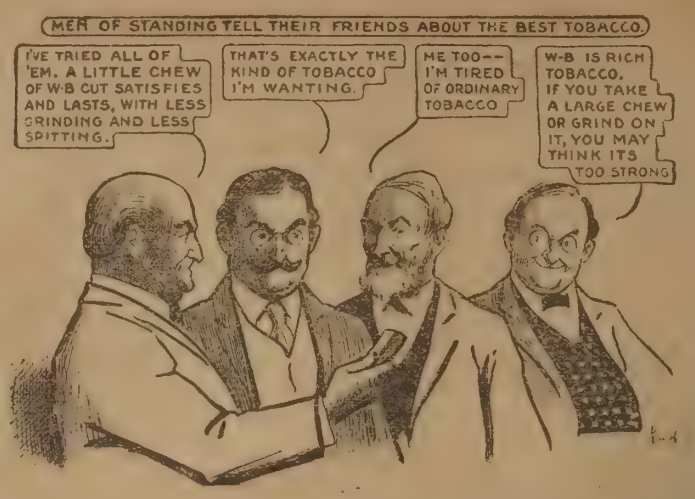
Bob's place was a place of good cheer and thrift when he was at home and sober. When he was drunk it was as if a blight had descended upon it. Once I rode over to see him, and, peering through the window, saw him asleep in a drunken stupor on the bed. At other times I found the place deserted, and everything mussed and neglected while he was in Coulee City on a "tear."

Once I rode into his place, on which occasion his cats had multiplied to 12. The poor things were meowing about, hungry and thirsty. I knew that that year the coyotes were hungry, due to a scarcity of squirrels and very few calves on the range; that long before Bob would return from his "celebration" in Coulee the coyotes would have cleaned out his cats. I pitied the poor creatures, and finally rounded them up and shut them in the one-room cabin, setting a big pan of water on the floor and further provisioning them with a huge pile of accumulated baking-powder biscuits which I found in the house.

A week later, I think, Bob came home sobered up. He found his 12 cats in the house, all alive and in a fair degree of comfort. It requires no imagination to see why Bob found his house scarcely inhabitable to one of his fastidious neatness—and he was that neat when sober. I arrived at his place shortly after him. He had everything in the house thrown out in the yard, cats included, and was "cleaning house." As soon as I came within hearing, he began to swear at the blank-blanked son-of-a-blank who had no more blanked sense that to shut a dozen blanked cats in a man's blanked house and leave them there a whole blanked week. It was a blank of a trick to play on a man and his cats, he said.

IN THE NEXT CHAPTER THE MEMORIES OF THE BUNCHGRASS BOY LINGER FOR A LITTLE, GOING BACK OVER THE TRAIL. "THERE COMES TO MY MIND A PICTURE OF GRANDFATHER, GRANDMOTHER AND MY UNCLES SAM AND HARRY, STANDING ON THE SMALL DEPOT PLATFORM AT CARTHAGE, ILL., WAVING GOODBY TO FATHER, MOTHER AND ME AS WE STARTED OUR JOURNEY OUT WEST." MANY HAVE TOLD OF THE WESTWARD JOURNEY, BUT HERE WE HAVE THE CURIOSITY AND THE WONDERMENT OF THE CHILD ENTERING INTO RAILROAD TRAVEL AS PICTURESQUELY DESCRIBED AND AS REAL AS THOSE CHILDISH EXPERIENCES IN THE WAGON TRAINS OF THE EARLIEST IMMIGRANTS INTO THE FAR WEST.

Would Like it Repeated.



"Bang!" went the rifles at the maneuvers. "Oo-o!" screamed the pretty girl—a nice, decorous, surprised little scream. She stepped backward into the arms of a young man.

"Oh!" she said, blushing. "I was frightened by the rifles. I beg your pardon."

"Not at all," said the young man. "Let's go over and watch the artillery."

SOW STERLING SEEDS for BETTER GARDEN CROPS

IMPROVING the yield and quality of your garden crops is important this year. Beans and many other food products are worth more now than at any time during the last quarter century. Yet you can raise a large portion of your family's food in your own garden and keep your table bountifully supplied with all kinds of delicious fresh vegetables at very slight cost.

Greatest success in gardening is attained only by sowing reliable seeds. Northrup, King & Co.'s garden seeds have been bred and selected for trueness to type, superior quality and heavy yield. They are carefully tested for germination and are especially adapted to sowing in the Northwest.

That's why it will pay you to be particular this year in asking your dealer for

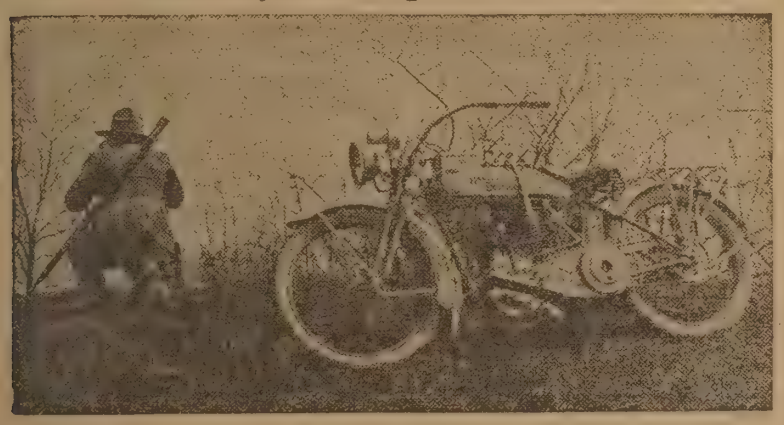
Prominent Figures in Russia



—Copyright by Underwood & Underwood.

Prof. Paul Miliukoff. Grand Duke Michael. M. Rodzianko.

The foreign minister in the new Russian cabinet, Professor Paul K. Miliukoff, has grave problems to solve. Grand Duke Michael Alexandrovitch, brother of the czar, was offered the regency of Russia. He has been at odds with the emperor for many years. Grand Duke Michael is strongly opposed to German influence in Russia and in the imperial family. Michael will accept the regency only upon approval of the people. M. Rodzianko, president of the Russian duma, formed an executive committee of duma members, which seized the reins of the Russian government.

Rodzianko was the leading figure among the deputies, who unanimously decided to oppose the imperial order for a dissolution of the house. They continued their session, and M. Rodzianko informed the emperor, then at the front, that the hour had struck when the will of the people must prevail.

Motorcycle Corps War Asset

The motorcycle riders of the United States do not intend to be left behind in any preparedness campaign that may result from the international crisis. Already there is a well-organized movement on foot to start a company of motorcycle volunteers in every community in which 25 or more riders can be gathered into a company. The promoters of the plan have received an unqualified indorsement of the value of the motorcycle in military organization from the war department. Ralph A. Hayes, private secretary of Secretary of War Baker, in an answer to a letter written Secretary Baker, outlining the plan for the organization of motorcycle volunteers, said:

"Doubtless, in case the present crisis should unhappily become more acute, the services of motorcyclists would be very necessary and valuable. The experience of the contending forces on the other side of the ocean demonstrate that motorcycle forces can and must be used for service which would be less satisfactorily performed by any other branch of the service."

Captain Davis, assistant quartermaster in charge of the entire southern district, in a recent interview, said of the motorcycle forces on the Mexican border: "Motorcycles have proved very satisfactory in service on the border. All of the officers want them, and if war should come we will have to have many more of them." With these indorsements, it is believed that it will not be difficult to interest the riders to form local organizations, so that they will at least be partially prepared should their country need them.

Ancient Bagdad Is Captured by British

—Photo by International Film Service.

Ancient Bagdad has fallen into the hands of a British force, led by General Maude, after a desperate stand by the Turkish defenders. The British found large military stores left behind and an item in the booty included 500 wounded Turks.

Can Distinguish Friends From Foes

—Photo by International Film Service.

Montraville M. Woods of Boston, has just invented a torpedo which he claims can distinguish friend from foe. The whole makeup hinges upon the microphone, or detectaphone. This is how the inventor says it would work in the event of attack by hostile warships upon an American port: The microphones are all set. When the sound of the oncoming vessels is picked up by the microphones, they are telegraphed to the mechanical brain of the torpedo. The brain, upon receipt of the message, closes a circuit which releases the anchor pin and starts the propeller. Away speeds the torpedo, 40 miles an hour, straight toward the source of the sounds to which it has been tuned.

General Lake.

Here is General Sir Percy Lake, commander of the British forces on the right bank of the Tigris. He is working under the general direction of General Maude, in command in Mesopotamia.

General Maude.

The above is a picture of General F. S. Maude, who, by taking Kut-el-Amara, has retrieved one of the greatest British blunders of the war. It is noted by the English with pride that he required but 73 days to take the place, while General Townshend's little garrison held it for 146 days against the Turks.

WHEN KNIGHTHOOD WAS IN FLOWER

or, the Love Story of Charles Brandon and Mary Tudor, the King's Sister, and Happening in the Reign of His August Majesty, King Henry the Eighth.

By EDWIN CASKODEN (Charles Major).

Copyright, 1893, The Bobbs-Merrill Co.

CHAPTER XIII.—(Continued.)

After perhaps half an hour we encountered Buckingham with his lawyer-knight, Johnson. They had evidently walked out to this quiet path to consult about the situation. As they approached, Mary spoke to the duke with a vicious sparkle in her eyes.

"My Lord Buckingham, this shall cost you your head; remember my words when you are on the scaffold, just when your neck fits into the hollow of the block."

He stopped, with an evident desire to explain, but Mary pointed down the path and said: "Go, or I will have Master Brandon spit you on his sword. Two to one would be easy odds compared with the four to one you put against him in Billingsgate. Go!" And the battle was over, the foe never having struck a blow. It hurt me that Mary should speak of the odds being two to one against Brandon when I was at hand. It is true I was not very large, but I could have taken care of a lawyer.

Now it was that the lawyer-knight earned his bread by his wits, for it was he, I know, who instigated the next move—a master stroke in its way and one which proved a checkmate to us. It was this: the duke went at once to the king, and, in a tone of injured innocence, told him of the charge made by Brandon, with Mary's evident approval, and demanded redress for the slander. Thus it seemed that the strength of our position was about to be turned against us. Brandon was at once summoned and promptly appeared before the king, only too anxious to confront the duke. As to the confinement of Brandon and his secret trial, the king did not care to hear; that was a matter of no consequence to him; the important question was, did Buckingham attack the princess?

Brandon told the whole straight story exactly as it was, while Buckingham as promptly denied, and offered to prove by his almoner that he was at his devotions on the night and at the hour of the attack. So here was a conflict of evidence which called for new witnesses, and Henry asked Brandon if the girls had seen and recognized the duke. To this question, of course, he was compelled to answer no, and the whole accusation, after all, rested upon Brandon's word, against which, on the other hand, was the evidence of the Duke of Buckingham and his convenient almoner.

All this disclosed to the full poor Mary's anxiety to help Brandon, and the duke having adroitly let out the fact that he had just met the princess with Brandon at a certain secluded spot in the forest, Henry's suspicion of her partiality received new force, and he began to look upon the unfortunate Brandon as a partial cause, at least, of Mary's aversion to the French marriage.

Henry grew angry and ordered Brandon to leave the court, with the sullen remark that it was only his services to the princess Mary that saved him from a day with papers on the pillory.

This was not by any means what Brandon had expected. There seemed to be a fatality for him about everything connected with that unfortunate trip to Grouche's. He had done his duty, and this was his recompense. Virtue is sometimes a pitiful reward for itself, notwithstanding much wisdom to the contrary.

Henry was by no means sure that his suspicions concerning Mary's heart were correct, and in all he had heard he had not one substantial fact upon which to base conviction. He had not seen her with Brandon since their avowal, or he would have had a fact in every look, the truth in every motion, a demonstration in every glance. She seemed powerless even to attempt concealment. In Brandon's handsome manliness and evident superiority, the king thought he saw a very clear possibility for Mary to love, and where there is such a possibility for a girl, she usually fails to fulfill expectations. I suppose there are more wrong guesses as to the sort of man a given woman will fall in love with than on any other subject of equal importance in the whole range of human surmising. It did not, however, strike the king that way, and he, in common with most other sons of Adam, supposing that he knew all about it, marked Brandon as a very possible and troublesome personage. For once in the history of the world a man had hit upon the truth in this obscure matter, although he had no idea how correct he was.

Now, all this brought Brandon into the deep shadow of the royal frown, and, like many another man, he sunk his fortune in the fathomless depths of a woman's heart, and thought himself rich in doing it.

CHAPTER XIV.

With the king admiration stood for affection, a mistake frequently made by people not given to self analysis, and in a day or two a reaction set in toward Brandon which inspired a desire to make some amends for his harsh treatment. This he could not do to any great extent on Buckingham's account; at least, not until the London loan was in his coffers, but the fact that Brandon was going to New Spain so soon and would be out of the way, both of Mary's eyes and Mary's marriage, stimulated that rare flower in Henry's heart, a good resolve, and Brandon was offered his old quarters with me until such time as he should sail for New Spain.

He had never abandoned this plan, and now that matters had taken this turn with Mary and the king his resolution was stronger than ever, in that the scheme held two recommendations and a possibility.

The recommendations were, first, it would take him away from Mary, with whom—when out of the inspiring influence of her buoyant hopefulness—he knew marriage to be utterly impossible; and second, admitting and facing that impossibility, he might find at least partial relief from his heartache in the stirring events and adventures of that far away land of monsters, dragons, savages and gold. The possibility lay in the gold, and a very faintly burning flame of hope held out the still more faintly glimmering chance that fortune, finding him there almost alone, might, for lack of another lover, smile upon him by way of squaring accounts. She might lead him to a cavern of gold, and gold would do anything; even, perhaps, purchase so priceless a treasure as a certain princess of the blood royal. He did not, however, dwell much on this possibility, but kept the delightful hope well neutralized with a constantly present sense of its improbability in order to save the pain of a long fall when disappointment should come.

Brandon at once accepted the king's offer of lodging in the palace, for now that he felt sure of himself in the matter of New Spain and his separation from Mary he longed to see as much as possible of her before the light went out forever, even though it were playing with death itself to do so.

Poor fellow, his suffering was so acute during this period that it affected me like a contagion.

It did not make a mope of him, but came in spasms that almost drove him wild. He would at times pace the room and cry out: "Jesu! Caskoden, what shall I do? She will be the wife of the French king and I shall sit in the wilderness and try every moment to imagine what she is doing and thinking. I shall find the bearing of Paris and look in her direction until my brain melts in my effort to see her, and then I shall wander in the woods, a suffering imbecile, feeding on roots and nuts. Would to God one of us might die. If it were not selfish I should wish I might be the one."

I said nothing in answer to these outbursts, as I had no consolation to offer.

We had two or three of our little meetings of four, dangerous as they were, at which Mary, feeling that each time she saw Brandon might be the last, would sit and look at him with glowing eyes that in turn softened and burned as he spoke. She did not talk much, but devoted all her time and energies to looking with her whole soul. Never before or since was there a girl so much in love. A young girl thoroughly in love is the most beautiful object on earth—beautiful even in ugliness. Imagine, then, what it made of Mary!

Growing partly, perhaps out of his unattainability—for he was as far out of her reach as she out of his—she had long since begun to worship him. She had learned to know him so well, and his valiant defense of her in Billingsgate, together with his noble self-sacrifice in refusing to compromise her in order to save himself, had presented him to her in so noble a light that she had come to love up to him as her superior. Her surrender had been complete, and she found in it a joy far exceeding that of any victory or triumph she could imagine.

I could not, for the life of me, tell what would be the outcome of it all. Mary was one woman in 10,000, so full was she of feminine force and will—a force which we men pretent to despise, but to which in the end we always succumb.

Like most women, the princess was not much given to analysis; and, I think, secretly felt that this matter of so great moment to her would, as everything else always had, eventually turn itself to her desire. She could not see the way, but, to her mind, there could be no doubt about it; fate was her friend: always had been, and surely always would be.

With Brandon it was different; experience as to how the ardently hoped for usually turns out to be the sadly regretted, together with a thorough face-to-face analysis of the situation, showed him the truth, all too clearly, and he longed for the day when he should go, as a sufferer longs for the surgeon's knife that is to relieve him of an aching limb. The hopelessness of the outlook had for the time destroyed nearly all of his combativeness, and had softened his nature almost to apathetic weakness. It would do no good to struggle in a boundless, fathomless sea; so he was ready to sink and was going to New Spain to hope no more.

Mary did not see what was to prevent the separation, but this did not trouble her as much as one would suppose, and she was content to let events take their own way, hoping and believing that in the end it would be hers. Events, however, continued in this wrong course so long and persistently, that at last the truth dawned upon her and she began to doubt; and as time flew on and matters evinced a disposition to grow worse instead of better, she gradually, like the sun-dial in the moonlight, awakened to the fact that there was something wrong; a cog loose somewhere in the complicated machinery of fate—the fate which had always been her tried, trusted and obedient servant.

The trouble began in earnest with the discovery of our meetings in Lady Mary's parlor. There was nothing at all unusual in the fact that small companies of young folk frequently spent their evenings with her, but we knew well enough that the unusual element in our parties was their exceeding smallness. A company of eight or 10 young persons was well enough, although it, of course, created jealousy on the part of those who were left out:

"Carry this to the king: That I will see him and the whole kingdom sunk in hell before I will marry Louis of France."

WE WILL PAY SALARY

to farmer with rig or saddle horse. The publisher of The Washington Farmer wants men to secure and renew subscriptions to this paper in various farming districts throughout the state. We are paying good salaries to those who can do the work and are offering these positions only to farm owners or renters.

We want to hear only from those who will be willing to give our proposition a fair trial for at least a month and who will put in good, hard licks for good pay. For men with these qualifications the opportunity is a splendid one. This work isn't easy; but you can do it and earn a good salary. We give you full instructions and the right kind of help.

You will be able to earn a salary of from $25 to $150 per month or even more, dependent upon the amount of time and effort you can give to the work. Salary check will be sent promptly at the end of each month.

We will not consider an applicant who does not live on a farm and who does not have a rig, saddle horse or automobile. In writing us tell whether married or single, whether you own or rent your place and give the names of two merchants with whom you trade. There isn't any red tape about our proposition, but we must know something about those workers we put on our payroll to receive a monthly salary check.

Give full details in your first letter to The Washington Farmer, Review building, Spokane, Wash.—Adv.

STERLING SILVER ROLLED GOLD

A. J. STILLSON, 8114 Post, Spokane.

but four -two of each sex—made a difference in kind, however much we might insist it was only in degree; and this we soon learned was the king's opinion.

You may be sure there was many a jealous persons about the court ready to carry tales, and that it was impossible long to keep our meetings secret among such a host as then lived in Greenwich palace.

One day the queen summoned Jane and put her to the question. Now Jane thought the truth was made only to be told, a fallacy into which many good people have fallen, to their utter destruction; since the truth, like every other good thing, may be abused.

Well! Jane told it all in a moment, and Catherine was so horrified that she was like to faint. She went with her hair-lifting horror to the king, and poured into his ears a tale of imprudence and debauchery well calculated to start his righteous, virtue-prompted indignation into a threatening flame.

Mary, Jane, Brandon and myself were at once summoned to the presence of both their majesties and soundly reprimanded. Three of us were ordered to leave the court before we could speak a word in self defense, and Jane had enough of her favorite truth for once. Many, however, come to our rescue with her coaxing eloquence and potent, feminine logic, and soon convinced Henry that the queen, who really counted for little with him, had made a mountain out of a very small mole-hill. Thus the royal wrath was appeased to such an extent that the order for expulsion was modified to a command that there be no more quartet gatherings in Lady Mary's parlor. This leniency was more easy for the princess to bring about, by reason of the fact that she had not spoken to her

"She went alone, one afternoon, to see Brandon."

brother since the day she went to see him after Wolsey's visit, and had been so roughly driven off. At first, upon her refusal to speak to him—after the Wolsey visit—Henry was angry on account of what he called her insolence; but as she did not seem to care for that, and as his anger did nothing toward unsealing her lips, he pretended indifference. Still the same stubborn silence was maintained. This soon began to amuse the king, and of late he had been trying to be on friendly terms again with his sister through a series of elephantine antics and bear-like pleasantries, which were the most dismal failures—that is, in the way of bringing about a reconciliation. They were more successful from a comical point of view. So Henry was really glad for something that would loosen the tongue—usually so lively, and for an opportunity to gratify his sister from whom he was demanding such a sacrifice, and for whom he expected to receive no less a price than the help of Louis of France, the most powerful king of Europe, to the imperial crown.

Thus our meetings were broken up, and Brandon knew his dream was over, and that any effort to see the princess would probably result in disaster for them both; for him certainly.

The king upon that same day told Mary of the intercepted letter sent by her to Brandon at Newgate, and accused her of what he was pleased to term an improper feeling for a low-born fellow.

Mary at once sent a full account of the communication in a letter to Brandon, who read it with no small degree of ill comfort as the harbinger of trouble.

"I had better leave here soon, or I may go without my head," he remarked. "When that thought gets to working in the king's brain, he will strike, and I—shall fall."

Letters began to come to our rooms from Mary, at first begging Brandon to come to her, and then upbraiding him because of his coldness and cowardice, and telling him that if he cared for her as she did for him, he would see her, though he had to wade through fire and blood. That was exactly where the trouble lay; it was not fire and blood through which he would have to pass; they were small matters, mere nothings that would really have added zest and interest to the achievement. But the frowning laugh of the tyrant, who could bind him hand and foot, and a vivid remembrance of the Newgate dungeon, with a jangling noose or a hollowed-out block in the near background, were matters that would have taken the advanturous tendency out of even the cracked brain of chivalry itself. Brandon cared only to fight where there was a possible victory or ransom, or a prospect of some sort, at least, of achieving success. Bayard preferred a stone wall, and thought to show his brains by beating them out against it, and in a sense he could do it. * * * What a pity this senseless, stiff-kneed, light-headed chivalry did not beat its brains out several centuries before Bayard put such an absurd price upon himself.

So every phase of the question which his good sense presented told Brandon, whose passion was as ardent though not so impatient as Mary's, that it would be worse than foolhardy to try to see her. He, however, had determined to see her once more before he left, but as it could, in all probability, be only once, he was reserving the meeting until the last, and had written Mary that it was their best and only chance.

This brought to Mary a stinging realization of the fact that Brandon was about to leave her and that she would lose him if something were not done quickly. Now for Mary after a life of gratified whims, to lose the very thing she wanted most of all—that for which she would willingly have given up every other desire her heart had ever coined—was a thought hardly to be endured. She felt that the world would surely collapse. It could not, would not, should not be.

Her vigorous young nerves were too strong to be benumbed by an overwhelming agony, as is sometimes the case with those who are fortunate enough to be weaker, so she had to suffer and endure. Life itself, yes, life a thousand times, was slipping away from her. She must be doing something or she would perish. Poor Mary! How a grand soul like hers, full of faults and weakness, can suffer. What an infinite disproportion between her susceptibility to pain and her power to combat it. She had the maximum capacity for one and the minimum strength for the other. No wonder it drove her almost mad—that excruciating pang of love.

She could not endure inaction, so she did the worst thing possible. She went alone one afternoon, just before dusk, to see Brandon at our rooms. I was not there when she first went in, but, having seen her on the way, suspected something and followed, arriving two or three minutes after her. I knew it was best that I should be present, and was sure Brandon would wish it. When I entered they were holding each other's hands, in silence. They had not yet found their tongues, so full and crowded were their hearts. It was pathetic to see them, especially the girl, who had not Brandon's hopelessness to deaden the pain by partial resignation.

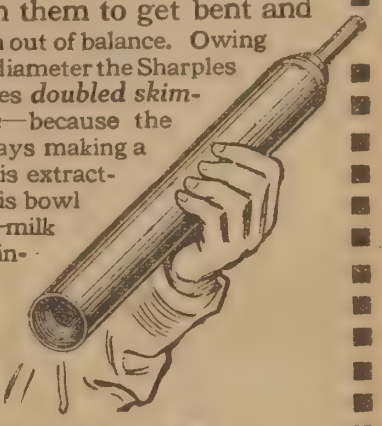
Upon my entrance he dropped his hands and turned quickly toward me with a frightened look, but was reassured upon seeing who it was. Brandon mechanically walked away from her and seated himself on a stool. Mary, as mechanically, moved to his side and placed her hand on his shoulder. Turning her face toward me, she said: "Sir Edwin, I know you will forgive me when I tell you that we have a great deal to say and wish to be alone."

I was about to go when Brandon stopped me.

"No, no; Caskoden, please stay; it would not do. It would be bad enough, God knows, if the princess should be found here with both of us; but, with me alone, I should be dead before morning. There is danger enough as it is, for they will watch us."

Mary knew he was right, but she could not resist a vicious little glance toward me, who was in no way to blame.

(To be continued in the next issue.)



Chair Gymnasium.

Almost a whole gymnasium is contained in a new chair in which a seated person, by pulling straps over his shoulders, manipulates levers and weights that exercise most of the muscles.

Just *One* Piece in it!

The Sharples Bowl is easy to clean and hard to hurt. It has ***no discs!*** It's a plain strong tube—simply run a brush through it, and it's clean. Sharples bowls in use 12 or 15 years are still in perfect balance—for there is nothing in them to get bent and throw them out of balance. Owing to its small diameter the Sharples Bowl creates *doubled skimming force*—because the milk is always making a sharp turn; thus the cream is extracted more thoroughly. This bowl is also remarkably long—milk travels further while the intense skimming force is working on it. But its greatest feature is that it will skim clean regardless of how fast or slow you turn it.

SHARPLES
SUCTION-FEED CREAM SEPARATOR

is the ***only*** separator that:

—skims clean at widely-varying speeds
—gives the same thickness cream regardless of speed changes
—skims your milk quicker when you turn faster
—has only ***one*** piece in the bowl—no discs, easy to clean
—has knee-low supply tank and once-a-month oiling

Sharples *varies the feed in direct proportion to the separating force,* and thus insures clean skimming at *all* speeds—needs no watching. It's *positive* protection against cream loss. All fixed-feed separators lose considerable cream *when turned below speed*—and 19 out of 20 people do turn too slow. A Sharples will average 5% more cream than any other separator just for this reason.

Build Up the Quality of Your Poultry

Cash returns from your poultry are in direct proportion to the capacity your fowls have for heavy egg production.

Dispose of the "boarders" in your flock and secure new stock from the advertisers in the poultry columns on our "Want Ad" page.

High and Noble Qualities

Each Little Trait Is a Stone in Wall of Character

To the dear girls of the Family Circle —Did you read the story of the lonesome little girl who, evening after evening, went away into the woods, to hunt the cows? I am certain there are girls, among the readers of the Family Circle who have cows or pigs or sheep to drive, and I imagine they do it, as I used to do, because I was told to drive them. No doubt they think it hard and wonder why they have such tasks to perform when some other girls never seem to have hardships.

Young people are not likely to consider much of anything about their work except the hardships. I am sure I never thought of much else in connection with my early tasks, but looking back upon those years I see how the performance of those tasks had a strong influence for good upon my life.

If some little word that I may write should help some other girl I will feel I have not written in vain. I believe it would not have been beyond my understanding had some one taken the trouble to point out to me how the task of bringing up the cows was a factor in laying the foundation to character building.

You have all seen a mason lay a stone wall and you know how he places one stone upon another till the wall is finished. Each stone has its place and each one is necessary. So it is with character building. Let us think of each trait cultivated as a stone in the character wall.

Everything in the world has to have a beginning, and a fine, strong character has to start from the beginning and be built up.

The dictionary tells us that character means the qualities which distinguish a person especially high and noble qualities. So characters are made like a stone wall, by developing one good trait after another.

Let us see now, girls, what hunting cows has to do with character building.

First, the little girl was told by her father to go and hunt the cows. She was not told to go till she got tired, not told to go if she wanted to do so, but to go, listen for the bell, then hunt till she found the cows. She was to keep hunting, though the way was hard. This was a lesson in obedience. She knew her father was depending upon her to bring up the cows that they could be milked, and the milk converted into butter for the family's use and to sell to customers who were depending on her father to bring them their weekly supply.

It was an important business, the bringing up the cows, and she learned responsibility. She knew her father depended upon her and she learned to be trustworthy. You will remember the cows were scattered about and had often to be searched for, long and hard, through trees and brush and the little girl learned perseverence.

Her father instructed her to drive the cows home slowly and quietly as it was injurious to them to be hurried. She often wanted to get home more quickly than the old cows would walk, but having already learned obedience she added the trait of patience to her list. You will remember there was a cold, swift stream to cross, so deep it made her afraid. She would have liked some one to give her a strong hand to cling to, but she was alone and the cows on the opposite side, so she learned self dependence and though she was afraid she crossed anyway, learning to be brave.

Do you see how our character wall is growing? Let us sum up the traits or stones in our wall. First and most important, is obedience. The longer I live and the more I observe the lives of young people the stronger I grow in the belief that obedience should be the first law in the home. Obedience to the commands of parents or older people who have authority over young people is like the rudder to a boat. Without such guidance young lives will surely drift out of the safe and true course.

Next we have responsibility, then trustworthliness, perseverence, self reliance, patience, courage. These seven traits of character when practiced for years make a well balanced and rounded out character.

Of course, with such a very small girl the stones in her character wall were not very big, but as we said before there must always be a beginning. We are always growing better or worse. We never remain the same. Let us remember this, dear girls. The process of character building lasts as long as life. We build up or tear down day by day. Let us be very careful to build up.

"Heaven is not reached at a single bound,
But we build the ladder by which we rise
From the lowly earth to the vaulted skies.
Step by step and round by round."

—A. W. B.

Every Morning

Offers Chance for New Beginning

What is the quotation or what are the words which have helped you in the journey of life?

Send it to the editor of The Farmer and let it help another.

To the Editor: I am sending a quotation which I think has much consolation in it, hoping it may help some one who is discouraged: "Every day is a new beginning; every morn is the world made new. You who are tired of sorrow and sighing, this is a beautiful thought for you." DORRIS FITCH.
Walla Walla, Wash.

Annual Waste of Cattle Food.

The annual waste in the United States of foods available for cattle has been estimated at $100,000,000 by department of agriculture experts.

Home-Made Clothes

Cooperative Plan in Dressmaking

By MARIELLA LADD.

It has always puzzled me why home-made pies and cakes are credited with superior excellence and "home-made" clothes looked upon, especially by the young folks, as something to be delivered from. Perhaps some information I have collected on the subject may interest readers of The Farmer.

Out of 20 friends who gave me their experiences only two had sewing rooms. Ten acknowledged that ready-to-wear clothes were very much more costly in the end, but did not feel that they had time to do more than the very plainest sewing at home.

Five had successfully tried a cooperative method. Near neighbors planned to do their spring and fall sewing at the same time and hired a dressmaker from the city to help with the work. Eoch neighbor shared expenses according to the work that had to be done, and the one who gave up room to the dressmaker and boarded her was compensated according to a fixed rate. This plan had been tried for two years only, but so far there had been no hitch.

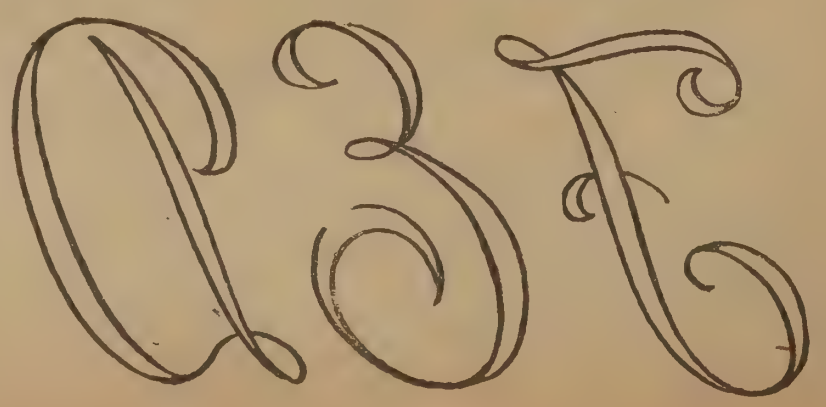
All 20 were capable needlewomen and 15 of them had sewing machines. Their difficulties arose not from lack of ability, but from sheer lack of time and conveniences. Only four had mirrors big enough to show the hang of a skirt. Ten had been using the same patterns for years. This alone accounted for much unpopularity, for little changes in dress are as essential as little changes of diet, and fashions, while they need not be slavishly followed, are just as helpful in their way as the changing seasons.

The most general need was a cutting-out table. Of course, there is always the floor, but a cutting-out table is much better than the floor and need not cost much. It should be from 34 to 38 inches high, according to its owner's height, at least three feet wide and six feet long. In it should be drawers, if possible, for assorted pieces of materials and patterns. On such a table a garment can be laid out and cut to advantage. It can be stood against a wall and covered when not in use.

With a cutting-out table, a mirror and an up-to-date pattern garments made at home by skilful fingers can not be detected from those made by an expensive modiste, so that my researches have gone to prove the distinctions between different classes of home-made products to be an absolutely fictitious one founded on supposed limitations that can be banished by patience and a get-together spirit.

Makes Many Matches.

Sweden recently exported 10,000,000,000 matches to the United States.



Script Initials for Embroidery

By WINNIFRED WORTH.

To transfer this design, put some soap in a pint of hot water, stir and remove excess moisture by partially drying design. Place material on a hard, flat surface and lay the design, face down, upon the material. Cover with two folds of newspaper and, with a tablespoon, rub, pressing hard, until the design is entirely transferred.

In all alphabets which I have given, and they are so useful, I have kept in mind the importance of simplicity. There are no letters as a decoration which stand out in lovelier relief than those of simple design.

It's wiser being good than bad;
It's safer being meek than fierce;
It's fitter being sane than mad.
My own hope is, a sun will pierce
The thickest cloud earth ever stretched;
That after Last returns the First,
Though a wide compass round be fetched;
That what began best can't end worst,
Nor what God blessed once prove accurst.

—Browning

A WAR-TIME EASTER

Privations of the Colonial Days.

By EVA MAY.

How many people would go to church Easter Sunday if the minister announced the week before that the building would not be comfortably heated? In the colonial days and the days of the revolutionary war the churches were not heated, but the congregation did not mind the cold. One devout member wrote:

"Though it was so cold, yet John Tuckerman was baptised. At 6 o'clock my ink freezes so that I can hardly write by a good fire in my wife's chamber. Yet was very comfortable at meeting."

Many privations were endured by the patriotic people of 1776. Prices steadily mounted higher and higher and some products could not be obtained. On Easter morning of that year the most fashionable ladies of Boston and other cities went to church minus their pins, because the war had cut off the supply from Europe. The ladies used thorns and the spines of cacti instead—serviceable but not beautiful substitutes.

The fashions of that time prescribed the extensive use of gauze materials for dress; there were gauze gowns, gauze petticoats, gauze bonnets, gauze caps, gauze ribbons, gauze kerchiefs and gauze aprons. This material was also used to make the peculiar high head dresses of that period. No new gauze could be obtained for the Easter bonnet of 1776.

Some of the ladies of 1776 wore queer beauty masks of silk when they appeared upon the streets. If a lady rode on horseback, she would wear a "riding mask," fitted with a silver plate to be grasped between the teeth and thus securely held in position.

Frock of Taffeta.

The sketch shows the way in which the French adjust the apron on a new, smart frock of blue taffeta. The gown has a narrow skirt and carries out the oval silhouette demanded for the spring. The bodice and apron are of blue and tan polka dot foulard, and at the waist line in front is a huge buckle made of colored beads. The apron is made on traditional lines. The American woman does not need a pattern for it any more than she needs a recipe for pie. It is not tied at the waist line, but gives the appearance of having slipped down in a disorderly manner by holding on to the hips.

The woman who has a plain, dark gown that needs a new touch might do well to take up with due consideration the subject of the ornamental apron.—New York Evening Sun.

Improve Polish.

If milk is used to soften shoe polish it will improve the gloss.

Patterns

1990—Ladies' apron and sleeve protector. Cut in four sizes: 34, 38, 42 and 46 inches bust measure. Size 38 requires 5 yards of 36-inch material for the apron, and 3-8 yard for the sleeve protector. Price 10 cents.

1670—Costume for misses and small women. Cut in three sizes: 16, 18 and

20 years. It requires 5 1-2 yards of 36-inch material for an 18-year size. The skirt measures about 3 yards at the lower edge. Price 10 cents.

1983—Girls' dress. Cut in four sizes: 8, 10, 12 and 14 years. It requires 4 yards of 44-inch material for a 12-year size. Price 10 cents.

1986—Girls' guimpe dress. Cut in four sizes: 4, 6, 8 and 10 years. It requires 1 1-2 yards of 27-inch material for an 8-year size, for the guimpe, and 3 1-4 yards for the dress. Price 10 cents.

2000—Ladies' dress, with body lining. Cut in six sizes: 32, 34, 36, 38, 40 and 42 inches bust measure. It requires 6 yards of 44-inch material for a 36-inch size. The skirt measures about 2 2-3 yards at the foot. Price 10 cents.

1984—Ladies' house dress. Cut in six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 6 3-4 yards of 36-inch material for a 36-inch size. The dress measures about 2 3-4 yards at its lower edge. Price 10 cents.

Windows

Quick and Easy Way to Clean

What is the most helpful thing you have learned during the last year in your experience with housekeeping? Let us pass it along to other housekeepers.

To the Editor: A quick and easy way to clean windows is to take whiting (plaster Paris) and water. Mix to a thin cream, enough to paint the windows; add a spoonful of kerosene. Rub on the windows to loosen the dirt; let dry, then rub off with a dry cloth. There will be no lint or cloudy streaks and the kerosene makes the glass shine.

The individual subscription contest is becoming a real race. A little over two weeks ago Loyal Snyder was well in the lead and going fine. Then Miss Dorothy Rauch sailed in and won first honors, which she still holds. And now comes Miss Bessie Webb to put Loyal back to third place. So it goes—each week bringing a change—and holding out promise of still more surprises.

If Miss Eva Bond were to do as well, let us say, as did Bessie Webb, who scored four subscriptions in one week, Eva would then be in fifth place, whereas she is now in eighth. And if Mildred Glasgow were to round up five subscriptions she would tie Bessie Webb for second place—and so on.

Just as we said last week, it isn't possible to even guess who will win, because it is plain to see that every boy and girl in the race is right after the gold prize; and the odds are not so greatly in favor of those now in the lead as to make them seem sure of winning if some of the lower ones take on a sudden burst of speed and continue it for the next two or three weeks.

The list of contestants now stands as follows:

	Subscriptions.
Dorothy Rauch	16
Bessie Webb	14
Loyal Snyder	12
Mildred Glasgow	9
Dorothy La Rue	6
Lester Ruark	6
Violet Leachman	5
Eva Bond	3

Four new schools joined the ranks of the library workers this week. Garden City school, Grays Harbor county, brings 15 live boys and girls into the circle. They will work under the direction of W. R. Stiles, teacher. Richland school, Benton county, Miss Myrtle A. Penn, teacher; Kiona-Benton City school, Benton county, A. A. Baker, teacher, and Buena Vista school, Benton county, E. M. Craig, teacher, have 50, 55 and 30 workers, respectively.

Miss Lillian Brown of New Century school, Garfield county, writes us: "Your books were received last week and were in excellent condition. We all like them very much and feel well rewarded for our work."

There are still six books to go to New Century school, which, with those already sent, will make a library that any school can feel proud of having earned by a little spare-time effort.

Girls and boys and school entitled to a place on this week's honor roll:

Ford school—Bessie Webb.

Bicklcton school—Esverald Van Nostern, Irene Larsen, Elizabeth Nelson, Luella Faulkner.

Denison school—Donald T. Page, Hillman Buchser.

Sunset school—Boyd Hubbard, Harold Herron, Joe Mills, Dora Henning.

$ SAVED IN HOME CANNING $ ON THE FARM

What are you going to do this year to overcome the waste of fruit and vegetables due to crowded markets? Will you ship **all** this perishable material, regardless of market conditions, paying big commissions, high freight, and stand losses from decay and an overcrowded market—**or will you**—like the big manufacturer, convert this into a finished product and **MAKE A PROFIT?**

Answering These Questions

We say that facilities to produce **"Home Canned Foodstuffs"** are as necessary to such producers as is a cream separator to a dairy farmer.

That's the secret of success today for the Farm Woman, Fruit Grower and Market Gardener. With Sanitary Home Canning Outfits and cans from the Seattle Can company, the Home Canner will put up better goods as to quality and flavor than are now offered by the big canneries, and what the family can not use at home may be sold on the market. This solves the problem of "Waste versus Profit."

High Cost of Living

Sixty per cent of our population live in cities. They consume, but do not produce. The City Consumer wishes "the best." "Home-made goods" are always preferable. **The best** canned goods are Home Canned goods.

The best way to can goods at home is **"The Steam Pressure Way."** With our Sanitary Home Canning outfits for tin and glass jars, to handle pints, quarts, half-gallons and gallon cans, for use on any stove or with Fire Box attached for wood or coal, a steam pressure outfit may be had at **prices ranging from $16.50 upward.**

Use Coupon at Once

And get the folder and literature on this **new science** in the art of Home Canning.

Plans (with prices on cans and apparatus) for community work and packing plants of larger size, cheerfully furnished on request.

Farm Hands Wanted

Western Canada Farmers Require 50,000 American Farm Laborers AT ONCE!

Urgent demand sent out for farm help by the Government of Canada. Good wages. Steady employment. Low railway fares. Pleasant surroundings. Comfortable homes. No Compulsory Military Service. Farm hands from the United States are absolutely guaranteed against Conscription. This advertisement is to secure farm help to replace Canadian farmers who have enlisted for the war.

A splendid opportunity for the young man to investigate Western Canada's agricultural offerings, and to do so at no expense. Only those accustomed to farming need apply.

For particulars as to railway rates and districts where labor is required, or other information regarding Western Canada, apply to

J. N. GRIEVE, Cor. First and Post Sts., Spokane, Wash.

Prize Poultry

For Thrifty

Boys and Girls

Our poultry club provides a way for ambitious boys and girls to get a start. It gives them manly and womanly jobs, a feeling of ownership, an opportunity to do things. We furnish the hatching eggs from prize pens.

Send one order for a new or renewal subscription to The Washington Farmer at the special three-year rate of $1.50, and we will send your boy or girl a certificate of membership and all details concerning the club.

Give name of child when writing, and act without delay. We desire to hear from parents.

Do You Need Live Stock?

Our BREEDERS' DEPARTMENT offers many splendid opportunities to purchase registered and, in some cases, grade stock of merit. Before you buy look these offers over.

STREAM WAS LONESOME SO IT WENT TO JOIN THE SEA

Dear Aunt Nellie: As I was walking home from school tonight I came to a little stream. I followed it for a ways and came to some falls. When it fell over the bank it made a very pretty noise. It seemed to say to me, "Don't you think I am pretty?" I went on a little farther and came to where it curved around three rocks. Pretty soon I came to where another stream came into it. It said to the other stream, "May I come into your stream and help make you larger?" "Yes, yes, come right in." It was a large stream now. I went a long ways and it went over a bank again. Another stream came in. Now this stream was big. When it went over the bank it didn't go all in one place, but separated and made about a hundred little streams. Along its banks were green grass. As it fell over the bank it said to me, "I am going to the sea, I am not going to be alone all my life. Pretty soon I will be all dried up."—Mary France, St. John, Wash.

FISH TRAPS HALF A MILE LONG ARE IN THE BAY

Dear Aunt Nellie: I live on Orcas island, the largest island in the San Juan group. I will be 14 years old on May 19. I go about a mile and a half to the Crow Valley school. Our teacher is Miss Olga Hagen. She is a good teacher. I have two brothers. We live about a half a mile from the beach. We have lots of fun in the summer. There is usually a fish trap in the bay. We have a Sunday school in our neighborhood. To get back to fish traps, they are usually a half or three-quarters of a mile long. There are many fish around the island, among them are the lin cod, rock cod, spring, sockeye and humpback salmon. I go over to Friday Harbor sometimes to visit my aunt. I wish Adolph Olsón of Langley, Wash., would write to me.—Chester Kinnear, East Sound, Wash.

SHEP, WHITE PADDY, NAN AND BOB ARE HER PETS

Dear Aunt Nellie: I am 11 years old and in the fifth grade. I have two pets, one dog and one cat. I also have two canary birds. I call my dog Shep and my cat White Paddy. I call my canary birds Nun and Bob. I have three sisters and three brothers. My sister's names are Georgia, Artie and Nellie. My brothers' names are Basil, Eugene and Russell. My brother Basil is going to college at Pullman. We live on an 80-acre farm about eight miles from Dayton. I am now going to tell you about my school. It is one mile to school and I walk. There are nine pupils in one room. My teacher's name is Miss Gladys Tucker. We have one cow, four horses and one calf.—Elsie Austin, R. F. D. 1, Box 39, Dayton, Wash.

NICE, COLD SPRINGS ON THE CARVEY FARM

Dear Aunt Nellie: I live on a farm. We have 14 acres. Papa raises a lot of wheat every year. I have one brother and one sister. My brother's name is Jack, and my sister's name is Edith. We have a lot of horses and cattle and a lot of chickens. I have a pony named Tony. I ride two and one-half miles to school. Our school house is a large brick building. We have 12 grades in our school. I am in the second grade. This is a nice place in summer. We have nice, cold springs on our place. We milk about 10 cows in the summer. We are only milking three now. We have three cats, their names are Bill, Will and Silverheels.—Hazel Carny, Tonasket, Wash.

THIS IS GEORGIA'S FIRST LETTER TO THE CORNER

Dear Aunt Nellie: This is the first time I have ever written to the Children's Corner. I am 12 years old. I am in the fourth grade. My birthday is December 6. My teacher is Mrs. Sholl. I like her fine. I have no brothers or sisters. I live on a farm of 640 acres. I have a pony and saddle and bridle. My pony's name is Star and my sheep's name is Billie. We have two little pups. We are milking six cows. We have 17 head of cattle all together and 14 head of horses. We live seven miles from town. I have half a mile to go to school.—Georgia Buck, Box 111, Coulee City, Wash.

WORE AUNTIE'S STOCKINGS UNTIL HERS WERE DRIED

Dear Aunt Nellie: I am going to tell you about the worst day I have had. One time I was going to my aunt's on a very rainy day. My feet were so wet that they felt as if I was walking in a ditch. When I got there they were not home. So I ran a half a mile farther because their dog was after me. Then I found out that those people were not home either. So I was on my way home when I met them on the way. Then I went back with them and wore my aunt's stockings until mine were dry. That was the worst day I ever had.—Stella Sturrmans, R. F. D. 1, Lyaden, Wash.

HAD A BASKET SOCIAL ON WASHINGTON'S BIRTHDAY

Dear Aunt Nellie: This is the first time I've written to the Children's Corner. I am 10 years old. My birthday is on October 20. I have a little brother 1 year and 9 months old. His name is Silas Simon Parmeter. My father owns a store. We have one cow and two pigs and a Ford truck. I go after my cow every night in summer. Our schoolhouse is right across the road. I am in the fifth grade. My teacher's name is Miss Bernard. We had a program and basket social on Washington's birthday.—Edith Annetta Farmeter, R. F. D. No. 1, Reardan, Wash.

ARETA HAS PROMISED TO VISIT THE CORNER AGAIN

Dear Aunt Nellie: I am nine years old. My birthday is September 13. I am in the third grade at school. I walk three-quarters of a mile to school. My daddy has four head of cattle. I have one cow and her name is Brownie. We have two horses, about 50 rabbits. We have a Ford. My daddy runs a store and is postmaster at Alpha. I have one brother and his name is Roy. I have a sore arm and had it operated on not long ago. It has been sore for about four years. I help my mother. I like to read the letters in the Corner very much. I will come again.—Areta McAmary, Alpha, Wash.

OLIVER HAS NO BROTHERS OR SISTERS TO PLAY WITH

Dear Aunt Nellie: I enjoy reading the letters of the other children. I thought they would enjoy reading a letter of mine. I am 6 years old. I am going to school. I am in the second grade. My teacher's name is Miss Nellie Holmes. I like her real well. I live on a ranch three miles from Withrow. We have seven horses, three colts, one cow, one calf, one pig, 70 chickens, one dog and one cat. The dog's name is Sport. I have no brother or sister. I have lots of toys to play with.—Oliver Schilling, Withrow, Wash.

CHINESE LEARNED TO MAKE PAPER WATCHING THE WASP

Dear Aunt Nellie: I am a girl 12 years old. My birthday is October 2. My subject is "Paper." Paper is very useful. We see paper every day. The wasps were the first paper makers. The Chinese learned to make paper by watching the wasp. Paper is made out of rags, rice, flax and many other things. Paper is used to paper the insides of houses, to put on the roof, to use to make toys and for all the books we have. I live on a nine-acre orchard tract. I have a pet cat named Jimmy James. I am in the sixth grade. We take sewing to school.—Minerva Kenedy, Opportunity, Wash.

NICHOLAS GOES TO THE PINE SPRING SCHOOLHOUSE

Dear Aunt Nellie: There are 640 acres on our farm. My papa has 13 cows, four horses, eight calves and about 150 chickens, and I own a calf and two chickens. I go to school at Pine Spring schoolhouse. I am 11 years old and in the fifth grade. I have two brothers and one sister. Their names are Melford, Lloyd and Nita. We live four miles from Tyler. I walk a mile to school.—Nihcolas Nelson, Tyler, Wash.

COUSIN GRACE RIDES HER PONY, TOPSY, TO SCHOOL

Dear Aunt Nellie: I have been reading the childrens' corner every week and like it very much so I thought I would write. I am 11 years old. My birthday is the 8th of May. I am in the fifth grade, I go to the Bell school. My teacher's name is Ruth Keenholtz. I like her very much. I have two brothers younger than myself. The oldest brother and I ride Topsy, our pony, to school. We live on the farm and I like it better than in town because we can have more fun. I can crochet, tat and embroider.—Grace Clark, Tekoa, Wash.

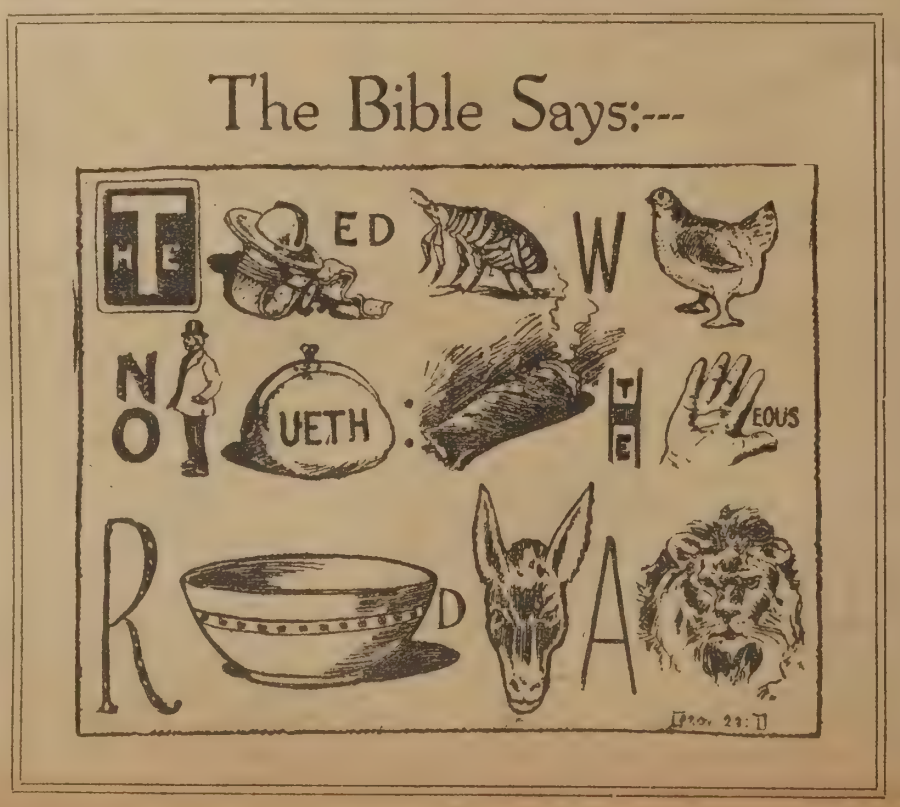
BEST FRIEND HAS BLUE EYES AND GOLDEN HAIR

Dear Aunt Nellie: I am going to write to you now and tell you about my best friend. I have never written before. My best friend is Helen Christianson. She has blue eyes and golden hair. She was born on the 7th day of July, 1904, and I was born on the 31st day of July, 1904. So you see we are pretty near twins. We play in the woods together in spring when I have time and when she has time. We pick berries together also. We are both in the same grade at school.—Gertrude Nelson, box 141, Puyallup, Wash.

HAZEL'S CHUM IS AS SWEET AS SHE CAN BE

Dear Aunt Nellie: This is the first time that I have written to the Children's Corner. My papa takes the Washington Farmer. I like to read the letters from other girls and boys. I am 9 years old. My birthday is June 18. Mary Dunn is my best chum, she has dark curly hair, blue eyes and is small for her age. She is 10 years old. She is as sweet as she can be, good natured and always full of fun. We are in the same class at school.—Hazel Marion Hillerud, Lawrence, Wash.

STAY IN TOWN WINTERS SO VESTA CAN GO TO SCHOOL



Dear Aunt Nellie: I am 10 years old and I am the oldest one in the family too. I have two sisters and one brother. My oldest sister is eight years old and her name is Ethel. My youngest sistr's name is Myrtle and she is three years old. My brother is six years old and his name is Orville. I go to school. My teacher's name is Miss Shutes. I like her. My best friend's name is Myrtle Dimmitt. She is in the other room. We stay in town in the winter time so my sister and I can get to school. In summer we live in the country.—Vesta Short, Molson, Wash.

PETER LIVES ON A FARM AND WORKS REAL HARD

Dear Aunt Nellie. My father is dead. He died about eight years ago. He got killed at a lime quarry, where he was working. I have a sister in Edmonton, Alberta. She would never forget me. She always would send me a present for my birthday and Christmas, Easter and Fourth of July. I love my mother very much. I live on a farm and have to work hard. I am 9 years old and in the fourth grade. There are 11 children in our school. My teacher's name is Mrs. Ella U. Hanna.—Peter Flanik, Northport, Wash.

JOHN READS BETTER THAN ANY ONE IN HIS CLASS

Dear Aunt Nellie: This is the first time I have written to the Corner and I want to know if I have a twin? I was 6 years old April 27. We have a little pony named Fly. She is quite pretty. If I have a twin I wish she would write to me. I walk one and a half miles to school. I can read the best of all in my class. My teacher's name is Mrs. Hanson. I like her very much.—John Francis Hayden, box 25, Mold, Wash.

MADE A DANDY SNOWMAN; DORA PUT HER CAP ON HIM

Dear Aunt Nellie: I thought I would write to you and tell you about our snowman. One Sunday my friend came over and the snow came pouring down, so we thought we would enjoy ourselves my making a snowman. When we had it done by brother Arthur and cousin James came to see it. They laughed at it and began to throw at it but we told them not to. They asked me if I would put my cap on, and I said yes. Then Arthur ran in and got papa's pipe and stuck it through the teeth. When it was finished we called mama out to see it. It had eyes made out of black rocks and teeth and ears made out of snow. The next morning when we woke up we ran to see it, but its head was blown off.—Dora Dunaway, Glenoma, Wash.

WOULD GLADLY ANSWER LETTERS FROM COUSINS

Dear Aunt Nellie: I have never written to the Children's Corner before and I want to join. I am 14 years old. My birthday is June 9. There are 18 children in our school. I am in the eighth grade. I walk about two miles to school. We have a horse named Dick and two milch cows. We have 37 chickens and they are starting to lay nicely. I love to read the Children's Corner. If any of the cousins will write to me I will glady answer them.—Exenia Matson, R. R. No. 1, Box 15, Shelton, Wash.

THERE ARE TWO OTHERS IN LESTER'S GRADE AT SCHOOL

Dear Aunt Nellie: I have been having a good time. I have a sorrel horse with a white face. I ride it to school. I am 8 years old. I am in the fourth grade. I have two others in my grade. My teacher's name is Mrs. M. K. Hanson. We have 21 scholars in this school. This school's name is Rocky Point. I have two sisters and one brother. Their names are Nellie, Ora, John, and my name is Lester. Ora and John have written to you before.—Lester Hayden, Mold, Wash.

HAD TO STAY SHUT UP IN ONE ROOM TO KEEP WARM

Dear Aunt Nellie: My suject is "My Worst Day." One day last winter it was very cold and stormy. We could not go to school. We had to stay shut up in our front room to keep warm. We had two hired men. They stayed in the house all day. There was a room full of us. The older ones were trying to read and talk. We children had to keep quiet, which was very hard for us. I was glad when the day was over.—Katherine Bowen, Oroville, Wash.

HAROLD CLAIMS FLOSIE, THE PONY, AS HIS OWN

Dear Aunt Nellie: I live on a farm of 700 acres. I have four sisters and four brothers. We have 26 head of horses and 12 head of mules. We have a little pony that I call mine, her name is Flossie. We have 12 head of cattle and four little calves. I like to live on the farm better than in town. I go to school. I am in the sixth grade. I was 12 years old the 15th of September. My teacher's name is Georgia Saxon.—Harold Muman, R. F. D. 1, Box 7, Penawawa, Wash

PLAY GAMES AND HAVE A GOOD TIME AT SCHOOL

Dear Aunt Nellie: I love to read the Corner. I am 10 years old. I am in the fourth grade. My teacher's name is Miss McDougall. There are 39 children in the room. There are 109 in the school. We have four rooms in the schoolhouse. We play games and have good times at school. I live in the country. I have five brothers and one sister.—Lillian Birkesto, East Stanwood, Wash.

WHEN LEO CALLS, BO-PEEP COMES RUNNING

Dear Aunt Nellie: I live on a farm of 80 acres and also have 80 acres all of my own. eW have about 20 acres under cultivation. For pets we have a lamb whose name is Bo-Peep, when we call him he comes running. We have about 800 head of sheep. We will shear them in about two weeks. My two brothers and I each have a pony of our own. Their names are Dickey, Lightfoot and Susie.—Leo Ohms, White Swan, Wash.

THIS COUSIN LIVES ON A FARM NEAR CHEHALIS

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. We take the Farmer. I am 7 years old. My teacher's name is Miss Newby. I go to the Union school. I have one kitten. Its name is Goldie. I live on a 100-acre farm.—Maudie Yates, Chehalis, Wash.

The Washington Farmer is glad to announce the receipt of letters for the Children's Corner from the following during the last week: Margaret Collaer, Grace Wills, Alice Clinesmith, Laverne Nunn, Florence Stephens, Esther Bergman, Kathryn Chamberlin, Frances McManamon, Gertrude Par, Marharette Dye, William Harmanes, Pearl Sarff, Laura Hatley, Tillie Helde, Maud Winston, Avah Fox, Hazel Slinkard, Necia Hire, Inez Lockwood, Calla Foster, Ida Shaw, Deo Weir, Myrtle Faye, John Shaw, Ruby Cantrell, Edna Smith, Mary Wilkins, Rena Craig, Grace E. Balsley, Clara Barton, Maud Burns, Oscar Berg

Styleplus Clothes $17

TRADE MARK REGISTERED

"The same price the nation over."
(*Price in Cuba $23*)

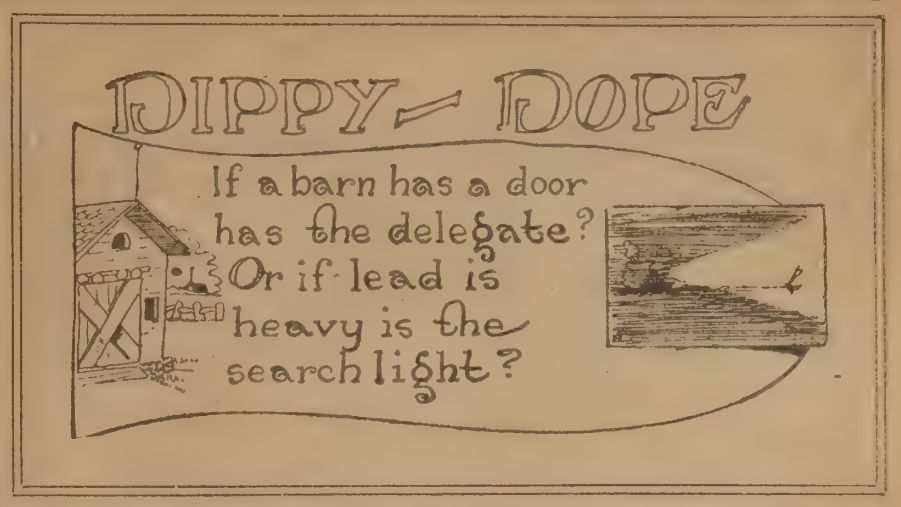
YOUR FLAG!

This is the time for every American to hoist "OLD GLORY" to the breeze!

Realizing that in this time of national stress and strain the patriotic readers of The Washington Farmer will want to show their colors, we have arranged to offer large sized, fast color American flags in connection with subscription orders. Size of flags 3x5 feet, full 48 stars. Supply is limited. Flags will go to the first who ask for them.

The flag will be sent with new or renewal subscription to The Washington Farmer for 3 years, both for only $2, which is the regular 3-year subscription rate of this paper. If you are paid ahead your subscription will be extended three years.

In ordering kindly use this coupon.



The Washington Farmer, Room 37 Review Bldg., Spokane.

Enclosed find $2 (your personal check, stamps or money order), for which send me American flag as advertised and **The Washington Farmer** for 3 years.

Address .....

Union Arithmetic.

Among the examples given out by the teacher was one pertaining to "men working 10 hours a day to complete a certain contract."

The following morning, in looking over the little pile of exercises, the teacher found young Frank's sum wholly unattempted. Upon asking for an explanation the boy, after considerable fumbling in his pocket, brought forth a note from his father and handed it to her. It read:

"Miss Wheeler—I wouldn't allow my boy to do this sum you give him as it looks to me like a slur at 8-hour sistum enny sum not more than 8 hours he is welcum to do but not more."—Country Gentleman.

America Farming?

Comparisons Seem to Indicate No

(Continued from page five.)

roots, carrots, beets, mangels, turnips, rutabagas or potatoes because of the thorough cultivation which must be given them may help a little in solving that problem. The objection raised does not apply to the farmers of the irrigated sections. To a certain extent, they have already learned the value of root crops. It does not take a great deal of urging to induce them to grow the sugar beet providing a satisfactory market in the shape of a sugar factory is at hand. If that system of marketing is denied them, they immediately utilize larger quantities in their feeding operations.

"On cut and burned over lands farmers are gradually learning to recognize their soil's one deficiency, its lack of organic matter. With the growing and feeding of clover, field peas and root crops and the proper utilizing of the resulting quantities of barnyard manure, the bringing of these lands into a high state of fertility is readily accomplished. Even in the Palouse country of eastern Washington, there are a few of us who have recognized the feeding value of the different root crops. Our university stock—beef cattle, dairy cattle, sheep, hogs and even horses—are given a liberal allowance of roots in their daily rations for several months of the year and with results that are surprisingly satisfactory from the standpoint of gain in flesh and general appearance. We feed at the present time from 60 to 70 tons per year and could feed 100 tons very readily if we had better storage facilities for the roots.

"In conclusion:

"First—We can afford to learn from the experience of European farmers whose greater yields of small grains in bushels per acre are attributed in no small degree to the prominence given the root crops in their rotations. Second—Our sage brush soils and the soils of our cut and burned-over areas are low in their content of organic matter and the nitrogen which organic matter carries. Successful systems of farming on both these types of land depend upon the introduction and growing of those crops which add materially to the soil's stock of organic matter. These crops are usually the clovers and alfalfa. It is believed that the root crops, to a certain extent, at least, in both north and south Idaho can be grown to advantage in rotation with alfalfa, the clovers and the small grains. Third—Root crops should be more widely used than they are at the present time in the feeding of all classes of live stock."

A Demonstration.

"Visitors, I suppose, bother you a good deal, sir?" said a reporter to a famous statesman.

"I have no fewer than 60 visitors a day," the statesman replied. "Of these 60, 30 on an average I must see."

"How do you get rid of them quick enough? How, without offending them, do you show them that it is time to go?" inquired the reporter.

"My secretary," said the statesman, "comes to me when the time limit has expired and tells me very audibly that my wife wishes to see me."

'Ha, ha, ha," laughed the reporter. "I suppose now—"

But just then the secretary entered and said:

"Your wife, sir, wishes to see you."—Chicago News.

Price $3000. Don't talk trade to me. Write for pictures and particulars of Corning. Refer to No. 7. W. N. WOODSON, Owner, CORNING, CAL.

Grain and Produce Markets

Chicago Grain.

CHICAGO, March 24.—Big losses in acreage as a result of winter killing did much to hoist the value of wheat today. The market, however, reacted because of profit-taking and in the end was unsettled at the same as yesterday's finish to 2¾ up, with May $1.90¾ to $1.91 and July $1.63 to $1.63⅜. Corn gained ⅝ to 1½c, oats closed ⅛c off to 1⅛c advance and provisions unchanged to 17c higher.

Reports from 11 leading states indicated that abandonment of winter wheat territory aggregated 4,885,000 acres, the heaviest total ever known except once. This showing with a fresh flood of damage reports from west of the Missouri river, led to unusually free buying that carried the market to the topmost prices which the new crop deliveries have attained this season. Prospects of increased cooperation of the United States in supplying foodstuffs to the entente nations counted materially as a help to the bull side of the market.

Anticipation of a good sized falling off in the United States visible supply total on Monday offset to some extent the influence of heavy realizing sales in the last hour.

Aggressive buying made corn soar to new high record prices for the season. Rumors of an Argentine embargo and the continued scarcity of domestic rural offerings were prominent factors. Oats rose with corn and wheat.

Provisions derived strength from the higher quotations on hogs and grain. Lard and ribs touched the highest prices yet this season.

Pacific Northwest Grain.

PORTLAND, Ore., March 24.—Wheat—Firm; no trading. Spot bids steady. Bluestem, $1.73; fortyfold, $1.70; club, $1.68; red Russian, $1.64. Barley—Unchanged.

TACOMA, March 24.—Wheat—Bluestem, $1.74; fortyfold, $1.70; club and red fife, $1.69; red Russian, $1.66.

SEATTLE, March 24.—Wheat—Bluestem, $1.74; turkey red, $1.74; fortyfold, $1.70; club, $1.69; fife, $1.69; red Russian, $1.67. Barley, $39.50 per ton.

WILBUR, Wash., March 24.—Bluestem, $1.60; club, $1.55. Oats, $37. Barley, $37.

San Francisco Grain.

SAN FRANCISCO, March 24.—Wheat, firm; no trading.

Barley, May, $2.29; December, $1.68 bid.

Minneapolis Grain.

MINNEAPOLIS, March 24.—Wheat prices opened firm, but the close was fractionally down. Corn and oats were in fair demand.

Flax, $2.87 1-4@2.95 1-4.

Rye, $1.61@1.62.

Bran, $35@35.50.

Flour—Fancy patents advanced 15 cents; quoted at $10; first clears advanced 30 cents, quoted at $8.85. Other grades unchanged. Shipments, 43,406 barrles.

Barley, $1@1.27.

Car Receipts at Coast Points.

Receipts of grain and hay in car lots at Coast points for the fiscal year beginning July 1 up to Saturday night for 1916-17 and 1915-16 were as follows:

Seattle—	Wheat.	Oats.	Barley.	Hay.
1916-17.....	7,002	824	1,226	3,513
1915-16.....	4,220	1,132	299	3,215
Portland—				
1916-17.....	4,204	2,025	182	1,885
1915-16.....	9,457	881	1,445	2,058
Total—				
1916-17.....	11,206	2,849	1,418	5,398
1915-16.....	13,677	2,063	2,671	5,273

Portland Wheat.

PORTLAND, Ore., March 26.—Oats were the strong feature of the grain market in the latter part of the week. The big demand in the interior for oats and hay for shipment into the sheep sections of Idaho, Utah, Nevada, Wyoming and Colorado raised prices all along the line. In the local market oats sold up to $38.50, and dealers reported sales in the country on the basis of $40 and even better at Coast. There is also government inquiry for oats and some demand from California. The trade looks for stocks to be cleaned out entirely before the season is over.

Hay prices are somewhat higher, but are not as strong here as in the country, as the local demand is not heavy and the supply is ample.

Wheat has held around the high point in spite of the impossibility of shipping east. The limited number of cars received during the week were used in rushing emergency shipments of feed into the sheep sections. Closing bids for April wheat were: Bluestem, $1.74; fortyfold, $1.70; club, $1.68; red Russian, $1.64.

Barley is firm at $40 in sympathy with the bulge in California, where new export business has been worked in the last few days.

Flour was advanced to the $8.60 basis for patents at the close of the week. This is the highest price known here since civil war days. Millfeed prices have also been raised and further advances are predicted.

The merchants' exchange has wired a protest to the interstate commerce commission against the proposed advance in freight rates, as affecting the 1916 crop. The wheat was sold on the basis of current freight rates and the roads alone are responsible for the failure to move it.

Live Stock Quotations.

At Omaha.

OMAHA, March 24.—Hogs—Receipts, 6800; market higher. Heavy, $14.60@14.80; light, $14.35@14.70; pigs, $12@13.50; bulk of sales, $14.50@14.70.

Cattle—Receipts, 200; market steady. Native steers, $9@12.50; cows and heifers, $7@19.50; western steers, $7.75@11; Texas steers, $7.50@9; stockers and feeders, $7@10.25.

Sheep—Receipts, 800; market steady. Yearlings, $14.50@13.25; lambs, $13.75@14.85.

At Chicago.

CHICAGO, March 24.—Hogs—Receipts, 14,000; market strong at yesterday's average to 5c higher. Bulk, $14.85@15.05; light, $14.20@15; mixed, $14.50@15.10; heavy, $14.45@15.15; rough, $14.45@14.60; pigs, $10.50@14.

Cattle—Receipts, 800; market weak. Native beef cattle, $9.20@12.65; stockers and feeders, $7@10; cows and heifers, $9.60@10.70; calves, $10.50@15.

Sheep—Receipts, 3000; market steady. Wethers, $11.20@12.65; lambs, $12.75@15.25.

At Seattle.

Sheep—Receipts, none; market steady. Prime lambs, $12@12.50; common lambs, $11@11.50; choice yearlings; $10.50@11; good yearlings, $9.50@10; best mutton ewes, $10@11.

Portland Market.

PORTLAND, Ore., March 24.—Butter is scarcer than ever before known at this time of year. Cubes are selling up to 38 cents and many shipping orders are unfilled. No increase in the make is expected before next month. City prints have been advanced a cent and would go higher, but creamery men fear to check consumption.

Egg speculators are again buying freely for storing and there is also a good demand from the Sound.

No new business has been reported in the wool market, but buying soon in anticipation of govtrnment needs is looked for.

The potato market is still quiet, but prices are firmer as farmers' stocks are running low. The last car of onions has passed out of first hands.

Bean prices have been raised again in response to sharp advances in California.

The hop market continues inactive.

In the following list of quotations the grain, hay, millfeed, hop, wool and hide prices are those paid to producers. The other quotations are prices from jobbers to retailers:

Oats—No. 1, $38.25@39.25 per ton.

Corn—While, $51; cracked, $52 per ton.

Millstuffs—Bran, $30 per ton; shorts, $34.

Barley—No. 1 feed, $40; brewing, nominal; rolled, $42@43.

Hay—Buying prices, Timothy, eastern Oregon, $20@21; alfalfa, $16@18; grain, $12.50@14.

Eggs—Oregon ranch, case count, 26 1-2@27c per dozen; candled, 29c.

Poultry—Hens, 19@20c; ducks, 22@24c; turkeys, live, 22@24c; dressed, 23@28c; geese, 12@14c.

Spokane Market.

The wholesale prices quoted in the list below are not the prices paid to producers or shippers; they are those charged by the Spokane commission houses to the retail trade for standard produce. The prices quoted for live stock, however, are the prices given to the producer:

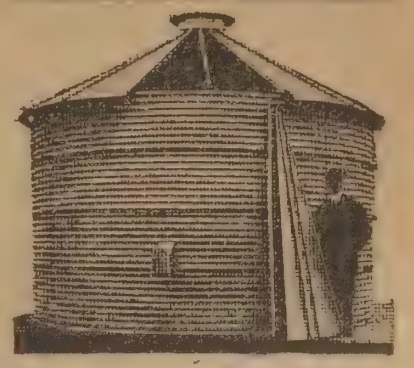
Potatoes—Potatoes, $3.25@3.50 cwt; sweet potatoes, $6.

Seed Potatoes—Early Ohios, 4c lb; Early Rose, 4c lb; white potatoes, 4c lb.

Apples—Washington apples, cooking, 65@85c; eating, $1@1.25; Wageners, 75c@$1.20 box; Rome Beauties, $1@1.40 box; Winesaps, $1.75@2 box; Y. N. Pippins, $1.75@2 box.

Butter—Blanchard cartons, 43c lb; Medo-Maid, 43c lb; Cascade, 43c lb; Gold Coin, 36c lb; Gold Leaf, 43c lb; Better Butter, 43c lb; Hazelwood, 43c lb; Peerless, 39c lb; Jersey Belle, 42c lb; Attalia, 43c lb; Diadem, 43c lb; Jersey, 39c lb.

Cheese—Wisconsin full cream, twins, 28c; triplets, 22½c; Hazelwood full cream, triplets, 23c lb; Hazelwood Young America, 24c lb; Wisconsin limburger, 28@29c lb; brick cheese, 28c lb; domestic Swiss, 33c lb; Young Americas, 25c lb.



Eggs—Fresh local ranch eggs, $9@9.50 case.

Live Poultry—Springs, 18c lb; hens, 18c lb; old roosters, 10c lb; ducks, 13c lb; turkeys, 20@25c lb.

Dressed Poultry—Hens, 21c lb; springers, 20c; old roosters, 13c; ducks, 16c; geese, 14c; turkeys, 28c.

Hide Quotations.

Green cows and steers—25 lbs and up, 17½c; salted cured, 20c; green bulls and stags, 13c; salted cured, 16c; kip, 15 lbs. to 25 lbs., 23c; calf skins up to 15 lbs; 31c; dry flint hides, 34c; dry salted, 27c; dry calf skins, under seven lbs., 42c; dry sheep pelts, full wooled, 22@26c; dry shearlings, 10 to 75c each; green horse hides, $3 to $5 each; dry horse hides, $1 to $2.50 each.

Seattle Market.

SEATTLE, Wash., March 24.—There has been more activity in the potato market this week, and while actual sales do not show any change in the quotations, inquiries have increased and grower holders and speculators are leaning more to the bull side.

Brokers here are unable to get confirmations of orders in the Yakima valley under $70, although they will bid $60 and $65. Jobbers who have small stocks are selling on the curb at that level, and report the demand slow.

Jobbers fear the effects of the Japanese Irish spud, 1000 sacks of which will go on this market next week. This is the first shipment of potatoes ever received from the Nipponese kingdom and the quality is yet to to be tried out. It is reported on authentic sources that there is a surplus of 1000 tons which importers are ready to market on Puget sound as soon as permits can be secured from the government. Opening prices are conjectural, but it is stated that the stock can be sold at a profit at $50 and $55. This is the pivotal question, as it is conceded that they must undersell both Yakimas and Puget sound spuds in order to affect this market. Should the Japanese potato experiments prove successful, competition for the spring trade will have been established with the local grower in onions and spuds and on eggs in the winter season.

The apple market is very firm. Only a few wholesale houses here are supplied with the fruit, and this in small amounts. Brokers are quoting $1.85 f. o. b. Yakima for four and four and one-half tier extra fancy Winesaps and $1.50 for five-tier. Newtown Pippins are $1.55. There is a heavy demand for apples in eastern markets and 25 to 30 carloads left the valley in a week. It is believed here, however, that apple holdings in eastern Washington are ample.

High prices of both butter and eggs which have run parallel in sentiment through the week, will part company on Monday according to the best advices now obtainable in the wholesale districts. Settled weather after the winds of the last four days is now expected, and the receipts are scheduled on the basis of reports from the country to increase heavily, while at the same time the demand will decrease.

The surplus needed for storage operations is likely to show. Receipts this week have been 50 per cent of the volume of a year ago, and the eggs went into consumption as fast as checked in. Efforts will be made by jobbers to bear the market to 25c. If this can be accomplished storage for the fall will be resumed, although not on as extensive a scale as last year.

The output of butter for the week has been the smallest, as reported by city creamerymen, of any week during the last year. Only for a differential in the California market prices, it is stated, it would have advanced at least 4c. It has been impossible to supply the demand from the daily local churnings. Country creameries have been shipping grudgingly of a reduced make. The condensaries have thrown 1000 pounds per day into the balance, but all these sources combined have fallen below the requirements of a market that consumes 950,000 pounds of butter per month. Grazing is needed to ease the situation.

Cheese is firm. Jobbers have nothing to offer under 25c per pound. Manufacturers quote 23@24c f. o. b., and report shortages in the make. Condensaries and cheese manufacturers in competitive territory are battling for milk, with the premium paid by the milk concerns throwing the bulk into their hands.

The shortage of the hay crop in eastern Washington, consequent high prices and the difficulty of securing cars for hauling the hay into this market has created a brisk demand while making a place for Puget sound hay. Steamers plying between this port and the Skagit country have been bringing in full cargoes of the hay. Wholesalers, in making examinations of the quality before buying, say that hay that was cut before the rains is of high quality, and is taking the place of eastern Washington timothy with many buyers. The difference in price of eastern Washington hay at $23@25 as against Puget sound at $18, best grade, is an attraction to many consumers and small dealers.

BUYING PRICES.

Unless otherwise stated the following prices are fixed upon a jobbing basis and are average prices obtained in reports of transactions by jobbers.

The following prices are offered to the producer by the local dealers for delivery in round lots f. o. b. Seattle:

Eggs—Local, 26@28c per dozen.

Poultry—Live hens, fat, over 4 lbs., 20c per lb.; do 3 lbs. and under, 19c; old roosters, 12c per lb.; springs, 21c; ducks, 20c per lb.; squabs, large, $3.50 per dozen; geese, fat, 16c per lb.; turkeys, live, 23@24c.

Butter fat—42c per lb.; dairy butter, 25c per lb.

Hay—Eastern Washington timothy, $23@25 per ton; alfalfa, $19@19 per ton; double compressed, $25 per ton; straw, $12 per ton; wheat hay, $16 per ton.

Onions—Oregon, 9c per lb.

Potatoes—Local, $65 per ton; Yakima Gems, $70 per ton.

Rutabagas—Yakimas, $2.50 sack.

Butter—Washington creamery extras, cubes, 38c per lb.; do bricks, 39c lb.; creamery firsts, cubes, 37 lb.; do bricks, 38c lb.

Eggs—Fresh ranch, 28@29c.

Seattle Wheat.

SEATTLE, Wash., March 24.—With all mills sufficiently supplied under the conditions that now prevail in the flour trade the amount of grain that changed hands this week in the country is very small. The approximate of the crop in this state of 3 to 5 per cent is being closely held, and is centered in a very small number of hands.

Futures are looking strong up to the beginning of the new crop year. One of the representative sales on change this week was 5000 bushels of July bluestem at $1.50. It is now everywhere conceded that the last of the hard wheat crops has been sold and is now beyond the possibility of reselling. Bids to the farmers for the week have been $1.52 for bluestem and turkey red and $1.47 to $1.48 for club and fife.

Farmers are clutching their grain, turning deaf ears to bids of less than $1.75, and do not appear to be interested. It is believed here that that level would sweep into strong hands very quickly all the grain that is now left in the state. Soft wheat is becoming scarce, but under the pressure of gloomy flour futures millers are convinced that there will be enough grain, with their own holdings and what is left in farmers' hands, to bridge over until the new crop year. Eastern buyers have been discouraged over the difficulty of getting cars and practically laid down this week.

Wool.

BOSTON, March 23.—The Commercial Bulletin will say tomorrow:

"While the volume of wool business has not increased very perceptibly over that of a week ago, more interest was displayed by the mills. Demand has been chiefly for grades above high quarter blood, all of which were fully firm in price. Contracting in the west has been limited to a few scattered clips, which were taken at the old rates. Demand among spinners and combers is for small quantities and chiefly stock lots, on which prices are steady."

Scoured basis:

Texas, fine, 12 months, $1.20@1.25; fine 8 months, $1.05@1.10.

California northern, $1.15@1.20; middle county, $1.05@1.10; southern, 80@85c.

Oregon eastern No. 1, staples, $1.25@1.30; eastern clothing, $1.05@1.10; valley No. 1, 95c@$1.

Territory fine staple, $1.30@1.35; half-blood combings, $1.20@1.25; three-eighth blood combing, $1@1.05; fine clothing, $1.10@1.12; fine medium clothing, $1@1.05.

Pulled extra, $1.10@1.15; fine A, $1@1.05; AA, $1.05@1.10; A supers, $1@1.05.

Butter and Cheese.

SAN FRANCISCO, March 24.—Butter—Fresh extra, 35 1-2c; prime firsts, 34 1-2c.

Cheese—New, 20 1-2c.

ELGIN, Ill., March 24.—Butter, 25 tubs at 40c.

CHICAGO, March 24.—Butter unchanged. Eggs higher. Receipts, 9404 cases; firsts, 27 1-2c; ordinary firsts, 26 1-2@27c; at mark, cases included, 26@27 1-2.

PORTLAND, Ore., March 24.—Butter firm. Market almost bare. Cube extras, 33c.

San Francisco Produce Market.

SAN FRANCISCO, March 24.—Butter—Fresh extras, 35½c; prime firsts, 34½c.

Eggs—Fresh extras, 27c; extra firsts, 26c; fresh extra pullets, 25½c; extra firsts, pullets, 25c.

Cheese—New, 20½c; Young Americas, 24c.

Poultry—Hens, 23@24c; old roosters, 15@16c; fryers, 30@35c; broilers, 38@40c; large, 30@35c; squabs, $2.75@3; pigeons, $1.75@2.25; ducks, 19@20c; geese, 18@20c; turkeys, 23@24c.

Potatoes—Rivers, $3@3.50.

Onions—$7@7.50.

Feedstuffs—Cracked corn and feed cornmeals, $51@51.50; rolled barley, $45@47; meal, alfalfa, $23.50, carloads; less, $26.50.

Receipts—Flour, 4905 quarters; barley, 8420 centals; beans, 576 sacks; potatoes, 1290 sacks; hay, 530 tons; hides, 1060; wine, 25,900 gallons.

Klickitat Stockman Dead.

William J. Mulligan, age 40, a well-known Klickitat stockman, died at Fallbridge, Wash. He lived in Klickitat county nearly all his life. He was formerly engaged in running sheep with his father, William Mulligan Sr., a Klickitat pioneer, and for several years had been foreman for A. L. Bunnell, sheep owner.

Hogs on Cheap Feed Test.

Willim Hyslop, professor of animal husbandry at Washington state college, has sold a car of 45 hogs from the college farm to the E. H. Stanton company of Spokane at $15 per hundred pounds. Part of the shipment was fattened on peas and part on barley, low-priced grains as against corn and wheat, high-priced grains.

No Water Shortage Feared.

After a check of snowfall conditions on the Yakima water shed reclamation officials are convinced that there need be no fear of a shortage of water for the coming crop.

Season Good for Lambing.

Yakima valley flock masters report good success with their sheep this spring. Lambing is well along and the losses have been small.

Linseed.

DULUTH, Minn., March 24.—Linseed on track, $2.90 1-4; arrive, $2.90 1-4; May, $2.91 1-4; July, $2.92 7-8 bid.

Canada Offers 160 Acres Land Free to Farm Hands

Bonus of Western Canada Land to Men Who Assist in Maintaining Needed Grain Production.

The demand for Farm Labor in Canada is great. As an inducement to secure the necessary help at once, Canada will give **one hundred and sixty acres of land free as a homestead** and allow the time of the farm labor, who has filed on the land, to apply as residence duties, the same as if he actually had lived on it. Another special concession is the reduction of one year in the time to complete duties. Two years instead of three, as heretofore, but only to men working on the farms for at least six months in 1917. This appeal for farm help is in no way connected with enlistment for military service, but solely to increase agricultural output. A wonderful opportunity to secure a farm and draw good wages at the same time. Canadian Government will pay all fare over one cent per mile from Spokane to Canadian destinations. Information as to low railway rates may be had on application to

J. N. GRIEVE

Canadian Government Agent
Corner First and Post Sts., Spokane, Wash.

Real $25 Value

Suits and Overcoats

$15.00

Order Suits by Mail

Our new mail order department brings our immense stock of ten thousand suits and overcoats direct to your home. It is now possible to purchase from us at the same low price and with the same guarantee of fit and service as the thousands of our customers in the city.

Save $10.00

Buy your clothes the modern upstairs way, the money-saving way. Ten thousand suits to select from—blue serges, pencil stripes, clay worsteds, tweeds, cassimeres, velours—any fabric you may fancy, all hand tailored, at a saving of $10.00 to you.

Selling clothes upstairs on the second floor is a radical change from the old way—the low rent, the inexpensive fixtures, the cash selling plan and the fact that we are willing to accept a small profit—these are the reasons why we are able to save $10 to every purchaser.

Thousands of men in the northwest have taken advantage of our selling plan and proven to themselves that they save money—you can do the same.

Mail Coupon Today

Cut out coupon and mail today for samples and measure blanks. State the kind of suit wanted. You can easily take your own measure. No trouble, no delay. You pay only on delivery and if not satisfied don't pay. **We guarantee satisfaction or your money back.**

We Pay Delivery Charges Anywhere.

LUNDQUIST-LILLY,
Seattle.

NEWS FOR BREEDERS

Shorthorn Sales at Portland and Spokane

Northwest Shorthorn breeders have announced through the columns of the Farmer their forthcoming sales—one to be held at the Union stock yards, North Portland, on April 3rd and the other at the Union stock yards, Spokane, Wash., on April 5th. The catalogues for both sales have been issued and are being mailed to prospective purchasers. Through the medium of both sales, 144 choicely bred bulls and heifers will be offered, 90 of which will be at Portland and 54 at Spokane. The list of consignors to both sales this year, include many new names in addition to the breeders who have contributed to Shorthorn sales held in the past, indicating the cooperative spirit with the smaller bredeer to find a market for his surplus.

While the Portland sale is familiar to all, through its having become a recognized institution, the Spokane event is this year but being initiated. The demand for better live stock throughout the northwest generally is increasing greately. The Spokane event should be of great value to many people living in the region tributary to Spokane. Should patronage justify it, the Spokane sale will be made an annual event.

Practically all the females listed in both sales are of breeding age, some having been bred. The bulls are ready for service, and for the protection of the buyer, a strong guarantee attaches to each animal sold. The entries to each sale will be exhibited the day prior to the sales and 12 prizes of $5 each will be given for the following classes: Bulls calved prior to September 1, 1915; bulls calved after September 1, 1915; cows or heifers calved prior to September 1, 1915, and heifers calved after September 1, 1915. In addition to these prizes, the American Shorthorn Breeders' association is giving two silver cups; one for the best bull of the show and one for the best female.

Both sales will start promptly at 10 a. m. and will be conducted by Colonel N. G. Kraschel of Harlan, Iowa. Frank Brown of Carlton, Ore., will supply catalogues of the Portland sale upon request and a card addressed to F. M. Rothrock at Spokane will bring a Spokane catalogue. Various railroads have authorized the usual certificate plan fares to the Spokane show.

DUFUR COLT SHOW.

The second annual Dufur Colt show will be held on Friday and Saturday, June 15 and 16, at Dufur, Ore. The membership of this committee is as follows: Henry Bolton, Kingsley; Harry Richards, Boyd; J. E. Kennedy, Wamic; J. T. Adkisson, The Dalles; A. R. Chase, county agriculturist, and George W. Johnston, H. C. Dodds, Henry Erickson, F. B. Ingels, P. W. Knowles and G. D. Brodie, Dufur. George W. Johnston and George D. Brodie were selected as president and secretary, respectively.

MORE SHORTHORNS FOR IDAHO.

D. E. Kiggins of Boise, Idaho, recently purchased 19 head of cows and calves, four heifers and two bulls from A. D. Dunn of Wapato, Wash., for shipment to the Boise valley.

The cows and heifers were mostly well-bred Scotch Shorthorns, and the two bulls were straight Scotch in their breeding. In addition, one of the cows had a splendidly-bred Butterfly bull calf, sired by the well-bred Canadian bull, Royal Lavendar.

ERROR CORRECTED.

In the last issue of The Farmer the announcement of the Jersey dispersal sale of W. G. E. Smith of Hood River, Ore., indicated that the sale would be held in that city. Instead, it is scheduled for Oregon City, Ore., and will be held April 11. To the Smith animals will be added Jerseys from the herds of W. S. Turner of Oregon City and J. B. Hyde of Portland. About 40 head will be entered in the sale.

DISPERSAL SALE OF JERSEYS.

A dispersal sale of registered Jerseys will be held April 11 at Oregon City, Ore. This sale will include the entire herds of W. G. E. Smith of Hood River, W. S. Turner of Oregon City and J. B. Hyde of Portland. About 40 animals will be disposed of, among them two herd bulls, a number of cows and bred heifers are to be offered.

SALE AT SKAMOKAWA.

H. L. Weister, proprietor of the Sunrise dairy farm, near Skamokawa, Wash., will hold an auction sale of Jerseys at his farm the afternoon of April 5. He will dispose of several registered bulls and some high-grade cows and bred heifers.

DUROC-JERSEY SWINE

A GOLDEN OPPORTUNITY

7——Durock Jersey Gilts——7

These are my tops. I had reserved them for my own use. Owing to recent business changes, I have decided to offer them for sale.

They are sired by Sprongs Prince, he by Topeka, dam Capitol Belle. On the dam side they are out of a granddaughter of Advance Wonder, tracing back to the great show sires, Proud Advance and Crimson Wonder. They are 7 months old, weigh 200 lbs. in breeding condition. They will be sold either open or bred.

C. G. SPRONG. Grandview, Wash.

Overland
TRADE MARK REG.

—two minds with but a single thought

Every indication points to a demand very much in excess of the possible supply of automobiles this year.

We are prepared.

This year we apply the economies of vast production for the first time to a *complete* line of automobiles—an end toward which we have been working for eight years.

Light Fours, Big Fours, Light Sixes and Willys-Knights, including the marvelous Willys-Knight Eight, are built and sold with

—*one* executive organization,
—*one* factory management,
—*one* purchasing department,
—*one* sales force,
—*one* group of dealers.

There is now an Overland or a Willys-Knight for every class of buyer.

Every one of these beautiful cars is a better car—better in appearance, in performance and in riding comfort.

One of them is the car of your dream under the evening lamp.

See these cars now. Get a car yourself this spring.

Light Four		Light Six	
Touring	$665	Touring	$985
Roadster	$650	Roadster	$970

TRACTOR·TRUCK·AND AUTOMOBILE·NUMBER

Here Is a Small Tractor Taking the Place of a Six-Horse Team.

IN THIS WEEK'S ISSUE OF THE WASHINGTON FARMER

Is the first report of an investigation it is making to learn if it is practical to plant potato eyes with only a small part of the potato, saving part for table use. Read it and watch for others

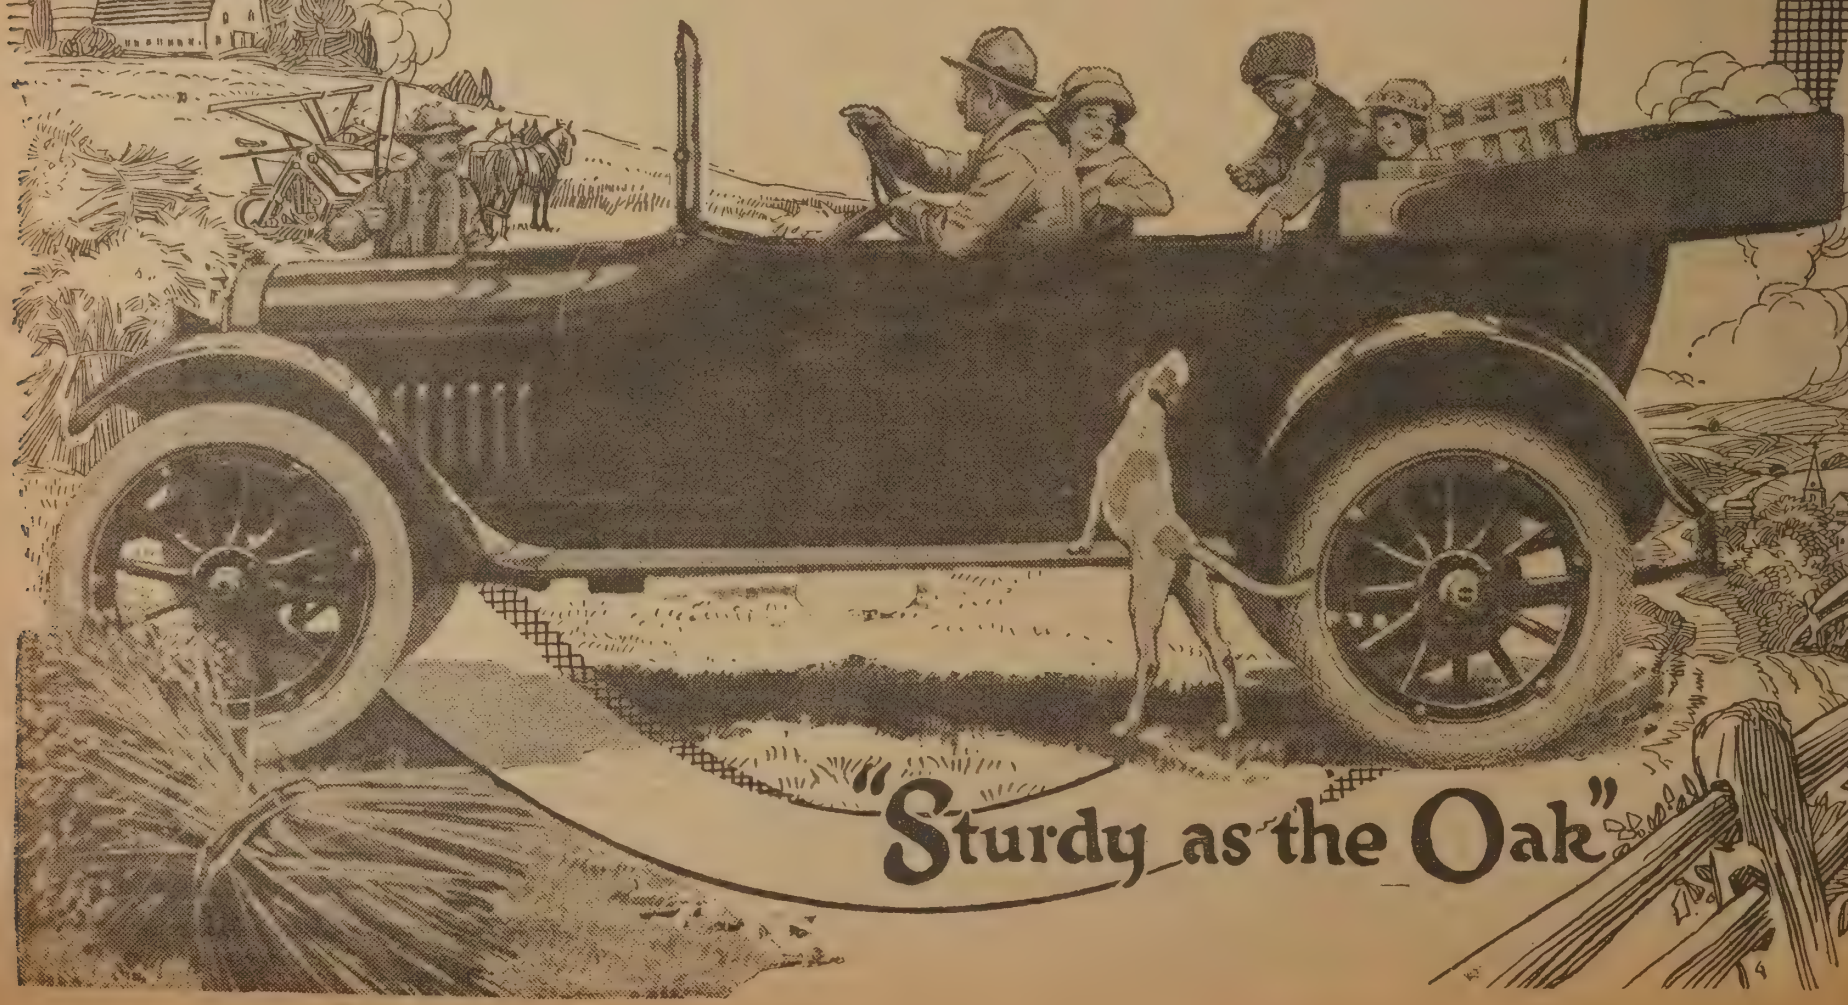
TO BE PUBLISHED AS INFORMATION IS RECEIVED

Oakland Sensible Six

The Practical Car for You

Up any hills—over any roads—the **Oakland Sensible Six**—$875—will take you with ease, comfort and economy.

It's a big car, though it weighs but 2150 pounds, and its long, semi-elliptic springs—51 inches in rear—over-size tires (32x4), long wheelbase, (112 inches), all give the **Sensible Six** that easy riding quality which wins the enthusiastic praise of owners everywhere.



The valve-in-head motor develops 41 h. p. at 2500 r. p. m.—one horse power for every 53 pounds of car weight. On the hills or in bad going the **Sensible Six** has more actual power and more proportionate power than any other car of its weight.

This power with light weight means fuel and tire economy. Average drivers get from 18 to 25 miles per gallon, and from 8,000 to 12,000 miles per set of tires.

Oakland Eight—$1585—is built for those who need a big, luxurious 7-passenger eight cylinder car of maximum pull and speed.

Our new book "How to Buy Your Car Intelligently" will prove helpful to you no matter what car you buy. Write for it today—it's free. (54)

Potato Prices Raise Seed Question

To What Extent Will It Pay to Use Eyes and Peelings for Seed?

The scarcity of potatoes has brought from many sources the question of the practicability of growing potatoes by planting the eyes with only a small portion of the potato, leaving the greater part of the potato for table use.

Would such planting produce good crops?

To what extent would high prices for potato seed justify the planting of eyes only?

How would you cut and prepare the eyes for planting?

What is the scarcity or supply of potatoes in your section?

The above inquiry was sent out by The Farmer to county agricultural agents and others. In reply timely and exceedingly interesting information has been received.

Uncertain Results.

E. F. Benson, who has just entered upon his work as state commissioner of agriculture, says:

I never planted potato skins or eyes because it seemed too uncertain a method to get a sure stand.

If soil and climatic conditions are ideal the planting of eyes with a small portion of the potato would undoubtedly give good results. But the potato furnishes the nourishment to aid germination and early growth, and with seed even as high as three or four cents a pound I don't believe it would pay to experiment with planting "peelings" or "eyes," on any commercial scale.

I can learn of no seed shortage in the Yakima valley and find small lots for sale at various points. Am not at all familiar with any other district in the state.

Experience Necessary.

A. A. Kelly, the well known, experienced market gardener of East Spokane, makes it plain that experience and especially favorable conditions are necessary when one would plant only the eyes of potatoes:

In the introduction of a new variety of potatoes, especially when the distance is far between introducer and customer, it is common practice to ship only the eye with a small portion of the tuber. And also when sufficient demand will justify or when a premium is awarded for the greatest amount of crop from a given quantity of seed, the eye of the potato may be divided into as many as three or four parts, each of which will produce a hill of potatoes. This, of course, calls for exceptional good judgment, experience and the very best of conidtions.

Yes, good crops can be produced from the eye with only a small piece attached, but the soil must be prepared to a degree that is scarcely followed in planting the ordinary subdivision of the tuber. The scientist tells us that the eye of the potato has a well-developed root system extending to the center of the tuber, and the fact that a goodly sized piece of the tuber attached to the eye will with only ordinary conditions result in a good crop, which seems to bear out the science theory. Practically all good growers of potatoes agree that a large seed piece furnishes food that is assimilated by the young growing eye or sprout.

Except to the grower of a very small potato patch the economy of the seed piece as suggested in your inquiry is absolutely impractical. Regardless of the price of seed when no extraordinary remuneration is anticipated for the resultant crop, it will not pay to reduce the size of the seed piece.

Plant Food in the Soil.

Lee M. Lampson, Benton county agricultural agent, writes:

In planting potatoes the size of the cutting necessary for good results evidently depends upon the availability of the plant food in the soil. Judging from our observation, good results are secured only in very exceptional cases where cuttings smaller than a hen's egg are planted. Results have averaged a little better where cuttings twice as large as this have been used. Potatoes are very scarce and high, but it would not be advisable to sacrifice on the size of the seed, as the difference in crop yield will probably be more than all of the seed costs.

Charles A. Cole, Pierce county agricultural agent has this to say:

The only experience I have had with planting potato eyes was from small mail orders. The pieces were about one inch square. While you may grow a good crop of potatoes from such eyes or from potato peelings I do not think it best to advise this practice, neither do I think it a good plan to plant small potatoes. Small potatoes may be planted once, but don't use the resulting crop for seed. I believe the best results are obtained by planting pieces of potatoes with at least two eyes.

Small Whole Potato.

H. W. Reaugh of Grant county also doubts the advisability of scrimping in the seed:

No doubt the high price of seed this year will cause many farmers to cut their seed pieces of potatoes in much smaller sizes than usually. In fact where the price of seed potatoes is as high as this year. Many potato growers believe that the one eye seed pieces will produce more results except possibly on extremely high priced land. But where the potatoes are planted on summer fallow or similar land the seed pieces can be reduced with good results.

Many farmers will use the small whole potatoes this year for planting and it will produce good results, but if this method of selection is continued from year to year the potatoes will tend to run out, but very little deterioration should come from the one year's planting.

I have seen people take the medium to large potatoes many times and cut out a fairly large cone shaped piece around the eyes which would leave a large portion of the potato to be used for eating purposes. I do not believe it would pay, however, to put too small a piece of potato with the eyes as it is apt to cause the young plant to be less vigorous in starting and consequently reduce the yield.

Strong Eyes.

Readers of The Farmer will be glad to have this word from Dr. Granville Lowther:

You can grow good potatoes by planting the eyes, provided enough potato is left with each and every eye to furnish food for the tender sprout, until it is strong enough to take its food from the earth. On the average, two-thirds of the potato can be saved for table use, and in large potatoes more.

It is well to note that one end of the potato produces strong, and the other end weak eyes. The strong eyes will produce a much larger, better crop than the weak. In strength and productivity, the eyes between the two extremes are medium.

If only the strong eyes are used for planting, most of the potato can be used for food.

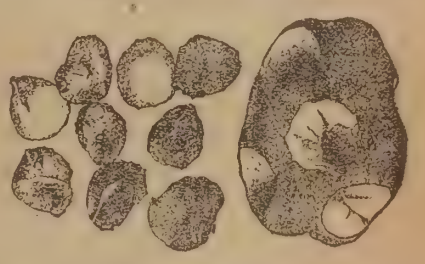
Reasonable Sized Piece.

B. W. Cooney, Klickitat county agricultural agent, writes:

I don't believe the best results can be obtained with an eye piece cut too thin. I would not care to use a piece smaller than a dollar and preferably one-half inch or more in thickness. There is a time in the sprouting of your seed piece that the young plant gets all of its nourishment from the piece it sprouts from. Naturally if this piece contains very little starch upon which the plant depends for a time before throwing out roots, consequently reducing its vigor sometimes to large degree.

I would not expect much from a field of potatoes that had been planted with potatoes amounting to little more than peelings. I do not believe the price of potatoes at present is so high but that I would use a reasonable sized seed piece of one good strong eye. There are cases no doubt where it might save the grower a little by using a thin eye piece, but I would want it to be the exception and not the rule.

The supply of seed potatoes, or what is commonly termed seed, is fairly abundant, but good seed potatoes that have been properly harvested and stored, free from diseases, are at a premium in the state.



Results Not Uniform.

J. M. Alcorn, assistant county agricultural agent of Crook and Deschutes counties, Oregon, says:

As to planting but the eyes, once in a while fair results are reported from this method when the soil and other conditions are just right, but the good results do not seem to be uniform at all. The high prices might justify planting smaller pieces than is customary where the two-ounce piece is recommended, but I would not want to recommend that the country over resort to eye planting. We are pretty well supplied with seed for local use, since one of our strongholds down here is seed potatoes, but there are not more than two or three cars of unsold stuff in the country, the manager of the Deschutes Potato Growers' association of Redmond informs me.

Other Comments.

William Stuart, horticulturist of the national department of agriculture, has gone into the subject of saving seed potatoes at some length in the Weekly News Letter. He is of the opinion that the cost of seeding Irish potatoes can be greatly reduced "if instead of using a whole potato for planting the gardener will cut out from potatoes cone shaped pieces of flesh, each containing an eye of the potato. In this way from one-fourth to one-fifth of the flesh of the potato will be needed to provide seed and the remainder of the potato can be cooked for table use. These cones range from one-fifth

Potato with cones containing eyes cut out for seed.

to one-seventh of an ounce in weight, whereas under the usual methods the sets range from three-fourths to two ounces in weight. His article seems to apply to the garden patch and to provide a plan by which seeding can be extended from day to day, while the rest of the potato is being used for food.

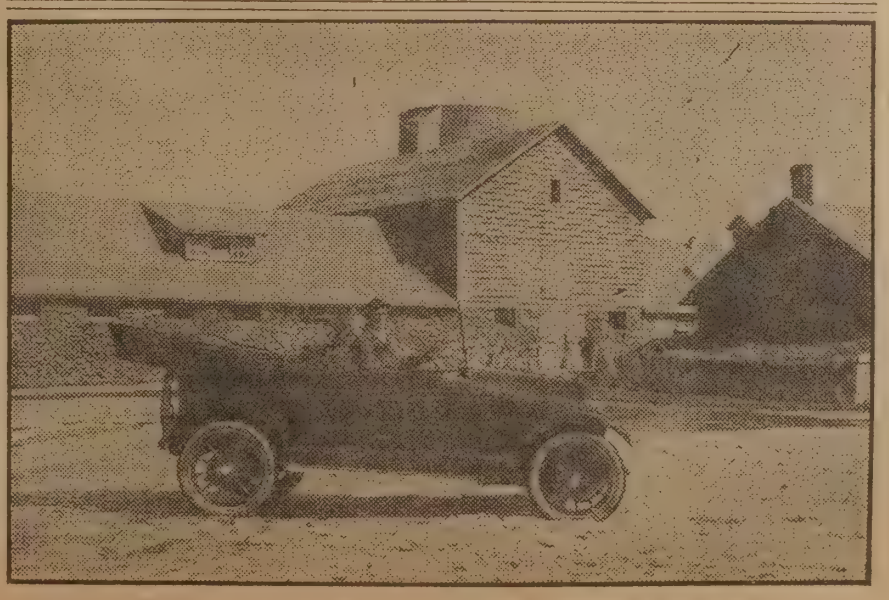
C. H. Bergstrom, who recently succeeded O. C. Van Houten as Thurston county agricultural agent thinks one might use a small portion of the potato surrounding the eye providing seed and conditions were ideal and on the very best of prepared and conditioned land; that Thurston county farmers are not getting more than $30 to $35 a ton for their potatoes and nearly every farmer has some supply on hand.

M. A. Means, Lewiston, Ida., who keeps a pretty close tab on the question of seed, says that while he has had no practical experience, yet many farmers have told him that they only planted the eyes of potatoes. They peeled the potatoes one-fourth to one-half inch, then cut this at equal distances between the eyes. Mr. Means reports plenty of potatoes in that locality for table use and planting.

Gasoline Cartridge.

Patents have been granted to a Maryland inventor for a gasoline cartridge for breaking up farm soil in the same way that dynamite is used.

Washington Portraits No. 9.



D. A. Lenocker.

D. A. Lenocker came to western Adams county, near Schragg, and settled on a homestead in 1901. During these 16 years he has been engaged in the raising of wheat for the market and has raised his own live stock. He raises enough barley and oats for his stock feed and says that it does not pay to raise them for the market in that community.

The next in the series of Washington portraits will be that of A. P. Bertschi of Glenwood, and will be given in next week's issue of The Washington Farmer.

Farmers to Build Elevators.

Eureka flat farmers have organized a company to build a grain elevator at Pleasantview, 12 miles west of Starbuck, Wash. The building will be of concrete and equipped with machinery for cleaning and grading grain, will have a capacity of 130,000 bushels and will cost $30,000. In the company are C. W. Pearson, J. E. Painter, Lawrence Davidson and Kirkman & Reynolds, all heavy wheat producers of that section.

The latest model from the Overland automobile factories.

Tractor and Horse Must Pull Together

Labor Saving Power Machinery Makes Up for Shortage of Labor; Does What Horse Can Not

By H. H. HARWOOD of the Northwest Buick Company.

One of the first measures for putting the farm on a business basis is the installation of up-to-date labor saving and time saving machinery. Rapidly coming to the forefront among such mechanical equipment is the motor truck and the farm tractor.

In the northwest the farmer has taken to the motor truck as the means of saving him thousands of dollars, and last season there were more of these labor saving machines introduced in this section of the country than ever before and indications are that this season will see even a greater increase. Volumes could be filled with the record of their achievement. Here are a few typical incidents showing the capacity of these machines.

Hauls Wheat to Warehouse.

Interesting demonstrations in the wheat fields on Asotin prairie, above Snake river in eastern Washington, were made last summer with a two-ton truck and trailer. The truck with its trailer hauled a load of 85 sacks of blue barley from No. 21 ranch to Tammany, covering a distance of 12 miles in one hour, one-half of the distance being through stubble fields. The weight of the total load was two and one-half times the capacity of the truck, or 10,152 pounds. The round trip was made in three hours, including the delay in loading and unloading, and at a total cost of $3.22, or a cost per sack of 3 3-4 cents. Previous record over the same haul, and with horses, showed a cost per sack of exactly 8 cents.

Another demonstration held last season in eastern Washington, which attracted more than the usual amount of attention, was that given Mrs. Nels Truedson, who operates a thousand-acre wheat farm near Sprague. Twenty-four tons of wheat were moved from the farm to Sprague in 11 hours, over a distance of 17 miles for the round trip, or a total of 136 miles. The total number of bushels moved was 828. The road was over four grades, averaging from 5 to 8 1-2 per cent and one-half mile in length. The two-ton truck used in the demonstration consumed 19 gallons of gasoline and one gallon of oil during the performance of this test.

A Big Bend Demonstration.

Again, a three and one-half ton truck purchased by Reinbolt brothers, who are wheat farmers located about 21 miles north of Davenport, Wash., and are compelled to haul their wheat to that point, also attracted considerable attention. Seventy-two sacks of wheat were loaded onto the truck in the field and pulled through the field from which the wheat had just been cut and the ground was soft. Two round trips, covering a distance of 84 miles and delivering 312 bushels of wheat, in nine and one-half hours was made. The fuel consumption for the test was 19 gallons of gasoline and one gallon of lubricating oil.

At Colfax, Wash., a two-ton truck was loaded with three tons of wheat right from the separator in the field, pulled through the medium soft ground to the county road over a 7 per cent grade and delivered its load at the warehouse at the railroad many miles away.

Another Wheat Experience.

Henry Hickman of Coltax, Wash., has a haul of four miles to the warehouse, two miles of which has a grade ranging from 10 to 20 per cent, and a drop in altitude over this four miles reaches the remarkable figure of 1250 feet. The truck, which was in service last summer and which Mr. Hickman expects to put in service the coming year, takes down 45 sacks in 35 minutes and returns in 40 minutes, making the major portion of the hill on second and third gear. Under the present road and climatic conditions it would require a four-horse team no less than two and one-half hours to accomplish the grade on the return trip with an empty wagon. This truck was driven on a double shift of 10 hours each, or a total of 20 hours per day.

When one considers that all these examples of truck performance, that the weight of the average sack of wheat runs from 130 pounds and over, it can be seen how much each one of these trucks hauled and what the saving was to the farmer.

Another enthusiastic truck user in eastern Washington reports that he drove a two-ton truck 145 miles, 72 1-2 miles the truck was loaded. He made five round trips—each trip was 29 miles. The total hours from start to finish, counting two hours out for meals, was 13. The total number of tons hauled was 15. The total number of bushels of wheat hauled was 522. The total gasoline consumed was 20 gallons, and the lubricating oil was three quarts. There were three grades on the trip that averaged between 10 and 11 per cent and two grades of 7 1-2 per cent. At no time on the entire test did they use low gear except to make the start in each case.

The farmer has been converted to the motor truck and they are now fast friends. Of that there can be no question. It remains for him to select the truck suitable for his particular requirements, and that entails the study of his conditions by a truck expert who has a thorough knowledge as to how to solve his problems, and to be capable of analyzing them intelligently.

Tractors are now being used in practically every agricultural district of the country. Farmers have been purchasing these machines in large numbers during the past year. The success attending the use of the pioneer machines induced others to avail themselves of this form of power on the farm.

The experience of farmers last fall has convinced them that this new force on the farm has peculiar advantages. The accumulated experience that farmers are getting in handling these machines, first in securing the greatest efficiency from the engine, and second, the different kinds of work upon the farm for which these tractors may be employed, and also the improvements that manufacturers are making, are doing much to popularize the tractor in the rural districts.

Operators Become Experienced.

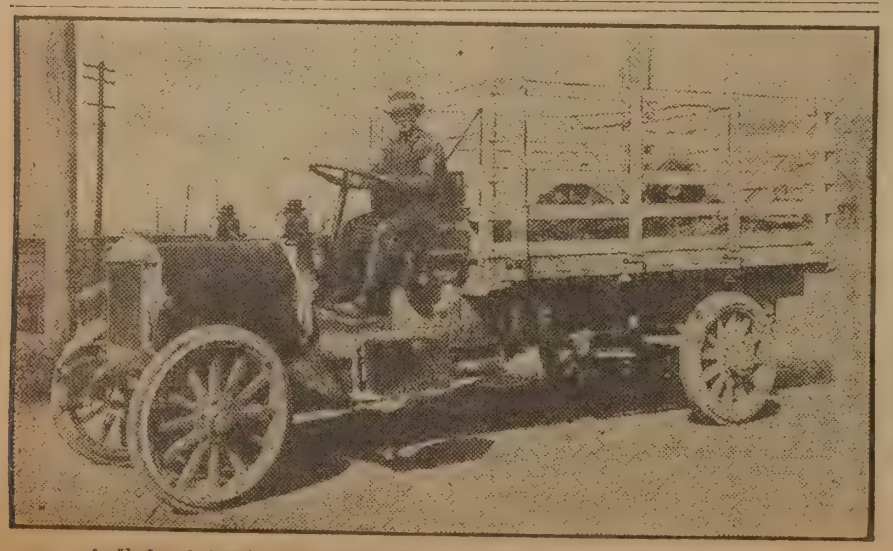
The tractor, like the automobile, is having a better chance today than it did two or three years ago, because there are more experienced operators to handle them. Tractor men not qualified to run these machines were responsible for some of the failures to get good service from them. But the situation is much improved. Farmers and farmers' boys are rehearsing the different features of the different makes of tractors, the best methods of operation, the ability of the different machines to accomplish his work quite as naturally as they formally did their favored team of horses. While this interchange of experiences is already familiarizing the farmer with tractor requirements, it is going to mean more in the future so that farmers will not be handicapped with a lack of good tractor engineers. As a matter of fact, it is no more difficult to run the ordinary light farm tractor than it is to run an automobile.

> The farm tractor will simply fit into the greater needs of the country and will do the heavier chores and drudgery that horses are little fit for. It will not replace the horses, but simply assist them and make life easier for them. Let us not dream too long on the practicability of the horseless farm—it is a long way off as yet.

Experience has shown that the farmer of today is the owner of the greatest percentage of automobiles which have been sold. Experience has also shown that there is no comparison between horses and the tractor, where it is found that conditions are such that the tractor can be operated profitably. Of course, there are some conditions where a tractor should not be used, and no reputable dealer will place one in operation under such conditions, not only for the protection of the purchaser, but for his own reputation for integrity.

As an example of the practicability and profit to the farmer of the small tractor, the experience of some farmers in this state last summer may prove interesting.

In one case where the cost of the tractor was $775, delivered, on several occasions pulling two 14-inch plows, it plowed a full acre per hour. In a number of other instances the average was three-fourths acre per hour. Near North Yakima a tractor put up 85 tons of ensilage in 13 hours, burning distillate at a cost of $5.06. Previously the owner had taken two days to put up the same amount of ensilage and had to hire a team to haul coal and another to haul water.



In southern Washington and in Oregon the farm tractor is proving profitable in orchards. In eastern and western Washington its versatility for pulling trees, stumps, hauling stones from rough ground, plowing, mowing, binding, hay baling, pumping, etc., many things that horses could not possibly do make it really a mortgage lifter.

The introduction of the farm tractor will not, as some believe, remove horses from the field and their pastures. Some prophets who predict that horses on the farm will soon be only a memory will quite likely be but memories long before the horse is. The advent of street cars did not have that effect on horses, neither has the bicycle or the automobile. Today there are more horses in this country than there were 10 years ago, and prices are considerably higher. The one thing that the farm tractor will do is to supply the needed power on the farm that horses can not give. Take away the farm tractors which are in use today and several hundred thousand horses would be required to replace then, for until horses could be had the land would have to go unplowed and untilled.

The number of tractors now in use will be multiplied many times during the next 10 years, but there will still be as many horses in this country as there are today, and prices will be even higher than now.

Farm tractors are becoming a necessity just as electric street cars have

Community Brand

Gives Potatoes a Stable Market

A. H. MacLean, a well-known grocer of Tacoma, had something to say to the members of the Western Washington Horticultural association at its recent session which was a revelation to many of them.

"I, as a middleman, represent, if you please, only an arbiter between the producer and the consumer," he explained. "In this connection I am often asked why we do not pay as much for local grown potatoes as for Yakima Gems. It is not a matter of quality, for a time has already come when some western Washington potatoes are as good as the best raised across the Cascades. At present, however, we can not put locals into competition with the Yakiam product, and we will not be able to do so until we have a sufficient acreage to draw upon to insure a supply, once a demand is created."

This matter of the middleman's part in creating a market was brought opt very clearly by Mr. MacLean.

"I have suggested to some neighboring communities," he said, "that a market could be built up for a small sack of potatoes—one put out in a cloth sack, branded with the community trademark, and sold at 25 cents. This size would fill the need which exists among apartment house dwellers and other housekeepers in a small way, for whom the hundred-pound sack is too large and who still want a uniform, dependable article. No, an individual grower probably could not take advantage of this need. The fact is that no demand exists for such an article at present—the need exists, and the demand could be created; but no middleman would undertake to do so without the assurance best furnished by a community that after a market had been created the supply would be forthcoming year after year."

Community Club Hall.

The people of the West Valley, Wahkiakum county, have formed a society to be known as the West Valley Improvement club and they are making arrangements to build a hall. The Constable brothers and sisters deeded a piece of land 100 feet square to the club on which to erect the hall. The site lies just north of the residence of George Burch. There is a good spring near the ground and the location is a convenient one for the people of that valley.

No Foundation for Attempted Scare

Law Does Not Require Legislative Legalization of Farm Loan Bonds

By N. W. DURHAM, Chairman of Spokane Committee on Land Banks.

Sensational articles have been published in some of the newspapers of the Pacific northwest declaring that the failure of the Washington legislature to pass a law legalizing investment of trust funds in the bonds of the new federal farm loan system would disqualify all farm loan associations in that state and drive the federal farm loan bank away from Spokane to some city in Oregon, Idaho or Montana.

These unfounded articles have created considerable alarm, and the Farmer has received a number of inquiring letters from officers and members of associations in Washington.

Now that the officers and directors of the Spokane district bank are in Spokane organizing the institution, that quarters have been chosen and the organization is working under the direction of the federal farm loan board at the national capital, all fears on that score should be allayed.

There never was the slightest warrant for the publication of the sensational canard. Nothing in the law, either directly or indirectly, requiries legislative legalization of the farm loan bonds. The legislature was remiss in its duty in failing to take the action asked by Secretary of the Treasury McAdoo and recommended by Governor Lister, but there was not the slightest danger that the national board would be so unreasonable and unjust as to penalize the farmers of the state for the negligence of their legislature.

There is only one provision in the law that would authorize the national board to disqualify a state from participation in the system, and that pertains to an entirely different matter. Under the heading "State Legislation," section 30 says:

"It shall be the duty of the farm loan commissioner to make examination of the laws of every state of the United States and to inform the federal farm loan board as rapidly as may be whether in his judgment the laws of each state relating to the conveying and recording of land titles, and the foreclosure of mortgages and other instruments securing loans, as well as providing homesteads and other exemptions and granting the power to waive such exemptions as respects first mortgages, are such as to assure the holder thereof adequate safeguards against loss in the event of default on loans secured by any such mortgages.

"Pending the making of such examination in the case of any state, the federal farm loan board may declare first mortgages on farm lands situated within such state ineligible as the basis for an issue of farm loan bonds; and if said examination shall show that the laws of any such state afford insufficient protection to the holder of first mortgages of the kind provided in this act, said federal farm loan board may

(Continued on page thirty-one.)

Dual Purpose

Applies to Autos and Cows Alike

There is much said in the live stock business about "dual purpose" animals. The sheep is, perhaps, the leader because he produces not only meat, but wool. Certain breeds of cattle are developed with a view to both milk and beef production. Likewise the hen, producer of eggs and chicken pie, and the medium-weight horse, with both draft and roadster abilities.

So it is with the motor vehicles. There is a field for the dual purpose automobile, the automobile that may be shifted from road service to power use by the use of a tractor attachment. Especially is this need felt on the small farm where the owner can not afford to have both a car and a tractor or truck.

Several of the manufacturers are now putting out attachments by means of which the small car, or in some instances, the large car, may readily be transformed into a farm tractor. While they are new in the field in practically all cases they are being tried out by many farmers and being watched carefully by others.

Regarding the actual experience of those who have used tractor attachments The Farmer is in receipt of a number of letters. T. B. Fredendall of Pamona, Cal., states that he pulled three eight-inch gang plows very successfully with the attachment for his small machine, and further states it will do more and better work than can be done with two horses. He consumes about a half gallon of 10 1-2-cent distillate per hour. He recommends it for a small place of from 20 to 60 acres.

Mr. R. E. Fisher of Woodland, Cal., is using a tractor attachment, which he claims is satisfactory in every way. He uses it mostly in orchard work, but has put in 30 acres of grain, doing all the work with the attachment, pulling six-horse farm tools.

Ed Walker of Stockton, Cal., writes that he finds his attachment satisfactory. He hauled two and one-half tons of hay to market and pulled three sections of a 15-foot harrow without difficulty. He expects to cut his hay with the attachment and he also is using one at Lindsay, Cal., in his orchard. He thinks it is practical for both small and large farms.

Dairymen Urge Agriculturist.

The Whitman County Cow Testing association in annual meeting at Palouse strongly urged the county commissioners to take steps at once for a county agriculturist. H. H. Curtis, Pullman, was elected president; A. G. Woodward, Fairbanks, vice president; and A. B. Nystrom, Pullman, secretary-treasurer. The association was organized two years ago, the members representing 380 cows and paying at the rate of $1.50 per cow for the testing.

Good Roads Movement

Finds Expression in Work of Legislatures

The money actually expended in public road building in the United States annually at the present time approximates $300,000,000, indicating the interest taken throughout the country in betterment of rural travel.

The northwest is rapidly coming to the front in road building, and greater activity than usual was noted in the sessions of the legislatures just recently adjourned. While the money appropriated and expended by the state highway authorities is much less in all instances than the aggregate of that raised and spent by the counties and county road districts, it is notable that the legislature of Idaho voted a highway bond issue of $1,000,000; that the Oregon legislature voted to submit to the people of the state at an election in June a $6,000,000 bond issue; and that the legislature of Washington continued in effect that state's two highway levies by which approximately $2,500,000 is raised annually for highway building under the general approval of the state highway department.

Secure Federal Aid.

In addition to these amounts, the legislatures of the three states passed measures under which federal aid amounting to several hundred thousand dollars will be accepted for the construction of what shall be called post roads.

Indicating the large sums of money raised by county and district levies or bonds for road purposes, the state of Washington will expend nearly $19,000,000 on highway construction during the next two years, of which between $13,000,000 and $14,000,000 will be raised by the smaller taxing units. In like manner, in the other states of the northwest the greater share of the money actually put into road construction and maintenance is raised by county or district.

Automobiles Make Funds.

Largely due to the fact that automobiles and auto trucks are such wearing users of the roads, the states are year by year increasing the license fee on them and placing the money so derived into funds for the benefit of the roads. Under the proposed Oregon bond issue, it is expected that the auto license fees will pay both interest and principal on the $6,000,000 bonds if they are voted. In Washington, money received from such licenses totals approximately $600,000 a year under the present law.

A Caterpillar "30" operating in cleared land in a river bottom of Oregon.

Milk Producers Win

Summer Prices Same as in Winter

The New York Dairymen's league and the big milk distributors of New York city have agreed on prices for the next six months and the threatened strike is averted.

The agreement is a compromise. The producers asked for summer prices somewhat higher than the prices that have ruled the past winter, but have agreed to a schedule that is the same to a cent as the average of prices for the six months ending March 31.

The dairymen's league make the following official announcement:

"Detailed arrangements have been made whereby the large milk dealers in the city of New York have secured their supply of milk for the six months April 1, 1917, to October 1, 1917, through the dairymen's league. It is not anticipated that there will be any shortage of milk in New York city due to the failure of dealers to pay league prices. The directors of the dairymen's league met in the Murray Hill hotel on March 19, and modified their original schedule of prices. In modifying these prices the directors took into consideration the situation and the conditions of international affairs."

The compromise is regarded as another victory for cooperation among the producers, as it has been almost an unbroken custom for milk prices to be materially lower in summer than during the winter.

The achievements of the dairymen's league are remarkable when it is considered that their members will get prices this spring and summer that will be 80 per cent higher than the corresponding prices in the same months of 1916. The figures are as follows:

	1916	1917	Originally proposed for 1917
April	$1.31	$2.04	$2.20
May	1.06	1.93	2.15
June	1.00	1.80	1.95
July	1.16	2.00	2.20
August	1.32	2.54	2.35
September	1.41	2.54	2.55

These prices are per 100 pounds of milk for the New York city district. Prices for the second district are 10c less.

During the current six months the following prices have been charged by the dairymen's league:

October	$2.[illegible]
November	2.25
December	2.25
January	$2.15- 2.20
February	2.15
March	2.11

Permanent Help

Should Have More Consideration

To the Editor of The Washington Farmer: The article by Dr. Bryan on the year-'round labor problem is thorough comprehensive and quite practicable. A good many farmers, especially those who are becoming well established, are doing just about as suggested in this article, and a few have been so doing for a good many years.

The permanent man should have more consideration at all times than the transient helper who comes only in the harvest or in the nice weather, has no permanent interest in the farm or farm life and does not have to face the snowstorm and wade the mud during the long and too often lonesome winter.

This suggests the plan of giving the permanent man and his family a few weeks' vacation. Nothing pays better. Your men will come back in most cases better satisfied with the farm life and will go ahead with new vigor. Why shouldn't he? This can generally be arranged after the fall rush or during the winter months. I suggest just here that it is a good thing for the boss sometimes to take his best hired man's place for a couple of weeks and realize how many details this helper really has to take care of. Often it will make him more considerate.

Farm wages should depend to some extent upon prices received for farm products. The writer has made a practice of this for the last two years, paying $5 per month more than the regular wage providing wheat be worth 80 cents or more when he sells. With wheat at present prices, the laborer should have even more consideration.

R. V. PERINGER.

Belmont, Wash.

RYE FOR SHEEP

Makes a Splendid Pasture.

Does rye make good pasture for sheep? Will it grow on alkili soils?

J. M. S.

Weston, Ore.

Rye makes a splendid pasture for sheep. It has the advantage that it may be sown late in the fall or early in the spring and in either case will make a pasture crop. It makes its growth at a time when few other plants will make sufficient growth for pasture. Rye will also grow better on alkali soils than most of the common agricultural crops. Land may contain too much alkali for the successful growth of rye, but if this is the case there is no need of trying any of the other ordinary forage crops, for they succumb to alkali much more quickly than does rye.

Organize for Farm Loans.

Officers of the Meridian Farm Loan association, including the townships of Lynden, Ten Mile and Marietta, were named at a meeting of the board of directors. R. E. Metcalf was elected president and B. S. Hillier secretary. Directors include Elvin Minor, W. H. Kaufman, Fred Urfer, A. E. Rusco, B. S. Hillier, Francis Edwards, R. E. Metcalf, D. F. Bliss and Nels Jacobson.

Entered as second-class matter January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction, and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

Farm Bank and Cooperation

President D. G. O'Shea of the northwestern district federal farm loan bank, now organizing at Spokane, tells The Farmer that he sees great possibilities along lines of financing the small farm through the workings of the loan system. But he sees something that might well prove more far-reaching than matters of money and mortgages. He sees a nationwide development of the cooperative movement in rural communities.

Under farm credit systems in some of the states that are trying it, loans may be taken by individual farmers without associating themselves together in a loan organization. This might seem to be a special merit of such system, but President O'Shea looks upon the federal requirement that local associations be formed before loans may be negotiated as a meritorious provision. He sees such association a community association, a group of farmers banding themselves together for a common purpose, meeting to discuss affairs pertaining to this purpose, uniting to carry out provisions of the law for their individual, but at the same time, joint good. And he also sees these farmers when they meet developing other subjects of common or community interest. He sees possibilities of social life being built up about the local farm loan association.

The spirit of cooperation is abroad in the land. Farming communities are rapidly grasping the possibilities. They are ready for any stimulus that may be received, and if the farm loan system proves the success that its newly appointed officers believe it will, it will at the same time certainly prove an object lesson in the matter of united, community effort.

What Is Education?

There is an age-old question, What is education? When does a young man cease to be ignorant and become educated? Is the college youth of today and yesterday one who in all probability can neither spell correctly, write legibly, nor speak readily and forcibly—is this final product of our present educational system truly "educated?"

The basic facts and methods, however, should be mastered—really mastered by thorough and continuous drill and review. This was the backbone of the common school curriculum of 50 years ago: reading, which included the ability to spell correctly all of the words met with in the vocabulary of the average business or professional man or woman, together with the ability to get at the meaning of a book or an article without waste of time or labor; writing—another of the lost arts of today—and arithmetic. Perhaps the schoolboy of today will compare more favorably with the average youngster of half a century back in this last essential than in any other, a fact which, if true, indicates that it is not the innate thinking ability of the individual which has deteriorated, but rather that relentless and unescapable drill of the little red schoolhouse which our grandfathers attended.

Farms of Europe Are War Victims

In the four northwestern states of Washington, Oregon, Idaho and Montana we have a population of only seven persons to the square mile.

Germany has 335 to the square mile. Belgium about 650, and England about 635.

When these figures are considered we glimpse the reason why the warring countries find it so difficult to feed their people in time of war. They are over-crowded, and there lies the deep, underlying cause of this terrific conflict.

Agricultural efficiency has been impaired by the war. The strength of the nations is at the front, and the soil is tilled by old men, boys, women and girls who have to work with run-down live stock and worn out implements and machinery. It has been found impossible to keep the land well fertilized, and the inevitable consequence is a diminished yield at a time when the fighting countries have their greatest need of food.

These conditions indicate a fairly long period of good prices for the products of the American farm. When the war is over hungry Europe will seek food wherever it may be found around the world. The run-down farms can not be restored in a week or a month. Probably two or three years will be needed to put them back to that stage of productiveness that existed when the war drums beat the great call to arms in the first days of August, 1914.

Telling the Extremes

The story about the man who makes a million dollars in a year is enticing to the paper, whether it be printed for town or for country. The great success, the wonderful accomplishment, is the thing that a man can write about and use exclamation points.

And yet these stories are not typical; they have their place in the every-day reading diet of a paper just as pepper has a place on the dinner table. Nobody eats straight pepper—it is a spice and helps digest the food. That is the way the story of remarkable and unusual success should be taken. They are true, but we all do not reach them. There may be favoring circumstances and surroundings which help bring the achievement about.

These extraordinary stories are merely as a sort of condiment to life. They are within the range of possibility for us all; however, the thing really most interesting is about the averages, to which most of us belong.

A Good Foundation

There were, not so long ago, days when canneries started up in communities without anything but enthusiasm as a foundation. Every once in a while one can find an old, disused building, erected on the spur of the moment, to can fruit and vegetables, and then it was found, too late to save the investment, that there weren't enough vegetables and fruit produced to support the institution.

Large organizations have learned that facts are the only safe basis for enterprises. For an example, before deciding to establish a cannery at North Yakima a concern conducted a campaign for tonnage. They met the farmers and growers at many gatherings, told them what they would pay for various articles, and signed contracts for definite tonnage.

There is nothing like facts to build on. Enthusiasm is a good thing and a necessary thing, but it must have the solid foundation to make it of permanent value.

Beautify the Place.

There is neither man nor woman in whom there is not some response to the beautiful. Sometimes the appreciation of "things as they ought to be" is so dulled that one may seem to lack it altogether, but it is not so. Unkempt premises—fences down, grass and weeds growing and dying about the buildings, trash lying about, the house or barn unpainted, the broken window unrepaired—these and kindred things result from listlessness or laziness and tend to create and perpetuate in one those characteristics which mean failure and worthlessness.

Well-kept premises—fences in order, yards spick and span with flowers blooming, buildings bright with color, no rubbish lying around—these and their like result from energy and ambition, and create and perpetuate the characteristics which mean success and worthiness.

Washington Gleanings

Loans asked by members of the 15 farm loan associations in Yakima county aggregate $500,000.

M. D. Rinehart has bought the Jonas farm of 370 acres at McKay from Clarence Smith for $100 an acre. The farm is all in crop.

The board of county commissioners of Kitsap county has entered into a contract with the state college at Pullman to furnish an agricultural or county agent.

A. L. Hill and F. H. English have purchased the George Harper farm of 240 acres, three miles northwest of Palouse, on the Colfax road, paying $18,500, or approximately $77 an acre.

Notice of election to a life membership in the American Poultry association has been received by W. K. Whitaker of the department of poultry husbandry at the state college at Pullman.

Mount Crawford farmers have been busy blowing stumps off the right of way on their roads on top of the mountain. They expect to open up about a mile of road this spring. The county is supplying the powder to blow the stumps.

Many new acres of prunes have been set out in Clarke county, following the big crop and high prices received during the last year. There will be a considerable amount of new acreage if prunes mature this year, particularly in the Felida district.

Officers of the fair association have asked the granges in Snohomish county to unite and make a Pomona exhibit at the county fair next fall. Meetings are being held with every subordinate grange in the county in the interest of the exhibit.

Extensive clearing of land has been carried on in the section of Lewis county around Chehalis during the winter months just closing. Many acres have been entirely cleared of stumps and roots and will be put under the plow for the first time this coming season.

A comprehensive permanent exhibit of pictures of prize-winning bulls, steers and heifers of America during the last season is being installed in Wilson hall, the agricultural building at the state college at Pullman, under the direction of Professor William H. Hislop, professor of animal husbandry.

Professor Walter Holt, for the last three years principal of the Richland high school, has resigned to take the position of county agriculturist of Okanogan county. Professor Holt is a specialist along agricultural lines and has done much for the Richland high school in educating the boys in practical farming methods.

Two west side boys who enrolled in the agricultural course at the state college have been awarded first and second prizes as a result of the collegiate butter judging at the Portland dairy products show. L. C. Callow of Elma was the winner of the first prize and George Hinman of Everett was the winner of the second prize.

What Others Say

Wallace's Farmer: The inquiries concerning grass seed mixtures are coming in very rapidly now.

Dakota Farmer: Farms that are permanently profitable usually keep a man busy the year around.

Farmers' Mail and Breeze: Careful planning is needed in a woodlot just as much as in the grain fields.

California Cultivator: The world is crying for food. Actual starvation is facing millions. There is a great duty before all America.

Hoard's Dairyman: In short, do not hesitate to purchase a second-hand dairy bull if he is well bred and has proven himself a good breeder.

Rugged, Hardy Work Wagons

These Overlands are as keen for the work of farm hauling as for the constant hard usage in commercial delivery work.

The Overland 1200 pound Delivery Wagon is built on the reliable time tested 35 horse-power chassis that made Overland famous the world over.

It is electrically equipped for lighting and starting and has every convenience.

The body is big and has capacity for larger bulk freight as well as 1200 pounds of weight.

It is a comfortable easy riding car as well and may be had with two *extra three-passenger removable seats for fifteen dollars additional if desired.* With these extra seats you have a comfortable eight passenger car.

It is a great money maker and time saver on any farm.

At the price $850 it is exceptional value for it shares proportionately in the economies of our vast production of the most comprehensive line of motor cars ever built by any one producer.

The smaller cars either panel or express type are exceptional values and equally sturdy and reliable for lighter farm hauling.

See the nearest Willys-Overland dealer at once and have him show you these wagons and the beautiful new line of passenger cars.

Farm Home Orchard and Garden

Enough Fruit Can Be Raised on Half Acre. Farm Garden Is Not What It Should Be

VIII.

The orchard and the garden belong with every farm home. In some cases the orchard furnishes the principal crop and all other things are secondary. When this is the case, so exacting are the demands of the specialty, that the general farm conditions are entirely subordinated to the main issue. Still the minor interests ought not to be overlooked. In a small but very useful way a minimum of live stock may be fitted into an orchard farming system without disturbing the main issue and serving a good purpose, at all times, and in the periods of low prices or crop failure, helping to tide over. Swine are quite adaptable to the fruit farm. Dairy cows, at least for the home supply, should always be included. Poultry may with advantage be fitted in on a considerable scale. In each and all of these directions the college may be a coadjutor and next friend. But on the main orchard crop its help is absolutely indispensable. The orchardist who does not keep in constant touch with his agricultural college is foolish. In the matter of varieties, of fertilizing by manure or commercial fertilizer, or green manuring, in dealing with all pests, insect and fungus, in pollination problems, in questions of harvesting and marketing, the college is a clearing house through which every orchardist should receive and contribute all useful knowledge in both theory and practice. And miscarriage of plans or methods should be submitted and discussed not alone for the sake of the personal profit, but of the general welfare.

So far as the small farm orchard and the gardens are concerned, the college is in a position to render useful assistance. I have for a long time been the advocate of a very small farm orchard in eastern Washington and on the larger farms in western Washington. A half acre is enough. Needless to say that the varieties of apples, pears, cherries, plums, prunes etc., should be so selected as to furnish as nearly as possible a continuous supply of fresh fruit from the earliest date possible to the latest period, with fruits that will keep throughout the rest of the year. In planning for this you can and should ask for help. If it is to replace an old orchard, state every phase of the problem when asking for assistance.

The garden is much more meager than it should be, both in the extent of its varieties and the excellence of the ones selected and the arrangement of time and method of planting, etc. The opportunities for help in common vegetable gardening are especially neglected.

The ornamentation of the yard and grounds with suitable trees and shrubs and the plantation and cultivation of flowering plants offer another interesting and useful field of help which is almost wholly neglected by the farmer and the farmer's wife. The college not long ago distributed, gratis, in the dry belt more than 20,000 trees and shrubs and gave careful direction for plantation and care so as to make the home in the semi-arid belt more beautiful and comfortable.

E. A. BRYAN.

IN HIS NEXT ARTICLE DR. BRYAN WILL TELL HOW THE FARMER IS BEGINNING TO MAKE USE OF THAT USEFUL SERVANT, THE GAS ENGINE, AND HOW THE FARMER'S SON, AS WELL AS THE FARMER HIMSELF, NEEDS TO KNOW SOMETHING DEFINITE AND HELPFUL ABOUT FARM MACHINERY GENERALLY.

WINTER WHEAT

Needs Rest Period Before Heading.

To the Editor: Will Red Russian wheat, sown late in the fall of 1916, and which does not sprout till March, 1917, head out in 1917 and make a crop? U. P.

The above question was referred to E. G. Schafer, agronomist at the Washington State college, who replies as follows:

I believe there is practically no danger but what winter wheat when seeded in the fall will head out and mature providing it comes through the winter successfully. I believe this is true even though it does not come up until spring. It seems to be necessary for winter wheat to be subjected to severe colds or at least a rest period before it will head out. This is, most winter varieties when planted in the spring will not head out and mature a crop. On the other hand if it has lain in the soil during the winter and is uninjured it should head out and mature, but possibly somewhat later than if it had had a better start.

Save 50% On Your Tire Bill

BEFORE

AFTER

GET 3,500 more miles from your old tires! McMonies rebuilds your old casings into new guaranteed tires, at half the cost of new ones. This wonderful new process has saved motorists of the Northwest thousands of dollars.

Guaranteed for 3500 Miles

—In writing—3500 miles without a puncture is the signed guarantee you get with every McMonies rebuilt tire.

1-2 The Cost of New Tires

Late Season Helps Fruit

Buds Are Held Back by Cold, Minimizing Chance for a Loss by Frost Later in the Spring After the Buds Are Developed

KENNEWICK, Benton County, Wash., March 30.—Spring is extremely late, the buds on the trees have not started to swell yet, and the alfalfa has started to grow in only a few places. The wheat started out all right but the late spring does not make conditions look promising. The late spring holding the fruit buds back is a benefit to that industry. Generally the farm work will be two or three weeks later than usual.

LEE M. LAMPSON.

Plow and Harvest Together.

BRICKLETON, Klickiat County, Wash., March 30.—Spring is three weeks late in this section. Farmers are just beginning to stir the ground. Hard frosts have kept everything at a standstill all through March. Spring plowing and seeding are usually done from March 10 to May 1, depending on the altitude. In a distance of 15 miles here the altitude varies from 1200 to 3200 feet. The farmers on the lower levels farm a month earlier than the ones on the high elevation. Fall plowing and seeding is done according to what time the fall rains come. A few seed in the dust. Summer fallowing is done from April until July, depending on the conditions of the ground. Two years ago I saw a large farmer above me, running a plowing outfit and heading grain at the same time, but that is unusual. Harvest generaly comes in July and August. Winter wheat is uncertain, it is impossible to judge what it will be at present. Work is now commenced on a bulk grain elevator of 100,000 bushels capacity at Alderdale, a station on the S. P. & S., 16 miles from here, our nearest point. F. W. Sanders, manager of the present warehouse is constructing it.

BERT H. FAULKNER.

Little Planting Done.

SHELTON, Mason County, Wash., March 20.—Just as soon as the soil is not too wet, plowing begins. Some years this condition comes in February, more often in March. This winter and spring but little plowing has been done and the prospects are that most of it will be delayed until in April. Occasionally plowing is delayed in May. The larger the tracts under cultivation the earlier plowing begins if conditions are favorable. Our sandy soils offer the first invitation to the plowman. The many varieties of soil and the many small tracts are not favorable for the usual systems for plowing. Summer fallowing is a rare process and but little fall plowing is done. Potatoes are harvested any time from June 1 until the next spring just before plowing. Hay is harvested in July; usually better hay could be had if harvesting was not delayed by June rains. The spring is late and very little planting is done. In many cases fall cropping has has resulted in a total failure.

SCOTT HAYES.

Land Washing a Menace.

COLFAX, Whitman County, Wash., March 18.—Spring here is late. Farmers usually are plowing by this time. The snow is hanging on and the nights are cold. Drifts are from 4 to 10 feet deep. Fall wheat seems about normal and will come through the winter o. k. of the present freezing and thawing does not injure it. The acreage is away below normal, owing to the dry fall. Cattle and hogs are scarce and abnormally high. Summer fallowing progresses through the greater part of the summer, owing to the methods employed. Some disk early and plow late, others plow early and cultivate late. Both methods have their advantages and disadvantages. Early disking, followed by late plowing without further cultivation, keeps the ground from "washing" so badly in the spring, but the yield is a little less per acre than where early plowing and late cultivation are followed. I believe that in the long run the former method is the preferable, as early plowing followed by intense cultivation pulverizes the soil to such an extent that the spring thaw washes the soil on the hillsides as deep as it has been plowed. If the present "washing" is not averted, it will be only a question of time until the hills of the old Palouse will be barren.

E. C. HUNTON.

Cold and Dry.

TOPPENISH, Yakima County, Wash., March 22.—Spring in the middle Yakima valley is rather later than usual. Fruit buds show very little development at the present time, while hardy plants, such as alfalfa and clover, have as yet made no growth. The ground is unusually dry at this time of year, but spring plowing and seeding are rather more forward than usual. The nights have been very cold, the ground being frozen until the middle of the forenoon almost every day during the month of March. Much high wind has prevailed, and very little moisture has fallen. The snowfall in the lower foothills is lower down than usual at this time of year, yet it is very light, and with a few days' warm wind will entirely disappear. Most fruit trees show an excellent bud formation. A larger acreage of potatoes than usual will be planted this year, while the acreage of corn and small grains will be greater. The acreage to alfalfa and other hay crops will be smaller than usual. A larger percentage of the new land will be planted to potatoes or grain. While the snowfall in the lower mountains is light, that in the higher elevations is almost normal; that, taken together with the amount of storage water which will be available, seems to indicate that irrigation water will be fairly plentiful. The acreage of melons will be smaller than usual, while a considerable portion of the surrounding territory, perhaps 3000 acres, in the vicinity of Toppenish and Sunnyside will be planted to sugar beets. This is a new crop for this section of the country. The interest in highly bred stock is growing at a very rapid rate and is being influenced as much as any other way by the formation of pig clubs and other live stock clubs by the students of the various schools. There have been numerous sales in the vicinity of the middle Yakima valley this spring. Nearly everything offered has been sold at a good price. Ordinary dairy cows, mixed breeds and mixed in quality, have brought from $60 to $100; horses and mules of medium and heavy weight are in great demand and are finding ready sale at excellent prices; hogs are the highest ever known in the valley. Beef cattle are scarce, while sheep bring almost any price that the owner cares to ask for them. A considerable number of tractors are being purchased by the farmers this season, and will be tried out for ordinary farming purposes as well as for hauling heavy loads over the roads. The use of light trailers on automobiles for hauling light loads is increasing very rapidly. A great many dairymen are bringing their milk and cream to town in this manner, and on the return trip take back 800 to 1200 pounds of supplies.

C. A. WYCKOFF.

Work Must Be Rushed.

RITZVILLE, Adams county, Wash., March 23.—The various branches of farm work in the spring are commenced with seeding just as soon as the frost is out of the ground and the soil reasonably dried so it will not stick to the implements. Summer fallowing is continued until well along in June. Some say early summer fallowing is best, but it involves a combat with the weeds which sprout and grow until harvest time. Disking the soil and late plowing is a very good way to get the weeds. This spring is at least three weeks late. For five days a severe storm from the southwest raged recently, starting with snow and running into a duststorm. There is little or no fall plowing done in this community. Fall seeding is done as soon as enough rains fall to sprout the grain. Last fall there were no early rains and people who seeded in the dust have to reseed again. Farm work this spring will be done in a rush as the earliest seeding promises best results. Harvesting crops varies about one month owing to the season. As a rule we start on fall grain after July 4.

JACOB HARDER.

Latest Spring on Record.

NEWPORT, Pend Oreille county, Wash., March 24.—Spring plowing as a rule starts in the Pend Oreille valley from March 15 to April 1. Seeding is done from the first of April to the 15th of May, and fall plowing can be done at any time after the crops are taken off and the best results are had by seeding in August or early September. Summer fallowing is not practiced as there is ample moisture for all grain crops. Harvesting starts the first of August and is continued through the month. The present spring season is the latest of which any record is had. There is an average of 15 inches or more of snow on the level today, March 24. Snow in this section as a rule is gone from the open lines on the first to the 15th of March. This year it will be after the first of April before the ground is bare. This condition is usually of great advantage to fall grains as well as hay crops, but it is a serious handicap to the spring sown crops. It will have a tendency to reduce the yield of wheat and oats because of the short growing season. Farm work as far as I can determine at this time will be about normal except in the case where farmers failed to get their fall plowing done, and such will have a serious setback by reason of a late crop.

CHARLES M. TALMADGE.

Seed Early in Spring.

HUNTERS, Stevens county, Wash., March 27.—In this section farmers invariably try to do their spring seeding as soon as possible, for any grain crop to do well should be pretty well along by the time dry weather sets in. We usually have more or less rain through April and May and there is generally considerable rain in June, but July and August are dry. Therefore the spring seeding is done as early as the season will permit. This year the season is late. There will be more spring plowing than usual due to the dry falls. As regards fall powing many wait until after the first fall rains which means plowing in Octobef usually. But the fall rains are uncertain and often inadequate and when they come late there is but little time for plowing before it freezes up. Hence there is some dry fall plowing done in September by those having much spring work to do. While not so good it leave less to be done in spring. There is not a great deal of summer fallowing done here. Often it grows up to chess, a troublesome weed in the subsequent crop. With an annual precipitation of 18 inches obtained here there should be no need of summer fallowing.

ELIAS NELSON.

Crops Used at Home.

NEWPORT, Pend Oreille County, Wash., March 1.—Hay, timothy and clover are the principal farm crops here. Next, I would say, come oats, wheat, cream, beef and poultry. Timber, of course, is the big product of the country, and the lumber industry consumes practically all of the farm products, and most of the farmers' products are marketed locally.

CHAS. M. TALMADGE.

Three Weeks Late.

MONTBOURNE, Skagit County, Wash., March 17.—Spring plowing is generally done in March and seeding in April. There is very little fall plowing and no summer fallowing. The hay crop is ready to cut about the middle of July and the oat crop is harvested in August and September. The spring is about two to three weeks late. Very few fall crops are sown here.

J. B. PETERSON.

Save Your Thresh Bill

YOU can do it with a Red River Special threshing outfit. Good work without breakdowns. The Red River Special saves the farmer's grain. *Beats it out.* "Saved enough more of our grain over other machines to pay our thresh bills," say Andrew Scott and 17 other farmers of Kerwin, Kansas. Buy or hire a

Red River Special

Beating shakers toss and beat the straw just as you would by hand. 90 per cent of the grain is separated at the big cylinder—by "the Man Behind the Gun." Low upkeep and repair cost. Frames made of seasoned hard maple lumber. Steel used where iron lacks strength. Tell your thresherman to get a Red River Special. It means better threshing and less lost time for you. Or write and learn about our "Junior" machine. Small enough to make threshing your own grain pay. *Write for the Red River Special Paper.*

$175--It Might as Well Be Yours--Think a Moment

Think of the many times your friends have earned prizes by entering contests in which you might just as well have participated. You were quite certain their exhibit at the fair was inferior to that which you had at home; you were satisfied, and are now, that you are just as bright and capable as many of your more successful acquaintances. You have let them forge ahead merely because you failed to embrace the opportunity—the same opportunity they profited by. There will be cases like this in the

FARM INFORMATION CONTEST

Don't let it escape. Get our contestants' helpful outfit and start at once
On April 19 this first prize drops to $150---Read the Rules---Answer these questions

46. From what fruit are raisins made?
47. For what product advertised in this paper is the phrase used: "Chases dirt?"
48. Will an iron bar measuring when ice cold 1-inch wide, 1-inch thick and 12 feet long contain more than 144 cubic inches when its temperature is raised 100 degrees?
49. Is a subscriber of this paper guaranteed against loss in dealing with its advertisers?
50. What is the meaning of the words "E. Pluribus Unum," found on many of our United States coins?

$800—IN CASH to Be Paid—$800

We will positively give EIGHT HUNDRED DOLLARS in cash awards (and more in event of ties) to the winners. As explained in the rules which follow, there will be five questions run in every issue of the Farmer for 12 weeks. The last five questions will appear in the issue of April 19.

Open to Four States

Contestants must be residents of Washington, Oregon, Idaho and Montana.

Five Questions Each Issue

The contest will be composed of 60 questions. Five will be run in each issue of the Farmer for 12 issues.

Answers to each question except No. 45 can be given correctly in from one to 10 words and will be given a score of 100 if correct. Answers to question No. 45 will be limited to 100 words each, and will be graded as to the common sense and general knowledge of farm conditions shown by the contestant without regard to spelling, grammar or penmanship. As with the other 59 questions, a perfect answer to No. 45 will be scored 100.

Perfect Score Is 6000

The contestant who comes nearest to a score of 6000 and complies with all the conditions of the contest will receive the first prize; the next nearest, second prize, and so on. In case of a tie each tying contestant will receive the full amount of the prize.

There are 35 prizes, as follows:

$150 is amount of First Prize. **$50** is amount of Third Prize. **$10** is amount of Fifth Prize.
$100 is amount of Second Prize. **$20** is amount of Fourth Prize. **$5** each, Sixth to Tenth Prize.
$2 each, Eleventh to Fifteenth Prizes. **$1** each, Sixteenth to Thirty-fifth Prizes.

OTHER RULES

The answers will be passed upon and graded by a fair-minded, thoroughly competent judge.

Two weeks will be allowed for sending in answers after April 19, 1917, date of the issue containing the last five questions.

Remember, your failure to answer all the questions will not necessarily exclude you from the contest. There are 60 questions to be answered and it is not reasonable to suppose that all our prize winners will attain a perfect score. Your answers must all be sent in at the same time. Do not send any answers until you have completed the full list or as many as you can answer.

Those who use our CONTESTANT'S HELPFUL OUTFIT will be able to send in their complete set of answers without delay, there being no need of their waiting for the questions as they appear in The Farmer from week to week down to the final issue of April 19. In order to get as prompt returns as possible from those contestants who use our CONTESTANT'S HELPUFL OUTFIT, extra inducement is made in the prize awards. SEE ENLARGED PRIZE LIST.

Announcement of prize winners will be made and prize checks mailed as soon after close of contest as possible.

If any point is not clear, do not hesitate to write the Farm Information Editor.

All answers must be mailed on or before midnight, May 3, 1917, as shown by post-office dating stamp on your envelope.

ORDER COUPON—If your subscription is paid ahead, the time paid for herewith will begin at the date to which you are now paid.

A Valuable Aid to Contestants

One complete CONTESTANT'S HELPFUL OUTFIT, including all of the 60 questions and instructions and helpful warnings as to answers which would be wrong and the correct answers to some of the most difficult questions, is truly a big help to the contestant.

To each contestant who sends in a new renewal or an extension of his subscription at the time of registering for the contest, this complete Contestant's HELPFUL OUTFIT will be sent in combination.

We feel that those beginning on the contest will find these suggestions as to what to avoid distinctly useful. The equipment supplies in convenient form everything needed to enable you to apply your ability to the best advantage and will contain information enabling you to answer the most difficult questions correctly.

Puts Questions in Reach of Children

This CONTESTANT'S HELPFUL OUTFIT puts the solution of the questions in the reach even of the children, it being the purpose to make it possible for everybody in Washington, Oregon, Idaho and Montana to compete. This outfit includes, besides general information about the plan of the contest, the following:

Guide against wrong answers, which includes either correct answers of more difficult questions or easy references as to where to find the correct answers; and blank forms on which to write your answers in such a way that there can be no confusion when your answers are taken up by the judge for scoring.

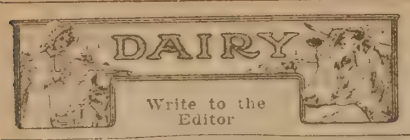
It will be worth considerable to you to be assured that your answers are reaching the Farm Information Editor in such form that he will know in every instance exactly what question you intended to answer. This CONTESTANT'S HELPFUL OUTFIT will make it possible for you to

Begin Work at Once

On account of the large number certain to send for our CONTESTANT'S HELPFUL OUTFIT, thus making it possible for them to answer the entire 60 questions without delay, it is deemed advisable to offer some special inducements to secure prompt returns from this particular class of contestants. By securing the early replies of those who are thus supplied with the entire 60 questions we will be able to have their papers carefully scored before the final rush of answers toward the end of the contest.

Understand, it is not absolutely required that those who use our CONTESTANT'S HELPFUL OUTFIT send in their replies at once, but, in order to induce them to get in early, the following plan for enlarging the awards to those prize winners whose answers come in early is offered:

ENLARGED PRIZE LIST—$800 IN PRIZES—ENLARGED PRIZE LIST



For those who use our CONTESTANT'S HELPFUL OUTFIT.

Thirty-Five Prizes	Amt. of prize if winner sends in answers during 1st period. Feb. 1 Feb. 21	Amt. of prize if winner sends in answers during 2d period. Feb. 21 Mch. 14	Amt. of prize if winner sends in answers during 3d period. Mch. 14 April 5	Amt. of prize if winner sends in answers during 4th period. April 5 April 19	Amt. of Prize for winner who does not send in answers before April 19
First Prize	$300.00	$225.00	$200.00	$175.00	$150.00
Second Prize	200.00	175.00	125.00	110.00	100.00
Third Prize	100.00	87.50	62.50	55.00	50.00
Fourth Prize	40.00	35.00	30.00	22.00	20.00
Fifth Prize	20.00	17.50	15.00	11.00	10.00
Sixth to 10th Five prizes each	10.00	8.75	7.50	5.50	5.00
11th to 15th Five prizes each	4.00	3.75	3.00	2.20	2.00
16th to 35th 20 prizes each	3.00	2.50	2.00	1.50	1.00

To secure our CONTESTANT'S HELPFUL OUTFIT, fill out order coupon on this page and send it in to Farm Information Editor, with your personal check, money order or 2-cent stamps, for $1.00 for one year or $1.50 for three years.

Costs Increase

Faster Than Do Dairy Revenues

Looking back upon his 32 years of experience in farming, James Nelson of Renton Junction, Wash., does not think the rancher, particularly the milk producer, of today stands as good a chance to make money as did the pioneers. The explanation, according to Mr. Nelson, is that production costs have gone up, without an equivalent rise in the price paid the dairyman.

"You can figure it our yourself," he comments. "Today I am selling an average of eight cans of milk, for which I receive $2 per can. Here is what it costs me to produce this milk: One-half ton of hay, at $16 per ton; three sacks of malt, at $22 per ton; two sacks of middlings, at $28 per ton; 500 pounds of beets—probably it costs me $1.75 to produce these. I pay my milkers a total of $4 a day. This makes the production cost of my eight cans of milk close to $19.75, and I am not figuring in interest on my investment, taxes or wages for myself and my wife.

"Years ago," Mr. Nelson continued, "We used to take the milk can into the barn and pour the milk directly into it. We produced what we considered good clean milk, but there were none of the modern requirements and there was no inspector to tell us how to handle milk. One at a time these things were added, and as each new requirement went into effect we received a temporary increase for our milk. Then the price would drop back, so that in the end we find ourselves paying out a lot more for labor and equipment than we did in the beginning, without a corresponding increase in the price we are paid."

Mr. Nelson does not feed silage, as he finds he can get as many roots, acre for acre, as he could get of corn silage, and he considers the former full as good for his purpose as the latter. The Nelson farm comprises 145 acres, mostly bottom land. From 90 to 100 bushels of oats can be produced on this kind of land, and potatoes and corn also do well. Speaking of corn, eight rows of sweet corn planted in the Nelson garden show the value of using acclimated seed: four rows were planted with seed grown on the farm and the other four with the same variety, bought at the seed store. There was a difference of 18 inches or so in the height of the stalks, almost throughout the season, and maturity and yield correspond with this difference in vigor.

Silage Not Injured

By Frosting of Corn in the Field

By HORACE ADDIS.

Last fall much of the corn in the Willamette valley and elsewhere in the northwest was struck by a hard frost before it was mature enough for silage. Some dairymen countermanded orders for silos, because they considered the corn badly damaged and the general opinion was that the silage put up would be of much less than the average feeding value. To the surprise of dairymen generally this has proved to not be the case. I have visited a large number of the breeders and dairymen of the valley and find that the universal experience is that the frosted silage is better than expected while, in some cases, the declaration is made that the silage is as good as or even better than any they have had before. Whenever the corn was fairly well matured when the frost struck it, and especially if water was liberally used when putting it in the silage is of an excellent quality. One prominent Jersey breeder let his corn stand for two weeks after the frost struck it and he found that it matured considerably in that time. His silage is sweet and good and the cows eat it with relish.

Outside of the fact that the fodder blades did not cut up quite as well as those of corn with more life in it, and as there is perhaps a very slight waste on that account, as the larger pieces of blades are not eaten quite so readily, there seems to be no damage to the silo and, in some cases, I have found the frosted silage sweeter, eaten more readily and the cows eating larger quantities than other silage in the same neighborhood put up before the frost, but put up rather green and therefore rather sour.

I have found the same experience in the few places I have visited outside the valley, and it would therefore seem that there should be less fear of frosted silage corn; that it is better to let corn mature more and taken the chance of frost than to put it in the silo too green.

IDAHO CHEESE WINS

High Class Product Is Shown.

The highest score in both export and home trade classes of cheese was captured by Idaho cheesemakers exhibiting at the Northwest Dairy Products show at Portland, Oregon, last month. Cheese was entered from factories in Idaho, Washington, Oregon, California and Wyoming, and the competition was very keen.

The medal winning cheese in the home trade was produced by Gustave Kuntz of Buhl, Idaho. It was a very smooth medium open textured milk and clean flavored chese. The moisture content was 36.8 per cent, which is moderate or even low for this type and suggests that Mr. Kuntze would not be at all inconvenienced by a 40 per cent moisture standard.

The high scoring cheese in the export class came from the Boise Co-operative Creamery Co.'s Eagle factory. This sample was firm, well matured and had a fine, sharp, nutty flavor. It was a very fine example of the slower maturing type and had a moisture content of 32.4 per cent.

Idaho as a state had a larger per cent of her factories represented than any other state exhibiting.

Cheese has been found such a satisfactory method of marketing the butterfat from so many sections that the quantity manufactured is increasing steadily and is certain to increase more rapidly as dairying is more extensively practiced.

AS TO FALL GRAIN

Will It Do Well Sown in Spring?

To the Editor of The Washington Farmer: Will winter wheat or rye sown in the spring head and mature the same as spring wheat or rye? Would it be apt to make as good a crop as if fall grain had been sown in the fall? Some of the farmers here claim that "all that is necessary for fall grain sown in the spring to head and mature is to get it in the ground early enough so that the ground will freeze a couple of inches before spring.

I have a quarter section and would like to sow the fall grain (rye) if the chances are nearly equal for a crop; but if it seems best I will sell the fall rye for what I can get and buy some spring grain. D. E. F.

Mesa, Wash.

Answer by Leonard Hegnauer, State college extension specialist.

There seems to be a great deal of variation among varieties of grain with reference to their ability to grow when sown in the fall and in the spring. Others are both winter and spring and will head out and produce a crop when sown either winter or spring. A strictly winter variety, however, is not safe to sow in the spring, but it may produce a crop the first season even if sown late in the winter. For spring sowing it is better to use the spring varieties, and I should prefer this wherever it is possible to obtain them.

Junior Agricultural College.

The commercial club of Puyallup is discussing the establishment of a Junior Agricultural college in the Puyallup valley.

List of Awards Coming

Many Figure Losers Write Cheery Letters

By THE CONTEST EDITOR.

An early issue of the Farmer will contain the list of awards in the figure contest and the names of all those who tied on the correct solution, 6971.

The contest editor is pleased to receive letters like the following three communications selected from a large number of the same character from losers in the figure contest:

Baby Tore Up Charts.

To the Contest Editor: Congratulate me, please. I came just in one of having to trace the dotted lines, as my answer was 6972. The girls say I've wasted enough time on the puzzle now to crochet lace for a trousseau. But say it was fun and I've got the paper cinched for three years.

It helped to pass away a lot of time in these snow-locked hills. And I don't feel half so bad about losing out as I will if I forget my new incubator just once. The adding was good training to help me remember. Anyway I'm glad they're all added and I can go to work.

No, I'm not such a poor mathematician, but I added all the charts and set the answers on a tablet back—didn't try to remember what they were and the girls used the tablet back to mail a photo! So I added up a lot more charts and baby tore them up, so my answer was decided by the last three charts, one was 6963 with a 9 in doubt, one was 6971 with a 2 in doubt, and one was 6974, so I was pretty close to it.

MRS. MARILLA KIDWELL.
Garfield, Wash.

Far From "Coast of Norway."

To the Contest Editor: "Everybody's Doin' It!" You say 6971 is the correct solution in the figure puzzle. I do not believe my figures are infallible, but I do believe I have worked the puzzle a "hundred" times and always with the same result (6972).

You have left me struggling in a maelstrom of mistaken identity far from the coast of Norway. Well, I send congratulations to you, Mr. Editor, to the winners and I also congratulate myself because regardless of the high cost of living I will receive copies of the Farmer to and including the 21st day of December, 1920. Very truly yours.

JACK TIMMONS,
Havre, Mont. (An Also Ran).

A Case of "Nerves."

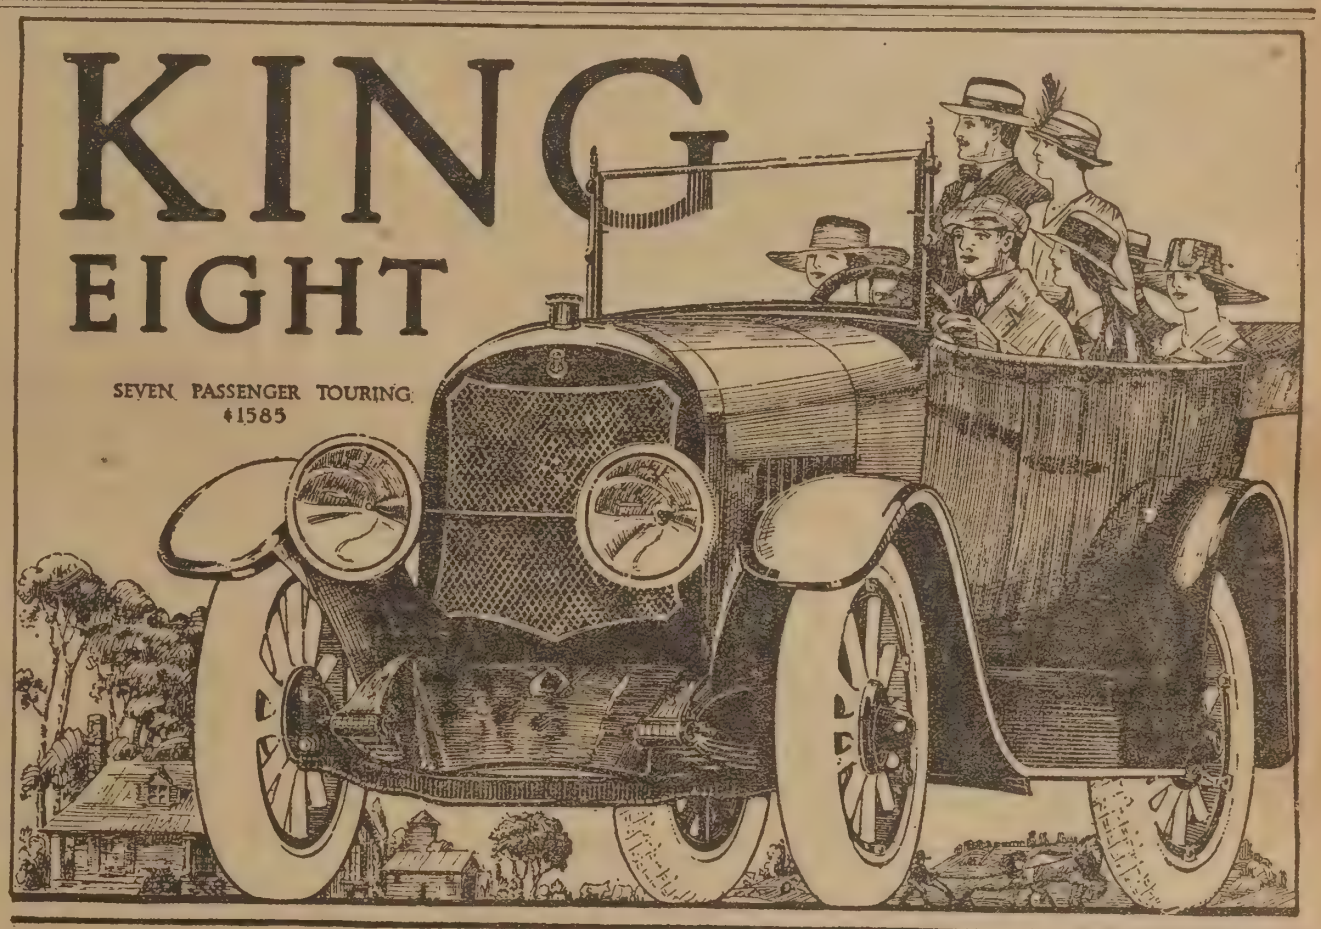
To the Contest Editor: I certainly believe you when you say you have no more knowledge as to the possibilities of the dot problem than the rest of us. I am glad we have only three trials. More would cause nervous prostration to at least one contestant. Sincerely yours,

MRS. C. D. HANCE.
Eureka, Mont.

Mrs. Hance also describes the way she feels about the contest in the following verse:

THE WAY I FEEL ABOUT IT.

I did not think one had to be so very smart
To add up the figures on the figure chart.
To get every one but not any twice
Was the trick, then they added up nice.
It was fun and it helped to while away
Many an hour of winter's cold day.
But, O the puzzle with all those dots
Where shall I begin and where shall I not.
Which way shall I turn, now where shall I go;
Can I catch the dot or am I too slow?
These questions come to me o'er and o'er
As I follow a line trying to get four
Instead of three; the dots play out;
I must stop short.
I get nervous and mad and stop with a snort.
"I might as well quit, I can never win."
Then I cool off again and go at it again.
For my chances are as good, yes, every bit,
As any of the others, so I'm not going to quit.
If the editor decides under the conditions laid down
That I'm not the winner, I hope I'll not frown.
But if I have the most dots and win the big prize
Our roof must be weighted or else it will rise



Get Crops In On Time

BE ready for the soil and weather conditions with a La Crosse Happy Farmer Tractor. Don't pay the cost of waiting for slow work with a team. Here's the tractor that you **CAN** afford. Costs but little more than the price of a good team—will replace 6 to 8 horses on all field work.

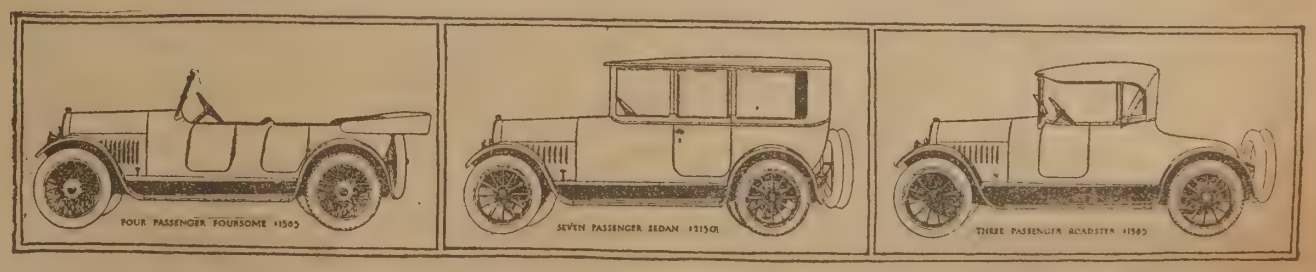
La Crosse HAPPY FARMER Tractor

Model "A" pulls two plows practically anywhere—weighs only 3,500 lbs. 1,500 lbs. guaranteed drawbar pull—16 h. p. on all belt work. Burns gasoline—or kerosene with special attachment.
Model "B" a perfect **Kerosene** Burning Tractor. Twin Cylinder Motor—Perfect Cooling System—Mechanical Oiler—All gears steel cut and inclosed—every part easily accessible. One-piece unbreakable cast steel frame—Contracting Clutch—**Hyatt Roller Bearings**—Self-steering—Turns square corners.
Write for Catalog, also ask about La Crosse Tractor-Drawn Implements. **Live Dealer Agents Wanted.**

LA CROSSE TRACTOR COMPANY, Dept. 18, MINNEAPOLIS, MINN.
We have a Distributor in your vicinity for prompt service.

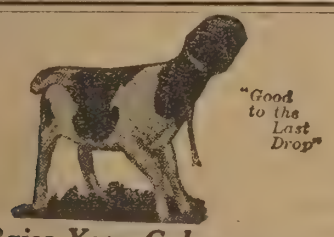
Low cost of operation and upkeep, coupled with high power and reliability, have made the King a favorite car among Farmers

THIS Company has found that Farmers want all the style, finish, comfort, and luxury required by the city man, but are interested in those qualities *only* after a car's mechanical superiority has been proved.



The KING chassis for 1917 is substantially the same as the one which earned this Pioneer Eight a reputation for efficiency, power and economy all over America and in fifty-two foreign lands. It was this chassis which made the famous sixteen KING stock car road tests last year, adding many notable chapters to automobile annals.

This remarkable mechanism embodies a practical experience possessed by few manufacturers and represents the eight cylinder V-type motor at the point of its highest development. It is the most economical car for its power now being offered and is built to endure the hardest service for many years.



Sixty horse-power, Model EE may be had in four luxurious body models; Touring, Foursome or Roadster, $1585; Sedan, $2150. Prices F.O.B. Detroit. There is a KING dealer in your vicinity. Write for descriptive matter today and let us tell you where to find him when you are ready.

All prices quoted may be advanced at any time

Care of Sow

Look to the Housing and Feeding

By E. J. FJELSTED,
Field Animal Husbandman, University of Idaho.

Why does the farmer save only 50 to 65 per cent of the pigs farrowed in the spring? This question is at all times paramount with the producer, and especially is this true when hogs are selling for 15 cents per pound in the open markets. With this question in view, the following suggestions are offered to help the farmer solve this important problem.

The most important factor tending toward a higher per cent loss is improper housing. Before farrowing, the quarters should be thoroughly cleaned and disinfected. This precaution will materially reduce the canker sore mouth trouble so common among small pigs, and lessens the danger from internal and external parasites. See to the quarters that they are dry, and provide sufficient bedding to keep the sow off the bare floor, but not enough to allow her to make a deep nest. Provide a fender around the pen to prevent the sow from lying on the pigs. A strip of 2x6-inch fastened to the wall about six inches from the floor will serve this purpose very well.

Next in importance, and, if carefully studied, will help materially in the solution of the problem, is the feeding of the sow before and after farrowing. If you have some roots, such as mangles, carrots, sugar beets, etc., that are not frozen, be sure to make use of them in your rations. The roots will tone the system and reduce the usual troubles at farrowing time to a minimum. For the best results, the sow should receive roots some weeks before farrowing time. A small amount of grain should be fed in connection with the roots. Do not feed the sow anything except warm water for at least 24 hours after farrowing. At the end of this period, feed her some thin slops, the solid part composed of bran or shorts. Get her back to full feed gradually. A heavy feed soon after farrowing oftentimes causes indigestion, which will result in impaction, and probably the loss of the sow. Many sows become "pig eaters" as a result of heavy feeding too soon after farrowing.

The following mixture should be before the sows at all times:

100 pounds slacked coal; 2 pounds air-slacked lime; 2 pounds common salt; 1 pound epsom salts.

Sprinkle over this mixture a solution made by dissolving two pounds of copperas in one quart of boiling water.

Pasture Poisons

Are Menace in the Spring Time

By S. B. NELSON

Head of the veterinary department of the State College of Washington.

At this time of the year there appears in many moist as well as wet places the green doubly compound leaves of the water hemlock or cowbane or wild parsnip as it is called, a deadly poisonous plant. The leaves have narrow serrated or saw-toothed leaflets about two or three inches in length. It grows from a root stock somewhat resembling a small narrow regular oblong sweet potato.

When green feed is scarce as it is now, the bright green leaves and stocks become quite attractive to grazing stock and they eat it freely. They even eat into the crown of the root of the plant which contains the larger quantity of the poison cicutoxin, and when the animal obtains this plant it nearly always proves fatal because the plant material has an opportunity of being absorbed and causing the poisoning before the owner knows anything about it.

The symptoms are a severe pain, a peculiar trembling across the shoulders and in the tissues back of the shoulders. These tremblings later develop into more or less severe muscular spasms. The eyes have a staring look increased by the dilation of the pupils. The pulse is weak, wiry and sometimes intermittent—that is, it misses a beat. The breathing is irregular, sometimes heaving and at other times regular, being influenced to a considerable degree by the muscular spasm. There are no regular symptoms regarding the bowels though at times there will be small passages of manure at short irregular intervals.

Remedial measures are not of much value unless they can be administered very soon after the animal has partaken of the plant. Probably one of the best remedies to use is potassium permanganate, the dose of which is from 10 to 50 grains for cattle, depending upon the age and size of the animals. The drug should be dissolved in from two to four quarts of water. The more water used within reason the more apt the liquid is to come into contact with the poisonous plant material. Be sure that the drug is completely dissolved before the solution is given to the sick animal.

Water hemlock frequently grows in smaller or larger groups so that as a preventive measure it may be either fenced away from the pasture land, or it may be removed by digging.

In many cases the plant could be entirely exterminated at a small cost for the labor necessary. It is to be remembered that every time a plant is dug up and destroyed the chances for the poisoning of stock is lessened.

In the later spring and summer months, hemlock grows two to five feet high. The stem is hollow and carries an umbrella cluster of small white flowers. At this time of the year it is much more readily recognized so that it may be dug out.

Grabbing Ideas

This issue of The Farmer has many good ones. Some of them you can put to profitable use now, others you can store away in your mind for future use. You will find them all through the paper—a practical suggestion here that will save you money—a good plan there that will make you money. You'll surely enjoy nosing them out and making those that apply to your line of work a part of your mental and business equipment and capital. There are lots of good ideas for the women folks, too, and interesting bits of entertainment for the young folks and kiddies. Read this issue, all of you—it will yield some real nuggets, and it will whet up your appetite for the dandy good things you will find in next week's issue.

Elgin Six

"The Car of the Hour"

Breaks Another Record

The Elgin Six has just established a new record of 67½ hours between Chicago and Miami, Fla., a strenuous trip of 1626 car-racking, stamina-testing miles.

Thirteen hours of this time was driven in a heavy rainstorm that made the roads slippery and dangerous, and in some places so deep and heavy with mud that the average car could not negotiate them at all.

The route included the steep, rocky mountain grades of Kentucky and Tennessee, the heavy sands of Georgia and the slimy, treacherous swamp roads of Florida.

The Elgin Six has made perfect scores and won highest economy honors in some of the most gruelling endurance and economy runs of the last year.

Many other remarkable Elgin performances have firmly established the Engin Six as a Mechanical Masterpiece and a champion for long-sustained speed, endurance and economy.

And, as for style and beauty, no other car selling under $1250 has the fashionable center cowl and the "V"-type radiator of the high-priced European models. Its beautiful yacht line design sets the Elgin Six aside from the monotonous designs of common cars and gives it distinction on country roads or city streets.

Dr. S. B. Nelson

"Do Not Furnish Instruments."

To the Editor: In the March 22 issue of The Farmer there was published in this department an answer to the question of what to do for blackleg in cattle. In this answer the statement "You can obtain the government vaccine free of cost, with instrument for use, by writing to," etc., is an error. I dictated "with instructions." That has been misinterpreted in transcribing or in typesetting. Will you kindly correct this by saying that "We furnish the government vaccine free of cost, with full INSTRUCTIONS for use. We do not furnish the instruments."

S. B. N.

A little more than a month ago my hay getting low I put the dry cows and young cattle on rye hay, cut green and stacked, the dry cows for a while had some oat hay. About two weeks ago one cow dropped her calf two or three weeks premature. She seemed to be all right, all functions acting naturally for two or three days, then she began losing appetite and a couple of days more she was dead. We dissected her and could not find anything wrong except an offensive odor about the womb. Three days ago another cow lost her calf and is now showing the same symptoms. Is it the feed and are the other cows apt to do the same thing? J. R. S.

Republic, Wash.

You state in your letter that you have been feeding rye hay to cattle. I hardly think that your cattle are affected with contagious abortion, although that might be the case, but I am rather of the opinion that the trouble is due to the hay that you are feeding. Whenever pregnant animals are fed rye hay and they lose their young we look very carefully to the rye hay because this kind of hay is subject to the invasion of a fungus known as Clavitets purpura, also known as ergot. If there is any quantity of this in the rye hay, and there nearly always is, the action of the ergot is to contract the blood vessels of the womb and as such stop the blood supply and cause the premature birth of the young. I think that if this is the trouble, after the change of feed for your cows, you would have no more trouble. If you do have trouble, that is, it continues, there may be some other cause for it.

A couple of weeks ago we had a horse die. He acted like he had a mild case of colic and we gave him a quart of raw linseed oil. He was sick two days and two nights. We opened him and found an intestine had bursted.

H. E. F.

Riverside, Wash.

As a general rule ruptures of the bowels are due to a part of the bowel being severely distended with gas which because of a twist in the bowel can not pass backward. The gas may, of course, be an over amount formed because of a little indigestion, or it may be practically the normal amount of gas present, but the twist in the bowels not allowing it to escape causes the rupture. There is no treatment after the rupture occurs.

I have an 8-year-old cow which calved last on November 15, 1915. She ran in pasture and was served last part of May. She was then served by another bull June 20 and shortly after she was sick, but seemed to recover in a day or two. She wanted to go dry the 1st of December and was permitted to do so. She does not show any signs of coming fresh at this date. Do you think she has been injured or has she contracted abortion?

F. V. S.

Beach, Wash.

I do not think that the cow shows any evidence of having contracted contagious abortion. A person would rather be of the opinion that she was with calf if she has not shown any evidence of heat since June. There may, however, be some internal uterine trouble which prevents her from coming in heat or even showing that she is not with calf. There is no remedy or advice I can give you in this matter.

I have a cow that has large bumps filled with pus on her side. Do not know what caused them. W. K.

Chewelah, Wash.

The only explanation that could be given regarding the trouble affecting your cow is that she has become infected in some way and that the infection has localized itself as you describe it by forming large lumps filled with pus, that is, abscesses on her side. I am going to recommend that you open the abscesses from one side to the other so as to give them good free drainage, then wash them out with a 10 per cent solution of creolin once. After that, wash them out daily with a 2 per cent solution of creolin, or some other coal tar product. That is practically all of the external treatment that she will need. At the same time I am going to recommend that you give the cow one dram of potassium iodide night and morning for five days. Give the potassium iodide in one pint of water and drench the cow.

I have a horse that has eye trouble. One eye will become swollen and inflamed, watering profusely for one or two days, then seems to be all right and the other eye will show the same trouble. This has continued for three weeks. The horse has a good appetite and is fat. No other symptoms except stamping hind feet. F. A. D.

Kennewick, Wash.

Drop into the horse's eyes morning and evening a few drops of a 2 per cent solution of argyrol in water. Drop it in from the outside corner of the eye.

I have a cow that has red water. Can this be cured? J. G.

Clear Lake, Wash.

Write to Dr. J. W. Kalkus, veterinarian to the experiment station at the state college of Washington at Pullman. Dr. Kalkus has been experimenting with red water and investigating the trouble for a number of years and he can give you the information that is available on this subject.

Please describe tuberculosis in milch cows. I have a cow that coughs whenever she becomes excited or the cold air strikes her. R. D. N.

Roberts, Idaho.

The symptoms of the advanced stage of tuberculosis of cattle generally are as follows: Bright, shiny eyes, dry muzzle, a staring coat of dry, unthrifty looking hair, generally turned toward the ears, occasional diarrhea and constipation, the loss to a certain extent of the milk production power. If the cow is exercised some she breathes and pants considerably. There is general unthriftiness. In other cases there may not be any visible signs of the disease at all, as tuberculosis is a very insidious disease which affects the lymph glands as well as sometimes all other organs of the body and frequently it is not possible to determine these lesions by physical examination. The only way to determine whether or not any lesions are present is by means of the tuberculin test.

TRUCKS

HORSE vs. MOTOR POWER

"A Horse Is the Poorest Motor Ever Built"

2-ton G. M. C. truck hauling wheat for Henry Hickman, Colfax, Wash.

A horse eats 12,000 pounds of feed a year; he eats the whole output of five acres; yet his efficiency is only 2 per cent. He must be taken care of 365 days of the year, yet he averages only three and one-half hours' work per day, and tires in six.

Land and labor are both too high tostand this expense.

With a GMC truck one man can haul in ten hours from your setting in the field 1000 bushels of wheat a distance of ten miles, loading and unloading same, at a total cost of less than 1-2c per sack per mile.

Remember GMC TRUCKS do not eat when they do not work.

Mail attached coupon for information of GMC performance last summer on the farms of the Northwest. Let us tell you what they will do for you.

JAMES DRYDEN
Editorial Contributor

The seed is now being planted for next winter's egg crop—the eggs are being set. As the seed is good, so will the crop be.

No matter how early the chicks may be hatcher or what breeding they have behind them, the pullets will not lay in the fall and winter unless they have been kept growing throughout the summer by good care—good feed and feeding, plenty of clean range, roomy coops or houses with plenty of fresh air in them, and freedom from insect pests. Neglect of the chicks in the summer is one of the main causes of few eggs and high prices in winter. J. D.

Feeding Brooder Chicks.

The chicks should be taken out of incubator about 12 hours after they are all hatched and thoroughly dry.

First Day.

Give buttermilk or skim milk to drink but no water, and have plenty of bran and egg mixed crumbly, or stale bread soaked in milk and squeezed dry, ready for them on a shingle. Give them a chance to eat before putting them under hover. Put them under the hover before they get cold.

In half an hour take them out again to feed and after that every hour for the first day. After the first day take them out every two hours and put them back after eating, leaving them out about half an hour. Use a wire screen around the hover to keep them from coming out and getting chilled until they learn to go to the hover when cold. Have plenty of bran and egg mash or stale bread and milk on shingle when you put them out. Take away any of the mixture left and feed it to other brooder lots, but do not keep it more than two or three hours. Sprinkle a little fine grit on the sand.

Second Day.

Sprinkle on sand a grain mixture of equal parts, fine cracked wheat and corn, as much as they will clean up. After three days feed cracked grain in cut straw about an inch deep at the start. Then in two days more add another inch of straw. At 10 days old they should have about five inches of cut straw.

Second Week.

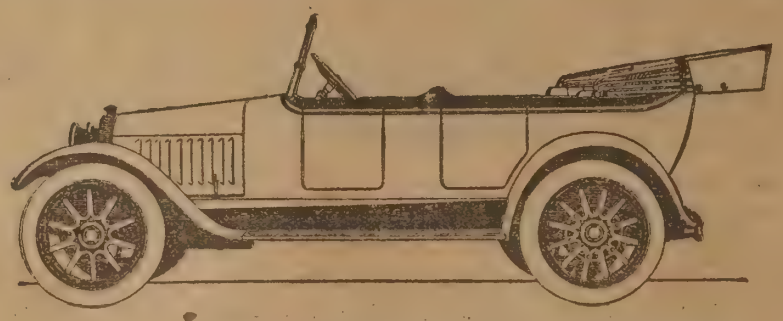
At the end of week bran and egg may be discontinued and a mash mixture fed once a day, the first thing in the morning. If there are plenty of infertile or tested out eggs mix some of them in the mash. The mash will be three parts by weight of brain, one part middlings, one part corn meal, with a pinch of salt. Mix with lukewarm water to a crumbly consistency. Be sure there are no lumps in the salt.

Beginning of second week put 5 per cent meat scrap in mash, and give water as well as milk to drink. Feed grain mixture three times a day in litter, enough to keep the chicks busy scratching as much as possible. The last feed in the day, which should be about two hours before dark, be sure they get all they can eat. At other times keep them a little hungry. They should always be hungry when feeding time comes.

Grit, charcoal and fine cracked bone should be kept in hoppers all the time. Green food to be fed all they will eat.

The same ration will do for hen hatched and hen brooded chicks.

Continue this way until chicks are six week old.



If milk buttermilk is not available use 10 per cent meat scrap in mash at end of first week when egg is discontinued. J. D.

Has It Come to This?

I have received a circular from a Washington poultryman advertising his poultry flock, which contains this motto: "Eggs Before Ribbons." The meaning of this might not be apparent to the novice, but it is clear to others. It means, of course, that this poultryman is breeding for eggs rather than the exhibition points that win ribbons in the shows. It is hard, of course, for the inexperienced poultryman to understand why a bird

Tells why chicks die

E. J. Reefer, the poultry expert, 466 Reefer Bldg., Kansas City, Mo., is giving away free a valuable book entitled, "White Diarrhoea and How to Cure it." This book contains scientific facts on white diarrhoea and tells how to prepare a simple home solution that cures this terrible disease over night and actually raises 98 per cent of every batch. All poultry raisers should certainly write Mr. Reefer for one of these valuable FREE books.

Chalmers 7-Passenger Touring Car—Price $1350 Detroit

Full Value for Every Dollar

In this Chalmers, 7-Passenger Touring Car

Scan the list of other 7-passenger cars for the equal of this Quality Chalmers. You will not find it. Only in this Chalmers are combined so many real values. You may pay $300 to $500 more and find nothing better.

Only a builder of long experience and with a yearly output of thousands could produce this car at so low a price. Only thus can quality of materials and of manufacturing be combined with economy of production. Because Chalmers does this is the reason why this Chalmers 7-passenger Touring Car has no competition at anywhere near its price of $1,350.

These Prove Quality Claims

Chalmers claims a motor of unexampled smoothness, of unusual power. Prove it by examining Chalmers Lynite pistons, 1/3 the weight of the usual cast iron. These give smoothness, less strain on bearings, admit of higher power. Compare the Chalmers crankshaft with others. It is one-piece, special steel, drop-forged, balanced in motion to a fraction of an ounce.

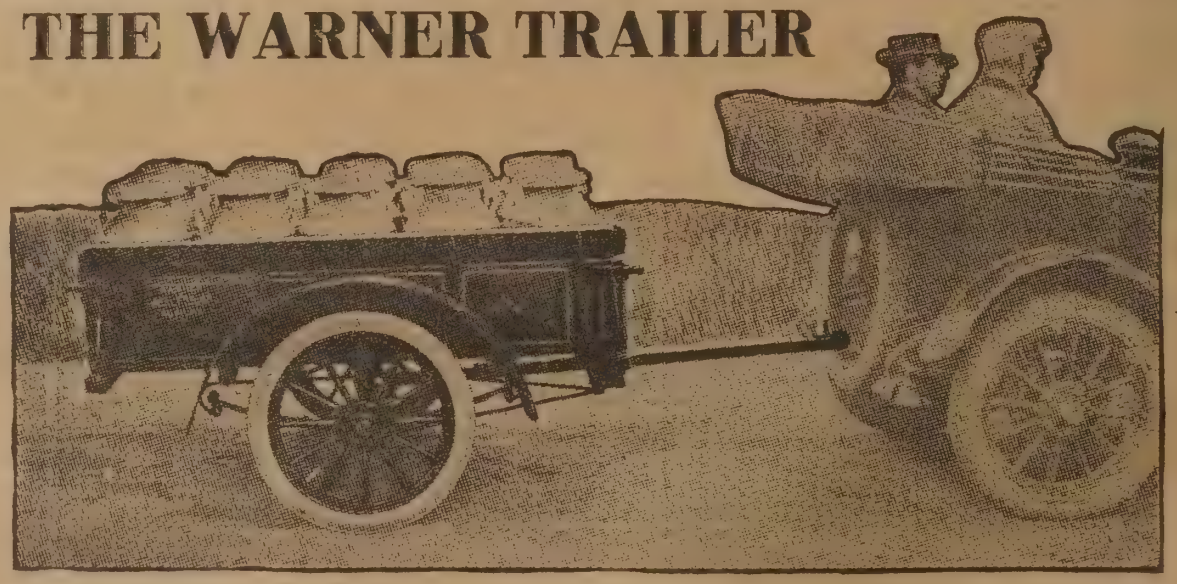
See the Chalmers Transmission

Gears are crucible nickel steel, case-hardened and heat-treated. They shift easily, without clashing, and properly used are practically indestructible. The Chalmers type of dry-plate, disc clutch is far in advance of other designs. Chalmers rear axle is the same as used in expensive foreign and American cars. It is silent, efficient, economical.

A Big Beautiful Body

Big—122 inch wheelbase. Beautiful—because graceful in form, hand-finished in Chalmers shops, upholstered in genuine pebble-grain leather, with new Scotch "fluted" finish. Auxiliary folding seats, Pantasote top, curtains open with the doors, fasteners are the "lift the dot" pattern.

Compare Quality—and Price



Think how great the difference between this quality Chalmers and other cars. Realize what unusual value is here offered. You will go much higher in price before you will find any other to please you so well. And all these claims we submit for *your* decision. Come—try the car. Investigate. Then only can you decide.

Touring Car, 7-passenger	$1350	Roadster, 3-passenger	$1250
Touring Car, 5-passenger	1250	Limousine, 7-passenger	2550
Touring Sedan, 7-passenger	1850	Town Car, 7-passenger	2550

that has won the blue ribbon in the show room is not necessarily a good layer, or that a blue ribbon bird may be a poor layer. The average American is built so much along the lines of utility that it strikes him as a strange contradiction that the poorest layer may win the blue ribbon.

This has been one of the revelations of the trapnest. Before the trapnest came we didn't know which were the good and poor layers in the flock. About the only way we had of judging a hen was in the show room. She was judged according to certain shapes, certain color of feather, and in shape and color there were a score of points that were considered in awarding the prize. Poultry shows are judged in the same way today, except that here and there there are utility shows now. But the trapest has shown that the best colored bird or the best shaped bird according to the show standard is not necessarily a good layer. The chances are that she is as likely to be a poor layer as a good layer. It has shown us that shape and color have not been very good guides in selecting good layers. We think, however, that show standards will be changed before long; they must be changed if the show is to keep pace with the poultry industry. J. D.

Tractor and Horse

Must Work on Farm Together

(Continued from page four.)

become, the same as the telephone has supplemented the telegraph in the way that they have taken the place of messenger boys in the quick delivery of mail. No one will agree that there are not more miles of telegraph in use today than there were 10 years ago, nor can it be said that there are fewer messenger boys, yet the telephone is in almost every business house and many housholds doing their work faithfully, and for which there was but little demand a few years ago.

Salesman Is Responsible.

The suiting of the particular truck or tractor to the individual conditions under which it must operate is a problem as big for the salesman and distributor as that of the farmer. Now that the truck and tractor are acknowledged factors in every line of farm business, and are here to stay, the distributor and the salesman must have the ability to solve the problems of transportation presented in each individual case and to sell the prospective buyer proper equipment to give the maximum efficiency under the conditions covering each particular case.

Must Suit Conditions.

With few exceptions no motor truck or tractor should be put in operation upon the farms of eastern Washington unless the salesman has gone personally over the ground and seen the conditions under which it must operate. In that way only will the purchaser be sure that he is getting the best advice under the circumstances.

Another item of equal, if not greater importance, than that of having the dealer go over the ground personally, is to make sure before the goods are purchased that the distributor has ample stability for protecting the purchaser in case of breaking of parts. Regardless of the cause of breakage, unless the parts are within easy reach, all the time which the machines may save may be burned up waiting for parts to come from the factory.

Must Protect Machine.

No distributor is justified in placing a machine in operation unless he is prepared adequately to protect it. What good is a tractor in the middle of the field laid up for two weeks waiting for parts to come from the factory? What good is a motor truck in the midst of the hauling season unless there are parts within easy reach?

Motor trucks and tractors have come to stay and everybody knows it. Just as horse power in the past has supplemented the man with the hoe, so in the future the tractor and truck will supplant the horse in many lines of work. It took man many ages to realize that by using horse-drawn machines he could greatly increase his efficiency. Today few men realize that the tractor has taken the place of the horse for all manner of farm work. It is replacing the horse for the same reason that the horse replaced the ox team—it is more efficient.

Save Your Chicks

That's your greatest problem. Little chicks die by thousands from *indigestion, diarrhoea, gapes, leg weakness, etc.* They need help—three-fourths of the loss can be avoided. Begin with the bowels—make the digestion right by using

Dr. Hess Poultry PAN-A-CE-A

Cures Gapes, Indigestion, Leg Weakness, etc.

Here are a few of the valuable ingredients in Pan-a-ce-a to meet the requirements of your poultry which I have just stated: *Nux-Vomica*, a nerve tonic; *Carbonate of Lime*, a shell former; *Hyposulphite of Soda*, an internal antiseptic; *Quassia*, an appetizer; *Iron*, to enrich the blood, and other valuable ingredients, all well known and recommended by the highest medical and veterinary authorities.

Lye Spray

Thinks It Best For Early Spring

By GRANVILLE LOWTHER.

Mrs. L. T. Hall, writing about conditions on Vashon island, Wash., and about the proper spray to use, recommends lye instead of the sprays in general use. In commenting on Mrs. Hall's article, I would say that I am fully convinced that lye will kill anything that lives, provided it is applied with sufficient strength. I am very well acquainted with a man now past the middle age of life who, when he was a child, accidentally spilled a can of concentrated lye on his arm, and before the effects could be neutralized the flesh was eaten almost to the bone and the scars will remain as long as he lives.

There are two questions, however, that are of practical import. Is it good for the trees, and, if so, what is the relative cost as compared with other sprays? I have not tried it, but I take Mrs. Hall's testimony that it is good for the trees.

The following is Mrs. Hall's article:

Having tried numerous sprays, we have come to the conclusion that the lye spray is the best early spring spray. Not only does it clean the bark of all fungus and insect life, but there is no poison resulting to the fruit by absorption, and also the lye which sinks into the ground around the trees is a soil digester. We have formed a habit of fertilizing before spraying, then turning the chickens into the orchard to gather the bugs for a few weeks before spraying and digging in the fertilizer after lye spraying. This spray may not be used when the wind is blowing, as it is dangerous to eyes and complexion. Many men protect the head and neck during spraying by wearing a sunbonnet.

Young trees can not stand as strong a solution as older ones. For 1 to 3 year olds one can to 30 gallons is enough. The strongest it may be used is one can to 10 gallons, the strength proportioned according to age and disease of tree. The stronger spray is not put on in as great a quantity as the weaker. Before spraying, the trees should be searched for eggs of tent caterpillar, which will be found in clusters stuck around the twigs and smaller branches like a piece of chewing gum. Burn these after removing.

While tobacco spray has had a medium result for later spraying, we are going to use a crude carbolic spray, made very weak in a soap emulsion, this year. This will kill aphis and pear leaf blister mite. Ducks and toads in the orchard are a good preventive of aphis, as they both eat ants, which insect is responsible for the care and distribution of aphis eggs. The aphis is sometimes known as the cow of farmer ant. We have no codling moth on Vashon island, but back east we used to tie tar paper around the stalk or trunk of tree and in winter remove and burn when the paper was found to be well inhabited. As soon as the tar paper wrappers were burned the trees were winter sprayed with lye solution. Never use an arsenate of lead spray unless you wish your fruit to cause ill health and the cattle to die from eating the grass beneath the trees, even to the second crop of grass, which will cause illness if not always death.

ARTICLE 6.

Frost Cautions

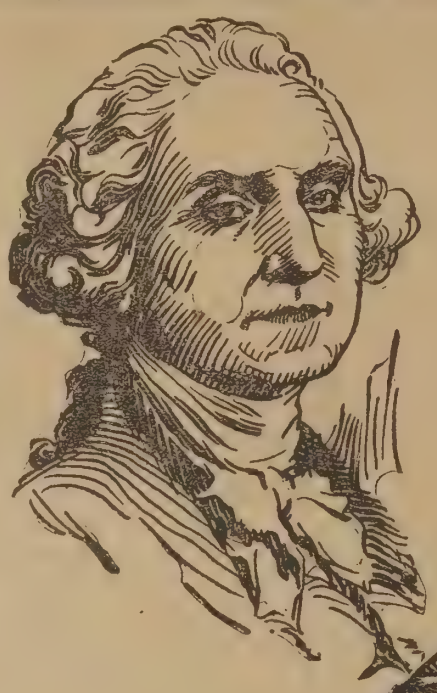
The late spring in many sections of the northwest has made more than usually vital the matter of knowledge concerning the power of various vegetables to resist cold. While this matter has been touched upon in previous articles, it is deemed advisable to publish at this time extracts from a special bulletin prepared by the United States department of agriculture on this subject. The following are lists of vegetables arranged according to appropriate times for their planting, which is determined on the basis of their power to resist cold:

GROUP 1.

Plants not injured by a light frost. These may be planted as heavy frosts are over or usually as soon as the soil can be put in good condition. Cabbage, Irish potatoes, early peas, (smooth types as distinguished from wrinkled), onion sets, salad crops, such as kale, spinach, mustard. At the same time start in seed boxes in the house or hotbeds tomatoes, eggplant, peppers, cauliflower.

GROUP 2.

Vegetables which should be planted only after danger of hard frost is over. Lettuce, radishes, parsnips, carrots, beets, wrinkled peas, early sweet corn.



GROUP 3.

These should be planted after all danger of frost is past: String beans, sweet corn (late varieties). A few early tomato plants may also be set out, but care should be taken to protect them from any sudden chilly weather, by providing a shelter of newspapers, boxes, etc.

GROUP 4.

This group should not be planted until all danger of frost is past and the ground has begun to warm up. Included in this would be cucumbers, melons, squashes, pumpkins, Lima beans, tomatoes, eggplant, peppers. Plants of tomatoes, eggplant and peppers which have been grown in boxes or hotbeds should be ready to set in the open at this time.

"In order to insure a steady supply of vegetables, crops like peas, beans, radishes, lettuce and other rapidly maturing crops may be planted every three or four weeks," says the bulletin. "Some of these can be planted in the spaces made available by removing the other crops."

"The Will of the People and My Own Good Name"

G. Washington

In Washington's Inaugural Message he promised to sustain "The Will of the People and My Own Good Name."

And so it is in the world of business. Commercial honor can successfully be built only on the standard of quality and personal good faith. By the "will of the people" and by answering all their demands for Most Miles per Dollar, Mr. Firestone has built an organization which stands for leadership.

GOVERNMENT WHITEWASH
Its Use on Lower Part of Trees.

I have received an article from W. C. Getz, Bellingham, Wash., in which he says:

"Please tell me through The Farmer if government whitewash can be used on the lower part of fruit trees, and, if so, can you give me the receipt for it?"

I am not well informed on the practical use of what is called the government whitewash. There is considerable difference of opinion among orchardists as to the value of paints and washes of different kinds for trees. Some claim that anything which tends to stop up the pores of the bark and prevent a circulation of air is injurious, while others claim, on account of the tendency to check the ravages of insects, that they are of value. The same difference of opinion exists as to the value of paints for cuts caused by pruning or by accident. Some claim that a wound will heal faster if it is not painted over, while others claim that the air should be excluded by painting. I am not entirely settled in my opinion on that question, except that one year we painted the wounds on a few of our trees and I could see no especial benefit from it, so that we have not kept it up.

Recipe for Government Whitewash.

Lime (unslaked)	40 lbs.
Salt	15 lbs.
Rice flour (or ground rice)	3 lbs.
Spanish whiting	½ lb.
Glue	1 lb.
Water	5 gals.

Slake the lime in warm water and cover so as to keep in the steam; strain through a fine sieve or strainer; add the salt, well dissolved, in warm water. Then add the rice, boiled hot; the Spanish whiting, and finally the glue, which has been previously dissolved over a slow fire. Lastly, add the five gallons of hot water. Stir well and let stand for a few days. Apply hot with a brush. One pint of the mixture will cover a square yard. Coloring matter may be put in, such as Spanish brown, yellow ochre, etc. G. L.

Buys 2270 Sheep.

88 Bu. Oats Per Acre

Mr. A. Taylor of Saskatchewan, writes: "I had 315 acres in oats that averaged 88 bushels an acre, 30 acres in wheat that averaged 50 bushels an acre, 20 acres in barley that averaged 50 bushels an acre."

This is only one of thousands of good reports from Western Canada. The total value of all farm crops in Saskatchewan alone for one year was $382,845,000.00. Recently surveyed 160-acre Homesteads are now open to you in this fertile farming section.

160-Acre Farm FREE

Go get a homestead free this year. No matter where you have been farming, a fortune awaits you if you go now and get one of the recently surveyed 160-acre free homesteads in the rich districts in Saskatchewan, Alberta, Manitoba and British Columbia, reached by the Canadian Northern Railway, the newest transcontinental railroad of America, "The Road to Opportunity." Here you can make a fortune at growing grain, mixed farming, raising cattle, hogs and poultry. Easily accessible markets make conditions and opportunity of settlement excellent now.

Special LOW RATES

Low round-trip home-seekers' fares to Western Canada are in effect every Tuesday, March to November inclusive. Also one-way low-fare for settlers. Even if you have already selected your farm, it will pay you to travel to Western Canada via the Canadian Northern Railroad. 21-year grazing land grants may be procured at very low cost. Outdoor feeding of beef cattle on native grasses bring even better results than indoor feeding. Country roads are good and the public school system is well abreast of the times.

Free Book Be sure to write today for a free copy of the "Home-Seekers' and Settlers' Guide," full of complete and authentic information. A fortune is waiting for you.

Factories at Marysville and Benicia, California

for long life and low upkeep cost: BUY A YUBA

STRAWS—unimportant, unrelated facts but they show how the wind blows and how the YUBA is dominating the tractor field.

"You certainly have a lot of Yuba salesmen here," said a visitor at the State Fair.

"Salesmen!" exclaimed the Yuba man. "They are not salesmen. They are men who own Yubas and like to talk about them!"

Hayward Reed, of Sacramento, has been watching all tractors on the market since back in 1914. He was the second purchaser of a Yuba Model 20-35 and bought it at its first exhibition. He has since ordered two more.

The James Mills Orchard Company investigated all makes of tractors. They purchased three Yubas, and four months later, yet another.

Mr. Williams of Woodland phoned to the Marysville office for a Yuba service man. He was sent promptly. When the man arrived Mr. Williams said: "I simply had to show somebody how beautiful this machine runs!"

The first lot of Model 12-20 tractors was sold out before one was shipped.

We are now able to make prompt deliveries

Yuba Manufacturing Company Dept. C3

Ask Your Question--These Answer It

Gersix MOTOR TRUCKS

"Made in the Northwest to Meet the Needs of the Northwest"

2½-ton capacity—six-cylinder motor—electric lights—electric starter—worm-gear drive—extreme simplicity—vacuum feed—extra heavy construction.

"A Steady, Sturdy, Simple Six"

F. O. B. Tacoma Complete Chassis **$2650**

INVESTIGATE—That is all we ask. The GERSIX is ALL truck. No shop theory in the GERSIX, but practical truck knowledge and long experience. Sterling qualities, ability to stand up and perform—these can be said of every part of this truck. Every single unit down to the smallest part is the time-proved product of SPECIALISTS—of MEN WHO KNOW. INVESTIGATE THIS TRUCK BEFORE YOU BUY.

In Use Throughout the Northwest---Owners All Satisfied

FREE LITERATURE—Tells about trouble-proof transmission, and many other things the truck buyer should know. Write us—we will gladly send you our folders.

AGENTS WANTED

Certain territories are still available for GERSIX TRUCKS and UNIVERSAL TRACTOR ATTACHMENT representation. Live men only, and responsible. This is a proposition for the best interests. The Gersix Trucks are known all over the Northwest. The "Universal" Tractor attachment will lead in Northwest tractor sales in 1917.

UNIVERSAL TRACTOR ATTACHMENT

"Made in the Northwest to Meet the Needs of the Northwest"

"A Modern Workhorse"—Converts most any automobile chassis into a powerful tractor. Converted to pleasure car again in three hours. No mechanical changes whatever.

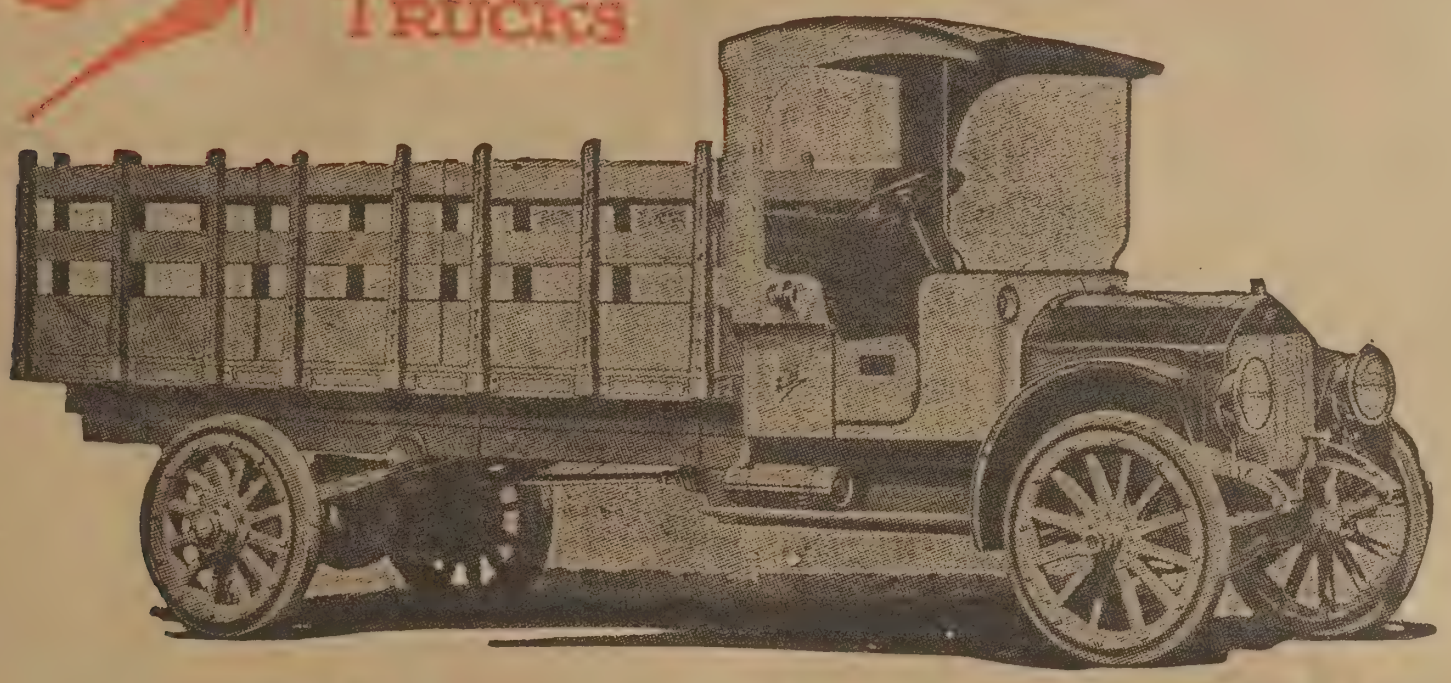
The Universal Attachment with Ford chassis. A tractor for the Farm, the Orchard, the Lumber Yard, or Road.

F. O. B. Tacoma Complete Attachment **$275**

INVESTIGATE—That word is a slogan every thinking man will listen to. The "UNIVERSAL" Tractor Attachment meets the man who must have a Tractor at the lowest cost, and it is the Tractor for you regardless of cost. In a word, incomparable for simplicity, for all-purpose work, for indestrucibility, for economy in operation.

This Man Gave It the Acid Test —More Than Satisfied

F. H. Mackey of Ellensburg writes that he, with Mr. Frear, expert machinery buyer for the county, pulled 388 gallons of gasoline and other load with a Standard Oil Tank as the trailer six miles to his ranch, on sticky and heavy road. He says: "That workhorse is sure one pulling fool. In every test the Universal has stood up very good indeed."



FREE LITERATURE—Write us for "Tractor Facts." Tells you things you should know about tractors.

Garford Motor Trucks

THIS TRUCK HAS SAVED ITS COST

Through excessive perspiring and jolting in the slow horse and wagon trips over bumpy roads from farm to station, the average hog will lose about two per cent of his weight.

This represents a direct money loss. For the station weight—not the farm weight—is the basis of sale.

Quick, easy transportation on good, smooth-surfaced roads is therefore very essential.

The Admiral Stubblefield trucks—two 2-ton Garfords—have actually paid for themselves in the saving of hog shrinkage in hauling the animals over the 40-mile route for shipment.

This is the direct testimony of Mr. Admiral Stubblefield, owner of the trucks and one of the largest hog buyers in the northwest.

A similar saving can be realized in transporting any kind of stock.

And Garford Motor Trucks, through their sturdiness, their ease of operation, their economy of both fuel and time, and their adaptability to practically any kind of work, are the ideal means of transportation for the farmer.

Crates of fruit, bags of grain, bales of hay—in fact any farm produce—can be moved more economically with the proper Garford truck, mounted with the right type of body, than by the old horse and wagon method.

Hundreds of farmers, stockmen and fruitgrowers are using Garford trucks—at a profit.

And they report far greater hauling economy than was ever possible with horses and wagons.

YOU can use a Garford just as profitably as your competitor. It will pay you to investigate.

Catalogues and full information on request.

U. S. Answering Call

Would Battle for American Ideals

At this moment congress is assembling to consider the recommendations made Monday by President Wilson that a state of war between this country and Germany be declared to exist, and to take such steps as to make the warfare of the United States most effective in the event that the president's recommendation is approved. President Wilson asked congress to declare that a state of actual war exists as shown by the wanton destruction of American lives and property by German submarines; to take steps looking toward the utmost practical cooperation with England and her allies in their warfare against Germany; to extend liberal financial credits to these nations to finance their warfare; to equip the navy to the greatest possible degree of efficiency to cope with submarines and other menaces of war; to authorize compulsory military training and raise at once an army of 500,000 men; to take action to raise such funds as the government will require to carry out these steps.

To Fight for Humanity.

If this country goes to war with Germany, as seems inevitable, it will not be because of any desire to aid Germany's opponents, nor because of enmity toward the German people. Hundreds of thousands of American citizens are German born, or trace their ancestry to Germany. If America goes to war it will not be for conquest. No victory will be sought save the victory of liberty, justice, law and humanity over tyranny, injustice, lawlessness and inhumanity. The principles that the colonists fought for in 1776 are the principles for which the United States will fight, if fight she must, in 1917.

Provocation Is Great.

Some 250 American citizens have been killed through Germany's submarine warfare. Hundreds of other peaceful, neutral citizens have been sacrificed with no warning and little chance of rescue. Commerce of the United States has been destroyed in large tonnage, and much more driven from the sea through fear of submarine attack. German intrigues in the United States have resulted in large property losses and created widespread fear of repetitions. Documentary evidence is in the possession of the United States showing that high German officials have plotted to unite Mexico and Japan against the United States.

Preparations Being Made.

This country is still hopeful that general participation in the war may be averted, but preparations are being rushed for any events that may transpire. Governmental secrecy is maintained as to the exact nature and extent of much of the preparation, but the navy is being put into the best possible fighting trim, and additions are being made to it as rapidly as factories and munitions plants can produce them; the regular army is being recruited to war strength and plans are being laid for the development of a large citizen army; the state militia are being called back into the service; plans to put the agricultural and manufacturing industries on the most efficient basis possible are being launched. Industrial mobilization in modern warfare is as vital as mobilization of men and arms.

Spies Are Hunted Down.

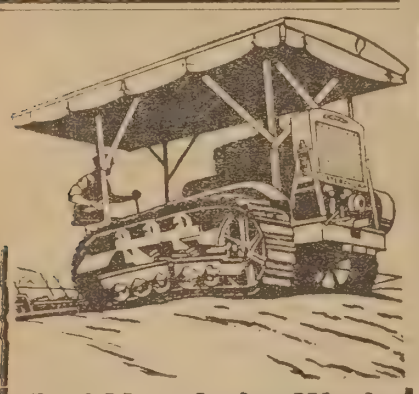
The danger from spies and plotters in the event of war is considered great in this country. Already many spies have been apprehended. Under their activity not only could the enemy be informed of the preparations and warlike movements of this country, but munitions plants, railways, supply vessels, forts and arsenals and factories of all kinds would be jeopardized. Therefore the United States government has made each of its hundreds of thousands of employes a guard against spying, and rigorous methods for dealing with suspects are being put into effect.

Peace at Any Price.

The pacifists are still active and the peace-at-any-price advocates are hard to eliminate. Styling themselves "The Emergency Peace Federation," an organization the identity of which is unknown, is carrying on a nationwide advertising campaign in behalf of peace. The advertisements urge peace loving people to plead with their representatives in congress to oppose entrance into the war.

American People Loyal.

Though the extreme pacifist is active and self assertive, the people of the United States are rallying behind the president in the present crisis, assured that humanity and not commercialism, justice and not aggrandizement, love of permanent world peace and not militarism are the principles upon which the war will be fought if actual war comes.



Commerce Kept From Sea.

Indicating that the submarine warfare on shipping has been effective far beyond the actual number of ships sunk, the report of the United States department of commerce shows that the exports from this country were about $150,000,000 less in February than they were in January, without any apparent reason other than fear of destruction of ships by submarines.

New Zealand Wheat Prices.

In the interest of steady and fair prices for bread supplies and in the interest of the wheat grower the New Zealand government has again imposed a duty of 18 cents per 100 pounds on wheat from all countries and 24 cents per 100 pounds on flour from the united kingdom and possessions, with 4 4-5 cents additional from all other countries, also the 1 per cent ad valorem war tax in each case. The government has fixed the maximum price of wheat at from $1.35 per bushel for the poorer grades to $1.39 for the best grades for delivery during February, March and April, and 1 cent per bushel additional for each of the months of May, June and July, with 1 cent per bushel additional for all wheat sold after the last date.

It is expected this will insure a much larger acreage than was sown in 1916, together with a fair price for the crop, and that it will also prevent any attempt to corner wheat in this dominion with a view to pushing up prices.

Rush Your Spring Work

YOU ARE NOW confronted with the problem of handling an unusual amount of seeding, harrowing and plowing which must be done in the shortest possible time. The late spring makes necessary speedy work. Ground conditions are favorable for crops; wheat prices are holding up. Why don't you buy a

Better Than 6 Horses

Bean TrackPULL Tractor

Here is a little Tractor that does the work of six horses on what it costs to keep one team—only it does more work and does it better—gets into corners and closer to trees than a team—does your plowing, your cultivating, your discing, or runs stationary machinery, and will work 24 hours a day if necessary.

This wonderful little Tractor is very light, is rugged, simple and efficient. On account of its light weight and long traction surface it is the **ideal machine for cultivating.**

How It Works

The Bean TrackPULL Tractor is built on a substantial track 12 inches by 32 inches on the ground. The power in the tractor pulls it along its own revolving track. That's why it does not pack the soil—gets long traction, turns easily to right or left—can make a complete turn in a 10-foot circle, is most economical in operation and a boy can easily work it. When the hot days come your team loafs and you get only an average half day's work done in 10 hours. The Bean TrackPULL will work day and night if you want it to, and does the work all day long that a six-horse team could do if they worked hard continually.

The Price Is Only $975.00

Bean TrackPULL Tractor construction consists of a 10-h. p. (at belt) Le Roi 4-cylinder vertical type 4-cycle motor. Equipped with Donaldson air clarifier, Bosch ignition, Perfex radiator, water cooled with centrifugal pump and fan, combination splash and pump lubrication, Hyatt roller bearings in track wheel sprocket and track rollers, six New Departure ball bearings in the transmission, running in grease and dustproof. Gears are steel. No differential or other complicated mechanism.

Making figure 8 around trees and leaving no unfinished work.

Pulling a spring-tooth cultivator between rows 12 1-2 feet apart.

Prompt Deliveries in April

Our entire output is sold a month in advance and we are working night and day. We have just finished a large addition to our factory and increased our capacity so that we will be able to ship tractors that are ordered now in April.

Federation Solves Village Church Problem

Proof Is Found in History of a Year in a Little Oregon Town Where Church Flourishes

Herewith is shown the congregation of the federated church of Scio following one of the services. In the lower picture is to be seen the old Baptist church and parsonage, no longer in use since the federation was effected. The individual photograph is that of the Rev. H. B. Iler, to whose zeal is due much credit for the success of the union.

"How good and how pleasant it is for men to dwell together in unity," sang the Psalmist; and in like manner there comes from Scio, a little town of the Willamette valley in Oregon, a story of the goodness and pleasantness brought about by the union of three struggling little churches into one enthusiastic and vigorous body. The story is told by Principal O. V. White of the Scio schools, who writes the following concerning the consolidation:

"The religious conditions and the spiritual outlook were anything but inviting a year ago when the Rev. E. H. Edgar, evangelist, and P. A. Stockton, singing evangelist, came to our town.

"The church buildings and three church organizations had a nominal existence among us. Both churches were without resident pastors, with services every two weeks in the Christion church, conducted by pastors from outside our town. One Sunday school was in operation as a sort of union affair and held its sessions in the Baptist church. A few faithful Christians of the various denominations kept alive the church spirit as best they could against heavy odds and most discouraging conditions.

Federation the Only Solution.

"At the close of a two weeks' successful revival by the above named men a call was issued by the evangelist for a special meeting of the Christian people of the town to discuss the federation idea, which had for weeks been brewing in the minds of the thoughtful workers of the town as the only solution of our church attendance problem. About 35 of the leading citizens and church workers of the town were present at the meeting and took part in the open discussion.

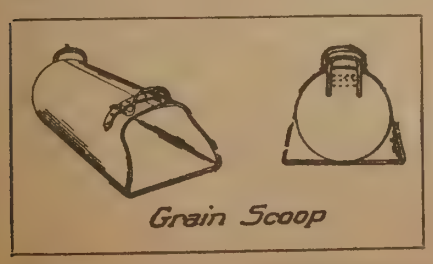
"About 10 of the prominent business men and pastors from Albany were present at this meeting and gave valuable assistance in the work of organization and in the selection of articles of faith (which articles are very brief, touching only the fundamentals of faith in Jesus Christ).

"More than two hours were spent in an open discussion, which was freely and eagerly entered into by a score of those present. The articles of faith were read, adopted and presented for signature to those who wished to become charter members of the federated church—the only one in the Willamette valley. Men seemed more than anxious to be the first to place their names on the document, which seemed to bid fair to deal a solar plexus blow to the partition wall which had so long kept us apart in our devotions and blinded us to our own highest spiritual interests. Both men and women pushed their way to the secretary's table. The entire company sang with hearty good cheer, "Blest Be the Tie That Binds," and a hearty handshaking time followed.

Seven Directors in Charge.

"A board of seven members from the denominations was elected and now have charge of the entire church property, finance, the spiritual interests of the church and the calling of a pastor to serve the people of the entire town—one church.

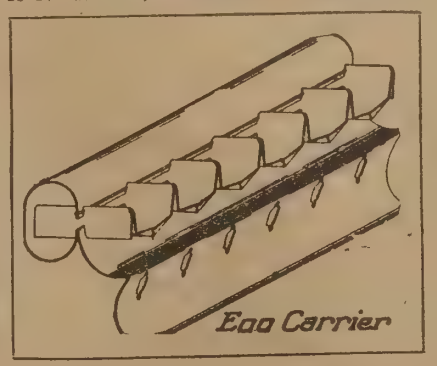
"The sacrament of the Lord's supper is observed once each month. No set mode of baptism is followed—each for himself. One general treasury has charge of our missions and offerings for education.



"Our pastor, the Rev. H. B. Iler, has been with us about a year, and we have a live and representative congregation each Sunday, a Sunday school of a representative type, a well attended and interesting prayer meeting on Thursday evening and an active Christian Endeavor society. The pastor marries our sons and daughters, officiates at all our funerals, advises and instructs our young people, visits in all our homes, eats with us and prays at our family altars. In short, we are all pleased and greatly encouraged, and would not dream of returning to the former plan of division in worship."

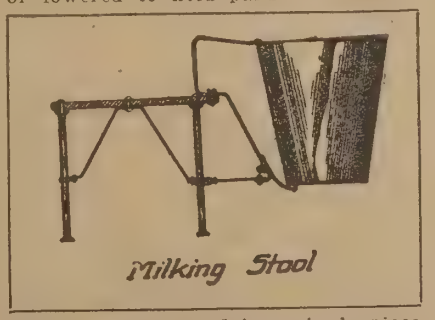
Inventions

By C. J. LYNDE, Macdonald College, Quebec.



Grain Scoop.

The new feature of this scoop is that there are a number of air holes in the rear plate which permit the air to escape and thus prevent the formation of compressed air pockets at the end.

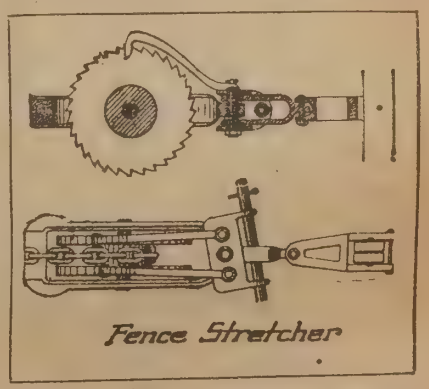


Egg Carrier.

Each egg in this cardboard carrier is held in a suspended pocket, and this, it is claimed, reduces the breakage to a minimum. The edges of the case are held securely by notches in the partitions.

Milking Stool.

The lower end of the pail support of this stool is a fork which can be raised or lowered to hold pails of different sizes; the upper end is a single piece of spring steel.



Horses on Farms and Ranges.

Despite the export of horses to Europe, the total number of horses on farms and ranges in the United States is estimated to have decreased only 33,000 during 1916, and there were more horses on farms and ranges on January 1, 1917, by 164,000 than on the same date in 1914.

Wire Fence Stretcher.

When the handle of this stretcher is rocked back and forth, the ratchet arms alternately turn the ratchet wheels and wind the chain on the chain wheel. The handle can be operated from either side or from both sides at once.

Ups and Downs of a Bunch Grass Boy

By J. L. ASHLOCK.

(Copyright 1917, by J. L. Ashlock.)

CHAPTER V

AS I journey on with this tale, I see that I am leaving farther and farther behind the romance of my childhood—childhood with its joys, sorrows, lessons, unwisdom of a kind and wiseness of a kind, and, best of all, its innocent contemplation of life itself. We lose this innocence as we grow older, exploring the paths whither destiny leads and bumping a world which is rather calloused to our bumps.

I am tempted to linger—to go back over the trail. There comes to mind a picture of grandfather, grandmother and my uncles, Sam and Harry, standing on the small depot platform at Carthage, Ill., waving goodby to father, mother and me as we started our journey out west. Grandmother was crying—even after the train had passed so far away that she made but a small figure on the platform. I knew that she was crying and that the white handkerchief she waved was wet with tears.

Mother was crying, too, softly, and her cheeks were very bright. Father was smiling in an odd, embarrassed way, and tugging at his mustache and stroking his beard. He looked constantly out of the window at the fields sweeping by, and said nothing.

As for me, I was all curiosity. I wanted to know why every one was weeping. What were the "cars" whistling about?. Nobody answered me. A cow galloped away from the train, and the man across the aisle told me that the cow had been on the track and that the cars had whistled so that the cow would get off and let them go by. What was the cow doing on the track? I asked. Eating grass, the man said. Why didn't the cow eat grass somewhere else? I asked. Because it was a cow, said he. Why was it a cow? The man laughed, but did not answer. I demanded one. Why was it a cow, anyhow—what if it had not been a cow? The man laughed again, and mother pinched my ear and told me to be quiet.

I espied our lunch basket presently—a great, round, deep basket of woven willow, which was brown and straw color, with a checkerboard effect. It had a woven willow lid which was solid brown. I essayed to lift the lid, to see what was under it. Then there was an argument, mother insisting that I should wait till supper time. Were we going back to grandma's for supper? No—we would not see grandma for a long, long time. That settled it. I was hungry. I wanted to eat at once; maybe supper time wouldn't come for a long, long time. Mother compromised by giving me a big slice of bread spread with butter and sugar, followed by half an apple. I inquired about the other half and was told to wait till supper time.

Night came at last, after a sleepy, tiresome, jolting afternoon, with every one too sad, too busy, or too something else to talk to me. A man came through and lighted a number of lamps in the swaying top of the car. The lamps sputtered and gave forth a peculiar odor, which was quite interesting to me and drew a number of questions which no one seeme dable to answer. The smell of the lamps was mixed with occasional gusts of smoke that came in through the opened door of the car, or a window, and the mixture of lamp smell and smoke smell was very pleasant to me. Also, I was greatly interested at the cinders which pelted against the window pane, and at the first opportunity thrust out my hand to see how the cinders would feel; whereupon mother jerked my hand inside and told me very decisively that if ever again I stuck my hand out she would spank me. Why? Because, she said.

The night was weird and wonderful—pale yellow light and subdued voices inside, blackness shooting by outside and the wild ringing of the engine bell or long muffled whistle.

When I awoke it was light again; and the train was still going, just as fast as ever.

I marveled. I asked the man across the aisle if the train didn't stop to sleep at night. The man said no; it stopped only now and then to take a drink. I wanted a drink, too, and ceased not my clamor till father took a tin cup from our checkered lunch basket and got me a drink from somewhere in the far end of the car.

After the first day I wearied of looking out of the car window; was too tired or sleepy most of the time even to ask questions, and had only a passing interest in the big lunch basket. We kept on going. Mother had cheered up, and she and the other women in the car laughed and talked and sang songs. Father talked to the other men, and I can remember hearing them speak of "land out west."

15,000 Tried to Get a HUDSON SUPER-SIX and Failed

Last year, thousands of buyers, including a large number of farmers, failed to get a Hudson Super-Six. We were too far oversold. Yet no car above $1100 had so large an output.

More people, we fear, will be disappointed this year as the Super-Six is better known and holds all worthwhile records.

The Economy of It

People buy the Super-Six because of endurance. Its speed, its power, its hill-climbing ability are all interesting factors. But the greatest of all is economy.

The year a gasoline saver in the form of radiator shutters. We add a motormeter. We use a patent pneumatic carburetor, which adjusts itself to every engine speed. And we put an engine primer at the driver's hand.

You'll Want It

You are bound to want a Hudson Super-Six when you know the facts. If you buy a fine car, you want the one which can outdo all others. If you buy a car to keep you want one that stays new.

And if any one can afford a **good** car like the Hudson, it is the Pacific northwest farmer, because he will appreciate its economy—it super-endurance. It may cost less, in the long run, than a car at half the price.

Remember, the Hudson motor is patented. No one else has it.

It has won every record that counts. In the great endurance test it broke all records by 52 per cent.

The whole car, as now built, is worthy of this motor. Every part is an engineering masterpiece.

A lesser car may bring you long regret. Find out the facts while you can get an early spring delivery.

Write us for the new Hudson booklet. Don't wait, but look it up now if you think you want the greatest car that is built.

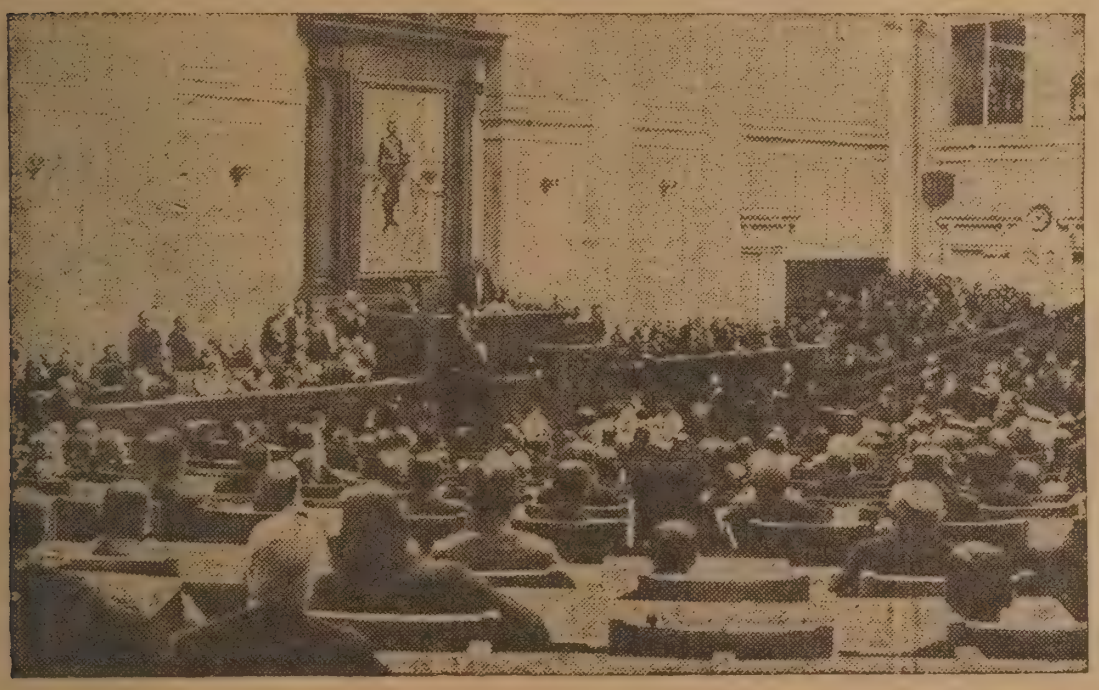
Cuban Candidates in Reelection



Reelections in Victoria do Las Tunas will be held April 9. The voting will decide whether President Menocal (at the left), conservative candidate, is to remain in power for another four years, or must give way to Dr. Alfredo Zayas (at the right), liberal candidate.

Sinking of the Yarrowdale

Guy Van Dorn, an American boy (shown in the insert above), photographed the steamer Yarrowdale as she was going down from a porthole of the Hudson Maru, the Japanese ship used by the German South sea raider as a prison ship. This picture shows the Yarrowdale sinking after the mysterious German sea raider had exploded a bomb aboard her. Van Dorn was landed at Pernambuco, Brazil, from the Hudson Maru, when the first word of the operations of the sea raider was given to the world. Members of the crew of the Yarrowdale, many of whom were Americans, were taken to Germany, but have just been released on the demand of the United States government, after having been held in quarantine for two months.

Fireman Aid in National Defense

The above photograph shows the fireboat New York tied up in the lee of the Brooklyn bridge, guarding against fire the huge munition piers where war supplies are being loaded for the allies. The fireboats of New York play an important part in the defense plans of Manhattan and also act as lookout boats aiding the defense of the bridges by playing their powerful searchlights on the piers and superstructures at night.

When Knighthood Was in Flower

BY EDWIN CASKODEN

CHAPTER XIV.—(Continued)

Presently we all moved into the window-way, where Brandon and Mary sat upon the great cloak and I on a camp stool in front of them, completely filling up the little passage.

"I can bear this no longer," exclaimed Mary. "I will go to my brother tonight and tell him all; I will tell him how I suffer, and that I shall die if you are allowed to go away and leave me forever. He loves me, and I can do anything with him when I try. I know I can obtain his consent to our—our—marriage. He can not know how I suffer, else he would not treat me so. I will let him see—I will convince him. I have in my mind everything I want to say and do. I will sit on his knee and stroke his hair and kiss him." And she laughed softly as her spirt revived in the breath of a growing hope. "Then I will tell him how handsome he is, and how I hear the ladies sighing for him, and he will come around all right by the third visit. Oh, I know how to do it; I have done it so often. Never fear! I wish I had gone at it long ago."

Her enthusiastic fever of hope was really contagious, but Brandon, whose life was at stake, had his wits quickened by the danger.

"Mary, would you like to see me a corpse before tomorrow noon?" he asked.

"Why! of course not; why do you ask such a dreadful question?"

"Because, if you wish to make sure of it, do what you have just said—go to the king and tell him all. I doubt if he could wait till morning, but believe he would awaken me at midnight to put me to sleep forever—at the end of a rope or on a block pillow."

"Oh! no! you are all wrong; I know what I can do with Henry."

"If that is the case, I say good-bye now, for I shall be out of England, if possible, by midnight. You must promise me that you will not only not go to the king at all about this matter, but that you will guard your tongue, jealous of its slightest word, and remember with every breath that on your prudence hangs my life, which, I know, is dear to you. Do you promise? If you do not I must fly; so you will lose me one way or the other, if you tell the king; either by my flight or by my death."

"I promise," said Mary, with drooping head; the embodiment of despair; all life and hope having left her again.

After a few minutes her face brightened, and she asked Brandon what ship he would sail in for New Spain, and whence.

"We sail in the Royal Hind, from Bristol, in about a fortnight," he replied.

"How many go out in her; and are there any women?"

"No! no!" he returned; "no women could make the trip; and, besides, on ships of that sort, half pirate, half merchant, they do not take women. The sailors are superstitious about it and will not sail with them. They say they bring bad luck—adverse winds, calms, storms, blackness, monsters from the deep and victorious foes."

"The ignorant creatures!" cried Mary.

Brandon continued: "There will be a hundred men, if the captain can induce so many to enlist."

"How does one procure passage?" inquired Mary.

"By enlisting with the captain, a man named Bradhurst, at Bristol, where the ship is now lying. There is where I enlisted by letter. But why do you ask?"

"Oh! I only wanted to know."

We talked awhile on various topics, but Mary always brought the conversation back to the same subject, the Royal Hind and New Spain. After asking many questions she sat in silence for a time, and then abruptly broke into one of my sentences—she was always interrupting me as if I were a parrot.

"I have been thinking and have made up my mind that I will do, and you shall not dissuade me. I will go to New Spain with you. That will be glorious—far better than the humdrum life of sitting at home—and will solve the whole question."

"But that would be impossible," Mary," said Brandon, into whose face this new evidence of her regard had brought a brightening look; "utterly impossible. To begin with no woman could stand the voyage; not even you, strong and vigorous as you are."

"Oh, yes I can, and I will not allow you to stop me for that reason. I could bear any hardship better than the torture of the last few weeks. In truth I can not bear this at all; it is killing me, so what would it be when you are gone and I am the wife of Louis? Think of that, Charles Brandon; think of that, when I am the wife of Louis. Even if the voyage kills me I might as well die one way as another; and then I should be with you, where it were sweet to die." And I had to sit there and listen to all this foolish talk!

Brandon insisted: "But no women are going; as I told you, they would not take one; besides, how could you escape? I will answer the first question you ever asked me. You are of 'sufficient consideration about the court' for all your movements to attract notice. It is impossible; we must not think of it; it can not be done. Why build up hopes only to be cast down?"

"Oh! but it can be done; never doubt it. I will go, not as a woman, but as a man. I have planned all the details while sitting here. Tomorrow I will send to Bristol a sum of money asking a separate room in the ship for a young nobleman who wishes to go to New Spain incognito, and will go aboard just before they sail. I will buy a man's complete outfit, and will practice being a man before you and Sir Edwin." Here she blushed so that I could see the scarlet even in the gathering gloom. She continued: "As to my escape I can go to Windsor, and then perhaps on to Berkeley Castle, over by Reading, where there will be no one to watch me. You can leave at once, and there will be no cause for them to spy upon me when you are gone, so it can be done easily enough. That is it; I will go to my sister, who is now at Berkeley Castle, the other side of Reading, you know, and that will make a shorter ride to Bristol when we start."

The thought, of course, could not but please Brandon, to whom, in the warmth of Mary's ardor, it had almost begun to offer hope; and he said musingly: "I wonder if it could be done? If it could—if we could reach New Spain, we might build ourselves a home in the beautiful green mountains and hide ourselves safely away from all the world, in the lap of some cozy valley, rich with nature's bounteous gift of fruit and flowers, shaded from the hot sun and sheltered from the blasts, and live in a little paradise all our own. What a glorious dream; but it is only a dream, and we had better awake from it."

Brandon must have been insane!

"No! no! It is not a dream," interrupted downright, determined Mary; "it is not a dream; it shall be a reality. How glorious it will be; I can see our little house now nestling among the hills, shaded by great spreading trees with flowers and vines and golden fruit all about it, rich plumaged birds and gorgeous butterflies. Oh! I can hardly wait. Who would live in a musty palace when they have within reach such a home, and that too with you."

Here it was again. I thought that interview would be the death of me.

Brandon held his face in his hands, and then looking up said: "It is only a question of your happiness, and hard as the voyage and your life over there would be, yet I believe it would be better than life with Louis of France; nothing could be so terrible as that to both of us. If you wish to go, I will try to take you, though I die in the attempt. There will be ample time to reconsider, so that you can turn back if you wish."

Her reply was inarticulate, though satisfactory; and she took his hand in hers as the tears ran gently down her cheeks; this time tears of joy—the first she had shed for many a day.

In the Siren country again without wax! Overboard and lost!

Yes, Brandon's resolution not to see Mary was well taken, if it could only have been as well kept. Observe, as we progress, into what the breaking of it led him.

He had known that if he should but see her once more, his already toppling will would lose its equipoise, and he would be led to attempt the impossible and invite destruction. At first this scheme appeared to me in its true light, but Mary's subtle feminine logic made it seem such plain and easy sailing that I soon began to draw enthusiasm from her exhaustless store, and our combined attack upon Brandon eventually routed every vestige of caution and common sense that even he had left.

Siren logic has always been irresistible and will continue so, no doubt, despite experience.

I can not define what it was about

JOSEPH A. WHITE, Prop.

Mary that made her little speeches, half argumentative, all-pleading, so wonderfully persuasive. Her facts were mere fancies, and her logic was not even good sophistry. As to real argument and reasoning there was nothing of either in them. It must have been her native strength of character and intensely vigorous personality; some unknown force of nature, operating through her occultly, that turned the channels of other persons' thoughts and filled them with her own will. There was magic in her power, I am certain, but unconscious magic to Mary, I am equally sure. She never would have used it knowingly.

There was still another obstacle to which Mary administered her favorite remedy, the Gordian knot treatment. Brandon said: "It can not be; you are not my wife, and we dare not trust a priest here to unite us."

"No;" replied Mary with hanging head, "but we can—can find one over there."

"I do not know how that will be; we shall probably not find one; at least, I fear; I do not know."

After a little hesitation she answered: "I will go with you any way—and—and risk it. I hope we may find a priest," and she flushed scarlet from her throat to her hair.

Brandon kissed her and said: "You shall go, my brave girl. You make me blush for my faint-heartedness and prudence. I will make you my wife in some way as sure as there is a God."

Soon after this Brandon forced himself to insist on her departure, and I went with her full of hope and completely blinded to the dangers of our cherished scheme. I think Brandon never really lost sight of the danger, and almost infinite proportion of chance against this wild, reckless venture, but was daring enough to attempt it even in the face of such clearly seen and deadly consequences.

What seems to be bravery, as in Mary's case, for example, is often but a lack of perception of the real danger. True bravery is that which dares a danger fully seeing it. A coward may face an unseen danger, and his act may shine with the lustre of genuine heriosm. Mary was brave, but it was the feminine bravery that did not see. Show her a danger and she was womanly enough—that is if you could make her see it. Her willfulness sometimes extended to her mental vision and she would not see. In common with many others she needed mental spectacles at times.

CHAPTER XV.

So it was all arranged, and I converted part of Mary's jewels into money. She said she was sorry now she had not taken de Longueville's diamonds, as they would have added to her treasure; I, however, procured quite a large sum, to which I secretly added a goodly portion out of my own store. At Mary's request I sent part to Bradhurst at Bristol, and retained the rest for Brandon to take with him.

A favorable answer soon came from Bristol, giving the young nobleman a separate room in consideration of the large purse he had sent.

The next step was to procure the gentleman's wardrobe for Mary. This was a little troublesome at first, for, of course, she could not be measured in the regular way. We managed to overcome this difficulty by having Jane take the measurements under instructions received from the tailor, which measurements, together with the cloth, I took to the factional little man who did my work.

He looked at the measurements with twinkling eyes, and remarked: "Sir Edwin, that be the curiousest shaped man ever I see the measures of. Sure it would make a mighty handsome woman, or I know nothing of human dimensions."

"Never you find about dimensions; make the garments as they are ordered and keep your mouth shut, if you know what is to your interest. Do you hear?"

He delivered himself of a labored wink. "I do hear and understand, too, and my tongue is like the tongue of an obelisk."

In due time I brought the suits to Mary, and they were soon adjusted to her liking.

The days passed rapidly till it was a matter of less than a fortnight until the Royal Hind would sail, and it really looked as if the adventure might turn out to our desire.

Jane was in tribulation, and thought she ought to be taken along. This, you may be sure, was touching me very closely, and I began to wish the whole infernal mess at the bottom of the sea. If Jane went his august majesty, King Henry VIII., would be without a master of dance just as sure as the stars twinkled in the firma-

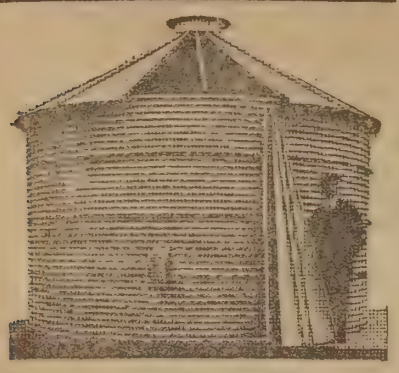
"The Bull Gets with the Pull"

Bull Tractor on Washington Farm.

The Tractor That Does Things



Here are a few things the Bull Tractor has done in Washington:
Plowed in field one and one-half miles around at Cameron Ranch, Sunnyside, Wash., a depth of ten inches, up a 15% grade.
Plowed five and one-half acres on Parish Farm, North Yakima, Wash., in six and one-half hours.
Filled ninety-ton silo in thirteen hours, at cost of $5.00, near North Yakima.
Operated successfully in plowing a stubblefield near Davenport, where grade of 20% was encountered.
At Reardan fifteen acres were plowed with two 14-inch plows at an average of an acre an hour.
Pulled two-ton truck with capacity load of potatoes out of mud at Bellingham.
Plowed ten acres out of twelve near Olympia, without a driver.
Snaked logs out of field for Nels Anderson of Edison.
Plowed five acres in La Conner Flats, successfully operating a disc plow, cutting a 20-inch furrow to the depth of one foot in hard pan soil that five horses found impossible to break.
At Wapato plowed continuously for twenty-four hours, plowing a total of nineteen and one-fourth acres, at a cost of 61c per acre.

ment. It was, however, soon decided that Brandon would have his hands more than full to get off with one woman, and that two would surely spoil the plan. So Jane was to be left behind, full of tribulation and indignation, firmly convinced that she was being treated very badly.

Although at first Jane was violently opposed to the scheme, she soon caught the contagious ardor of Mary's enthusiasm, and knowing that her dear lady's every chance of happiness was staked upon the throw, grew more reconciled. To a person of Jane's age this venture for love offers itself as the last and only cast—the cast for all—and in this particular case there was enough of romance to catch the fancy of any girl. Nothing was lacking to make it truly romantic. The exalted station of at least one of the lovers; the rough road of their true love; the elopement, and, above all, the elopement to a new world, with a cosy hut nestling in fragrant shades and glad with the notes of love from the throats of countless songbirds—what more could a romantic girl desire? So, to my surprise, Jane became more than reconciled, and her fever of anticipation and excitement grew apace with Mary's as the time drew on.

Mary's vanity was delighted with her elopement trousseau, for of courst it must be of the finest. Not that the quality was any better than her own, but the doublet and hose showed so differently on her. She paraded for an hour or so before Jane, and she became accustomed to the new garb, and as the steel reflected a most beautiful image, she determined to show herself

Clother in doublet, hose and confusion, the prettiest picture mortal eyes ever rested on.

to Brandon and me. She said she wanted to become accustomed to being seen in her doublet and hose, and would begin with us. She thought if she could not bear our gaze she surely would make a dismal failure on shipboard among so many strange men. There was some good reasoning in this, and it, together with her vanity, overruled her modesty and prompted her to come to see us in her character of a young nobleman. Jane made one of her mighty protests, so infinitely disproportionate in size to her little ladyship, but the self-willed princess would not listen to her, and was for coming alone if Jane would not come with her. Once having determined, as usual with her, she wasted no time about it, but throwing a long cloak over her shoulders started for our rooms with angry, weeping, protesting Jane at her heels.

When I heard the knock I was sure it was the girls, for though Mary had promised Brandon she would not, under any circumstances, attempt another visit, I knew so well her utter inability to combat her desire, and her reckless disregard of danger where there was a motive sufficient to furnish the nerve tension, that I was sure she would come, or try to come, again.

Canada Offers 160 Acres Land Free to Farm Hands

Bonus of Western Canada Land to Men Who Assist in Maintaining Needed Grain Production.

The demand for Farm Labor in Canada is great. As an inducement to secure the necessary help at once, Canada will give **one hundred and sixty acres of land free as a homestead** and allow the time of the farm labor, who has filed on the land, to apply as residence duties, the same as if he actually had lived on it. Another special concession is the reduction of one year in the time to complete duties. Two years instead of three, as heretofore, but only to men working on the farms for at least six months in 1917. This appeal for farm help is in no way connected with enlistment for military service, but solely to increase agricultural output. A wonderful opportunity to secure a farm and draw good wages at the same time. Canadian Government will pay all fare over one cent per mile from Spokane to Canadian destinations. Information as to low railway rates may be had on application to

J. N. GRIEVE
Canadian Government Agent
Corner First and Post Sts., Spokane, Wash.

One Must Obey

Obedience Vital Part of Training

Dear Girls of the Family Circle: I feel like writing to the Family Circle tonight, to every one gathered around the reading lamp, but more especially will I address myself to the girls of the household. You see, girls, I have not forgotten how it feels to be a girl, though there are more gray hairs in my head than there used to be. I remember the thoughts I used to have on the old farm. I used to lean out of my window on moonlight nights, when every one in the house was asleep. I can see just how the world used to look in the clear moonlight.

I used to wonder where I would be a year from that night, two years, 10 years, 20 years. I used to wonder what changes would come into my life, if I would some day see great cities, sail on the ocean, climb mountains; or if I would always stay on the farm where I must rise at 5 every morning and work all day till 9 o'clock. Many times, when extra things had to be done, I used to look out at the big barn across the road. It looked so big and black, for the old weather-beaten boards had never seen a bit of paint. I used to wonder how I ever dared to crawl under that big, dark barn.

The old barn was built rather close to the ground, and the foundation was broken in places, and the hens used to steal their nests under there.

As I was the only one of the older children who could crawl under, I was always chosen to get the eggs, about once a week

How I hated it! I had to lie perfectly flat and pull myself along on my elbows. It was so dark, and cobwebs and spiders were everywhere. I used to imagine I would touch a snake every time I crawled forward. And once I saw two round balls of fire so close that I shrieked, whereupon those balls of fire got active and quickly showed me they belonged to a cat. It was too dark to see the eggs, so they had to be found by the sense of touch. Sometimes my exploring hands came in contact with a cross old hen vainly trying to spread herself over two or three dozen eggs. In that case, she had to be captured, and some way, any old way, I was expected to deliver that squawking hen to my waiting mother at the hole through which I had crawled. Then another trip back for the pan of eggs that I had left behind, while mother placed the hen in "solitary confinement." Waiting with my mother at the opening was, usually, my older brother, who was just too big to admit of his flattening himself out under the barn floor, which explains why he was not under there with the setting hens and spiders instead of me. He would cheer me on with messages like these: "Look out, there are big black things with horns under there," or "I saw a skunk going under the barn the other day." Then would come mother's calm voice, telling me not to be afraid; that nothing would hurt me, and to find all the eggs I could; that she would stay right there. Then the voice of my brother would come again: 'Oh, pshaw! Don't be a 'fraid cat.'"

Girls, have you got a big brother who loves to tease? If you have, then you know all about it. But cheer up; they get quite decent when they grow up. Of all the chores connected with my little girlhood that have left upon my memory an impress of dread, hunting eggs under the barn and crossing the swift, cold creek to drive up the cows stand out the clearest.

But it never entered my mind to make any excuse for not doing either chore. I was simply practicing my lessons in obedience and responsibility, which are the first lessons I knew anything about. I imagine these experiences are not so very unlike your own, because farm life is much the same the world over. They seem very hard while we are living them, but, after all, they are only incidents along life's journey. The purpose of these little personal experiences, dear girls, is to impress on your minds the great importance in the building of character to learn while young to be obedient to parents and faithful and dependable in performance of duties.

It happens that I have opportunity for heart-to-heart talks with girls from 13 to 17 years of age, who, having slipped away from control of their parents and having gone wrong one way and another, have been commited by the courts to industrial schools under supervision of the state.

Every 25 out of 30 tell me they began their downward course by disobeying their mothers; then tried to cover that offense by lying. Do you wonder, dear girls, that I feel deeply impressed with the necessity of young people having regard for the commands and advice of those who, above all others, have their greatest good at heart? Are you dreaming your dreams in the moonlight as I used to do? Are you, too, wondering if you will do things and go places?

There is no reason why you need not do almost everything you want to do. Make the most of every opportunity, and as the years come on ways will open, and no doubt you will climb mountains, sail on the ocean and visit great cities. Those three, at least, of my moonlight dreams have been realized.

A. W. B.

When Easter Comes.

When Easter comes the violets lift
Their shyly hooded faces
Where late the frozen snows adrift
Heaped high the wonderful spaces.
When Easter comes the sunbeams dance
On green leaves all aquiver,
And grasses rally, spear and lance,
By ripping brook and river.

When Easter comes the lilies haste
What time the bells are ringing
To bring their perfumes, pure and chaste,
From hallowed censers swinging,
Shine dim church aisles on Easter day
Beneath their serried whiteness,
And happy children kneel and pray
Amid the lilied brightness.

When Easter comes a merry train,
The robin, wren and starling,
With song and wing are here again,
And many another darling,
The bluebird and the oriole,
The martin and the swallow,
"Anyway," they chant, "with grief and dole!
Here's spring, and summer'll follow!"

When Easter comes, when Easter comes,
Then winter's spell is over!
Ere long we'll hear the elfin drums
Where bees are deep in clover,
After we catch the swaying lilt
Of wings among the daisies
And see the rose cup's sweetness split
Among the garden mazes.

When Easter comes—ah, happy day!—
E'en tears like dewdrops glisten,
And songs climb up the heavenward way
While angels bend to listen,
For love and life and joy untold
Are in the age long story
That spells itself on harps of gold
And thrills with endless glory.

—Margaret E. Sangster.

Ring out old shapes of foul disease,
Ring out the narrowing lust of gold;
Ring out the thousand wars of old,
Ring in the thousand years of peace.

Ring in the valiant man and free,
The larger heart, the kindlier hand.
Ring out the darkness of the land,
Ring in the Christ that is to be.

—TENNYSON.

KITCHEN AND PARLOR

Plans for Light and Ventilation.

To the Editor of The Farmer: I am sending my ideas of a kitchen and parlor. This is not a description of our kitchen and parlor, as we are living in a rented house now, but expect to build this summer.

First of all, I want plenty of light and ventilation; and I want the stove between two windows. That is the fault I find with so many house plans. The stove is always placed in the darkest corner of the kitchen, so one's back is to the windows when cooking. I think a 12x12-foot kitchen is large enough, with a kitchen cabinet or work table by or under a window on the left. To the right, a stove between two windows, to the right of the stove a sink and drainboards under another window, and have linoleum on the floor and the walls covered with oilcloth. One might add other arrangements to suit their needs.

In the parlor I would want a nice, comfortable fireplace. Then I think the parlor described by the lady in a recent issue of The Farmer is just fine. A little more I would add, keep the window blinds up all day so the sunshine could find every corner. I would rather have the sunshine than so much fine furniture till I would have to pull down the blinds to protect it. It seems to me a house looks dreary with the blinds pulled down.

UNION PACIFIC SYSTEM

Are you reading the history now running serially in advertisement form in *Colliers*, *Saturday Evening Post* and other national magazines, of the BUILDING of the Union Pacific?

Union Pacific is a national achievement upon which depended the safety of the Union and the holding of the Pacific States.

The stories are rich in intimate facts of United States history. When you read them you will realize what a great part Union Pacific played in the growth and welfare of our Nation; and how truly serviceable Union Pacific is and will be—in peace or war—to the people of our United States, as individual travelers, or shippers, and as a Nation.

UNION PACIFIC SYSTEM

Patterns

$ SAVED IN HOME CANNING ON THE FARM $

What are you going to do this year to overcome the waste of fruit and vegetables due to crowded markets? Will you ship **all** this perishable material, regardless of market conditions, paying big commissions, high freight, and stand losses from decay and an overcrowded market—**or will you**—like the big manufacturer, convert this into a finished product and **MAKE A PROFIT?**

Answering These Questions

We say that facilities to produce **"Home Canned Foodstuffs"** are as necessary to such producers as is a cream separator to a dairy farmer.

That's the secret of success today for the Farm Woman, Fruit Grower and Market Gardener. With Sanitary Home Canning Outfits and cans from the Seattle Can company, the Home Canner will put up better goods as to quality and flavor than are now offered by the big canneries, and what the family can not use at home may be sold on the market. This solves the problem of "Waste versus Profit."

High Cost of Living

Sixty per cent of our population live in cities. They consume, but do not produce. The City Consumer wishes "the best." "Home-made goods" are always preferable. **The best canned goods are Home Canned goods.**

The best way to can goods at home is **"The Steam Pressure Way."** With our Sanitary Home Canning outfits for tin and glass jars, to handle pints, quarts, half-gallons and gallon cans, for use on any stove or with Fire Box attached for wood or coal, a steam pressure outfit may be had at **prices ranging from $16.50 upward.**

Use Coupon at Once

And get the folder and literature on this **new science** in the art of Home Canning.

Plans (with prices on cans and apparatus) for community work and packing plants of larger size, cheerfully furnished on request.

Gentlemen: Send me folder on Home Canning Outfits as described in The Washington Farmer.

Name .....

Box or Rural Route.....

Town..... State.....

The Washington Farmer,
Spokane, Washington.

Our school has not started a Washington Farmer library campaign. Please tell the bookman to write to our teacher and mention my name as a pupil who would be willing to help secure more library books for our school by taking subscriptions for the Washington Farmer in our district. I will talk to the other boys and girls in our school and see if they are willing to start a Red and Blue subscription contest.

My teacher's name is———. There are——pupils in my room. I am——years old. My name is———.

My postoffice is———. State———.

The bookman has been away for a week, down in the country where a lot of the boys and girls live who are working to get school libraries. While down there he met a good many people who were very much interested in the boys and girls, and who had given their subscriptions to members of the Red and Blue teams to help them in their campaign.

The bookman said it made him feel proud of the Red and Blue team hustlers, when these people told him how earnestly they all had worked

Then he met other people who told him that their teacher had not started a Red and Blue team subscription contest in their district. They asked why it hadn't been done so they could help their school to get some of these books for their library, also, by giving their new and renewal subscriptions to the boys and girls.

The bookman could not tell them why this had not been done. But he promised to try and find out. So, boys and girls, if your school has not started a Washington Farmer subscription campaign in order to get some of the nice books other schools are receiving every week, fill out this blank and send it to the Washington Farmer, so the bookman can write to your teacher and tell of your interest in the matter and see if he can't give these people, who are willing to help your school get books with their subscriptions, a chance to do so.

The bookman says he feels sure he is going to get a lot of letters from the boys and girls who are interested, for he knowns how anxious they all are to get books to read. So every one of you can help.

Here is what one teacher says about the books that the boys and girls are helping place in their school libraries:

"We were very much pleased with the books and feel that the effort made in procuring them was worth while, indeed. Respectfully, Franc DeGraff."
North Yakima, Wash.

New Schools Starting Contests.

Pioneer school, Stevens county, W. H. Blackenburg, teacher; Velvet school, Stevens county, Irene F. Adam, teacher; Evans school, Stevens county, Avis C. Fisher, teacher; Rice school, Stevens county, Vivien Johnson, teacher; Woldale school, Kittitas county, Mrs. Estelle S. Simmons, teacher; Lyons school, Kittitas county, Erie Gates, teacher.

The individual subscription contest between pupils of the various schools continues to be filled with interest. Somebody is going to win that $5 in gold on the first of May, and any boy or girl has the right to compete for it. It will be given to the goy or girl who secures the most subscriptions through individual effort by that time.

Contestant's Standing.

Dorothy Rauch, Chewelah, Wash, 20; Bessie Webb, Ford Wash., 14; Loyal C. R. Snyder, White Swan, Wash., 12; Mildred Glasgow, Bossburg, Wash., 9; Dorothy LaRue, Mayview, Wash., 6; Lester Ruark, Mayview, Wash., 6; Violet Leachman, Mayview, Wash., 5; Eva Bond, Valley, Wash., 3.

We expect new contestants to come in next week. Also the school winning the book prize for their teacher on Library day will be announced.

No Foundation

For Scare About Bank Being Moved

(Continued from page five.)

declare said first mortgages on land situated in such state ineligible during the continuance of the laws in question."

When the federal farm loan board conducted its hearing in Spokane Commissioner Norris questioned Governor Lister on this point and was assured by the governor that the laws of this state would be found entirely satisfactory.

Undoubtedly the laws have been found satisfactory in all the four states in this district, for mortgage companies have long been making farm loans in large volume in Washington, Oregon, Idaho and Montana, and the great life insurance companies are heavy investors in such mortgages. The laws of all these states have been carefully scanned by the attorneys of these mortgage companies and life insurance associations and found ample and satisfactory.

The Farmer gives herewith in full the recent announcement of the federal farm loan board that a uniform interest rate of 5 per cent would be charged on all farm mortgages under the new system. The Associated Press dispatch carried only a brief condensation of the order. The board announces:

"The federal farm loan board has finally fixed, by resolution, the interest rate at which farm loan bonds will be sold and the interest rate on loans extended to farmers. The bonds will bear 4 1-2 per cent and will probably be sold at a premium. The interest rate to the farmer will be 5 per cent. The interest rate which will be charged the farmers is 1 per cent less than the maximum provided by the federal farm loan act.

"This determination on the part of the farm loan board, reached after careful consideration of every factor in the situation, means a tremendous financial saving to the farmers of the United States. The present farm mortgage indebtedness of the United States is approximately $4,000,000,000, and the average interest rate is approximately 7.4 per cent. A reduction of this rate to 5 per cent on the present volume of farm loan business means an average saving to the farmers of nearly $100,000,000 a year.

"This takes no account of the greatly increased volume of loans certain to follow the decreased interest rate. The determination of the interest rate to the farmer is based upon the rate fixed on the farm loan bonds. Under the law the farm loan board is permitted to add to the interest rate on the bonds a maximum of 1 per cent to pay the cost of operating the farm loan banking system. The great volume of business assured the twelve federal land banks at the start has induced the board to limit the operation cost to half of 1 per cent, so that since the bonds will bear 4 1-2 per cent the rate of interest to the farmer will be 5 per cent."

THERE'S A

MACK TRUCK

FOR EVERY NEED

More than 7000 **Mack Trucks** are in daily use throughout the United States. Farmers and the industrial and business interests of Washington and Idaho have bought $75,000 worth of **Mack Trucks** in the last three months.

The question is—What is your need?

Do you want a light, medium or heavy duty truck? Whether it is for wheat to market, wood, coal, lumber hauling, or general farm utility, there's a MACK TRUCK built especially for YOU. Sizes 1, 1 1-2, 2, 3 1-2, 5, 5 1-2, 6 1-2 and 7 1-2 tons—anything YOU want.

MACK TRUCKS have certain definite points of superiority and adaptability. We can't give you more than a few hints in this announcement. You'll learn more about MACK TRUCKS in these pages—but don't wait; mail the coupon today for catalogue and other literature.

Especially we want to send you a mighty interesting booklet—"Mack Truck Aids Science;" how a 31-2-ton MACK TRUCK carried a 20,185-pound load up a mountain—it's a good story of a remarkable performance.

Hazel Tells About Their Nice Farm.

Dear Aunt Nellie: I am going to write about our farm. I would not trade with any city girl. We have 40 acres and 30 of them are under cultivation. Scatter Creek runs through our place. Papa has cleared our land with the donkey engine. We have about 350 fruit trees and one-half of an acre of logan and blackberries and a quarter of an acre of strawberries. Papa has 12 acres of grain in and mama has 29 chickens. We have some pets. They are guinea pigs and rabbits. Papa has three horses and two cows. My sister milks the cows. We have five cats at the barn. We have two dogs. We have a big house with eight rooms and two pantries. Mama has some flowers around the house. We have a little calf; it is three months old. I am 12 years old. My birthday is June 19. I helped papa plant an acre of potatoes last year. I help mama in the house. I go to school too, and I am in the seventh grade.—Hazel Allen, Rochester, Wash.

Thinks the Baby is Sweet and Cute.

Dear Aunt Nellie: I am twelve years old and my birthday is the 16th of July. I live on a dairy farm two miles from the school. I go to a Sunday school. Our Sunday school and school have been shut down on account of measles. I have three brothers and two sisters. Their names are Arthur, Ernest, Robert, Grace and Alice. Alice is the smallest, whom we all love and think very sweet and cute. My teacher's name is Miss Huntington. I have not seen any letters from this part of the country so thought I would write. I have finished piecing the blocks for my quilt, so I sent Leona Waldron some pieces for her quilt. I am sorry she can't get out and enjoy herself like other girls can.—Lydia Guild, Woodland, Wash.

Have a Fine New School Now.

Dear Aunt Nellie: I am a little girl 11 years old and I am in the fifth grade. I started to school at the beginning of the term and went about a month, when our school house burned down. Then we went to school in a vacant farm house until our schoolhouse was built. Our school is called the Kirby school. I live in the country. I have seven sisters and three brothers. In the spring and summer months my sister and I take music lessons. We are in the second grade in music. I can tat and crochet. I have a little pet dog and I call him Browny. He is very friendly and likes to play.—Hattie Malone, Pomeroy, Wash.

Big Lake on the Merrick Farm.

Dear Aunt Nellie: I am going to tell you about our farm. We live on a 160 acre farm. There is a big lake on our farm and we go boat riding and fishing. The name of our lake is Deep lake. I have five brothers. Their names are Morse, Fayrse, Ross, Earl, Tonie. Papa has four horses. I have a Shetland pony and his name is Midget. His weight is 350 pounds. I ride him one and a half miles to school. I have two geese. We have 50 chickens. We have an old mother pig and eight little ones. We have seven head of cattle and two dogs. There is a large pine tree here, which is 22 feet around.—Henry Merrick, Fish Trap, Wash.

Pond Is Full of Ducks All the Time.

Dear Aunt Nellie: I am 12 years old. My birthday is the second of December. I am in the sixth grade. I have two sisters younger than I am and two brothers, one older and one younger than I am. We live on a ranch of about 160 acres. One of the fields has a pond of water on it and there is about 700 ducks in it all of the time. I am going to tell you about my school. There are four rooms. We have three teachers. My teacher's name is Miss Peterson. We have an extra room that we use to eat in. There are 24 children in my room. There are about 63 all together.—Marjorie Cayse, Dungeness, Wash.

No Absences Since School Began.

Dear Aunt Nellie: My subject is, "My First Surprise." I came home from school and I saw the Washington Farmer. I unwrapped the paper and turned to the Childrens' Corner. I looked at the Aunt Nellie letter and read it, then I looked to see the letters and saw my name as second prize. I could hardly believe my eyes. My mama was surprised also. My friends and I have a very good time. I am all the time joking people. My school has had perfect attendance during all the months of school so far; we have had neither absences or tardies since school began. I am 11 years old, November 26.—Helen Niblick, Trinidad, Wash.

Hot Lunches at School Every Day.

Dear Aunt Nellie: We have been taking The Farmer for some time and we like it very much. I live on an eight-acre farm. I have eight pet chickens of my own and two cats, the cats' names are Blackie and Tom. I am 11 years old and my birthday is the 21st of June. I am in the sixth grade at school. My teacher's name is Mr. Howell. I like him very much for a teacher. There are nine pupils in our class. I am going to tell you about our schoolroom. It is a large building with four rooms in it. Three of the rooms are used for schoolrooms and the other is used for cooking. We have hot lunch every day.—Dorothy Curtis, Freeland, Wash.

Have to Wait Till Summer Comes.

Dear Aunt Nellie: I have had a birthday since the last time I wrote. I am 12 years old. I would like to correspond with any one of my own age. I have one sister and one brother. Their names are Opal and Herbert. Opal is 14 and Herbert is 21 months old. My sister and I go to the Johnson school. I am in the seventh grade and she is in the ninth. We girls have a lot of fun at school now, but we do not play basket ball because there is only one ball. The others have been punctured. I wish that summer was here so we could go for pleasure rides in the car, but we will have to wait till it does come.—Flora Lamm, Johnson, Wash.

Knows Mother's Her Best Friend.

Dear Aunt Nellie: I go to school every day. I go to Uniontown and it is about three and a half miles. We ride a little pony to school. My pony's name is Jimmy. My teacher's name is Miss Mary Codd. I am in the fifth grade and I am 10 years old. My sister is in the third grade. She is 8 years old. My studies are reading, penmanship, spelling, arithmetic, language, hygiene, history and geography. My subject is "My Best Friend." My best friend is my mother and she is my best friend because she washes my clothes, cooks for me, protects me, and makes my bed.—Jennie Myers, Uniontown, Wash.

The Dog, "Judy," Is 14 Inches High.

Dear Aunt Nellie: I read all of the letters that I see in the Children's Corner. This is the first letter I have written and I hope it won't be the last. We have a little dog whose name is "Judy." She is 14 inches high. We have had many kittens but they always die. I am 12 years of age. My birthday is January 28th. I live 100 rods from school. My teacher's name is Mr. Bramblitt; he tries to make school pleasant for us and is always joking. Just the same he is strict with us.—Alice Bartlett, Centralia, Wash.

The More the Merrier, Esther.

Dear Aunt Nellie: I wonder if there is any room for another little girl. I am a farmer's daughter. I am 9 years old. I am in the second grade at school. My birthday is February 29 so you see that I am a leap year girl. My teacher's name is Mary Soper. She is good and kind to the children and the children all like her. In summer I have lots of fun picking strawberries, raspberries and blackberries and in the fall, I pick huckleberries and in the winter I have lots of fun coasting down the big hill. In the spring I begin to work on my garden.—Esther Sandberg, Olalla, Wash.

Girls Play Volley Ball at School.

Dear Aunt Nellie: I am 11 years old. My birthday is May the 24th. I am in the fifth grade at school. I have three sisters and two brothers. My sisters' names are Ruth, Esther, Agnes, and my brothers' names are Gust and Alf. I live on a 20-acre farm. We have four cows, one heifer and two horses. We have about 180 chickens. I go to school every day. We play volley ball and the boys play baseball. The school I attend is called Riverside. My teacher's name is Mr. Manners.—Svea Boman, Independence, Wash.

Cat Was 19 Years Old When it Died.

Dear Aunt Nellie: I am 10 years old. My birthday is February 11. I have one sister and one brother. My sister's name is Elnora. She is 6 years old and my brother's name is Gene. He is 3 years old. We live with our grandpa and grandma. Our old pet cat died of old age today. She was 19 years old. She was born in 1898. We have 13 head of horses and one hog, also 180 chickens. We children raise a garden every year. We walk to school. We have three miles to walk.—Agnes Davis, Hulby, Wash.

Little Pet Kitten is a Blue One.

Dear Aunt Nellie: I live on a farm of 260 acres. I have one pet kitten. It is blue. I have two brothers; one is 16 and the other is 15. I have one sister and she is 20 years old. I go to school. I am 11 years old. I am in the fourth grade.—Naomi Miller, Leese, Wash.

Dresses Little Brother and Sister.

Dear Aunt Nellie: I am 9 years old and in the fourth grade. My birthday is November 3. We live on a 15-acre farm. We have two colts and one horse. The horses name is Jude and the names of the colts are Dixie and the other Buck. We have seven heifers and five cows. We have a puppy named Mutt. We children have lots of fun playing. Our teacher's name is Miss Wilcox. She is a good teacher. I wash dishes for mama and I dress my sister and brother.—Neva Helen Cayse, Dungeness, Wash.

Taken 17 Lessons on the Piano.

Dear Aunt Nellie: I go to school and am in the seventh grade. My teachers' names are Mrs. Murdock, Miss Silverstone and Mr. Williams. I take sewing at school every other day. I live in the country and live two miles and a half from school, but I ride in a bus. We have a piano and my sister, my brother and I take lessons. I have taken 17 lessons. I will be 13 years old July the first.—Marcia Mossman, Raymond, Wash.

Only One Room in Marie's School.

Dear Aunt Nellie: I live on Puget Sound. I am nine years old. My birthday is on May the nineteenth. We have two cows, lots of chickens, two cats and one dog. I have three sisters and one brother. I am the baby of the family and I am in the fourth grade. My teacher's name is Miss Shelley. There is only one room in our school and there are 27 pupils. I walk a mile and a half to school.—Marie Fountain, Fragaria, Wash.

Brothers Are in the English Army.

Dear Aunt Nellie: I live on a 40-acre farm. I am 7 years old. I have two rabbits and a cat. We have three horses. Their names are Bill, Babe and Nance. Nance got cut by some barbed wire. I don't think we can use her any more. We take The Farmer and the first place I turn is the page where the letters are. I have fun on the farm. I have four brothers. Two of them are in the English army. I will write again.—Clayton Hay, Sunnyside, Wash.

Here's a Little Blue-Eyed Cousin.

Dear Aunt Nellie: I live in the country. I have never lived in the city. We live on 160 acres. We have 25 head of cattle and five horses. Their names are Fannie, Ned, Dixie, Trixie and Prince. I walk half a mile to school. There is just one room. My teacher's name is Miss Scribner. I am 9 years old and am 5 feet high. I have yellow hair and blue eyes.—Violet Throop, Deer Park, Wash.

Tells How She Earned Her Money.

Dear Aunt Nellie: I am 9 years old and my birthday is in July. I am in the third A grade. I have a pet dog named Prince and when he stands up he is as tall as papa. I have a pet kitten named Muff and we have over 90 chickens. Papa has two horses named Birdie and Jim. I gather the eggs every night and get in a little wood and papa gives me 20 cents every week. I like my teacher very much.—Eva Durham, Seattle, Wash.

Will Have a Garden This Summer.

Dear Aunt Nellie: I have two sisters and one brother and we have a calf and its name is Daisy and we have a dog. His name is Bounce. I go to school in town. I have a steer and my brother has one too. I live on a ranch. My sister is going to school. The two youngest are twins. They do not go to school. I am going to make a garden this summer. I am 8 years old and have $5. My sister has $5.50.—Gustave B. Sloughter, Mansfield, Wash.

The Washington Farmer is glad to announce the receipt of letters for the Children's Corner from the following during the last week: Grace E. Balsey, Maud Burns, Hazel Ethrege, Willie Bell Dysart, Eva Wees, Clara Burton, Rena Craig, Oscar Berg, Josie Read, Nick Seivonen, Louise James, Rubie Amley, Hattie Litchfield, Ethel Harriman, Lucile Bowers, Evalena Clement, Edna McClelland, Elizabeth Bowen, Mary Symington, Eugene Pollastrini, Mary Willis, Rogenia Willis, Katherine Bowen, Gladys Brummund, Ellen Purcell, Frank Purcell, Imogene Nelson, Myrtle Ledbetter, Jessie Moss, Ella Liere, Ruby Warren, Mabel Margret.

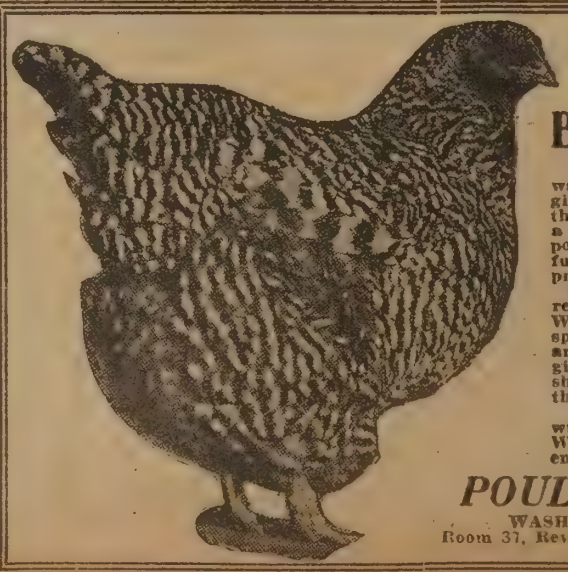
The Bible Says:

BOYS AND GIRLS

Win

THIS SHETLAND PONY

For the Best Garden Products



We want to encourage gardening among the boys and girls of the great Pacific Northwest. We know boys and girls who have earned good pocket money raising vegetables and selling them. We have, therefore, decided to give away as prizes the following for the best garden products:

1st prize: A beautiful Shetland pony,
2nd prize: Iron Age Hand Cultivator,
3rd prize: Agricultural Encyclopedia.

There are no strings or impossible conditions to this contest. It is open to every boy and girl under the age of 18.

Write LILLY'S *Seattle, for full particulars,* and remember that you cannot buy better seeds than

LILLY'S *Best For The West*

Crooked Stick

Gives Place to the Tractor Plow

During the tractor demonstration which took place November 13 to 18 on the farm of T. H. Larson on the Pacific highway in Washington the thoughtful observer was brought face to face with the fact that "gas" is coming into its own. The farmers who attended the demonstration came in automobiles, almost to a man. On the broad highway adjoining the field in which the plowing was done, huge trucks rumbled past, some of them carrying the produce of the farms to the city, others conveying city goods to the farmer's door. And in the field an apparently intelligent monster of steel and brass nosed its way up and down the plow furrow, dragging two 14-inch plows through the frozen soil. One spectator, a white-haired old man who leaned heavily on his cane, shook his head slowly as he gazes across the fence.

"What's the world coming to, I should like to know?" he queried, addressing the crowd at large. "When I was a boy in England I can remember a time when scythes were prohibited in harvesting the grain. It all had to be cut with cycles, and the man with the biggest hand, who could grasp the biggest bunch, was the prize harvester. Our plows were little better than crooked sticks. But now——"

Again he shook his head, as he pointed his cane at the retreating tractor.

Opinion favorable to mechanical plowing, where the fields are large enough to justify the initial expense, was freely pronounced by the witnesses for the demonstration.

Time With Chickens Well Spent.

(To the Editor.)—I would like to say to every small farmer west of the Cascades to keep at least a small flock of chickens of a good laying strain. Here, where the land is hard to clear and not much, if any, capital to do it with, a flock of blooded chickens won't come amiss and helps a lot towards paying running expenses on the place. I put up 17 full blooded White Leghorn pullets in a pen by themselves on the first of February to test their laying qualities and here is shown what I realized from said pen: Laid 393 eggs, or 32 3-4 dozen of eggs in 28 days, sold to our local hospital at 40 cents per dozen, or $13.10. Deducting expenses for feed that I had to buy amounting to about $2, would leave me a profit of $11.10, not counting the feed that I raised on the place which would amount to, perhaps, $1.25. We have been on the old homestead for nearly eight years and we have never been without fresh eggs anytime of the year. Many people have asked me, "What do you feed your chickens that they are laying all the year around?" The answer is this: "If you are willing to spend a little time each day to take good care of a flock you can do the same thing.

First of all get a laying strain; fix up good, warm, dry quarters and keep them clean, plenty of room for them to scratch in and good, clean drinking water constantly before them. This is the way I feed ours: In the morning a warm mash consisting of cull spuds or carrots mixed with bran, also warm drinking water in the winter. I raise oats and field peas mixed for chicken feed. Bundle it up and the bundles are fed at noon, hung up on wire hooks in the scratching pens and biddy does her own threshing and enjoys doing it. By this method I save all the straw for feed for the young stock. In the evening I feed scratch, sometimes wheat and real cold cracked corn. All the wood ashes on the place go to the poultry house in the roosting quarters. By doing this they get all the charcoal they need and the droppings are easier to remove. All bones from slaughtered cattle and hogs are taken care of and ground up in winter on a bone grinder. Oyster shells and dried beef scraps constantly beside them, besides granite rock grit. You can find rock suitable for grit on most all the uplands, pound them up with a sledge hammer when there is no rock crusher. I consider the little time I spent with taking care of our chickens well spent.

C. B. NEIDERPRUM.

Darrington, Snohomish Co., Wash.

Ellensburg's First Market Day.

Ellensburg's first market day last week proved a great success. Articles of every description were offered for sale, including incubators, horses, hogs, household furniture and farm implements. There was a crowd of 200 active buyers. The second Wednesday of every month hereafter will be market day.

Limestone

Find Out If Your Land Needs It

County Agriculturist Floyd W. Rader of King county, Wash., calls attention to the tendency of lime to work down into the soil. It is because of this tendency of alkaline salts in solution to seek lower levels that many irrigation districts are now confronted with the necessity of removing an excess of alkali from their lower lands; and in applying lime to acid soils this same fact should be kept in mind. The point of practical application is that lime should be added to plowed land after plowing rather than before. A violation of this rule often leads the farmer to conclude that his soil did not need liming, or that lime is of no benefit, when the fact is that by plowing his lime under he has robbed the surface soil of its beneficent action. The subsoil is much less apt to be acid than the surface soil in any case.

Ground limestone will not cake if applied on wet ground, and many be spread as early in spring as team and wagon can get into the fields. February or March is a good time, although April is not too late.

If you are in any doubt as to whether or not your land needs liming, Mr. Rader says it is a simple enough matter to decide for yourself. Buy a tube of blue litmus paper at the drug store and insert a small strip in a handful of dirt, just enough to moisten the paper. Examine at frequent intervals. If the paper begins to turn red quickly—say within from three to five minutes—your soil is decidedly acid. If it takes half an hour to color the paper pink, on the other hand, much less acid is indicated. Apply two tons of ground limestone for the very acid soil, and from one-half to one ton for milder cases.

Here is a final tip offered by the King county agent: Burned lime quickly reverts to the same chemical composition as lime stone, so that as a rule there is no advantage in applying the former.

Grain Grades Fixed

Will Govern the Season's Crops

Announcement has come from Washington, D. C., that the department of agriculture has adopted a set of grain standards for the entire grain business of the United States. The standards will become effective for grading the 1917 crops.

No detailed report of the exact standards have yet been received in the northwest, but it is believed that they conform in most respects to the proposed standards as outlined to the producers, dealers and shippers in February when the department of agriculture held hearings throughout the grain growing districts. These standards differed only slightly in some minor details from those already operative under the Washington state grain inspection law, which is practically the same as that recently adopted in Oregon

The Farmer will publish the details of the regulation in a later issue.

W. H. Paulhamus

Mr. Paulhamus says—

"Cooperation means working in harmony with a view of obtaining the best possible results for all interested. This is a very simple method and can be followed to a successful conclusion by any community."

In an early issue of The Farmer Mr. Paulhamus will give his impressions of

The Middleman

From the viewpoint of a man whose work in establishing cooperative enterprises has been so successful as to make him a nationally-known figure, Mr. Paulhamus' estimate of the middleman is bound to be of extraordinary interest and value.

The Farmer has arranged with Mr. Paulhamus for a series of articles on

Cooperative Marketing

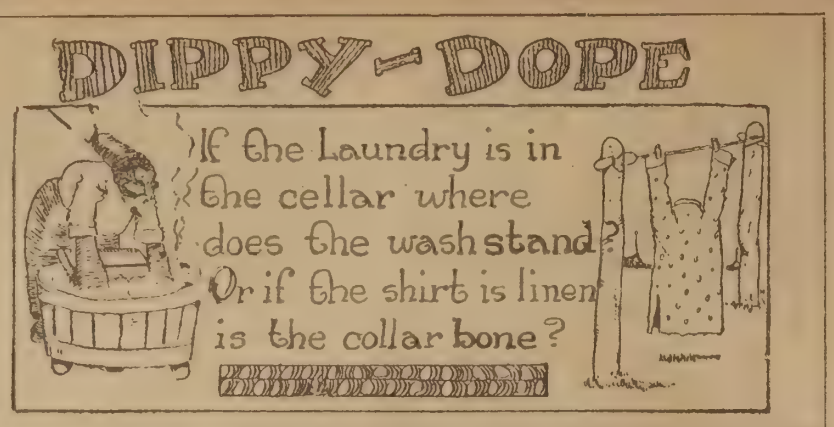
which will go straight to the heart of the vital subject in a way that we know every reader will appreciate.

Smoothing the Way for Mother

The Farmer is not as exclusively masculine in its leanings as the great Henry George, who said, "I am for men." The Farmer is also for women as well as men.

"**LET THE WOMEN DO THE WORK**" is all right so long as they aren't asked to do too much of it. The Farmer is going to offer some plans and suggestions during the months just ahead for reducing both the work and the cost of housekeeping in country homes. We believe most of our women folks will enjoy these talks and find many a way to profit from them.

Not a word about father—he is doing 3 days' work in 1, thereby saving two days. But what about mother?



Will the well dressed party sell Mr. Jones of Pinedale Farm $1000 worth of stock in the Great Consolidated Hot Air Company? No, the w. d. p. will not.

The Farmer, of the issue Mr. Jones is holding has told the facts about this company and made Hot Air stock look about as desirable as a fourth mortgage on an abandoned brickyard.

Swatting the Swindler

is a part of the work The Farmer has cut out to do in future issues. Watch for these "swats."

His Best.

She (on board ship)—Mr. Jones, if I fell overboard and were drowning, would you jump in and save me?

He (hesitating, but honest)—By Jove. You know, I don't believe I could. But I tell you what I would do. I would watch you drown with the deepest sorrow and regret.—Life.

Mutual Creamery Co.

Seattle, Washington.

PIONEER DEVELOPMENT.

In many western states our time and money and pioneer work, with a cash market for the farmers' dairy and poultry products, have made it possible to reach the present splendid development whereby Western states have become exporters instead of importers.

WORLD-WIDE MARKET.

We reach local markets, also markets in any part of the United States and in all parts of the world, thus assuring the producer good returns and benefits from a wide distribution of his products. The farmer produces and we reach those that consume and we bring in the dollars from over the mountains.

OUR PROFITS.

Our profit is fixed by our articles of incorporation, namely, 3 per cent on sales, if we can earn that much. Should we earn more than 3 per cent on sales, this surplus earning is returned to our producer stockholders, holding stock in the company at the rate of one share, par value $10, for every two cows milked, in proportion to the amount of milk, cream, eggs and poultry they sell us. This limits our profits to approximately 1 cent per pound on butter, six-tenths of a cent per pound on cheese and nine-tenths of a cent per dozen on eggs.

COMPETITION.

This company does not own a share of stock in any corporation or firm, whether competitors or not, directly or indirectly engaged in the creamery or produce business in the west, in the United States or in the world; and no firm, individual or corporation, whether competitors or not, directly or indirectly engaged in the creamery and produce business in the west, in the United States or in the world, owns any shares of stock or holds any interests whatsoever in this company.

STOCKHOLDERS.

Two hundred and forty-three farmers have taken stock in our company, and sixty-six of our employes are stockholders. It is the right and privilege of every farmer, with milk and cream to sell, to become a stockholder with us, and 60 per cent of our capital stock is reserved for producers.

DIVIDENDS PAID DURING 1916.

The total dividends distributed to stockholders during the year 1916 were 8 per cent upon the par value of stock outstanding. We have in addition to these dividends paid to the farmers and producers above referred to 2 per cent upon the total value of dairy and poultry products sold by them to this company.

MUTUAL CREAMERY COMPANY.
W. F. JENSEN, President.
M. W. ELLIS, Manager. —Adv.

Ups and Downs of a Bunch Grass Boy

(Continued from page twenty-four.)

Once we crossed a great, high bridge. Looking down, as if from the clouds, I beheld what seemed to be thousands of wheelbarrows. Just why all those wheelbarrows were there I did not know to this day. Somewhere on the road, in Wyoming or Montana, likely, big Indian women with straight, black hair, red handkerchiefs, and large rings in their ears, came on the train with big platters of broiled meat, elk steak, I think. The Indina women were selling large, juicy elk steaks at a few cents each. Father hesitated; then, in response to my wild entreaty, felt in his pocket for a coin. Mother caught his arm and resolutely told him not to buy—we could not afford it. She had her way, and the Indian woman with rings in her ears and checks dyed red passed on down the aisle and sold her steaks to somebody else.

After the first few days of the journey across the plains I must have slept a good deal, for there is little of it that I can recall. It was only the very unusual that gripped my imagination and started a string of questions that I recall. Such a thing happened when we had traveled for many days. Looking out of the window, I beheld what I believed to be immense, blue clouds lying in conical masses on the distant skyline. Instantly I was all excitement. I believed that the train was about to plunge into these masses of blue clouds.

They were not clouds, said mother. They were mountains. What made me think they were clouds, anyway? They looked like clouds I declared; if one stepped on a mountain, would he fall in? Surely he would, for they looked so soft and blue.

But mother said that they were mountains, not clouds, and were not soft. They were the Blue mountains, and we were getting close to Walla Walla. I insisted that the Blue mountains were soft, like clouds. I reminded mother that she had often told me how a man named Rip Van Winkle had walked into a mountain with his dog and gun and had met some people there who put him to sleep, and he didn't wake up for years and years and years. These were the same kind of mountains; and if I stepped on one I would go in out of sight, and thre would be some people there to catch me and put me to sleep.

Mother nearly retreated under the volley of my curiosity. It was the legend of Rip Van Winkle which she had told me oftentimes when I had begged for a story. In my mind, the soft, blue mountains, Rip Van Winkle, his dog and gun and the goblins were associated together; so I mistook the Blue mountains of southeastern Washington for the Catskills in which Rip Van Winkle lost his way once upon a time and slept for two decades.

The train puffed into Walla Walla by and by, and it was well it did, for our big lunch basket was empty. So was I. We went down the street of the then small town of Walla Walla, and came to a restaurant presently into which my parents marched me and seated me at a table. Father told the man to bring me a bowl of bread and milk. This was done, and for the bread and milk father paid the man 25 cents. I did not know till years afterward that it was the last 25 cents he had in the world; so if I had had elk steak in Wyoming I would have gone hungry—as did my parents—in Walla Walla.

We lived in the Walla Walla valley for several years; in the very shadow of the beautiful Blue mountains; but to me the romance of the mountains became no less. To me they were a row of giants' castles, each castle inhabited by giants and ogres of the most ogrish kind. I supposed, too, that "the old bad man" lived away down under the mountains and tended his fires, so that he could singe little boys who chanced to fall into his clutches. One night there was a fire in the mountain timber. The pine smoke rolled down into the valley, and I could see the flames in the mountains. I raced from window to window, sure that the old bad man had broken out of the mountains and was kindling his fires to consume bad little boys. I would accept no other explanation, and that night slept with my head under the cover, in mortal terror lest I should awaken and find the old bad man poking at me with his fork to bear me away to the fires he had kindled on the blue mountain tops.

NEXT WEEK THE BUNCHGRASS BOY TELLS OF HIS FRIENDSHIP WITH MR. GILLIAM, A DIGNIFIED, WHITE-BEARDED, FINE-EYED OLD GENTLEMAN—A PIONEER OF THE WALLA WALLA VALLEY, AND HOW HE USED TO TELL HIM STORIES—STORIES OF THE IMMENSE, COCK-AND-BULL KIND, WHICH, UPON THE SLIGHTEST PROVOCATION, HE WHOLESALED FROM THE DIAMETER, CIRCUMFERENCE AND DEPTH OF HIS SEVEN-YEAR-OLD IMAGINATION. THE BUNCHGRASS BOY TELLS HOW HE WAS CURED OF THE "WHOPPER" BUSINESS, AND HOW THEREAFTER HE "WOULD MAKE NO STATEMENT OF ANY KIND, WHETHER CONCERNED WITH WHALES, RABBITS, WHITE OR SOOTY WINGED ANGELS, TILL I HAD ASCERTAINED BEYOND ALL REASONABLE DOUBT THAT I WAS SPEAKING STRICTLY WITHIN THE UNINTERESTING CONFINES OF TRUTH."

Sidelights

Her Turn.

Smith got married. The evening of his first pay day he gave his bride $14 of the $15 salary and kept $1 for himself.

But the second day Smith gave his bride $1 and kept $14 himself.

"Why, John," she cried in injured tones, "how on earth do you think I can manage for a whole week on a paltry $1?"

"Darned if I know," he answered. "I had a rotten time myself last week. It's your turn now."—Topeka State Journal.

He Proved It.

A staff officer, noted for his jovial habits, determined to try the rare experiment of abstaining from spirituous liquors for a season. Late in the evening of the day when he started he met the staff surgeon, who was a theoretical temperance man.

"Doctor," said he, "haven't I heard you say that by abstinence from stimulating drinks a man's days would be prolonged?"

"Tehere's no doubt of it."

"That is my opinion," said our colonel, with a lonesome yawn. "I resolved to drink nothing today and it has been the longest day of my life."

Whose Uncle?

A man learned of the death of an uncle in a distant state and employed an attorney to get for him his share of the estate. After much delay the lawyer sent for his client and said:

"I have collected your share of your uncle's property, and here is a statement of our account."

The account rendered showed many items of expenses, such as "taking depositions," "notary's fees," "court costs," "traveling expenses," etc., a considerable charge in favor of the attorney for his services and only a small balance for the nephew.

After examining and pondering over the statement for quite a while the client looked up and said to the lawyer: "Was that your uncle or mine that died?"—West's Docket.

A Feathered Hat.

With a wild sweep the wind tore around a corner and removed the hat from the head of a respectable and near-sighted citizen who chanced to be passing.

Peering wildly around the man thought he saw his hat in a yard behind a high fence. Hastily climbing over he started to chase it, but each time he thought he had caught it it got yet another move on. Then a woman's angry voice broke on his ears.

"What are you doing there?" she demanded, shrilly.

He explained mildly that he was only trying to retrieve his hat. Whereupon the woman said, in wonder:

"Your hat? I don't know where it is, but that's our little black hen you're chasing."

Do You Know That

When you look back on your life it won't be the dollars you have made but the living you have enjoyed that will seem to have been worth while?

10 ACRES FERTILE LAND; NEW 3-ROOM cottage; 5 acres cleared; orchard; near school; about 16 miles southwest of Seattle. Price $1750. Pinney & Street, 726 Third, Seattle.

Grain and Produce Markets

Chicago Grain.

CHICAGO, March 31.—Wheat prices averaged higher today, largely as a result of the failure of expected rains, especially in Nebraska. The market closed unsettled at $1.95@1.95¼ for May and $1.64¼@1.64½ for July, with the market as a whole ⅞c off to 1c advance compared with yesterday's finish. Corn gained ¼@⅝c, oats closed ⅛c down to ½c, and provisions at losses of from 2½c to 40c.

Uneasiness regarding the long-continued lack of moisture throughout important sections of the winter crop belt dominated the wheat trade during the earlier trading, and was offset only in part as the session approached the close. In addition to drouth fears the tightening of the crisis between Germany and the United States encouraged sentiment for higher prices. Subsequently, however, the Oklahoma crop made a surprising exhibit, showing an improvement of 5 points during March, and this development counted as a factor in lowering values.

Price rallies which took place in the wheat market at the last were due chiefly to week end adjustment of trades.

Corn showed stubborn resistance to selling pressure. Talk of $13 hogs before fall did much to uphold advances. Brisk demand from the east and south gave independent firmness to oats. There was persistent buying of May by strong commission houses.

Provisions swayed in line with the hog market. An early advance was was followed by setbacks due to free selling on the part of houses that of late had been purchasing freely. The bulk of the trade was in lard.

Cash Quotations.

CHICAGO, March 31.—Wheat—No. 2 red, nominal; No. 3 red, $2.03@2.05¼; No. 2 hard, $2.04½@2.04¾; No. 3 hard, nominal.

Corn—No. 2 yellow, $1.22½@1.23; No. 3 yellow, $1.21½@1.22½; No. 4 yellow, $1.20½.

Pacific Northwest Grain.

PORTLAND, Ore., March 31.—April delivery—Wheat, bluestem, $1.74; fortyfold, $1.68; club, $1.66; red Russian, $1.65; oats No. 1 white feed, $39.75; barley, No. 1 feed, $40.

Future—May bluestem, $1.75; May fortyfold, $1.70; May club, $1.67; May Russian, $1.65; May oats, $40.35; May barley, $40.

TACOMA, March 31.—Wheat—Bluestem, $1.74; fortyfold, $1.71; club and fife, $1.69; red Russian, $1.65.

SEATTLE, March 31.—Wheat—Bluestem, $1.74; turkey red, $1.75; fortyfold $1.69; club, $1.68; fife, $1.63; red Russian $1.66.

Barley, $40 per ton.

WALLA WALLA, Wash., March 31.—Club wheat, $1.56; bluestem, $1.62. Barley, $40.

Portland Market.

PORTLAND, Ore., March 31.—Eggs are going into storage this week at 28 cents against a 22-cent market last year, and an average of 17 1-2 cents before the war. This would indicate a record market for eggs in the fall and winter when the stock comes out. The lay is good but the big receipts are readily absorbed by local and Seattle operators.

Butter is very scarce with cube extras selling up to 40 cents and creamery prints holding at 42 cents in cartons. Cheese is also scarce, but manufacturers hesitate to advance the price, as buying on the Coast for home consumption has been checked by the high cost.

Poultry receipts were unusually small in the last week and hens advanced to record price. There are fair arrivals of dressed meats, but they sell well at high prices.

The potato market is firm with 3 cents freely offered by carlot shippers, but farmers now have little to sell. First hand stocks in this state are estimated at only about 75 carloads.

The only wool buying during the last week was in the Yakima section, where local dealers purchased all that was available, paying up to 40 cents for medium. Eastern Oregon growers still refuse to contract, except at prices that buyers will not consider. The rains have stopped goat shearing at all points in the valley.

In the following list of quotations the grain, hay, millfeed, hop, wool and hide prices are those paid to producers. The other quotations are prices from jobbers to retailers:

Oats—No. 1, $40@41 per ton.

Corn—Whole, $54; cracked, $55 per ton.

Millstuffs—Bran, $31 per ton; shorts, $35.

Barley—No. 1 feed, $40; brewing, nominal; rolled, $43@44.

Hay—Buying prices, Timothy, eastern Oregon; $20@22; alfalfa; 17@20; grain, $12.50@14.

Eggs—Oregon ranch, case count, 27 1-2@28c per dozen; candled, 29c.

Poultry—Hens, 20@21c; ducks, 22@23c; turkeys, live, 20@22c; dressed, 23@28c; geese, 12@14c.

Butter—City creamery, prints, 42@43c per pound; cubes, 39 1-2@40c.

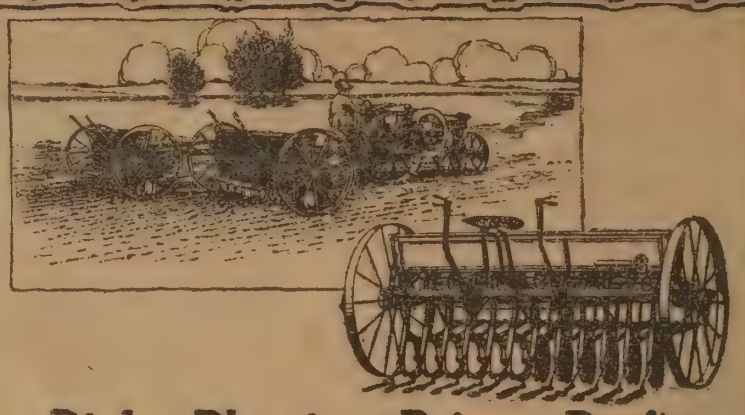
Cheese—Oregon triplets, 23c; Young Americas, 24c.

Dressed meats—Veal, 14@14 1-2c; pork, 18@18 1-2c.

Hops—1916 crop, 3@7c per pound.

Potatoes—Oregon, jobbing price, $3@3.50.

Onions—Jobbing prices: No. 1, $10; No. 2, $5@8 per sack.



Wool—Eastern Oregon, fine, 30@35c; coarse, 40c; valley, 40c.

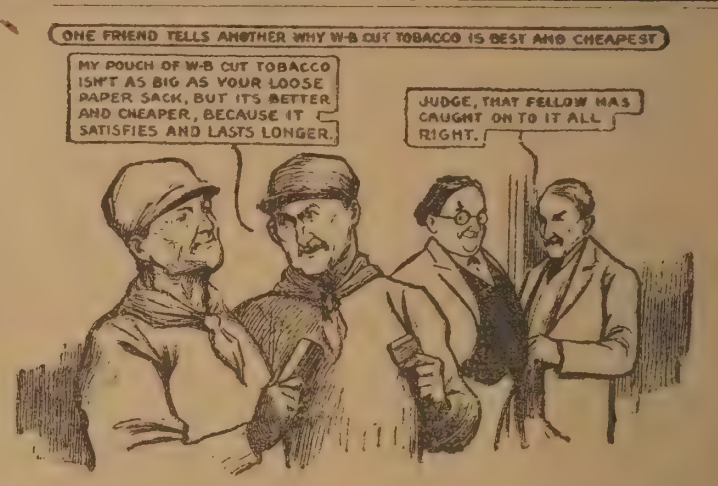
Beans—Oregon small white, 10c; California small white, 13c; large white, 12 1-2c per pound.

Hides—Salted hides (25 lbs. and up), 18c; salted stags (50 lbs. and up), 14c; green and salted kip (15 lbs. to 25 lbs.), 13c; green and salted calfskins (up to 15 lbs.), 27@28c; green hides (25 lbs. and up), 17c; green stags (50 lbs. and up), 13c; dry hides, 30c; dry salt hides, 25c; dry horse hides, $1 and $2; salt horse hides, $3 to $5.

Wool Deals Total $60,000.

NORTH YAKIMA, Wash., March 30.—Three wool deals closed yesterday and today bring $60,000 to growers in the Yakima valley. Prior & Sons, Olney Brothers and Coffin Brothers sold 170,000 pounds to Isador Koshland, Portland, and Joseph Farquhar, Boston, the former taking the bulk of the purchases.

Right Planting Brings Profit



IF you are growing small grains for fun and not for the most profit, plant your seed any old way. But if you want every dollar of profit you can get, plant your seed right. Use an **Empire Jr., Hoosier,** or **Kentucky drill.** Right planting is more important than many farmers think. It often means profit where the other fellow has to take a loss.

The local dealer who handles these drills carries the drill best suited to your work. With his advice you can choose a drill that will plant your seed in your soil and plant it so that you have a much better chance of getting a bumper crop than if you planted in some other way.

The arguments for **Empire Jr., Hoosier** and **Kentucky** drills are far too many to be told here. The dealer will show you all about feeds, furrow openers, bearings, attachments, etc. He will give you reasons for buying his drill you cannot ignore. See him and talk this over with him, or write to us and we will tell you all about the best drill you can buy.

HERE'S something curious about W-B CUT Chewing—it takes less out of your pocket and puts a better chew into your mouth. No big plug sagging your pocket, no big wad sagging your cheek. Half as much of this *rich* tobocco goes twice as far as ordinary plug. W-B saves your *silver* and gives you a silver-lining feeling of happiness all over. You can't help from telling your friends about W-B.

Do You Need Live Stock?

Our **BREEDERS' DEPARTMENT** offers many splendid opportunities to purchase registered and, in some cases, grade stock of merit. Before you buy look these offers over.

Seattle Market.

SEATTLE, March 31.—The weekend brings a stronger feeling in the spud market, based on a better movement, increasing tendency of speculators to hold on and a few more inquiries from the east which do not show a willingness, however, to pay any higher prices than what now prevails, or $60@70 f. o. b. Yakima and a similar price for Puget Sound stock at Seattle. Four carloads were sold at Yakima yesterday at $60, and if this is indicative of the feeling among holders there the market has not advanced, but only strengthened.

Little new butter has appeared this week, but on the contrary city manufacturers have been selling to country creameries for the first time in the history of Western avenue. The condensaries have cut down their allotment for this market. California holders have advanced quotations to 40c f. o. b., while at the same time advising buyers here that they are able to fill only 50 per cent of the orders. New York is taking all the southern butter that it can get and is bidding up strong. The situation today is more tense than it has been for many years.

Eggs are very firm. Jobbers have become reconciled to the fact that eggs into storage will cost them 8@10c higher than normal, and must therefore sell at 45c retail next fall and winter. All offerings for the week have gone into consumption as fast as received, and only a few cases have been stored.

Cheese is firm at 25c for Oregon and Washington triplets.

BUYING PRICES.

Unless otherwise stated the following prices are fixed upon a jobbing basis and are average prices obtained in reports of transactions by jobbers.

The following prices are offered to the producer by the local dealers for delivery in round lots f. o. b. Seattle:

Eggs—Local, 27 1-2@28c per dozen.

Poultry—Live hens, fat, over 4 lbs., 20c per lb.; do 3 lbs. and under, 19c; old roosters, 12c per lb.; springs, 21c; ducks, 20c per lb.; squabs, large, $3.50 per dozen; geese, fat, 16c per lb.

Butter fat—46c per lb.; dairy butter, 29c per lb.

Beef — Buying price: Prime beef, steers, 7@8c per lb.; cows, fat, 7@8c per lb.

Hogs—Light, 14@15 1-2c per lb.; do heavy, 10@12c per lb.

Veal—Fancy light, 13@14c per lb.; do heavy, 9@13c per lb.

Hides—Salted, 20c per lb.; salt kip, 22c per lb.; salted calf, 32c per lb.; green hides, 16c per lb.; salted bulls, 15c per lb.; dry hides (short trim), 36c per lb.; dry calf (under 6 lbs.), 40c per lb.; bull and dry salts, 4c per lb. less; green bulls, 12c per lb.; dry butcher full wool sheep pelts, 25@28c per lb.

SELLING PRICES.

City Prices—Team Lots.

Apples—Winesaps, $1.50@2.50 a box; cooking, 85c@$1.25 a box; Newtowns, $1.25@2.25 a box.

Feed—Scratch feed, $55@56 per ton; all grain chop, $46@47 per ton; oats, $42 per ton; rolled oats, $43 per ton; rolled barley, $46@47 per ton; wheat, $61@62 per ton; bran, $32@33 per ton; shorts, $35@36 per ton; alfalfa meal, $24 per ton; whole corn, $53 per ton; cracked corn, $54 per ton.

Hay—Eastern Washington timothy, $23@25 per ton; alfalfa, $25@26 per ton; double compressed, $30 per ton; straw, $12 per ton; wheat hay, $20@21 per ton; Puget sound, $20@21 per ton.

Onions—Oregon, 7 1-2c per lb.

Potatoes—Local, $65 per ton; Yakima Gems, $70 per ton.

Rutabagas—Yakimas, $2.50 sack.

Butter—Washington creamery extras, cubes, 42c per lb.; do bricks, 43c per lb.; creamery firsts, cubes, 41c per lb.; do bricks, 42c per lb.

Eggs—Fresh ranch, 30c.

Seattle Wheat.

SEATTLE, Wash., March 31.—The sale of one lot of wheat for eastern account by Puget sound millers this week at $1.72 eastern Washington shipping points was the most notable transaction of the last 10 days as indicative of the Washington market. The margin between buyers and sellers has narrowed and it is reported to be much easier to secure a parcel of grain now that seeding time has come on. Farmers who have grain are apparently more willing to let go, notwithstanding the firm situation elsewhere.

Country bids have been at a maximum of $1.68 for bluestem and turkey red and 3@5c under for club and fife. Millers have been on the market, but are not pushing farmers to sell, due to the dull future outlook at the milling end. More grain has been bought by some of the leading milling houses on Puget sound this week than at any similar period in the last 90 days.

Wool.

BOSTON, March 30.—The Commercial Bulletin will say tomorrow:

"Transfers of wool have been neither numerous nor large, according to trade reports this week. Prices, however, were firm with no disposition to shade values.

"Manufacturers report nothing new of moment, and reports from the west indicate very few contracts placed during the last week, owing to the present asking prices on the part of growers."

Scoured basis:

Texas fine, 12 months, $1.20@1.25; fine eight months, $1.05@1.10.

California northern, $1.15@1.20; middle county, $1.05@1.10; southern, 80@85c.

Oregon—Eastern No. 1 staples, $1.25@1.30; eastern clothing, $1.10@1.15; valley No. 1, 95c@$1.

Territory—Fine staple, $1.30@1.31; half-blood combing, $1.20@1.25; three-eighths blood combing, $1@1.05; fine clothing, $1.15@1.20; fine medium clothing, $1.10.

Pulled—Extra, $1.10@1.15; fine A, $1@1.05; AA, $1.05@1.10; A supers, $1@1.05.

Live Stock Quotations.

At Omaha.

OMAHA, Neb., March 31.—Hogs—Receipts, 8100; steady. Heavy, $14.80@15.05; light, $14.35@14.85; pigs, $12.50@14.25; bulk of sales, $14.60@15.

Sheep—Receipts none; market strong. Prime lambs, $12@12.50; common lambs, $11@11.50; choice yearlings, $10.50@11; good yearlings, $9.50@10; best mutton ewes, $10@15.

Spokane Market.

The wholesale prices quoted in the list below are not the prices paid to producers or shippers; they are those charged by the Spokane commission houses to the retail trade for standard produce. The prices quoted for live stock, however, are the prices given to the producer:

Potatoes—Potatoes, $3@3.25 cwt; sweet potatoes, $6.

Seed Potatoes—Early Ohios, 4c lb; Early Rose, 4c lb; white potatoes, 4c lb; Early Six Weeks, 5c lb.

Apples—Washington apples, cooking, 75c@$1; eating, $1@1.25; Wageners, $1 box; Rome Beauties, $1@1.40 box; Winesaps, $1.75@2 box; Y. N. Pippins, $1.75@2 box.

Butter—Blanchard cartons, 43c lb; Medo-Maid, 43c lb; Cascade, 43c lb; Gold Coin, 36c lb; Gold Leaf, 43c lb; Better Butter, 43c lb; Hazelwood, 43c lb; Peerless, 39c lb; Jersey Belle, 42c lb; Attalia, 43c lb; Diadem, 43c lb; Jersey, 39c lb.

Cheese—Wisconsin full cream, twins, 28c; triplets, 22½c; Hazelwood full cream, triplets, 23c lb; Hazelwood Young America, 24c lb; Wisconsin limburger, 28@29c lb; brick cheese, 28c lb; domestic Swiss, 33c lb; Young Americas, 25c lb.

Eggs—Fresh local ranch eggs, $9@9.50 case.

Live Poultry—Springs, 18c lb; hens, 18c lb; old roosters, 10c lb; ducks, 13c lb; turkeys, 20@25c lb.

Dressed Poultry—Hens, 21c lb; springers, 20c; old roosters, 13c; ducks, 16c; geese, 14c; turkeys, 28c.

Hide Quotations.

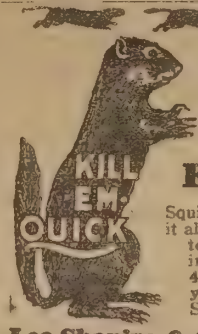
Green cows and steers—25 lbs and up, 17½c; salted cured, 20c; green bulls and stags, 13c; salted cured, 16c; kip, 15 lbs. to 25 lbs., 23c; calf skins up to 15 lbs; 31c; dry flint hides, 34c; dry salted, 27c; dry calf skins, under seven lbs., 42c; dry sheep pelts, full wooled, 22@26c; dry shearlings, 30 to 75c each; green horse hides, $3 to $5 each; dry horse hides, $1 to $2.50 each.

The Right Power at the Right Time

THE Advance-Rumely "8-16" gives a man a chance to take advantage of weather conditions instead of being at their mercy. Whether it is plow quick, or harvest on time—the 8-16 is able and ready to do every farm operation at the time *best suited to bring maximum results.*

In the first place, it is a one-man all purpose outfit. Plowing is made a one-man job because tractor and plows are combined in one machine, and full control is from the driver's seat. With the Advance-Rumely you plow as with a horse gang, the work always in sight. You can back up with your plows, make short turns and cut square corners.

For handling other ground working equipment, hauling and belt work, the 8-16 is just as efficient and easy to handle, as you merely detach the plows and plow frame and it's ready for any drawbar or belt job you put up to it.



And it burns cheap kerosene with full efficiency—not only at full load but at variable loads or continuous light loads.

The catalog shows in detail the powerful four-cylinder motor and the other features that make the "8-16" a tractor that fits to perfection the small and medium size farm. Just like the famous OILPULL tractor, and Ideal Separator—dependability is "inbuilt."

Our nearest branch will send you the catalog.

NEWS FOR BREEDERS

Started With Pure Bred Cows

The last herd bull of William Todd & Sons, North Yakima, and his first five calves in their herd.

Ten years ago a creamery man offered William Todd some purebred cows, and four were purchased on time, Mr. Todd agreeing to apply one-half of the creamery check each month in payment. Although during the first year one of the cows was lost, the three remaining animals in due time paid for the four. The present dairy herd of William Todd & Sons, near North Yakima, except two males, have been raised from the three cows and their increase. They purchased a young calf, Johanna Ruth Fayne, for $100, which animal was later placed at the head of the herd and proved so satisfactory that the bull, now in his 10th year, is still retained and doing service in the herd. Later Sir Korndyke Ormsby Piebe was bought for $1000. The Todds raise all of their own feed and have never gone extensively into the show ring, their exhibits being confined largely to the Washington state fair and the Cascade stock show. They have a goodly number of awards to their credit. They go on the principle that any dairy cow that will net from the pail alone pay for herself, her feed and a fair compensation for care, is not good enough to have a place in his herd, nor will they sell such a cow to any other dairy herd. She must go over the block. Harmonious cooperation between the father and the sons has resulted in a herd of 40 fine cows and heifers, five calves and two herd sires —an enviable record.

Western Berkshire Congress.

F. R. Steel of the Winona ranch, Grants Pass, Ore., president of the Western Berkshire congress, announces that "the one great Berkshire show of the west in 1917 will be the Western Berkshire congress show held at Salem, Ore., in conjunction with the 1917 Oregon state fair," and adds:

"You should begin picking out and fitting your show herd now. Select the one or two most promising March or April boar pigs of this year's farrow with three or four or perhaps five of the best sow pigs of the same age; and push them along on full feed as best you can for the 'under six months' or 'junior pig' classes. One boar and three sows of this age can be entered as an 'under year herd'; and if four of them are by one sire they can enter again as 'get of sire'; and if four are out of one sow they can also be entered as 'produce of dam.' These group and herd entries give an exhibitor a chance for more winnings at no greater transportation, feed or care expense—a more effecient show herd. Just the same thing can be done in the 'under year' class—pigs farrowed after September 1, 1916. This same sort of lineup can be well followed in the older classes, showing one boar—either an aged, senior yearling, or junior yearling; and three sows of one or more of these classes; and then bringing in the four as a senior or 'over age' herd. If bred by the exhibitor all the herds may be again shown as 'herds bred by exhibitor.'"

Of 17 Calves 14 Are Bulls.

J. B. Cornett, the Shorthorn breeder of Shedd, Ore., out of 17 calves born on the place the past winter, has had 14 bulls. They are all by the great Clifton King, for which Mr. Cornett paid $900 three years ago and as they are good, thrifty calves, showing the quality Clifton King is putting into all his offspring, Mr. Cornett is feeling pretty well satisfied.

STATEMENT OF THE OWNERSHIP, management, circulation, etc., required by the act of congress of August 24, 1912, of The Washington Farmer, published weekly at Spokane, Washington, for April 1, 1917.

State of Washington, county of Spokane, ss. Before me, a notary public in and for the state and county aforesaid, personally appeared J. F. Young, who, having been duly sworn according to law, deposes and says that he is the vice president of The Washington Farmer, and that the following is, to the best of his knowledge and belief, a true statement of the ownership, management (and if a daily paper, the circulation), etc., of the aforesaid publication for the date shown in the above caption, required by the act of August 24, 1912, embodied in seection 443, Postal Laws and Reegulations, printed on the reverse of this form, to wit:

1. That the names and addresses of the publisher, editor, managing editor and business managers are:

Publisher, Cowles Publishing company, Spokane, Washington; editor ——; managing editor, Edwin A. Smith, Spokane, Washington; business managers, none.

2. That the owners are: (Give names and addresses of individual owners, or, if a corporation, give its name and the names and addresses of stockholders owning or holdng 1 per cent or more of the total amount of stock.)

W. H. Cowles, Spokane, Washington; J. F. Young, Spokane, Washington; F. J. Whaley, Spokane, Washington; Cowles Publishing Co. (a corporation), Spokane, Washington.

3. That the known bondholders, mortgagees and other security holders owning or holding 1 per cent or more of total amount of bonds, mortgages or other securities are: (If there are none, so state.)

None.

4. That the two paragraphs next above, giving the names of the owners, stockholders and security holders, if any, contain not only the list of stockholders and security holders as they appear upon the books of the company, but also, in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting, is given; also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees, hold stock and securities in a capacity other than that of a bona fide owner; and this affiant has no reason to believe that any other person, association or corporation has any interest, direct or indirect, in the said stock, bonds or other securities than as so stated by him.

WE WILL PAY SALARY

Give full details in your first letter to The Washington Farmer, Review, wants men to secure and renew subscriptions to this paper in various farming districts throughout the state. We are paying good salaries to those who can do the work and are offering these positions only to farm owners or renters.

We want to hear only from those who will be willing to give our proposition a fair trial for at least a month and who will put in good, hard licks for good pay. For men with these qualifications the opportunity is a splendid one. This work isn't easy; but you can do it and earn a good salary. We give you full instructions and the right kind of help.

You will be able to earn a salary of from $25 to $150 per month or even more, dependent upon the amount of time and effort you can give to the work. Salary check will be sent promptly at the end of each month.

We will not consider an applicant who does not live on a farm and who does not have a rig, saddle horse or automobile. In writing us tell whether married or single, whether you own or rent your place and give the names of two merchants with whom you trade. There isn't any red tape about our proposition, but we must know something about those workers we put on our payroll to receive a monthly salary check.

Governor's Special Message to Our Readers

Urges Loyal Response to the Call of the Nation for Greater Food Production

To All Readers of The Washington Farmer:

Washington is a favored state agriculturally and its people have a great opportunity in responding to the patriotic call for a larger food production. The wide variety of fruits and vegetables which can be here grown admits of abundant stores of canned and dried and preserved supplies, and in this saving of fruits and vegetables almost every family in the country can have a part. The boys' and girls' club movement can add largely to the amount of food products. The pig clubs and the poultry clubs and the canning clubs all are called upon to take a loyal interest in the country's welfare.

Every family that adds to its table from its kitchen garden serves the common cause of patriotic preparedness just the same as the man who plows additional acres for wheat or makes an addition to meat supplies.

If every farmer will do a little more than he purposed to do in the way of food products, if every family will buy a little less and cultivate a little larger garden patch, or put a vacant lot into potatoes or beans or peas, the total will be an enormous increase in the output of the food products of the state of Washington and will result in a magnificent contribution towards feeding those who are called to arms and those already at arms in foreign countries, as well as in supplying the needs of the people at home.

GOVERNOR ERNEST LISTER.

I am more profoundly confident than ever, as I stated in my proclamation, that while "the man on the farm can be a leader in this patriotic service, there is hardly a person in any community without the chance to grow something for family use or the market." I believe that it is only necessary to get this thought before the people of this state, to make plain the present and coming needs of the nation, to insure a ready response from all loyal citizens, who will be eager to unite themselves into local organizations and into community effort to further this patriotic movement.

Ernest Lister

John W. Bate's Extras

Which Make Mitchell Cars Distinct

Here are some facts which you should prove before you buy a fine car. Surely nothing else in Motordom is any more important.

John W. Bate has for 30 years been a famous efficiency expert. He has given 14 years to the Mitchell car.

This factory is his creation, designed for this single type. Our present cars were evolved by him, through hundreds of studied changes.

He spent one year in Europe, to combine in Mitchells all the best of European standards.

So the latest Mitchells, in every detail, typify the ultimate efficiency.

These Two Objects

Mr. Bate's first object was factory efficiency. To build a great car, in the finest way, at the lowest factory cost.

He spent millions of dollars to that end. This whole mammoth plant was built and equipped for the purpose. Nearly every part—including our bodies—is built under Bate methods here. And those methods save us, on this year's output, at least $4,000,000.

Next he applied efficiency to the car. He made over 700 improvements. He aimed to make the Mitchell the finest of fine cars. And to make it a lifetime car.

31 Extra Features

His factory savings pay for extras, which most like cars omit. There are 31 distinct features—all costly features—which are rarely found in cars. Things like a power tire pump, a dashboard engine primer, a ball-bearing steering gear, a light in the tonneau, a locked compartment, etc.

100% Over-Strength

In the past three years, part by part, he has doubled our margins of safety. Now all important parts are twice as strong as needed. That is proved by tests.

Over 440 parts are built of toughened steel. All safety parts are oversize. All major strains are met with Chrome-Vanadium.

Gears are tested for 50,000 pounds per tooth. Bate cantilever springs—used for two years—never yet have broken. Not a single one.

24% Added Luxury

Our new body plant this year gives another big saving. That enables us to add 24 per cent to the cost of finish, upholstery and trimming. This makes the Mitchell the luxury car of its class. And all our bodies are exclusive, built and designed by our experts.

Go See the Results

Go see these extras—extra features, extra beauty, extra strength. Under other methods, such things are impossible at Mitchell prices.

See also Mitchell Junior, which is nearly like the Mitchell, but a little smaller size. You will agree that no such values are elsewhere shown in fine cars.

Do this now. In May and June we are always oversold.

MITCHELL MOTORS COMPANY, Inc.

Your Country's Call to Produce More Food

After All Is Said and Done the Plow May Be Mightier Than the Sword in Helping to Win War

Now that the country is at war with Germany, the nation turns to the American farmer with an appeal for increased production.

In the final analysis the plow may be mightier than the sword. If Germany had not brought up its agricultural productiveness to a high degree of efficiency it would have been starved into subjection.

The great conflict has now largely narrowed down to an endurance test of deprivation and hunger. On one hand, England and her allies are blockading Germany to keep ships from taking food supplies into German ports. On the other hand, Germany is resorting to ruthless submarine warfare to make England and France go hungry.

Here is where the American farmer will play a big part in winning the war for popular rights, human freedom and the future security of peace-loving nations. He should speed up the plow and cultivate his acres to the fullest extent of their producing capacity, that from our abundance we may feed not only the armies of the nations that are fighting Germany, but their people at home as well.

As Governor Lister of Washington puts it in his proclamation:

> "Equally important with the needs for arms and equipment is an adequate supply of food for our nation and the countries whose people and institutions have been attacked by an autocratic government ignoring the rights of humanity."

The war for American independence was won by those "embattled farmers whose shots were heard around the world." The present great war will largely be won by the American behind the plow feeding the man behind the gun "somewhere in France."

In his proclamation Governor Lister tells the people of Washington that proper preparedness means energetic attention must at once be given to producing as much as possible from the land in both the country and the city; that now the people generally can make a great contribution to the resources that will strengthen the nation—"by every man, woman and child undertaking in an intelligent way to increase the yield of food products." The governor adds that "while the man on the farm can be a leader in this patriotic service there is hardly a person in any community without the chance to grow something for family use or the market." Add to this the fact that a penny saved is as good as a penny earned and that any conservation of food resources, as the canning and the drying and preservation of fruits and vegetables, can add immensely to food supplies, one sees the practicability of joining in the concerted movement to meet the patriotic call that comes from the country at large.

WHEN SIGNED FORWARD THIS BLANK TO THE EDITOR OF THE WASHINGTON FARMER, SPOKANE, WASH.

Governor Lister's Proclamation.

Governor Ernest Lister of Washington last week issued the following proclamation, which is deserving of careful reading and prompt action:

A national crisis places upon every citizen the patriotic duty of immediately helping to sustain the United States in the action resulting from interference with our established rights and liberties.

Equally important with the need for arms and equipment is an adequate supply of food for our nation and the countries whose people and institutions have been attacked by an autocratic government ignoring the rights of humanity.

Proper preparedness means that energetic attention must at once be given to producing as much as possible from the land, in both the country and the city. The people of this prosperous state have the opportunity today of making a great contribution to the resources that will strengthen the nation—by each man, woman and child undertaking in an intelligent way to increase the yield of food products.

The man on the farm can be a leader in this patriotic service, but there is hardly a person in any community without the chance to grow something for family use or the market.

With the certain knowledge that all citizens will be quick to act for the good of the country, and because organized effort is essential for full service to the nation:

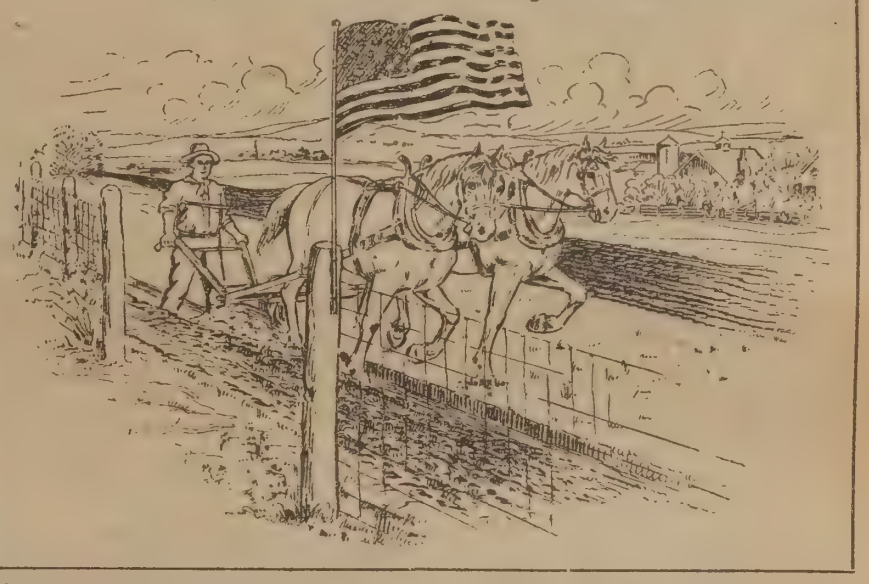
Now, therefore, I, Ernest Lister, governor of Washington, by virtue of the authority vested in me by law, do hereby call on the people of the state to cooperate in a great agricultural preparedness campaign, and direct immediate action to be taken as follows:

That the county auditor in each county in the state forthwith call to a meeting the county treasurer, county clerk, county agriculturist, county superintendent of schools, the chairman or a representative of the board of county commissioners, an officer from each bank at the county seat, and such other citizens as he may deem advisable, to organize by the election of a chairman and secretary, and the appointment of proper committees, for the purpose of bringing about the fullest possible food production in every part of that county.

That the central committee at the county seat appoint a local committee in each school district of the county, whose duty it shall be to see that full advantage is taken of every opportunity to increase the yield of food products.

That the local committees in each school district of the state make arrangements for a patriotic rally to be held on Saturday, April 14, for the purpose of planning action that will be of the most benefit to the nation from encouraging agriculture preparedness.

That the state granges, farmers' unions, commercial clubs and all other organizations qualified to act and inspired with a patriotic purpose, be invited to join in this service.



That the state department of agriculture, the state educational institutions and schools, and especially those that are serving the agricultural needs of the state, actively support this movement.

That steps be taken by the active committees throughout the state to devise ways and means for helping any one willing to cultivate land if assisted in securing seed, a plan suggested being for the person assisted in this way to pay at harvest time the cost of the seed, or to return from the crop at least twice the amount of the seed. Or any other plan which may seem to better suit local conditions may be adopted.

The state of Washington is rich in resources and I appeal to all citizens of this commonwealth to take an active part in this patriotic movement that will prepare us to meet any demands that may come.

(Continued on following page.)

Loyal to His Country's Call

A Pet Whale in Walla Walla County, Washington!

This week's instalment of THE UPS AND DOWNS OF A BUNCHGRASS BOY tells all about it. If you want many a good, hearty chuckle, just turn to page 19 and read the most vivid, moving and altogether delightful narrative of pioneer days in the Walla Walla country that Joe. Ashlock has done yet. Just see if it isn't.

Another One of These Good Stories Next Week

Wheat to $2.24 at Chicago

Bad Weather Conditions Have Proved Disastrous to Winter Wheat

How deceptive are the judgments of men! When the price of wheat went down, down, in the hard times of the early '90s and the crop of the Inland Empire was marketed around 25 cents many farmers and business men predicted that the days of dollar wheat were gone forever.

Now we see $2 wheat, in fact frantic buying and price advances of unparalleled rapidity and extent resulted in a wheat advance at Chicago Saturday to $2.24 for No. 3 red and no man knows where it will eventually go. The immediate rise in the Chicago market was due to the April government crop report which is characterized as the most sensational ever issued in the United States. Efforts of American farmers to bring this year's winter wheat crop to record production for war time needs apparently have been defeated by severe weather conditions and a crop of only 430,000,000 bushels is now expected as against 482,000,000 in 1916 and 674,000,000 in 1915.

Winter wheat was sown last autumn on 40,090,000 acres, which is close to the largest acreage on record. The crop had a bad start in the important growing states and entered winter in poor condition. Insufficient snow covering during the winter killed much of the crop

Much of the abandoned acreage will be planted to corn in the southern part of the belt and to spring wheat in the northern portion. Prevailing high prices for wheat are expected to spur farmers to place a larger acreage under spring wheat, and officials look for a record crop of that cereal.

In Kansas and Nebraska, the two leading winter wheat growing states, the crop suffered enormous damage. Kansas reported a condition of 45 per cent of normal. That was a decline of 50 points from the condition reported December 1 last.

Condition of winter wheat in the important growing states on April 1 was:

Ohio, 80; Indiana, 65; Illinois, 60; Missouri, 62; Nebraska, 35; Kansas, 45; Oklahoma, 74.

World Shortage.

The world shortage and the world war remain two great factors in determining the future of the demand for wheat. With two exceptions, every wheat producing country in the world from which figures can be obtained is short on this vitally important crop. The exceptions are India and Australia. In India the forecast for 1917 is an increase in wheat acreage of 8 per cent over the preceding year. In Australia the 1916-1917 crop is given as 100.3 per cent of the previous crop.

But the estimated production of wheat in Denmark, Spain, France, United Kingdom, Italy, Norway, Netherlands, Rumania, Russia (48 governments), Switzerland, Canada, United States, India, Japan, Egypt and Tunis is given as 74.7 per cent of that produced in 1914-5. These figures are from the International Institute of Agriculture, Rome, Italy, and cover the 16 leading countries in wheat production. Moreover, the production of wheat in Argentina, Australia and New Zealand for 1916-17 is 70 per cent of that produced in 1915-16, or 92.3 per cent of the previous five-year average. In other words, the wheat crop of the world is below normal at a time when abnormal demands are being made upon it, when great quantities are being destroyed on land and sea and when normal labor supply is turned toward other channels.

Unless all signs fail, it will be several years before the world will return to normal prices for wheat. Even if the war should end tomorrow time would be needed to restore agriculture to the conditions that existed in July, 1914. Europe must farm with diminished man power, diminished animal power and diminshed soil fertility. It must market its products with run-down railroads and worn-out locomotives and cars.

Of course, surprises sometimes come along in wheat, but so far as human vision goes the world is in for several years of diminished yield and high prices.

Secretary Houston again appeals to the country to make every effort to raise adequate food crops this year, not only for the United States, but to meet the requirements of the entente.

"The importance to the nation of a generous food supply for the coming year can not be overemphasized in view of the economic problems which may arise as a result of the entrance of the United States into the war," said the secretary. "Every effort should be made to produce more crops than are needed for our own requirements. Many millions of people across the seas as well as our own people must rely in large part upon the products of our fields and ranges. This situation will continue to exist even though hostilities should end unexpectedly soon, since European production can not be restored immediately to its normal basis.

Enlarge Production.

"It is obvious that the greatest and most important service that is required of our agriculture under existing conditions is an enlarged production of the staple food crops. Because of the shortage of such crops practically throughout the world there is no risk in the near future of excessive production such as sometimes has resulted in unremunerative prices to producers. This is particularly true of the cereals and of peas, beans, cow peas, soy beans and buckwheat.

"In view of the world scarcity of food, there is hardly a possibility that the production of these crops by the farms of the United States can be too great this year and there is abundant reason to expect generous price returns for all available surplus.

"The most effective step that may be taken to increase the production of these crops is to enlarge the acreage devoted to them in the regions where they are grown habitually. This expansion of acreage should be to the limit permitted by available good seed, labor and equipment. The placing of too great emphasis on production in new regions is inadvisable, since the introduction into a farm operation of a crop not usually grown frequently involves practical difficulties not easily foreseen nor quickly surmountable.

"Taking the winter wheat territory as a whole, winter killing has occurred to an extent very much greater than usual. This obviously, if not compensated for in some way, will mean a material reduction in the supplies of our most important bread cereal. Where winter wheat has been damaged sufficiently to justify the abandonment of fields it should by all means be replaced by spring-planted food crops, preferably small grains or corn."

These facts brought out by the government crop report grow in importance when it is remembered that the winter wheat production is about three-fourths of the total wheat production of the country.

Should Produce More Food

Plow May Be Mightier Than Sword in War,

(Continued from preceding page.)

On the very next day after the issuing of the call by Governor Lister for agricultural preparedness, County Auditor C. E. Barret of Yakima county called a meeting in the Commercial club rooms of North Yakima. Fifty business men met for organization with C. H. Hinman, chairman, and County Superintendent Rodey Ackley, secretary. A survey will be made immediately of vacant lots in North Yakima and newspapers will take up a publicity campaign encouraging the organization of boys' corn, potato, pig and sheep clubs. E. F. Benson, state commissioner of agriculture, was present, and much enthusiasm was reported. Later the secretary, School Superintendent Ackley, was directed to write to the mayors of all towns in Yakima county asking them to undertake organizations in their communities for carrying out Governor Lister's proclamation.

Spokane County Wide Awake.

Officers at the Spokane county courthouse have organized the Spokane County Patriotic league to help increase the food production in the county. It was decided to give County Agriculturist J. R. Shinn a special assistant to take charge of the intensified farm work to encourage the farmers to raise hogs and chickens and to get every available acre of the county into crop this year. Miss Donaldson, the county school superintendent, will urge the school directors in each district to produce as much food as possible, while the county assessor will ask rural deputies to urge on the good work of increasing the food production. Officials, teachers and others will work with the commissioners on the plan.

Owners of vacant lots in Spokane have offered to have them put into production. The chamber of commerce committee will see that these vacant lots are turned into garden plots.

In response to requests from the chamber of commerce committee, the city council of Spokane will donate $1000 to promote home gardens among children. This is to be used in cooperation with $500 from the chamber of commerce and other cooperation, financial and otherwise, from the school authorities, parent-teacher associations and public-spirited men and women throughout the city.

Food production increase in the vicinity of Asotin was the keynote of the commercial club meeting when a delegation of the "League for Increasing Production of Foodstuffs" from Lewiston invaded Asotin and was entertained at luncheon by the commercial club. Action was taken to list available vacant property and the council was given assurance of water for irrigation at actual cost.

Appeals to Farmers.

In this connection a stirring appeal comes from Secretary of Agriculture Houston to the farmers of the United States to farm as they have never farmed before.

"Both for economic and patriotic reasons," the secretary says, "the American farmer should strive this year for the highest standard of efficiency in the production and conservation of food. He should wring every possible ounce of production from the soil and conserve for the soil every atom of fertility. Let no one think," he says, "that the American farmer, on his farm, will play a small or unimportant part in this crisis.

"It is not only your own crop you are growing," he continued; "it is, in a sense, the nation's crop. Attention—unusual attention—should be given to the selection and safeguarding of seed for planting, the preparation of the land and the care of the crop.

"Fruits and vegetables," he declares, "which ordinarily it is inadvisable to attempt to conserve should be systematically saved now. Canning, drying and preserving operations should not be delayed until late summer or autumn, and family gardens should be planned to supply ample quantities of early maturing fruits and vegetables for preservation, as well as fresh products for immediate consumption. We should get back to the old-time methods and save, preserve and cure everything.

"Because of the scarcity of tin plate and the high prices of tin cans," Secretary Houston continued, "it may be necessary in household preservation of food more extensively to pack fruit and vegetables in other containers, and to dry large quantities.

As Governor Lister says, there is scarcely a man, woman or child in Washington who can not aid in this enterprise. If you are stirred by this appeal and believe in the pledge announced in the coupon given herewith, cut it out, fill in the blank with your name and address, mail it to the editor of The Washington Farmer and you will be enrolled in the Patriotic Legion of Washington. You can become a member just as well by saving as by producing. "A penny saved is as good as a penny earned." Can, preserve or cure food products and you are entitled to become a member. Lend your influence as well as contributing your effort to this universal call of agricultural preparedness.

Four Important Live Stock Sales

In this issue of The Farmer we give complete reports of four highly important live stock sales of the past week: The Shorthorn sale at Portland, Ore., the H. C. Davis dispersion sale of Holsteins at Granger, Wash., the Leaf and Jones dispersion sale at Rupert, Idaho, and the Shorthorn sale at Spokane.

For full report of each sale, giving the number and character of animals sold, prices paid and names of purchasers turn to pages 17, 18, 30 and 31.

Beginning Next Week

With next week's issue the Farmer will start a series of short illustrated articles on

The A B C of Road Construction

by Frank W. Guilbert, secretary Spokane county Good Roads association.

Mr. Guilbert is unquestionably one of the most thoroughly practical and best posted road builders in the Pacific northwest today. You can't read his direct, sensible explanation of the fundamentals of road construction and upkeep without feeling that you know quite a bit more about the "reasons why" of good roads and faulty roads than you ever knew before.

Don't miss the opening article of the series in next week's Farmer. It's worth while.

Washington Portraits No. 10.

A. P. Bertschi.

A. P. Bertschi has a profitable hay farm in Klickitat county near Glenwood. His principal varieties are clover, oats and wheat, although he has had some success with timothy. Mr. Bertschi says that there is a growing demand for sheep and hog raising in his community. Several farmers have tried both out and have been successful.

The next in the series of Washington portraits will be that of R. V. Peringer, of Belmont, and will be given in next week's issue of the Washington Farmer.

Men Who Are Pushing Pacific National Dairy Show

1. W. W. Warrens, Portland, president.
2. G. H. Dammeier, Gresham, Ore., secretary.
3. Henry Thiessen, Oak Grove, Ore., treasurer.
4. William Ladd, Portland, honorary president.
5. W. B. Ayer, Portland, honorary president.
6. J. W. Clise, Seattle, honorary president.
7. Walter K. Taylor, Corvallis, Ore., director
8. Clifford Reid, Portland, director.
7. Walter K. Taylor, Corvallis, Ore., director.
10. J. L. Smith, Spokane, director.
11. J. D. Mickle, Portland, state dairy and food commissioner.

The above officers were elected at a meeting held in Portland, which was the result of a dozen previous conferences. Fifty men, some of whom had contributed liberally already, subscribed for enough stock to make the incorporation of the new Pacific National Dairy show a practical certainty. The stock was subscribed and incorporation will follow, capital being placed for the present at $5000.

The following were present: W. K. Newell, Seghers; Thomas Carmichael, Gaston; W. B. Ayer, Portland; Professor R. R. Graves, Corvallis; Professor and Mrs. Fitts, Corvallis; J. M. Dickson, Shedd; C. L. Smith, Portland; G. H. and Mrs. Dammeier, Gresham; Clifford and Mrs. Reid, Portland; F. C. and Mrs. Linn, Perrydale; Harry West, Scappoose; J. W. Pomeroy, Scappoose; W. K. Taylor, Corvallis; B. C. Altman, Gresham; Ed Cary, Carlton; J. W. Vandervelden and Frank Vandervelden, Roy; Thomas and Mrs. Withycombe, Portland; George Withycombe, Gaston; W. O. Morrow, Independence; H. Thiessen, Oak Grove; C. S. Magee, McMinnville; John T. Whalley, Aurora; I. N. Staples, Portland; D. Brooks Hogan, Oswego; J. B. Ward; J. D. and Miss Mickle, Portland; O. G. Simpson, Portland; Robert Ireland; Lloyd Ewalt, Portland; Mr. Boyce, Portland; McDonald Potts, Portland; Dr. C. W. Cornelius, Portland; H. A. and Mrs. Lawis, Russeville; Mr. and Mrs. Lazelle, Oregon City; N. C. Maris, Salem; Carl Schallinger, Portland; H. C. Browne, A. D. Milligan, C. D. Minton, Horace Addis, H. H. Bushnell, Fred Davies, Portland.

With men like these boosting the Pacific National Dairy Show, which will be held at Portland this year, and with the design of holding it in Seattle, Spokane or other points in the Pacific northwest in future years, there is promise that the great dairy interests of the Pacific northwest are in good and trusty hands.

The plan, as briefly outlined by Chairman Mickle, is this:

The time has come when the dairy interests of the Pacific northwest are sufficiently large and strong to hold a show of their own, and make it a show not for Portland alone, nor for Oregon alone, but for the entire Pacific northwest. The show itself, which it is planned will be held in Portland this year, will not be kept there of necessity; possibly it may be held in Seattle the next year, in Spokane the following year and so on. The show is to be not only of dairy cows, but of dairy products. It is probable that the show will be held a week after the Oregon state fair.

Subscription price: $1.00 a year—special 3-year rate $1.50. Canada and foreign, 1 year $1.50.

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction, and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for damages on account of disease in stock sold through these columns.

Universal Liability to Service Is Principle of Military Training

President Wilson tells congress and the nation that the United States will need "in case of war at least 500,000 men, who should, in my opinion, be chosen upon the principle of universal liability to service." Additional forces may be needed later, he added, and provision should be made to get them through compulsory training of young men.

While some will differ from the president on that point, it must be admitted that our government was founded on the principle of general obligatory military training and the citizen's liability to serve his country in case of need.

Washington recommended it in his first annual message, and he and his first secretary of war drafted a bill to that end.

The first national defense act passed by congress, the militia law of 1792, provided a system of universal compulsory service. It required the enrolment in the militia of every able-bodied male citizen between the ages of 18 and 45, but authorized the various state legislatures to make such exemptions as they might wish. In time these exemptions kept on increasing and eventually the country drifted into the volunteer system.

It is not proposed by the president and his advisers to set up general training of all the men of the nation. What they do propose is that the young men who are physically sound, say the youths of 20 to 23, shall be given military training by the United States government, and from the forces thus trained the government will draw men as they may be needed. It would first call the unmarried men and those having no dependent parents.

Several bills are now before congress. It is thought the president inclines to that prepared by Senator Chamberlain of Oregon, chairman of the military affairs committee of the senate. Senator Chamberlain thus explains his measure as he amended it after conference with the president:

"In 1917 those 20 years of age will be trained, and if the president finds that the national defense so requires he may, by proclamation, also call out for training all those of the ages of 21, 22 and 23. In 1917 the president, even though he does not find it necessary to call out those of 21, 22 and 23 years, may require them to register and be examined."

Senator Chamberlain estimated that training of all the physically fit young men of 20 to 23 would provide an available force of nearly 2,000,000. He predicted that "if we should have a long war we should doubtless have to raise troops by compulsory service, and said a universal training plan would determine definitely the number of men available and those having the fewest responsibilities and dependents.

Farm Money at Cost.

The federal farm loan bank will afford the man on the farm an opportunity to finance his own affairs "without profit to anybody on earth."

So declared President D. G. O'Shea of the northwestern branch of the loan bank to a representative of the Washington Farmer.

This simply means that money will be supplied the farmers at cost. It means that no higher interest will be charged on loans than is required to pay the necessary expenses of the conduct of the banking business. This interest has been fixed to start with at 5 per cent. No promise is made that it will ever be lowered, but if the system as it develops enables cheaper money to be supplied the farmers than that, it will be supplied, says President O'Shea. It is not the intention of the government to make money out of the loan bank, but to help the farming industry finance its development and thereby build the foundation of a great and prosperous nation.

Agricultural Preparedness.

Secretary of Agriculture Houston has made an appeal to the farmers of America to join in agricultural preparedness measures so that the country may not be handicapped by food shortage in its efforts to meet international prices.

"Both for economic and patriotic reasons," the secretary said in a formal statement, "The American farmer should strive this year for the highest standard efficiency in the production and conservation of food."

The secretary adds that under existing conditions every practicable step should be taken to protect fruit and vegetable output throughout the season, and to utilize and preserve them as fully as possible when they are matured. Canning, drying and preserving operations should not be delayed until late summer or autumn, and family gardens should be planned to supply ample quantities of early maturing varieties for preservation.

The secretary suggested the preservation by drying for soup stock of such vegetables as carrots, potatoes and celery, and or drying of surplus sweet corn. Many crops grown usually for soil improvement, or for agriculture, he declared, possess large food value, if utilized properly and their utilization for human food and oil production "doubtless will be advisable." Such crops as soy beans, cow peas, peanuts and kaffir were mentioned specifically in this connection.

Use of Organizations.

"The only place where I have no support," said a county agriculturist, "is in a part of the country where they have no organization. They have tried several times to organize, but somehow it always dies out."

Human beings need organizations. It helps to get together with others and hear what they have to say. It adds something else which everybody ought to have—ability to express oneself.

This same agriculturist told of visiting two sections in his county, one where they had a good organization and the other where they had none. In the first, when he asked them if there were any questions they would like to ask, half a dozen came to the front, and one at least knew the answer, but asked that others might be informed, and also to start things. At the other meeting nobody asked anything, but after the meeting was over they collected in groups and asked each other many questions which could have been brought out in open meeting.

Ease in speaking what one thinks is gained by practice, and in no other way.

The Blood Lines.

When we come to the matter of environment we find that a great body of tradition and knowledge has been created to help us. We are told how to plant and how to cultivate; how to prune, spray and harvest. And all of these things are worth considering, for even the superlatively vigorous plant or animal can make little headway against an unfriendly environment. No one doubts that seed-bed, stable and hog-house should be the best time and labor can prepare. The surroundings of the growing thing, whether it be an animal or vegetable, can not be too favorable; but in the end it is the heredity, the ancestry, the blood lines, which will do most to insure profit or loss. The tendency to grow, to thrive, to press forward thriftily toward maturity, woven into the inmost being of any living creature from carrot to man, is worth more than all the pampering in the world.

Washington Gleanings

Twenty new members have been added to the Randle grange as the result of a membership campaign just closed.

The name selected for the farmers' organization at Union will be the Progressive Farmers' club. Motto is, "Do our best."

P. J. Sweeny of Tacoma has been appointed state grain inspector to succeed R. D. Jarboe, who resigned to go to the federal grain serivice.

Negotiations for the establishment of a beet sugar factory at Satsop have been concluded. A price of $6 a ton has been guaranteed for beets and a large acreage has been contracted for.

Extensive shipments of potatoes which have been stored in Vancouver for the past two or three months have been made recently to points in the middle west, principally Nebraska, Kansas and Minnesota.

That the wages of farm hands in Whatcom and Skagit counties are $5 higher than last year is the report of the federal employment bureau in Bellingham. The average paid now is $35 to $40 a month.

Baker and Acme townships of Whatcom county have indorsed the $88,000 bonding proposition to build and improve roads in the two townships. The principal construction will be a hard surface road through the townships.

The proposed new state highway between Meyers Falls and the Spokane river will be constructed under the supervision of the state, and the $40,000 available for expenditure this year will build between 12 and 15 miles.

Hay at the rate of 20 cars a day is being shipped from the Yakima valley to Montana and Oregon to save cattle from starvation. Stockmen are entirely out of feed and some of them are hauling hay 35 miles from the railroad.

Arrangements have been completed whereby the Exchange National bank of Spokane will advance live stock men in the Okanogan district approximately $25,000 for the purchase of purebred sires to run on the forest ranges this season.

Actual construction of the extension of the Cowiche branch of the Northern Pacific will begin this month. The road will be completed in ample time to handle the crops grown this year. Since the construction was announced the Utah-Idaho Sugar company has contracted about 300 acres of beets in the Tieton.

The sum of $1,812,052 became available from the state public highway fund April 1, while federal aid will amount to more than $400,000. The road budget approved by the commission includes the following: Pacific highway, $449,603; Olympic highway, $219,376; McClellan pass highway, $101,750; National Park highway, $248,598; Central Washington highway, $110,000; minor highways and secondary state roads, $332,250.

What Others Say

Farm and Fireside: Indeed, the likelihood of overproduction in any line seems remote.

Kimball's Dairy Farmer: The method of living from hand to mouth is no longer safe.

Ohio Farmer: The county agent is making good. The farmers are learning to utilize him.

Nebraska Farmer: Between regulated and unregulated monopoly, regulation is preferable; but neither, to my mind, is so satisfactory as free competition.

Farm Journal: You may forget your own birthday in the stress of the years, but tie a string around your finger to remind you of the little chap's birthday.

PROOF that Blasting the soil pays fruit growers

EVIDENCE

"In preparing the ground for the planting of trees the *Rural Press* recommends the use of powder." PACIFIC RURAL PRESS, San Francisco.

"We advocate the use of explosives for loosening up compact soils and hardpan in tree planting, knowing the value of such work"
FANCHER CREEK NURSERIES, Fresno, Cal.

"The use of a good explosive is of great benefit in planting an orchard, as the ground should be loose enough to allow roots to go to their natural depth easily."
BENEDICT NURSERY CO., Portland, Ore.

"We favor blasting holes for trees where the soil is heavy. Powder will loosen the soil, giving it a better chance to become aerated, as well as making it more retentive of moisture."
OREGON NURSERY CO., Orenco, Ore.

"My orchard has made excellent growth, due to the fact that I used dynamite, breaking up the soil and making excellent beds for the roots. If I were to set another orchard I would not think of doing so without blasting each tree hole"
T. A. JOHNSON, Boise, Idaho.

"We have used explosives in digging tree holes in the hard caliche subsurface layers which occur here. We find this cheaper than the use of pick and crowbar, and more satisfactory in that the soil is shattered deeper than the hole could be dug."
GEORGE T. FREEMAN,
Arizona Agricultural Experiment Station, Tucson.

"The use of Farm Powders in the orchard industry is rapidly being learned and appreciated. The worst looking orchard I ever saw, suffering from a lack of drainage, was blasted two or three years ago, and now it looks as fine as any other well kept orchard in this valley."
E. H. SHEPARD, Publisher "Better Fruit," Hood River, Ore.

"We have observed many cases in which powder has been used for blasting beds for fruit trees, invariably with great success. The use of explosives is of material benefit when the soil is inclined to be rather shallow and underlaid with a hard subsoil. There are few soils in which blasting cannot be done profitably."
THE FRUIT GROWER, St. Joseph, Mo.

"I have done a great deal of orchard planting and use powder for making the holes. At first it was used chiefly on heavy hardpan or other soils that were difficult to prepare with the spade, but is now used on all classes of soil. If I were planting trees even in light soil, easily handled, I should prepare all the holes with powder. Trees so planted make extraordinary growth."
FRANK FEMMONS, Oakhurst, Cal.

"Generally speaking the growth of plants depends upon the condition of the soil into which the roots penetrate. If the depth of loose soil is too limited or the surface water is permitted to stand too long, the growth is impaired. Explosives properly used in such instances have invariably relieved the condition and resulted in excellent growth. The yield is often three times as great on blasted soil as from those untreated in the same vicinity."
ROSECROFT NURSERY & FRUIT FARM, Sumner, Wash.

"The O'Connor prune orchard near Los Gatos in the Santa Clara Valley, California, was blasted in 1913. During the previous six years the largest crop was 3,900 pounds. In 1914 after the blasting, the crop was 8,000 pounds, more than double. It was a dry year, too. Where there were from 30 to 40 per cent. of 'drops' in the orchards on both sides, the O'Connor place lost only about 5 per cent. Prunes from the blasted orchard averaged much larger and the trees made a better growth and retained their foliage a month longer than the orchards on either side."
JOHN A. GALPIN, Los Angeles, Cal.

"My orchard was planted three years ago and all trees were of even age and size. I intended to blast the whole orchard but ran out of powder and finished the small balance without it. This enabled me to compare the growth of the trees and satisfy myself that the expense was justified. The trees that were planted in blasted ground show a growth of 75 to 100 per cent. over the trees that were planted in ground not blasted. They also appear healthier and more satisfactory in every way. I have just bought 1100 more prune trees and would not think of planting them without preparing the ground with powder."
HERMAN H. SMIDT, R. 3, Oregon City, Ore.

2

is given by many fruit growers in the accompanying page from the Giant book, "Better Orchard Tillage." These men say that blasting

- enables the trees to root deeper;
- adds moisture storage capacity;
- saves labor and money;
- improves orchards that are not doing their best;
- is always profitable when properly done;
- places the soil in the ideal condition that permits newly planted trees to make extraordinary growth;
- increases the yield of fruit.

Scores of the most successful fruit growers in the Pacific Coast States plant all of their trees in beds blasted with one of the

GIANT FARM POWDERS
STUMPING — AGRICULTURAL

—Eureka Stumping Powder or Giant Stumping—both of which are made especially for this and other agricultural work. They have found these Giant Powders particularly well adapted to subsoiling and for blasting tree beds.

Some kinds and grades of explosives tend to shatter and pulverize anything they come in contact with. They act too quickly. These ordinary dynamites do not do the work well and cost more. Eureka Stumping Powder exerts its strength slowly, comparatively speaking. It tends to disrupt, crack, split and heave the soil and it extends its influence over a wide area. It loosens and pulverizes the soil instead of packing it and throwing it high in the air. This is the action that is wanted in soil work and this action the "high percentage" dynamites will not give.

Warning Giant Powder is the trade name of explosives manufactured by the Giant Powder Co., Con. Because Giant Powders are best known everywhere, many have assumed that all high explosives are Giant Powders. Insist upon having the genuine, made only by The Giant Powder Co., Con. If your dealer has only ordinary dynamites, write us and we will see that you are supplied with *real* Giant Powders.

Try ONE BOX

Perhaps you have never planted trees in blasted beds. To make it easy for you to prove the value of blasting the soil, we print a trial order form in the coupon to the right. Fill it out and we will have our nearest distributor supply you—at the lowest market price—with a 25- or 50-lb. case of either of the Giant Farm Powders. Blast beds for all of your trees. Plant one in a spade-dug hole, the ordinary way. Note the difference in growth.

If you *are* using explosives for tree-planting, test a case of Giant alongside of the brand you have been using. After blasting with each, take a spade and see how much more thoroughly Giant does the work.

Remember that you can blast whenever the soil is dry. Any day to a year before planting time. Many growers keep Giant Farm Powders always on hand.

Have You Had the Book "Better Orchard Tillage"?

Prepared especially to tell the facts about blasting soils for orchards and in orchards of the West. It tells how to secure the proper sub-irrigation conditions by blasting. It explains how blasting promotes drainage and increases both moisture-storage capacity and fertility. It gives detailed directions for preparing the soil for tree planting or for deep cultivation of established trees. We will send a copy free on request. Tell us about your problems and mark and mail the coupon. Other books on Ditch Blasting, Boulder Blasting, Subsoil Blasting for all farm crops, and Stump Blasting will also be sent on request. Ask for the books that interest you.

Are Plowing Between Showers

Live Stock Has Wintered Fine in Western Washington. Dairy Cows Among the Best. Farm Wages Are Higher Than Usual.

CASTLEROCK, Cowlitz County, Wash., March 30.—The general weather conditions of Cowlitz county are rather bad at the present time. We have had a very backward spring. First it snowed and then it blowed, then a cold rain set in for the valley, and on the hills snow storms, driving the wild animals into the valley. Notwithstanding all this, the farmers are cheerfully going ahead, plowing between showers, and in a number of cases, seeding. Live stock has wintered fine and the assessor on personal property informs me that he has been agreeably surprised in making his assessments to find such substantial progress among the live stock growers. The dairy cows are among the best. As a rule, the farmers are bothered considerably to get good help, but some are hiring married men and furnishing a house to live in, a garden and other eatables, the help boarding themselves. If the farmer had a ready market for what they furnish free to their help, this would be a rather expensive way, but as it is, it keeps good help always on the farm and apparently contented. Wages are high compared with other years, but not as bad as one would think, considering the demand for young men for enlisting and the state work in the county on the Pacific highway. C. C. BROWN.

May Reseed Fall Wheat.

LA CROSSE, Whitman County, Wash., March 31.—Farm labor has been, so far, up to demand, with a good class of laborers. Wages range from $5 to $10 per month higher than in previous years and the men seem to be well satisfied. Farm work is very backward and but little field work was done up to the end of the month. Most of the farmers are of the opinion that very nearly all the fall wheat will have to be reseeded. This has been one of the latest springs ever known. April at hand and hardly a sign of vegetation, with cold winds and severe duststorms drying out the soil. Compared with a year ago, 1917 bids fair for a dry year. Rainfall the first three months in 1916 was 9.30 inches and 3.64 inches for 1917. Live stock is doing remarkably well considering no green pasture.

M. E. SCHRECK.

Land Values High.

SUMNER, Pierce County, Wash., April 1.—I have heard of no shortage of labor except that it seems to be hard to get good milkers at a price that most dairymen can pay. We hire only married men, and as we get extra prices for milk we can pay wages that keep milkers contented. As to the size of the farm, we have 45 acres and keep three men the year around, and hire but very little outside help, and do but little outside dairying. Berries are raised mostly here, and holdings are small. Land values are high. Very few men can keep help through the winter and pay interest on investments. It seems to depend largely on the men—a few can do it and make it pay, but most of them can not. Weather is wet and cold, and but very little planting has been done yet. W. J. LANGDON.

Farm Labor Scarce.

MONTBOURNE, Skagit County, Wash., March 2.—Farm labor is a little scarce, as the logging company pays more wages. It depends on the man one hires if he proves to be satisfactory or not. Wages are about 10 per cent higher than in previous years. The men, as a rule, are more or less restless. Dairy farming, where one has 25 head of milch cows or more, is the only kind of farming where it pays to keep a man the year round. There has been more wind, rain and snow through the month of March than usual. Grass has not started to grow yet, and no spring crops have been planted yet. There is a scarcity of hogs in this community. The cattle are in better shape this spring than they were a year ago.

JOHN B. PETERSON.

More Cattle in Country.

BOSSBURG, Stevens county, Wash., March 22.—This is the most backward spring we have had for many years. There is still considerable snow on the level land and there will be no plowing for three weeks on the hills and in Echo valley. Most of the spring plowing is usually done here by April 15 and seeding by May 1. There was but little fall seeding last fall on account of dry weather and there will be more work to do on farms in this part of the country than there has been any year since. About half of the grain crops have been fall seeding, but there was little last fall and we don't know how it will come through the winter as it is still under the snow. There is little summer fallowing done here except where the land has become full of weeds. Although this has been the longest winter since 1899 all the farmers got their stock through in good shape. We hear few complain of a feed shortage. There are more cattle in the country than ever before and fewer hogs and some of our farmers are putting sheep on the farms. Cattle of all kinds sell for good prices. We are looking for good prices the coming year and all the farmers are putting in grain crops wherever possible. There has been no damage done to fruit here so far, and as the trees have made no start as yet, we do not look for any later. W. W. PALMER.

Help Is Scarce.

KENNEWICK, Benton County, Wash., March 23.—The land here in Kennewick valley is usually prepared for spring and the summer crops of spuds and corn during the months of February and March. Also alfalfa land is cultivated about the same time by means of spring toothing. Panting of potatoes begins about the first of April, followed up with corn and early garden vegetables. There is no summer fallowing in the valley to speak of. On the uplands, such as the Horse Heaven district among the wheat ranchers, they summer fallow. Our valley land is all cut up into from 10 to 40 acre tracts or mostly all in alfalfa and orchards with small patches of spuds and corn for silage. This spring is about normal, in crop interests. Farm work is about normal with help very scarce. The last fall crops are sufficient to carry the majority of the farmers through till the new crops are ready to be used. About all the surplus hay is sold. The weather is fine for doing farm work.

F. A. SMITH.

Great Variety of Crops.

MALAGA, Chelan County, Wash., March 22.—The leading crops here are alfalfa, wheat, barley, oats, apples, cherries, pears, peaches, potatoes and corn. Some of these crops, such as soft fruit and garden stuff, are not raised in large quantities on account of the market being far away. Some of the farmers here are planning on planting more onions, beans and potatoes than heretofore. In some parts of this county beets of all kinds are raised. Seed potatoes are going to be very high in price and scarce also. So many of the farmers here did not get their potatoes dug last fall in time and they froze. It has been a backward spring so far, and cold. Some are doing their plowing and are seeding spring wheat. All the extra ground will be used for hay this year. Farm help is very hard to get this spring. The ground is in fairly good shape for plowing and with the good supply of irrigation water they have here they are bound to have a good crop of some kind out of the many crops that can be raised here. Hogs bring a good price and young spring pigs will bring a better price than they have in years. A good many horses have been sold here this spring and winter for an unusually god price. Good prices and good crops are looked forward to for the coming season.

MRS. O. ALLENBAUGH.

Farm Labor Inadequate.

CHEHALIS, Lewis county, Wash., March 28.—Farm labor is hardly equal to the demand in Lewis county. Many young men, sons of farmers, go to the woods to work preferring the life of the camps to work on a farm. The average farmer's boy who goes to the woods is not much account after that for the farm, as he is not contented and soon gets the wandering habit. Comparatively few farm hands are thoroughly efficient, that is there are so many things to know about feeding and caring for stock and operating farm machinery that comparatively few are fully qualified farm hands. Wages are a little higher perhaps than usual at this season, few receiving less than $40 per month, with board furnished. I think a good many farmers expect too much from their men, not realizing that the time has gone by when men have to or will work unreasonably long hours. The farm hand notices that many men in town work regularly only 10 and even eight hours daily and naturally resent the "daylight until dark" proposition. The wage scale for steady men should be agreed upon for the year with a lower rate during the winter months and higher wages in the busy season. Any farm of 80 acres in Lewis county should keep a man by the year if the farmer does not have help in the family on which he can depend. Of course the all-year-round help depends on circumstances. A man dairying needs a man all the time if he has 15 or 20 cows, while if the same man was raising beef or grain he might need only occasional help. There has been heavy snow until recently in the hills adjoining the Chehalis valley and the spring is a little late. There is little seeding done because the weather has not been fit. It is warmer now and much of the snow has gone. Farmers are hoping that in early April they will be able to make up some of their lost time.

J. C. BUSH

Wheat Prospect Poor.

PROSSER, Benton County, Wash., March 25.—The weather is dry and cold for this time of year. There was lots of wind the last week. Most of the spring wheat is blown out and the prospect for a wheat crop does not look good at this time, as there has been no growing weather yet. Spring plowing is usually done the last of February and March. Seeding of spring wheat is usually done in February and March; garden truck in March and April and corn is planted in April also. Fall plowing is done in the valley any time after October first; summer fallowing is done from April 1 to July 1. The first cutting of alfalfa is done during the first half of June and six weeks between each cutting thereafter, until the frost kills it. Wheat harvesting begins about July 15, but this spring is not coming in normal and last spring was also late. Peach and apricot trees should be in full bloom at this time of year, but this year they will do well to be in bloom by the last of April. Fall crops are like hens teeth.

G. W. WILGUS.

Must Reseed Wheat.

WILSON CREEK, Grant county, Wash., March 25.—Seeding is generally done in the month of March except on the Crab Creek bottoms where plowing and seeding is done in the month of April and May. There is very little fall plowing done here. Fall seeding is generally done in the month of September and October. Summer fallowing commences right after spring seeding is finished and continues to the first or middle of July. This spring is about 30 days late. Farm work this year will be about normal. Nearly all fall wheat will have to be reseeded. The leading crops are wheat and hay. Some oats, barley and corn will be planted this year and a very large acreage will be planted to potatoes. There is very little or practically no gardening done here. Farmers this year are raising more hogs and cattle, owing to the high prices of pork and beef. A good many are selling their poultry on account of the high prices of poultry, feed and wheat. Feed is getting scarce on account of the long winter and roughage for stock is commanding a premium.

J. P. SCHROEDER.

The Greek Topaz.

The topaz of the ancient Greeks and Romans is generally said to be chrysolite as we know it, while their chrysolite is our topaz. Chrysolite is a silicate of magnesia and iron.

Do Not Put Up With Power That Will "Pass"—You Want It To "Pull"

Wasteful extravagance goes hand in hand with inefficient farm power apparatus. Soil scratched with light plowing that reduces production, crops lost with poor threshing that wastes the yield, soon eat up the saving made in the purchase of a cheap and light farm engine. The farm engine should be a good one, capable of doing work that will bring returns in proportion to its cost. No better engines can be found than those that bear the Nichols & Shepard name as members of the

Red River Special Line

In steam tractors there are five sizes and fifteen variants, 13-40 to 25-85 h. p., burning any kind of fuel, wood, coal or straw. In Oil-Gas Tractors two sizes are built, 25-50 to 35-70 h. p., developing full power on kerosene—nothing that a farm engine can do is too much for either kind.

Your own neighbor probably owns a steam or a gas engine of our make. Let him tell you what it can do, and then you might write for a little farm paper that will give you the opinion of others that you know at home. A catalog that is worth reading carefully will be sent you with the paper. A postal request to the nearest branch house will bring you both.

War Is Now Upon Us

Call for Loyalty in Words and Acts

The newspapers have told the story of the first week of April, 1917, a week momentous in the history of America—the hurried meeting of the special session of congress Monday, the address of President Wilson urging upon the joint session the declaration of a state of war existing between the United States and Germany, the presentation in the senate of the war resolution on Tuesday and the prevention of its consideration for the day by Senator La Follette, the passage of the resolution by the senate Wednesday, its debate by the house Thursday and its passage in the house early Friday morning, the signing of the resolution by President Wilson and his war proclamation later on Friday.

The newspapers also have told the story of active war preparations in calling out the national guardsmen, in recruiting the army and navy, in planning a huge loan, perhaps $2,000,000,000, to the entente allies as well as $3,500,000,000 asked of congress for the military and naval establishments during the first year of the war.

Time for arguing has passed. Our own beliefs for or against war are forgotten. War is upon us. Our country's enemies can no longer be our friends. The hour demands loyalty in words as in acts and patriotism calls for greater conservation and production of food supplies—a nation-wide campaign for thrift.

Federal Farm Loan Bonds

President O'Shea Does Not Fear Bond Issues

By N. W. DURHAM

Chairman of Spokane Committee on Land Banks

While there is no present occasion for alarm, some uneasiness is felt in Washington over the possibility that war between the United States and Germany may retard the growth of the federal farm loan system.

If the government should try to carry on the war with big bond issues the farm loan officials might find it increasingly difficult to market their farm loan bonds. The $9,000,000 starting capital that has been put into the 12 federal farm loan banks ($750,000 for each bank) is only the "priming of the pump." It is only about one five-hundredth part of the farm mortgage indebtedness of the United States. The farmers will want hundreds of millions of dollars and eventually billions, and the new system can supply these great sums only through the bond markets of the country.

It is therefore obvious that if the government were to put out vast war loans it would be bidding against itself in the bond markets. It would be playing the war needs against the farm mortgage needs of the country. It might wreck the federal farm loan system, and at best it would impair its service. Having to pay higher interest rates in order to market its farm loan bonds, it would be required, in turn, to raise the interest rate on farm mortgages.

To overcome that and other dangers that would grow out of excessive bond offering, President Wilson is urging that the cost of the war should be chiefly met by direct taxation.

"It is our duty," said the president in his recent address to congress, "to protect our people as far as we may against the very serious hardships and evils which would be likely to arise out of the inflation which would be produced by vast loans."

In line with that recommendation opinion is growing at Washington that greater sums should be raised by increasing the income tax, by heavier internal revenue taxes on liquors and tobacco, and probably by a system of stamp taxes similar to that employed in the Spanish-American war.

It is a complicated and difficult problem, and its wise solution will call for careful thought and much intelligent planning.

D. G. O'Shea, president of the Spokane land bank, does not believe that national bond issues of other states taken to finance the war will interfere with the operations of the government rural credits system.

"I can not see that war bond issues would interfere in any way with the land banks," President O'Shea said today. "European countries which have similar systems have been continuing to finance farm loans as an incident to their other necessities. The total of loan bonds to be issued is very small, when compared with the resources of the country. We have inquiry now from possible purchasers.

"No, war will hardly interfere or delay the operation of the system. Right now our chief work consists in organizing the local associations, each one of which will remain a permanent and independent corporation, perhaps forever. Through them all the loans will be made. Since the opening of the bank in Spokane we have forwarded charters or application blanks to about 100 of these associations which are within our territory, and are getting them into proper organization."

GOOD NEWS FOR RENTERS AND FARM OWNERS' SONS

You can get a rich 160-acre farm free this spring, excellent for growing grain and mixed farming. Write for copy of "The Home Seekers' and Settlers' Guide." It gives full facts and tells what others are doing. Address Canadian Northern Railway, A. A. Brostedt, D. F. & P. A., 605 Hastings St., Vancouver, B. C., Canada.—Adv.

WHERE ARE YOUR PROFITS?

Did the weather get them? Because you could not get all your crop in on time on acconnt of the soft, muddy soil or on account of the sizzling heat? Are you not paying too much for labor, in time, money and health? If an ENGINE will save your grain, you'll get one in a hurry, won't you? If an ENGINE will save you labor, time, money and health, you'll get one, won't you?

THE "NEW-WAY" ENGINE

Equip your grain binder with an engine and you'll get all your crops in on time regardless of weather conditions. And you'll save horseflesh, too. The ENGINE does the work—the horses just draw the binder as they would a wagon. Yes, and two horses, WITH AN ENGINE, will cut one-third more grain than four horses without an engine.

ASK YOUR DEALER to show you the "NEW-WAY." Write for illustrated catalogue No. 29 mf-8

THE "NEW-WAY" MOTOR COMPANY
LANSING, MICHIGAN, U.S.A.
5 Race St.

COUNT THE DOLLARS IN YOUR TREES

Go over to the wood lot and size up your trees. Every 16-foot log averaging 14 inches thick will make 100 feet of good lumber. Ten such logs make 1000 feet of lumber worth from $25 to $40 (our book tells). An "American" Saw Mill will saw them at a cost of $4 to $5 per 1000 feet. You have the teams, the time and the engine. It will pay to get the dollars out of those trees. You can do it for your neighbors, too—more profit for you. All you need is an "American" Mill—so simple any one can run it, so strong it lasts for years. An 8 H. P. engine will cut up to 2500 feet per day. Farm lumbering is explained in our new book No. 7.

Wheat Silage

Offers Possibility in Northwest

At this time in the year many farmers are planning their silage crops. Much has been heard about the possibility of using wheat for silage in preference to corn in the localities where corn is not particularly successful as is the case in many northwestern localities.

The following is taken from a bulletin prepared by J. R. Shinn, county agriculturist for Spokane county, on the subject of wheat for silage, and throws light on the possibilities:

Cheap silage is a prime essential for profitable feeding of dairy cows, beef cattle, or sheep. This is especially true during the winter months. When the pasture dries up silage is even more essential for summer feeding. To obtain this kind of feed the middle west farmers have learned to rely upon corn. An investigation made by the author during the winter of 1913 showed that the yields of corn silage on Spokane county farms, not having irrigation, was very low compared with middle west yields. Incidentally a visit to the Glen Tana dairy farm revealed the fact that very satisfactory yields of excellent silage were being secured from wheat and vetch. These crops are seeded together in the fall and harvested for silage while green the following year. The foreman of this farm claimed a yield of 19 tons on a measured acre of ground and an average yield of 13 tons per acre for a 12-acre field. Furthermore, it is claimed that this silage gives better results than corn silage when fed to dairy cows and that its keeping quality is very satisfactory.

Selecting Wheat for Silage.

Jones' fife wheat has been used most for silage purposes, because it is one of the finest stemmed and sweetest wheats grown in the county. In the low places this wheat often attains a height of six feet, and, if cut at the proper time, averages 20 tons per acre. If allowed to mature on such ground it usually lodges before the grain is ripe. For this reason the cutting of these rank-growing patches of wheat prior to the harvesting of the remainder of the field would be economical farm practice. Furthermore, where the wheat grows so rank comparatively low yields of grain are usually found.

In a great many instances farmers, on whose places the above mentioned estimates of yields of wheat silage were secured, were asked to estimate the yield of hay. Quite uniformly their estimates of hay were one-fourth the yield of green forage. To further test out this factor a bundle of green wheat and vetch was taken and cured. When green it weighed 20 pounds, and when cured as hay it weighed five pounds. In other words, winter wheat will make approximately four times as much silage as hay.

Time to Harvest Wheat Silage.

According to our present knowledge wheat should be cut for silage while the entire plant is green and the kernel is in the milk. At this time the straw is not hollow, but as the ripening period advances the stem becomes hollow, thereby affording air space and consequent danger of spoilage when placed in the silo.

When winter wheat is grown alone for silage, it may be cut and bound the same as when grown for grain. If wheat is grown with vetch a mower must be employed, since the vetch tangles the crop. In this latter combination extra men are also necessary to open the mower swath in order to allow free passage of team and mower.

Cutting and Storing in Silo.

Wheat should be cut into one-half inch lengths or less before being placed in the silo. It should be spread evenly in the silo and tramped thoroughly. As an extra precaution to exclude the air, parties using wheat silage have resorted to the wetting down of the ensilage with water during the time of filling or soon thereafter.

Advantages of Wheat Over Corn.

Dairymen who have tried wheat silage claim better results in keeping up the milk flow and producing flesh than were secured with corn silage.

Every wheat farmer is provided with his own machine for harvesting wheat silage—the grain binder.

The harvest season for wheat silage comes at a time when labor is easily obtained and at about half the wage asked during the corn silage harvest.

The services of engines used for threshing purposes can readily be secured for cutting wheat silage, while at the time for corn silage cutting, the engines are busy threshing grain.

If wheat is cut for silage when the kernels are in the milk, the wild oats in the crop are removed from the field before sufficiently ripe to shatter their seed. This assists materially in keeping the land clean.

The filling of stave silos with wheat silage at the beginning of the summer's drouth prevents them from drying out and falling to pieces. When corn silage is used and the silos stand empty all summer they are generally badly warped and in poor condition at siloing time in the fall.

ON 40-POUND LIST

Honor Roll of Thurston County.

There were 37 cows during the month of March on the 40-pound list in the Thurston County Cow Testing association, according to the report of Hinston Grover, the tester. This shows a slight decrease from the month of February.

Brownie, a cow owned by C. C. Aspinwall, heads the list with 63.2 pounds of butterfat.

Star, the high cow for the last two months, owned by Mr. Munn, is second with 61.1 pounds.

During the last month another purebred bull was purchased by a member of the association. Traves Ayer has secured a Holstein bull of excellent breeding from the state college.

The following is the "roll of honor," composed of those cows producing over 40 pounds of butterfat for the month:

Owner and breed.	Milk.	Fat.
C. C. Aspinwall, mixed	1240	63.2
E. Munn, Jersey-Guernsey	986	61.2

Holland's Lessening Dairy Products.

A scarcity of milk and butter is reported from Holland, a country that in normal times exports large quantities of dairy products. The really serious feature in the situation is the decrease in the year of milk. This is attributed to the lack of stimulating and nourishing fodder, now almost unobtainable, which was imported in large quantities before the war. For the last year cream has been relatively scarce in Amsterdam and the prices unusually high.

Raise Your Calves on
Blatchford's Calf Meal
and Sell the Milk

More calves have been raised on Blatchford's Calf Meal than on all other milk substitutes combined.

100 lbs. makes 100 gallons of milk substitute, costing only one-third as much as milk.

Prevents scouring and insures the early maturity of sleek, handsome calves.

It is steam-cooked and no trouble to prepare or use.

Write for Pamphlet "How to Raise Calves Cheaply and Successfully with Little or No Milk." At dealers, or Blatchford Calf Meal Factory, Dept. 58 Waukegan, Ill.

Saves Time!

The faster you turn the Sharples, the quicker you finish skimming! For instance: If by turning a Sharples at 45 revolutions per minute you get through separating in 15 minutes, you can get through in 10 minutes by simply increasing the speed to about 55 revolutions. The Sharples is the *only* separator that can be "hurried"—a mighty handy thing when *you* are hurried.

Now consider the time saved in cleaning the Sharples. The bowl is the most simple in existence—just *one* piece in it, no discs or blades. Simply run a brush through it once or twice—and cleaning's done!

Furthermore, the Sharples requires oiling only *once* a month—and in only *one* place. Just pour a little oil into the enclosed gear case—more time saved!

SHARPLES
Famous Suction-Feed
"Skims clean at any Speed"
SEPARATOR

—the *only* separator that skims clean at widely-varying speeds
—the *only* separator that delivers cream of unvarying thickness—all speeds
—the *only* separator that you can turn faster and finish skimming quicker
—the *only* separator with just *one* piece in the bowl—no discs, easiest to clean
—the *only* separator with knee-low supply tank and a once-a-month oiling system

Remember that all separators lose considerable cream when turned below speed—*except Sharples!* The Sharples gets all the cream no matter whether you turn it fast or slow. It saves up to $100 a year more than other separators. Cordially welcomed by women, owing to its easy turning and easy cleaning. Over a million Sharples users. Write for catalog to Department 49.

E. J. IDDINGS, Editorial Contributor

Premiums for Berkshires.

The American Berkshire association as provided for special premiums mounting to $1200 at the National win show to be held at Omaha, Neb., hich, together with $800 offered by he National Swine Growers' associaion, will make a classification of 2000 for Berkshires at that show. An ppropriation of $500 was made for erkshire barrows in the single and en classes at the International Live tock exposition. This, with the mount offered by the Live Stock exposition will furnish a classification f $1000 for barrows. The association remiums at the International for rand champion dressed carcass, barow, pen and grand champion carload, won by Berkshires, remains the ame. The total amount offered by the ssociation for Berkshire barrows at he International totals $800 in cash nd trophies.

DRIED BEET PULP

For Beef Cattle and Sheep Feed.

The Farmer has received a letter rom W. F. Towne, manager of the Larowe Milling company of Detroit, Mich., n which he refers to an article which ppeared in the Farmer of March 8, by .- I. Potter, on dried beet pulp for eeding beef cattle and sheep. Mr. owne says:

"It is evident that the writer of this rticle—Mr. Potter—is under a misapprehension with regard to dried beet pulp on two or three important points. For instance, the statement that dried pulp is seldom used for fattening beef stock is not borne out by the facts. The demand for pulp for this purpose has grown to the point where we could probably sell at least a fourth of our present total output to packing companies and feeders of beef cattle and sheep."

Mr. Towne incloses a letter from C. B. Cunningham of Sacramento county, Cal., regarding the feeding of beet pulp to swine. Here is an extract:

"I would suggest that two parts of beet pulp to one part of grain be used, and that same be well soaked and salted. I am using that every day in feeding my stock, even when they are running out on the alfalfa. For sows that are suckling their young I use two parts of wheat middlings and one part of the above mixture, and I find that even while suckling I can keep them up in flesh, and I know positively that it is on account of the best pulp, for I never was able to do so before feeding this pulp."

Veterinary

Dr. S. B. Nelson

1. What can I do for botts in horses, also for heaves? 2. I have a calf that has bunches along its back which contain grubs. L. S. B.
Elma, Wash.

1. For botts in horses give one-half ounce to one ounce carbon bisulphide in gelatine capsules. The following morning or a few hours later give one quart of raw linseed oil. For the heaves there is no specific remedy. Sometimes good results have been obtained by giving one ounce of Fowler's solution of arsenic in a little water once daily to the animal for two, three or four weeks.

2. Regarding the calf which has the grubs or worms on its back these are warble grubs. The best thing to do is to squeeze the warbles out daily and crush them. Hold a tin cup over the parts when squeezing them so that they do not fly and strike you in the face or on the clothing. Then during the summer months of June and July apply some oil substance to the hair where the betts flies or warble flies lay their eggs. Fish oil with a little tar mixed with it has been recommended and is good material.

1. I have a cow that has been lame since the snow came. There is no swelling on her limbs anywhere, but especially after getting up she is quite stiff and sore. 2. I have a mare that secretes a whitish fluid a great deal. Can that be abortion, and if so, will it affect the stock that graze in the same field? 3. What is the simplest and best clover bloat remedy?
Snohhomish, Wash. R. A. F.

1. It is possible that your cow is affected with rheumatism. Give her one and one-half pounds of epsom salts in three quarts of water. Two days later begin giving her one ounce of sodium salicylate morning, noon and night for two days. See what that will do for her.

2. Regarding your mare, I do not believe that the discharge is an indication of contagious abortion, and I do not believe it will affect the stock that graze in the same field. It is more likely a local mucous irritation which, if the mare is not with foal, might be treated with a very light solution of potassium permanganate. Just a pinch between the fingers put into a pailful of warm water might be used as an injection.

3. In regard to clover bloat, give one ounce of creolin in one quart of water. Follow in a few minutes after this with one pound to one pound and a half of epsom salts in three quarts of water. If the bloat is very bad the cow should be tapped on the left side halfway between the last rib and the point of the hip, and a hand breadth down from the backbone.

Warranted to Give Satisfaction.

The New Self-Centering De Laval Bowl
Concave Bottom Detached Spindle

The Supremacy of the
NEW DE LAVAL

THERE may be some question as to who makes the best wagon or the best plow or the best watch, but when it comes to cream separators the supremacy of the De Laval is acknowledged at once by every fair minded and impartial man who is familiar with the cream separator situation.

Thousands and thousands of tests, the world over, have proven that the De Laval skims the cleanest.

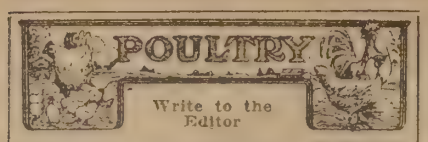
The construction of the New De Laval keeps it in a class by itself.

It outlasts and outwears all other makes by far, and can be run with much less cost for repairs.

The world-wide De Laval organization, with agents and representatives in almost every locality where cows are milked, ready to serve you, insures that the buyer of a De Laval will get quick and valuable service when he needs it.

More De Lavals are sold every year than all other makes combined.

The New De Laval has greater capacity than the 1916 style, is simpler in construction, has fewer and interchangeable discs, is easier to wash, and the skimming efficiency is even greater.



Each New De Laval is equipped with a Bell Speed Indicator.

Order your De Laval now and let it begin saving cream for you right away. Remember that a De Laval may be bought for cash or on such liberal terms as to save its own cost. See the local De Laval agent, or if you don't know him, write to the nearest De Laval office as below.

New Catalog will be mailed upon request

JAMES DRYDEN
Editorial Contributor

While Assistant Secretary Vrooman suggests as a patriotic duty that every farmer keep 100 chickens, it is none the less the farmer's duty to select good chickens, hens that are good layers or good meat producers, otherwise the wheat that the farmer feeds to them had better be made into flour to feed the soldiers.

When it came to the production of food, all the warring nations have lacked preparedness. Their soldiers were better trained than their hens. What would it have meant to those nations if the efficiency of the farm fowls had been increased 50 per cent by proper breeding? It could have been done at less cost to the nation than one day's warfare is now costing either England or Germany.

"Please give me a remedy for my hens. They get canker in the mouth and one eye swells together and some of them go blind in one eye without it swelling together. I have a good chicken house built up so they can go underneath, but there is a seepage when it rains underneath." B. Y. G.
Big Lake, Wash.

This is a case of either roup or canker, or both. If taken in the first stages the disease may be cured. Use permanganate of potash of a 2 per cent solution. The head of the bird should be dipped in the solution and held there as long as possible without strangling the fowl. This should be done daily two or three times until a cure is effected. Applying iodine with a feather to the canker spots is also recommended. Separate the affected fiwls from the rest of the flock and disinfect water vessels and feed troughs. The condition of dampness under the house should be remedied.

J. D.

Marketing

Cooperation Helps Solve Problem

We have a letter from Emma J. Boyce, American Falls, Idaho, in which occurs the following:

"I am only a beginner in the poultry business, but I see at once that we must arrange other ways to market eggs than just to take them to the stores in American Falls, or even to sell them to private individual customers here, for the reason that just as soon as a few farmers bring in a few dozen extra above the local demand the stores cut prices from 2 1-2 to 5 cents per dozen. No matter how careful I may be to gather my eggs often and keep them clean and to never sell a stale egg, I have to suffer the cut in price just the same as the party who isn't careful of his or her hens' eggs as to freshness, cleanness, etc. * * * I thought some such system as the sealed carton system of direct sales from producer to consumer might be a good one. What does The Farmer think of it and what does it suggest?"

First, I would suggest cooperation among the egg producers. But it usually takes more than a suggestion to get them to cooperate. If a few farmers would meet together in the spirit of cooperation the condition described at American Falls could very soon be remedied. They must have eggs enough, however, to make regular shipments in case lots, the more the better. So long as the express companies favor the large shipper by charging much less per dozen when shipped in case lots than in small quantities, so long will it be necessary for small producers to cooperate or combine their shipments in order to overcome this handicap. The eggs could be gathered together at one farm and candled and graded and packed in cases holding 30 dozen. In the Portland territory it is about as cheap to ship two cases at a time as one case. It would not take many producers to get the requisite quantity to ship in case lots, but if they could get two or three cases a day or five cases, so much the better. Regular shipments in quantities like that would make it worth while for some of the larger dealers in the cities to offer good prices. But the shipments must be regular and the eggs must be strictly fresh, the small ones taken out and the dirty ones washed.

American Falls is some distance from large cities, but eggs could be shipped to Boise, Idaho; Salt Lake City and Butte, Mont. Let the cooperators appoint one of their number secretary and manager who would see that they were properly graded and packed. First he should be instructed to correspond with some of the buyers in the cities mentioned and possibly in others. He could get the names of reputable dealels by writing to bankers, or to express agents in those cities. The postmasters would also furnish the information. The expense of the carton could probably be eliminated, but the buyers should be consulted as to this. It would be well in the end to stamp every egg with a rubber stamp, which would be the trademark, and if the quality of the eggs was always good this stamp would help to sell the eggs. Customers would ask for that brand.

It is all easy enough, except the cooperating. The farmers or producers should all sign a castiron agreement that they will sell all their eggs through the association or egg circle for at least a year, otherwise the local dealers will try to break up the cooperation by offering as high a price or higher price than they could get by shipping the eggs themselves.

A trade with private consumers, however, can be worked up by any egg producer. Eggs may be sent in 12-dozen lots by express to private city customers. This is often done now. A 12-dozen crate of eggs will keep all right for two weeks if kept in a cool, dry place. If it is too many for one family two neighbors or three can take a crate between them. The same crate may be sent by parcel post. It hardly pays to ship eggs by express in smaller quantities. They may be sent by post in smaller packages. Sometimes the express companies in the large cities will furnish the names of private customers who will take shipments of this kind. In some cities the postmaster keeps a list of buyers or private families.

Cherry Juice.

A letter from H. G. Monce, Nampa, Idaho, reads as follows:

"I am much interested in the growing and marketing of cherries since I have 2000 bearing trees at Nyssa, Ore. These trees are six years old and I estimate will yield an average of 10 gallons per tree for summer of 1917.

Have almost equal numbers in each of the following varieties: Early Richmond; Governor Wood, English Morillo, St. Dake and Mont Morency.

I contemplate selling the crop for cherry juice and would be much interested to see an article treating on this subject in your paper."

I have had the same thing in mind about which inquiry is made in this letter. There is very little literature on the subject in so far as I have been able to discover, and the industry in this country is new. For more than a year I have been giving attention and study to the question of manufacturing fruit juices, and how to market them to the best advantage, but I find very little to furnish information on the subject of cherry juice. I have observed the markets and find very little cherry juice offered for sale. The trade offers grape juice, apple juice, cranberry juice, orange juice and lemonade in large quantities, but only occasionally will we find cherry juice at the soft drink places. Last winter I spent some time in southern New Mexico and Arizona, where the water was so charged with lime and alkali that it was like taking medicine to drink it. I did what many others did: I drank fruit juices and root beer. I also took special notice of the kinds offered for sale. I very seldom found cherry juice, yet it is a most pleasant and appetizing drink. Why it is not more largely sold I do not know, but have a suspicion that it is because it is more valuable made into cherry wine and cherry brandy and what the German's call Kirschwasser, which, until the war, was made chiefly upon the upper Rhine and shipped to this country. Since the war the supply from that source is cut off and naturally manufacturers would try to meet the demand. This may or may not be the reason, but there is always a cause for every effect, and this looks to me like a reasonable solution of the problem.

G. L.

The Farm Garden

ARTICLE SEVEN.

The Turnip Class

The turnip, rutabages, radish, kale, cabbage, cauliflower and the like belong to the same vegetable family—the mustards. This is easily understood when these plants are observed at blossom time, the blossom and seed formation being very similar.

Turnips—Turnips should be sown in ground that can be kept reasonably moist throughout the growing season. They will not thrive in excessively hot localities, and therefore should be planted early enough in most sections to come to maturity before the hottest, driest part of the summer is reached. Turnips must be grown rapidly. If for any reason they are stunted—as from drouth or heat—they are inclined to become tough and pithy. Like most vegetables, they respond loyally to cultivation, but demand less than most other garden plants. Success can not be had with them unless the soil is well fertilized and well tilled prior to planting. They should be planted in rows and should be thinned to such extent that when grown they will not touch. There are many varieties, some suitable for table use and others primarily for feeding. Turnips are the victims of both a leaf-eating bug and a root maggot. Methods of combatting these pests will be discussed in a subsequent article in this column.

Rutabagas—The rutabaga is a close relative of the turnip. It is of richer, yellower meat, but is not generally so much used for table food as for live stock feed, though it is excellent for the table.

The rutabaga should be planted and cared for much the same as the turnip, but demands more cultivation. They require a longer season for reaching maturity, being a slow growing vegetable. Like the turnip, they fail if allowed to be stunted at any time in their growth by lack of moisture or cultivation or by too great heat.

Radishes—It is doubtful if any other garden vegetable is so universally known and grown as the radish. This is due partially to its freshness as an early spring vegetable and partially to the fact that it is easily grown. The small turnip radishes may be sown as soon as the ground can be worked. They can endure considerable frost, though cold retards their development. Sow them anywhere, and almost any way, and they will grow; but care in sowing and cultivation will result in a better quality of quickly-grown radishes. To be good the radish must be grown quickly, except the long, late varieties. The small ones should be planted successively, probably seven to 15 days apart, in order to have fresh, crisp radishes ready for the table at all times during the spring and early summer. Shortly after the first crop of early radishes is ready the later varieties should be planted. They are best adapted to summer and fall use. Radishes should be planted in rows from six inches to a foot apart and thinned to stand about an inch apart in the row. The seed should not be covered more than half an inch, which means that the surface of the soil must at all times we kept moist until the seeds have sprouted and formed root.

Orchard Sells for $13,500.

A deal has been closed between William Shelton and Sim Smith, whereby the latter acquired Mr. Shelton's 15-acre orchard tract a mile west of Cashmere, in Chelan county, for $13,500, or $900 an acre. It is planted to standard varieties of commercial apples, and the trees are mostly 10 years old.

Controls all barn and dairy equipment

CEDAR RAPIDS SPEED GOVERNOR

—as low as $12.00

—the speed governor of a thousand different speeds. Every turn of the hand wheel gives a different speed and each speed is absolutely steady and uniform.

Install it yourself with a screw driver. No figuring pulleys, no chance of installing it wrong for it runs in either direction, attached to the floor, the wall or the ceiling. It's *as cheap as an ordinary line-shaft* with the governor pulley thrown in.

THE Cedar Rapids Speed Governing Line Shaft is as cheap as the average friction-clutch pulley, yet it controls the speed of several pulleys at once without stopping your engine. The engine operates the governor—the governor controls the line-shaft.

The governor absorbs all jerky vibration. The power transmitted is steady and smooth. Runs all machinery at uniform speed. If you own an engine you need the Cedar Rapids Speed Governing Line-Shaft. One man saved enough labor fanning 50 bushels of clover-seed to more than pay for his governor outfit.

Controls Them All

Cream Separators require starting at slow speed. The Speed Governing Line Shaft *makes any separator run smoothly.*

Butter Churning necessitates slowing down the machinery to gather the butter. It regulates this.

Your Grindstone can best be run from a pulley on the Speed Governing Line Shaft.

Lighting Plants require regular power without "mis-fire" or "break". Controlled by the Speed Governing Line Shaft.

Your Washing Machine should be operated slowly when washing large pieces. The Governing Line Shaft controls it.

$50 in Cash Prizes

to be awarded July 1st. Present *owners* and *prospective buyers* should write for full particulars.

ANOTHER WEEK AND IT'S GONE

YOUR CHANCE TO WIN $175.00 ENDS APRIL 19

Send Today for Our Contestants' Helpful Outfit—If You Act Now Your Chances Are Equal to Those of Any One Else in Our Big

NOTE THESE FACTS

FARM INFORMATION CONTEST

READ THE RULES—ANSWER THESE QUESTIONS

51. What boy's name is also the name of an animal and a device for lifting?

52. When it is 12 o'clock noon in Washington, D. C., what time is it in Hong Kong?

(Our CONTESTANT'S HELPFUL OUTFIT tells you.)

53. What is the document called which shows that a piece of land is given as security for a loan?

54. What advertiser in various issues of this paper has offered to send an illustrated book entitled "Tree Planting"?

55. How many feet in a surveyor's chain?

$800—IN CASH to Be Paid—$800

We will positively give EIGHT HUNDRED DOLLARS in cash awards (and more in event of ties) to the winners. As explained in the rules which follow, there will be five questions run in every issue of the Farmer for 12 weeks. The last five questions will appear in the issue of April 19.

Open to Four States

Contestants must be residents of Washington, Oregon, Idaho and Montana.

Five Questions Each Issue

The contest will be composed of 60 questions. Five will be run in each issue of the Farmer for 12 issues.

Answers to each question except No. 45 can be given correctly in from one to 10 words and will be given a score of 100 if correct. Answers to question No. 45 will be limited to 100 words each, and will be graded as to the common sense and general knowledge of farm conditions shown by the contestant without regard to spelling, grammar or penmanship. As with the other 59 questions, a perfect answer to No. 45 will be scored 100.

Perfect Score Is 6000

The contestant who comes nearest to a score of 6000 and complies with all the conditions of the contest will receive the first prize; the next nearest, second prize, and so on. In case of a tie each tying contestant will receive the full amount of the prize.

There are 35 prizes, as follows:

$150 is amount of First Prize. **$100** is amount of Second Prize. **$50** is amount of Third Prize. **$20** is amount of Fourth Prize. **$10** is amount of Fifth Prize. **$5** each, Sixth to Tenth Prize. **$2** each, Eleventh to Fifteenth Prizes. **$1** each, Sixteenth to Thirty-fifth Prizes.

OTHER RULES

The answers will be passed upon and graded by a fair-minded, thoroughly competent judge.

Two weeks will be allowed for sending in answers after April 19, 1917, date of the issue containing the last five questions.

Remember, your failure to answer all the questions will not necessarily exclude you from the contest. There are 60 questions to be answered and it is not reasonable to suppose that all our prize winners will attain a perfect score. Your answers must all be sent in at the same time. Do not send any answers until you have completed the full list or as many as you can answer.

Those who use our CONTESTANT'S HELPFUL OUTFIT will be able to send in their complete set of answers without delay, there being no need of their waiting for the questions as they appear in The Farmer from week to week down to the final issue of April 19. In order to get as prompt returns as possible from those contestants who use our CONTESTANT'S HELPFUL OUTFIT, extra inducement is made in the prize awards. SEE ENLARGED PRIZE LIST.

Announcement of prize winners will be made and prize checks mailed as soon after close of contest as possible.

If any point is not clear, do not hesitate to write the Farm Information Editor.

All answers must be mailed on or before midnight, May 3, 1917, as shown by post-office dating stamp on your envelope.

ORDER COUPON—If your subscription is paid ahead, the time paid for herewith will begin at the date to which you are now paid.

FARM INFORMATION EDITOR,
Review Building, Spokane, Wash.
Enclosed find $1 for one year, or $1.50 for three years' subscription to

THE WASHINGTON FARMER

and enter me as a contestant in the Farm Information Contest. I am also to receive at once the complete CONTESTANT'S HELPFUL OUTFIT, consisting of guide against wrong answers, reply blanks, rules and all information to aid me to win a reward.

Name .....

R. F. D. ..... Town .....

State .....

Notice—Amount of remittance to be either $1 for one year's subscription to The Farmer or $1.50 for three years' subscription.

Answer this question: Are you now a subscriber? .....
If you wish paper sent elsewhere, fill in name and address.

A Valuable Aid to Contestants

One complete CONTESTANT'S HELPFUL OUTFIT, including all of the 60 questions and instructions and helpful warnings as to answers which would be wrong and the correct answers to some of the most difficult questions, is truly a big help to the contestant.

To each contestant who sends in a new renewal or an extension of his subscription at the time of registering for the contest, this complete Contestant's HELPFUL OUTFIT will be sent in combination.

We feel that those beginning on the contest will find these suggestions as to what to avoid distinctly useful. The equipment supplies in convenient form everything needed to enable you to apply your ability to the best advantage and will contain information enabling you to answer the most difficult questions correctly.

Puts Questions in Reach of Children

This CONTESTANT'S HELPFUL OUTFIT puts the solution of the questions in the reach even of the children, it being the purpose to make it possible for everybody in Washington, Oregon, Idaho and Montana to compete. This outfit includes, besides general information about the plan of the contest, the following:

Guide against wrong answers, which includes either correct answers of more difficult questions or easy references as to where to find the correct answers; and blank forms on which to write your answers in such a way that there can be no confusion when your answers are taken up by the judge for scoring.

It will be worth considerable to you to be assured that your answers are reaching the Farm Information Editor in such form that he will know in every instance exactly what question you intended to answer. This CONTESTANT'S HELPFUL OUTFIT will make it possible for you to

Begin Work at Once

On account of the large number certain to send for our CONTESTANT'S HELPFUL OUTFIT, thus making it possible for them to answer the entire 60 questions without delay, it is deemed advisable to offer some special inducements to secure prompt returns from this particular class of contestants. By securing the early replies of those who are thus supplied with the entire 60 questions we will be able to have their papers carefully scored before the final rush of answers toward the end of the contest.

Understand, it is not absolutely required that those who use our CONTESTANT'S HELPFUL OUTFIT send in their replies at once, but, in order to induce them to get in early, the following plan for enlarging the awards to those prize winners whose answers come in early is offered:

ENLARGED PRIZE LIST—$800 IN PRIZES—ENLARGED PRIZE LIST

For those who use our CONTESTANT'S HELPFUL OUTFIT.

Thirty-Five Prizes	Amt. of prize if winner sends in answers during 1st period. Feb. 1 Feb. 21	Amt. of prize if winner sends in answers during 2d period. Feb. 21 Mch. 14	Amt. of prize if winner sends in answers during 3d period. Mch. 14 April 5	Amt. of prize if winner sends in answers during 4th period. April 5 April 19	Amt. of Prize for winner who does not send in answers before April 19
First Prize	$300.00	$225.00	$200.00	$175.00	$150 00
Second Prize	200.00	175.00	125.00	110 00	100 00
Third Prize	100.00	87.50	62.50	55.00	50.00
Fourth Prize	40.00	35.00	30.00	22.00	20.00
Fifth Prize	20.00	17.50	15.00	11.00	10 00
Sixth to 10th Five prizes each	10.00	8.75	7.50	5 50	5 00
11th to 15th Five prizes each	4.00	3.75	3.00	2.50	2 00
16th to 35th 20 prizes each	3.00	2.50	2.00	1.50	1.00

To secure our CONTESTANT'S HELPFUL OUTFIT, fill out order coupon on this page and send it in to Farm Information Editor, with your personal check, money order or 2-cent stamps, for $1.00 for one year or $1.50 for three years.

Review Building, Spokane, Washington.

Our School Library Workers

The nice warm spring days are making all the boys and girls feel fine. They can get around among the neighbors to better advantage. This will enable them to finish the canvass for subscriptions in the school districts where they are closing up a school library contest.

The boys and girls down in Kittitas county are working hard for their libraries. Three schools have entered the contest this week and we hear that more will follow in a few days. The new schools entering are:

Dysart school, Kathryn Burroughs, teacher.

Ridgeway school, Howard Barnes, teacher.

Cove school, Miss Florence Foltz, teacher.

Now, we know that there are other boys and girls in that same county who would like to have their school get more library books through the Washington Farmer subscription plan. So, if any one of the boys and girls in any other schools desire to form a red and blue library team to take subscriptions and will write to the "Bookman," care of the Washington Farmer, he will write to your teacher and see if it will be agreeable to start a library contest in that district.

Read the "honor roll" this week and see how many of the boys and girls whose names appear there are known to you:

HONOR LIST.

Florence Cook and Florence Edsill, Stevenson school, Stevenson, Wash.

Ruth Thompson, Hopewell school, Everson, Wash.

Master John Bowen, White Salmon school, White Salmon, Wash.

Clifford Light, Bolles Junction school, Prescott, Wash.

Cathrine Nichols, Parker Bottom school, Wapato, Wash.

Laurence Havstad (3), Carl Timmerman (2), Eudora Mitchell, Ruby Leer, Lena Colvin, Merle Smith, Harry Cownell (2), Muriel Mountain, Ella Eggers (3), Murray Davidson (2), Stanley Hackney, Charles Blaker, Miss Nellie Richter, Joev Pollett, Richland school, Richland, Wash.

Dorothy Rauch (5), Chewelah school, Chewelah, Wash.

Joe Denton, Deer Park school, Loon Lake, Wash.

A great deal is being said about our soldiers and sailors just now because of the war which threatens our country. So a great many schools are including the following four books among their orders. You would like to read each one, we know.

Makers and Defenders of America.
Story of Lafayette.
Yankee Ships and Yankee Sailors.
Stories of Great Americans.

Individual Contest.

Dorothy Rauch still leads in the contest. Miss Dorothy seems to believe in that old saying: "A steady drop wears away the rock," for every day or so she sends us a subscription. Even the office force is interested in the contest and have picked their favorites to win. One will say, "You just watch Bessie Webb! She will win yet!" Another will say: "Loyal Snyder will surprise you one of these days!" So there you are.

Dorothy Rauch, Chewelah, Wash. ..22
Bessie Webb, Ford, Wash. 14
Loyal C. R. Snyder, White Swan, Wash. 12
Mildred Glasgow, Bossburg, Wash... 9
Dorothy LaRue, Mayview, Wash. 6
Lester Ruark, Mayview, Wash. 6
Viola Leachman, Mayview, Wash. .. 5
Eva Bond, Valley, Wash. 3

Books have been sent to the following teachers this week:

Lillian Brown, Mayview, Wash.
Mrs. John Oliver, Parker, Wash.
Sudie L. Lee, Colville, Wash.
D. M. McConnell, clerk, Almira, Wash.
Clara Philips, Prescott, Wash.
Viola Willey, Richland, Wash.

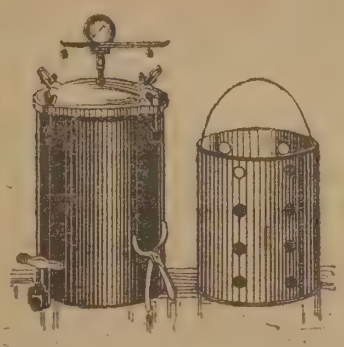
Teachers should send in the subscriptions they take each week together with the subscription money collected, in order to give prompt service to the patrons who are aiding their contest.

Community Center School Building.

The commercial club of Sprague, Lincoln county, has named a committee to cooperate with the school board in the educational campaign favoring the building of a new community school auditorium and gymnasium.

Okanogan County Agriculturist.

Walter A. Holt, who graduated from the department of horticulture with the Washington State college class of 17913, has been appointed county agriculturist for Okanogan county.



$ MAKE MONEY BY HOME CANNING $

HOME FARM & ORCHARD OUTFITS

A CANNING outfit is neither complete nor sanitary unless the canning is under **STEAM PRESSURE** and the cans hermetically sealed by a can-closing machine before the canned goods are placed in the retort. This does away with solder, unsanitary methods, spoilage, and **SAVES** the cost of solder and one-half the time devoted to sealing by the old method.

THAT constitutes a "Complete **SANITARY** Canning Outfit." It is the only safe and thoroughly effective way to sterilize canned produce. For any one putting up 500 cans of fruit—it is a modern hygienic necessity. This is the "**STEAM PRESSURE WAY**" with a strong, durable and easily adjusted **SANITARY CAN CLOSING MACHINE.** Cheap types of can closing machines are on a par with solder—neither of which are up-to-date. Our "Complete **SANITARY** Canning Outfit" is among the best that skill and science can produce.

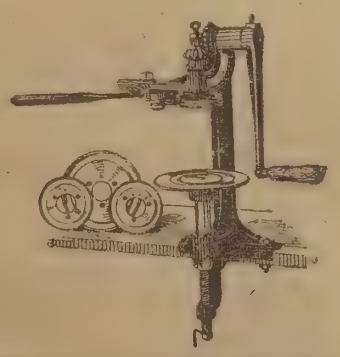
NOTE—Owing to the uncertainty of market conditions on material for equipment, we **URGE** you to place your order with us immediately, while present prices for "Complete **SANITARY** Canning Outfits" are quoted.

COMPLETE SANITARY CANNING OUTFITS.

NO. 1—FAMILY TYPE.

200 to 350 Cans Per Day.

Outfit consists of—



1 12x18-inch H. & A. Retort
1 Retort Cover with Packing
1 high-grade Steam Gage
1 Safety Pop-Off Valve
1 Petcock or Relief Valve
1 Galvanized Iron Grate
1 Galvanized Iron Triangle
1 pair of Can Tongs
1 H. & A. Recipe Book.

Holds at each charge—

21 No. 2 cans
12 No. 2½ cans
12 No. 3 cans
4 No. 10 or gallon cans.

Shipping weight .....65 lbs.
Price $16.50

F. o. b. Seattle, Wash.

SANITARY CAN CLOSING MACHINE
Hand Power Double Seamer
H. & A. Type

This shows machine, fastened to bench, with four chucks that accompany it. It is so simple that it is foolproof in operation and adjustment. It is durable and rigid and made to stand hard work. It double seams every can hermetically, and in its simplicity no experience is required to operate it. Do not buy cheap and poor imitations. It absolutely seals the can right. It is a modern necessity in canning under sanitary conditions.

Weight .....25 lbs.
Price complete $38.50
F. o. b. Seattle, Wash.

Weigh These Facts:

FIFTY per cent of all fruit and vegetables grown is WASTED. THE BEST of this as to size, color, flavor and appearance, ripening where it grows—CAN NOT BE SHIPPED. Perishable fruit and vegetables on a poor and an overcrowded market—IS A SURE LOSS. Will you save this loss this year by using our "Complete SANITARY Canning Outfit?" Why not can for the market? The "big fellow" cannot get his fruit and vegetables—FRESH. For HOME CANNING, yours is fresh when you PICK it. His "factory braud" can not, hence, compete with your "Home Canned Goods" that are always the best and the kind demanded by the city consumer. If you cannot buy a large outfit this season, start with a smaller one. This year's profit will buy a larger outfit next year. Put these things together and see how easy it will be to MAKE MONEY in the Home Canning Business.

Lots of farmers are **"rastling"** with 10 acres of fruit and vegetables and bucking the market through the commission broker, who is as helpless on a poor and an overcrowded market as is the farmer, making little or no headway and frequently encountering a severe loss, could very easily overcome this by installing on "the ranch" one of our **"COMPLETE SANITARY CANNING OUTFITS."**

In this wise you will be doing what thousands of farmers and growers have recently learned with success and profit to do—**CAN AT HOME FOR THE MARKET.** That is what **ALL** Farm Papers throughout the United States have been persistently advocating for several years. That is **ALSO** what all state and United States departments of agriculture have long been strenuously advising as the **sure salvation** of the farmer and grower against a loss that he can not otherwise overcome.

A word now about our **SANITARY CAN CLOSING MACHINE**, one of the most durable pieces of machinery ever put on the market. It is quicker than soldering, by half, and insures a hermetically sealed can. With it go four chucks, or closing appliances for all standard sizes of fruit and vegetable cans. **These are standard chucks.** This machine is a hand power, double seamer. Its operation is simple and requires no experience. It is a small edition of the celebrated H. & A. type for power seaming. We can not recommend it too strongly and we absolutely insist that its use is a necessity where canning is to be done under **SANITARY** methods.

With each **OUTFIT**, we send one of the famous H. & A. 56-page formula and recipe books—**FREE.** Extra copies may be had at $2 each. This is virtually, with its comprehensive information—**the right hand of the Home Cauner.** All of the recipes and formulae are practical, and only such are given as have been thoroughly tested in actual canning practice on a large scale.

BELOW is a coupon. Check the item in which you are interested from the canning standpoint and send it to us for literature and letter. We shall be glad to correspond with you and without obligation to purchase on your part before you are satisfied on every point as to our representations.

If material continues to advance, the price of machinery must advance. We again, therefore, urge you to buy NOW.

To the farmer and grower we offer four types of our "Complete SANITARY Canning Outfits."

No. 1, for use upon any stove.

No. 2, portable fire box for wood or coal, to be used in the house or orchard. With retort out and top that we furnish it becomes a stove for the sitting room.

No. 3, portable fire box with tank and burner for gasoline, for inside or outside use.

No. 4, orchard or community, with extra capacity.

We can furnish anything up to a commercial plant with say a capacity of 3000 to 6000 cans a day.

Just What Do You Want to Know?

How To Build a Cement Silo, Or Concrete Fence Posts, Or Water Trough?

There is a phase of farm economy in which nearly every farmer and farmer boy is much interested and has some degree of skill. This is Farm Mechanics. We sometimes describe this division of the college, which includes also buildings and drainage, as "farm engineering." Everybody likes to see the "wheels go 'round," most of all the farm boy.

Just now the farmer is beginning to make use of that useful servant, the gas engine. Whether in automobile, or lighting plant, or on harvester, or to be used in the operation of feed cutters, root slicers, separators or what not, the gas engine is here to stay. If the farmer or the farmer's son would but use two to six weeks of these long winter months in getting the help of the men at the college in studying the gas engines and heavy oil engines and other farm machinery, he would find it the most profitable part of the winter. He could learn much of the principles of the common machinery and of the operation of the less used machinery which would stand him in good stead in all his work. But if he cannot take advantage of this opportunity, he at least can write from time to time, as special problems arise for special advice and it will be given. If it is covered in some printed matter, that will be sent. If it is not so covered, the information will be sent by letter.

Does he wish to build a cement silo, or concrete fence posts, or a concrete water trough, he can receive any information which he lacks, if he will make his wants clearly understood. He cannot expect his correspondent at the college to boost this make of machinery and condemn that, but he will have an impartial criticism on the principles used in any. Oftentimes a problem arises of the amount of power required for certain purposes, or of the proper system of the transmission of power with the least loss, or of the most effective arrangement of machinery, in which the advice of the expert would save time and money. If the farmer will submit to the expert the specific question he will be glad to give advice.

In no kind of manufacture is the machine used for so small a fraction of the time as on the farm. In no other kind of machinery is the depreciation so great. In none is the cost of proper housing a greater burden. It is important then that the operation be thoroughly understood, that the installation be convenient and economical, and that the upkeep be reduced to a minimum. In all of these directions the college can help if you give it the opportunity.

E. A. BRYAN.

WHILE IT IS UP TO A FARMER TO KNOW SOMETHING ABOUT ALL KINDS OF FARMING YET IT IS UP TO HIM TO KNOW MUCH ABOUT HIS OWN KIND OF FARMING, JUST AS IT IS UP TO THE LAWYER TO BE POSTED IN SOME LINES AND OTHERS AND UP TO THE PHYSICIANS AND SURGEONS TO EXCELL IN THEIR OWN SPECIALTIES. IT IS ALONG THIS LINE THAT DR. BRYAN GIVES A VALUABLE HINT IN THE CLOSING ARTICLE OF HIS SERIES NEXT WEEK WHEN HE SAYS: "YOU SHOULD RECEIVE ALL OF THE BULLETINS WHICH RELATE TO YOUR KIND OF FARMING" AND SHOULD LOOK TO THE EXPERIMENT STATION EXPERTS AS SYMPATHETIC FRIENDS AND HELPERS.

At the Editor's Desk.

The 26th annual report of the state college experiment station at Pullman has been received. This is bulletin No. 136, and is sent free to all citizens of the state on application. Every farmer should have a copy, for it shows him how the affairs of the station are conducted and what work has been done. It is like the statement of the activities of a bank to a stockholder.

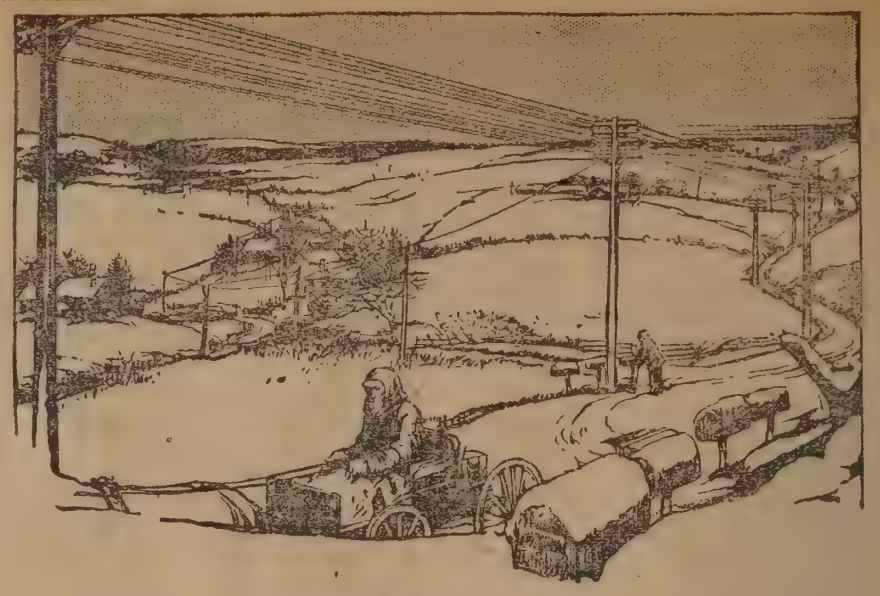
Apportion Highway Funds.

The state highway board has apportioned funds as follows for state highways: Pacific, $449,603; Olympic, $219,376; McClellan Pass, $101,750; National Park, $149,850; Sunset, $190,375; Inland Empire, $248,598, and Central Washington, $110,000. Secondary state highways will get $322,250.

With a Weyerhaeuser Silo

Hundreds of progressive northwest dairymen are satisfied owners of Weyerhaeuser Silos. They investigated, then they made their decision, and NOW they are

Weyerhaeuser's Best Testimonials



You, as a thinking, practical man, will decide that you must and can have a Silo. Then the next step is INVESTIGATION. We want you to get in touch with us, let us show you WHY THE WEYERHAEUSER IS THE BEST INVESTMENT YOU CAN MAKE.

A Silo must be low in first cost, cheap in upkeep; it must be easy to erect, and convenient in everyday use; it must be durable and permanent, an investment, not an expense. It must take care of silage perfectly.

WEYERHAEUSER FIR SILOS

Standards of Service

In rural communities clusters of mail delivery boxes at the crossroads evidence Uncle Sam's postal service. Here the neighbors trudge from their homes—perhaps a few yards, perhaps a quarter mile or so—for their mail.

Comprehensive as is the government postal system, still the service rendered by its mail carriers is necessarily restricted, as the country dweller knows.

Long before rural delivery was established the Bell System began to link up the farmhouse with the neighboring towns and villages. One-fourth of the 10,000,000 telephones in the Bell System are rural. They reach more places than there are post offices. Along the highways and private lanes the telephone poles lead straight up to the farmer's door.

He need not stir from the cheerful hearth ablaze in winter, nor grope along dark roads at night for friendly news or aid in time of trouble. Right in the heart of his home is his telephone. It is the American farmer's key to the outside world, and in no other country is it found.

Holstein Dispersion Sale

Seventeen Head of Registered Animals Average $275

By H. K. SILVERSMITH

The dispersion sale of registered Holstein-Friesian cattle owned by Leaf & Jones of Rupert, Idaho, held on March 27 was well attended and good prices prevailed. The top price of the sale was $525 for Model Fobes of Idaho, the herd sire, purchased by Earl Beebe of Rupert. The same purchaser secured eight head at an average of $312 per individual. The 17 head sold averaged $275. Colonel Earl O. Walter of Buhl, Idaho, handled the pedigree end of the sale. The auctioneers were Colson Clayton, Clayton, Walter, Hollenbeck and Hearts-horn.

Most of the cattle sold came from the A. A. Davis herd of Buhl, Idaho. Mr. Davis owns 15 daughters of the herd sire that topped the sale.

In connection with the above sale 45 head of grade Holsteins and Jerseys were sold, some of the cows bringing as high as $165.

Sale list follows:

Columbo Lilinokalani II., 5 years, to John Kaeser, Filer, Idaho, for $250.

Halla IV., 6 years, to John Kaeser, Filer, Idaho, for $235.

Jessie Fobes Improver Peeterje, 5 years, to R. W. Waldron, Rupert, Idaho, for $235.

Princess Hegugerveld Lyons, 5 years, to G. C. Breayeal, Rupert, Idaho, for $245.

Shade Vasliti Hortog Asma De Kol II., 5 years, to Earl Beebe, Rupert, for $245.

Lady Grandeur De Kol, 6 years, to John Kaeser, Filer, Idaho, for $250.

Wixon Zinnia II., 4 years, to J. B. Reford, Rupert, Idaho, for $260.

Inka De Kol Ina, 6 years, to Earl Beebe, Rupert, Idaho, for $310.

Maggie Ormsby Pietertje, 4 years, to C. H. Hager, Rupert, Idaho, for $260.

Princess Model, 3 years, to Earl Beebe, Rupert, Idaho, for $200.

Ormsby Itelka, 6 years, to Earl Beebe, Rupert, Idaho, for $300.

Frau De Kol Piebe of Edgertown, 5 years, to C. C. Nelson, Heyburn, Idaho, for $250.

Lady Grandeur De Kol II., 2 years, to Earl Beebe, Rupert, Idaho, for $280.

Inka De Kol Ina II., 3 years, to Earl Beebe, Rupert, Idaho, for $350.

Briders Butter Girl, 6 years, to Earl Beebe, Rupert, Idaho, for $300.

Yearling heifer to G. C. Breayeal, Rupert, Idaho, for $185.

Put It Up to the Men Who Already Own Bull Tractors

THE farmers who own and operate Bull Tractors, who have worked with them out in the field, under all sorts of soil and weather conditions, who have tried them out for all kinds of farm work, both of the belt and field variety—those are folks who **know.** They make up the Supreme Court of authority on the merits of the "Big Bull." Surely you'll take their word where you might think that our enthusiasm over the "Big Bull" is due to prejudice.

We have an abundance of evidence in the form of letters from Bull Tractor owners to prove all that we claim as to the power, speed, stamina, economy, simplicity, reliability, durability and the sub-soiling feature of the Big Bull: Let us show you.

The original basic principles of Bull design have been proven practical by three years of work in the field. Without departing from these proven basic principles—

The 1917 BIG BULL Has Three Big New Features

in addition to numerous refinements in construction.

The Clapper Kerosene Vaporizer which, we believe, excels in economy, efficiency and ease of operation any kerosene device on the market. It converts the liquid kerosene into a gas vapor before it enters the combustion chamber, and when ignited causes perfect combustion, leaving no kerosene to work past the piston rings into crank case. It enables the Big Bull Motor to produce as much power from a gallon of kerosene as from a gallon of gasoline—without fouling or overheating your motor or destroying its efficien cy.

Power on the Land Wheel in addition to the BIG BULL sub-soil ing wheel in the furrow. This feature and the large motor (12-24 h. p.) makes the Big Bull a practical 3-plow Tractor.

Positive Circulating Oiling System Oils connecting rod bearings through hollow crankshaft insures positive lubrication, with no attention except to keep oil reservoir filled. A big saving in oil consumption.

If you wish we'll refer you to Bull Tractor owners right here in this community who will prove to you any claim we make. **FILL OUT COUPON AND MAIL TODAY.**

Spokane Shorthorn Sale

Average of $314 for the Forty-Seven Head

Receiving an average of $314.46 for each of the 47 head of stock brought into the ring—the 14 cows averaging $385 and the 33 bulls $284.54—the spring sale of the Pacific Northwest Shorthorn Breeders' association, held Thursday afternoon at the Spokane Union stockyards, proved successful beyond the fondest hopes of its promoters. So much so, in fact, that F. M. Rothrock, sales manager, announced at the close that the breeders' sale would be made an annual event, next year's sale to be held February 23.

"We are well pleased with our sale today," said Mr. Rothrock, "and feel that prices received were fair to both buyer and seller. That we beat the recent Portland sale, is, of course, gratifying, but not surprising, in view of the fact that we had a much better class of stuff to offer."

F. W. Harding of Chicago, secretary of the American Shorthorn Breeders' association, who is just finishing up a tour of the west, was present at the sale, complimenting the breeders upon the class of stock consigned and speaking highly of the rapid development of the Shorthorn breed in the west.

"There are 22,000 Shorthorn breeders in the United States today," said Mr. Harding, "and nowhere is the breed developing more swiftly than in the northwest. This is but a logical result of changing conditions, for with the breaking up of the range and the maintenance of cattle on arable farms, the Shorthorn must inevitably be found the logical breed. It is the best dual purpose animal known, hence its growing popularity.

"The sale here today compares favorably with those held elsewhere throughout the country, as there is not much spread on prices of good Shorthorns."

At the opening of the sale the cows were brought in and for a while it loked like H. F. Samuels' sale. The Idaho man was there for good breeding stock and he got it, persistently boosting the best bids of I. Dunn and E. H. Hart of Molson, George Burnett of Davenport, H. D. Burns of Reardan, and others. He bought the first five animals going under the hammer, all cows, paying $655 for Sunbeam, a coming 2-year-old heifer, from the herd of A. D. Dunn of Wapato, this being the highest price paid for any animal during the sale. He paid $545 for Meadow Brook Mary, 9-year-old cow, consigned by Frank Brown of Carlton, Ore., and paid the second highest price of $590 for Lady Roan, 2-year-old, consigned by Alex. Morrison of Valley, Wash. In fact, nine of the 14 cows sold went to Mr. Samuels, Rosalind II., grand champion of the previous day's show, costing him $500 before he could force Dunn and Hart out.

Of the bulls, Golden Star, calved October 1, 1915, and consigned by Frank Brown of Carleton, Ore., brought the highest price, D. Urquhart of Krupp paying $440 for the animal. The next highest price was $435, bid by Charles Peach of Valley, Wash., for King Lavender, coming two-year-old from the herd of A. V. Bradrick & Son of Palouse, Wash. Silver Goods, consigned by Day & Rothrock and adjudged grand champion of the show was sold for $405 to Mr. Samuels, this being the only bull bought by him.

The heaviest bidders for the young males were Grant Copeland of Spokane and O. M. Plummer of the Union stockyards at Portland, Mr. Copeland buying six and the Portland man three. The latter bought with the beef idea in mind, while Mr. Copeland was looking for good stuff for his ranches.

The sale was cried by Colonel N. G. Kraschel of Des Moines, Iowa, assisted by Harry Cranke in the ring.

Shorthorn Show Awards.

At the Shorthorn show preceding the sale the following awards were made. There were four classes judged by John L. Smith, Spokane.

The first class judged was bulls calved prior to September 1, 1915. Awards were:

T. B. Gibson estate, Woodland, Cal., first.

A. D. Dunn, Wapato, Wash., second and fifth.

Joe Turner, Meyers Falls, Wash., third and fourth.

D. E. Pearson, Boyds, Wash., sixth.

In the class for young bulls, calved after September 1, 1915, awards were:

Hercules Stock Farm, Sprague, Wash., owned by Day and Rothrock, first, second and fourth.

Frank Brown, Carleton, Ore., third.

Gibson estate, fifth.

Alex Morrison, Valley, Wash., sixth.

A. D. Dunn, seventh.

In the class for cows or heifers calved prior to September 1, 1915, awards were:

Alex Morrison, first and fourth.

A. D. Dunn, second and sixth.

Hercules Stock Farm, third and fifth.

In the class for heifers calved after September 1, 1915, awards were:

Hercules Stock Farm, first and second.

Frank Brown, third.

A. D. Dunn, fourth.

Gibson estate, fifth.

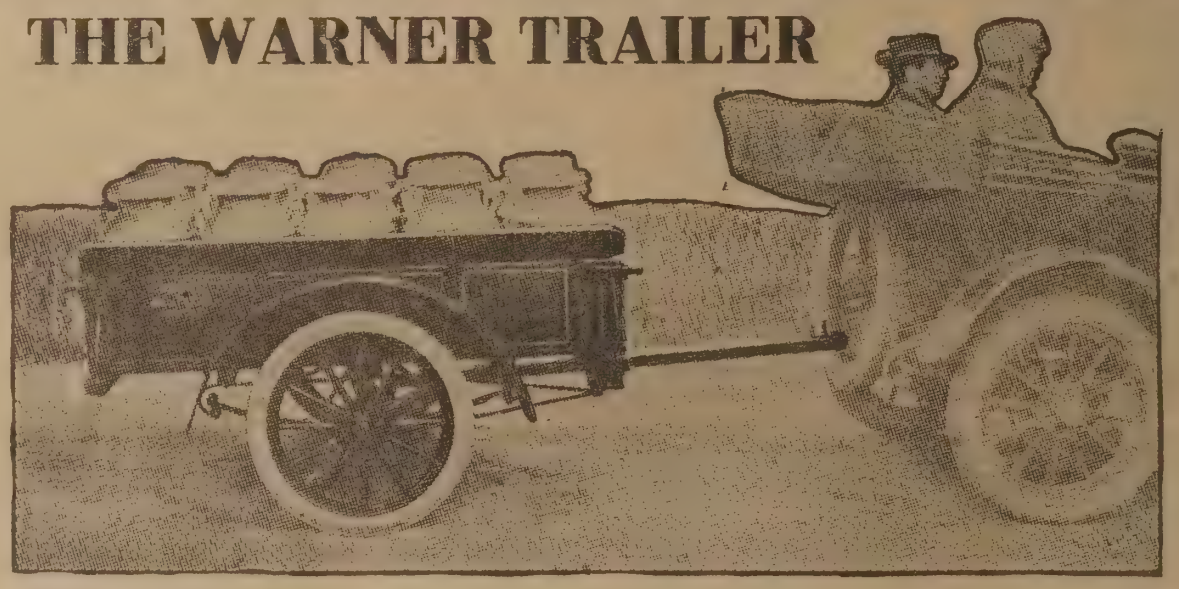
Competition for the two cups offered by the American Shorthorn Breeders' association aroused much interest. The cup for best bull went to the Hercules Stock Farm with the Gibson estate herd second.

The Hercules also got the cup for the best female.

The Banquet.

A banquet was held Wednesday night at the Spokane hotel and was presided over by E. E. Flood. Among the speakers were Colonel Kraschel, Harvey Burns, Reardan, Wash.; E. E. Sweet, Grangeville, Idaho; Joe Turner, Meyers Falls; O. M. Plummer, Portland, D. I. Raymond, L. L. Tennant and W. D. Roberts, Spokane; J. B. Hersperger, Oroville, Wash.; James Klengard and Professor William Hislop of Pullman; A. B. Willard, St. Paul.

Stanley Coffin Returns.



Relatives and friends of Stanley Coffin and family of North Yakima were greatly relieved to get a telegram Saturday that they had landed safe and sound at San Francisco, Cal. Mr. Coffin and family have been spending the winter in Australia and New Zealand. Mr. Coffin has been studying the sheep industry and brings back with him some valuable new blood for his flocks.

Fast Photography.

In Germany a picture has been taken in one ten-millionth part of a second.

THE WARNER TRAILER

You can easily afford to own a motor car if you can make it earn its upkeep. The WARNER TRAILER doubles the usefulness of the automobile.

Carries any load up to 1250 pounds safely—and at automobile speed.

Does not skid or jolt—tracks perfectly—and can be backed. THE WARNER TRAILER is designed and built by automobile engineers of wide experience—men who have studied the light haulage problem from every angle.

It has a specially designed body—mounted on regular automobile springs, axles and wheels, and is attached to the automobile by a shock-proof drawbar that prevents any possible injury from sudden starts and stops.

Write for the illustrated folder telling the complete story. Order your WARNER PRAIRIE SCHOONER now.

Ups and Downs of a Bunch Grass Boy

By JOE L. ASHLOCK

(Copyright, 1917, Joe L. Ashlock.)

CHAPTER VI.

For three years we lived in the shadow of the Blue mountains in the Walla Walla valley. In summertime it was hot and dusty and the yellow fields of wheat reached to the very foothills of the mountains. In winter it was cold and snowy, and the blue mountains turned into great pyramids of white; but the white in winter or blue in summer, the mountains remained to me the abode of giants, fairies, elves and animals of the kind in my story books, ranging from the Asiatic tiger to the African lion and Arctic owl of the frozen north.

We spent one winter at Gilliam's ranch not many miles from the foothills of the Blue mountains. That winter the snow was four feet on the level. Gilliams were a pioneer family of the Walla Walla valley. Mr. Gilliam was a white-bearded, fine-eyed old gentleman, straight as a pine tree and full of dignity and politeness as a courtier in the court of an emperor; and, indeed, he was a good deal of an emperor himself. He had two stalwart sons, Mark and Ben; who, like many other stalwart sons of their age, liked to sleep late in the morning when the thermometer was anywhere from zero to 20 below.

Mr. Gilliam, as thrifty as a hen with 22 chicks, was at times annoyed by their morning slothfulness. He would stand with his back to the roaring, morning fire in the big fireplace while breakfast was cooking; and in ample time before the breakfast call he would stalk out in the hallway, look up the stairs impatiently and call:

"Mark! Ben! Breakfast!"

This preliminary notice usually did not produce much of a response from Mark and Ben. With a thoughtful air, Mr. Gilliam would take his stand before the fireplace, or throw in a few more apple boughs or pine knots; and wait just five minutes longer. Again he would stride to the stairway and call loudly:

"Mark! Ben! Get up at once!"

But Mark and Ben still lingered in their blankets. By and by, Mr. Gilliam would seize his cane, stride impatiently to the stairway, whack his cane on the railing, and call with the crack of a whip in his voice:

"Marcus! Benjamin! Come down at once!"

And before his last word was spoken, the four feet of Marcus and Benjamin would hit the floor as one, and there would be a mad scramble for clothing. They had learned by regrettable experience that if they did not move lively, the cane would whack something much more sensitive to its whacks than the hardwood railing of the stairway.

Striding sedately back into the living room where Mrs. Gilliam would be engaged in her morning knitting, he would say very gently:

"We have two very fine boys, my dear,—sons to be proud of, but they must learn to get up in the morning. Indeed they must!"

"They are just boys," Mrs. Gilliam would remark, placidly knitting.

"All the more reason why they should be taught to rise promptly in the morning," would be the decided rejoinder.

All the while Mr. Gilliam's ear would be cocked attentively in the direction of the stairway, down which Marcus and Benjamin would presently tumble pellmell.

"Good morning, young gentlemen," their father would remark pleasantly, as they galloped through the living room. "You slept well, I presume?"

Headed at full speed for the wash bench beside the kitchen door opening into the woodshed, and its morning offering of cold water, a clean but coarse crash towel of the circular kind that runs on a roller, a looking glass and a big, black comb, and knowing the dire necessity of finishing their matinal ablutions before the final call for breakfast, Marcus and Benjamin did not delay unnecessarily in acknowledging their father's courteous inquiry about their sleep. They went straight ahead, and a moment later, with ears poised attentively in their direction, Mr. Gilliam would hear, with a nod of approval, their clamor as they plunged faces and heads into pans of icy water.

Nothing pleased Mr. Gilliam more than to have me tell him stories—stories of the immense, cock-and-bull kind, which upon the slightest provocation, I wholesaled from the diameter, circumference and depth of my 7-year-old imagination. One morning I rushed into the living room, and, actuated solely by the desire to create a sensation, vowed that whole droves of big, white rabbits with bells on their necks were racing down from the Blue mountains. Mr. Gilliam instantly partook of my excitement. He went to the doorway and scandalized my mother and Mrs. Gilliam by asserting that he saw the rabbits coming and even asked me to listen to the bells.

He came into the house with a string of small fish he had caught down the creek, whereupon I told him of a pet whale I once had owned. At once he was all excitement. He wanted to know how I had brought the whale west, on the train. I explained that I had tied a string around its neck and tied it behind the train. He was wholly convinced, but wanted to know what I had done with my pet whale. I at once explained that it had gotten out of its pen one day and a hen came along and swallowed it. He said the hen should have been cooked and eaten for doing such a thing to my whale, and I at once told him how I had taken an ax and chopped off the hen's head, so that it could not eat the pet whales belonging to other little boys. That was right, said Mr. Gilliam, hens should not be permitted to eat anybody's pet whales.

One morning in winter when fresh snow lay deep on the ground, I fancied I saw huge tracks of some kind all over the yard, and besought Mr. Gilliam to explain. Despite his dignity and white hairs, Mr. Gilliam could tell a few "whales" himself. He explained to me that these were angel tracks in the snow. Instantly, I was aflame with excitement and curiosity. While Mrs. Gilliam and my mother alternately besought him to keep still, or put their fingers in their ears, he explained gravely that there were two kinds of angels: beautiful, white-winged angels that flew through the air at night and kept watch over little boys while they slept; and bad, sooty feathered angels with short, stubby wings, claws on their feet, and sharp, hooked beaks with which they twisted little boys' noses when little boys had been bad.

He went on to say that during the night one of the bad, sooty winged angels with big claws and sharp beak, had come to twist my nose because I pulled the head from my "Jack in the box," the day before. The good, white angel had come to my rescue. They had had quite a fight all over

(Continued on the following page.)

One of the Modern Farms Found in the Willamette Valley of Oregon

One of the most beautiful homes in Oregon is that of Yonder Lea Farm, owned by Mr. and Mrs. James Edson, within a mile or so of Carlton. Mr. Edson was born in Missouri and came west about 18 years ago. For 12 years he lived near Carlton and then went to Nevada and entered the ranks of range horse men.

"I had 41,000 acres of range and 600 acres in alfalfa," said he. "We had about 6000 horses and branded 1100 colts each year. We used about 70 stallions. I preferred Shires for use with range mares, as what they lack is bone and no horse puts bone on better than the Shire.

"Our market was San Francisco. We delivered the horses at the railroad and our responsibility stopped there, buyers taking them off our hands. It may interest you to know that I figured that it cost just about $10 per head to raise and deliver a 4-year-old horse."

Returning to Carlton, Mr. Edson purchased 275 acres from what was the old Reed place. Here he has established an up-to-date farm and home. In his barn is a pumping plant which supplies water in both house and barn, while a modern electric plant supplies lighting all over the place. Mr. Edson sticks to horses, being a well-known breeder of Percherons and Belgians. Formerly he bred swine, but he has practically retired from the field, and is commencing with some sheep, which he regards as money makers.

Two farming practices which he observes on his place deserve mention. He uses a side delivery rake and hay loader when making hay and says he believes he gets better hay than those who cook it up. He thinks it dries quicker and is handled better. His clover hay was sweet and good at all events, and "the proof of the pudding is the eating." He plants peas and wheat together and this he regards as a wise and sensible thing to do. He had harvested a good crop of peas and a fair crop of wheat as a result. The peas he uses for feed. The straw makes a very find feed, all stock relishing it.

Ups and Downs of a Bunch Grass Boy

(Continued from preceding page.)

the yard in the snow, and he had heard their wings banging against the roof and the sides of the house. That was why the tracks were in the yard, he said. Also, they had knocked a lot of snow off the roof, and to prove this he showed me snow in deep drifts piled under the eaves.

I worked most of that day, and besought my mother's aid to get Jack's clownish head back on its spring and under the lid. Until this was done and the lid latched down, I could not have been driven to bed.

But it was Mr. Gilliam, who entirely unwittingly, cured me of giving rein to childish flights of the imagination. It came about in this way. He loved to gather the eggs; and every evening he would take a pail and prowl through the hay loft and other places looking for hidden hens' nests. Nothing delighted him more than to find a new nest under a feed manger, or out in the bushes. In these quests I helped him with great enthusiasm, and frequently climbed to places which I could not reach.

One night I had a dream—such a wonderful dream! I dreamed that the big, deep culvert where the railway went through the orchard fence was almost level full of eggs. It was so real that I got up thinking I really had seen the eggs the day before.

So that evening when we went out to gather eggs I began to tell Mr. Gilliam about the stacks and stacks of eggs up in the railroad culvert. He supposed that I had found a new nest there, and started off briskly with me trotting at his heels.

We reached the culvert which consisted of a square hole under the railway bridged across with sharply edged timbers so that livestock would not walk through this gap in the fence. Confidently I looked into the hole, expecting to see it full of eggs. None was there. I was amazed. I pondered; then, suddenly, it flashed upon me for the first time that it had been a dream.

"I guess I just dreamed about those eggs, Mr. Gilliam," I explained, really feeling greatly humbled.

Mr. Gilliam laughed. He sat down on one of the steel rails and rocked back and forth with his head in his hands and laughed and laughed till tears stood in his eyes. All the way back to the house he laughed. At the supper table he told about my dream, and everybody laughed, except my mother, who scolded me for telling such stories.

I was beset alternately by grief and rage. I vowed I had dreamed it; went over each step of the wonderful dream very carefully, trying my best to convince all. But nobody was convinced. They laughed, and finally, to quiet my wrath, mother told me to be still and threatened to enforce her decree.

For days thereafter I grieved and pondered. Several times I went up to the culvert and looked to see if the eggs really weren't there after all. But they weren't! And I was confronted with a bitter pill. Tell the truth, vow it, weep it as I might, no one, not even my mother, would believe me. Finally mother tabooed the subject altogether, saying I told "whoppers" so often that I could make myself believe them.

I quit the whopper business. Thereafter I would make no statement of any kind, whether concerned with whales, rabbits, white or sooty-winged angels, till I had ascertained beyond all reasonable doubt that I was speaking strictly within the uninteresting confines of truth.

Years afterward I was on a college debating team which met the Whitman college team in Walla Walla. By that time Gilliams had moved in from their Dry creek ranch near Dixie, at the foot of the Blue mountains, though I did not know it. After the debate was over and the Whitman college people crowded up on the rostrum to compliment me and the other members of the team—which they did quite enthusiastically, since we had lost the debate—and presently I felt a gentle slap on my shoulder, and a familiar voice said in my ear:

"Well, Joe, have you dreamed about hens' nests lately?"

I whirled about, and there stood Mr. Gilliam, straight as a pine tree, his beard a trifle whiter, his face a trifle older, but with the fine light still bright in his smiling gray eyes. I opened my mouth to renew my argument of nearly 20 years ago to convince Mr. Gilliam that I had dreamed about that confounded culvert full of eggs, but closed it straightway, realizing without speaking the futility of the task. If Mr. Gilliam is still living, and I think he is, I hope that he will read this, and be convinced, at last, that when I told him about my dream of the wonderful nest of eggs that I was telling the truth.

IN THE FAMILY'S JOURNEY THROUGH THE SAGE BRUSH COUNTRY, MANY INDIANS ARE MET—YOUNG AND OLD, "RIDING THEIR SMALL, WIRY PONIES OF MOST OUTLANDISH COLORS." NEXT WEEK JOE ASHLOCK RELATES HOW HE WAS TOLD BY THE INDIANS THAT A HORSE WITH WHITE EYES AND A DARK STREAK DOWN HIS BACK WAS BAD, AND OF MUCH OTHER QUAINT AND CURIOUS HUMOR OF INDIAN LORE WHICH WAS STRIKINGLY FASTENED TO HIS CHILDISH MEMORY.

Gins With Knives.

Gins with knives are needed in Chile. England formerly supplied Chilean manufacturers with these machines.

Our Flag!

In this solemn hour of American history every reader of The WASHINGTON FARMER will want to fly the Stars and Stripes.

We have secured a limited number of American flags, 3x5 feet, muslin, fast colors; and while the supply lasts will send one with a new or renewal subscription to The Washington Farmer, both for only $2, which is the regular 3-year subscription rate. If you are paid ahead your subscription will be extended 3 years.

We suggest that you act at once, as our supply of flags will be quickly exhausted.

In ordering kindly use this coupon if convenient.

The Washington Farmer,
Review Bldg., Spokane.

Enclosed find $2 (your personal check, stamps or money order), for which send me American flag, as advertised, and The Washington Farmer for 3 years.

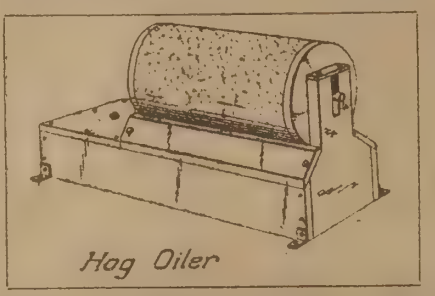
Inventions

By C. J. LYNDE, Macdonald College, Quebec.

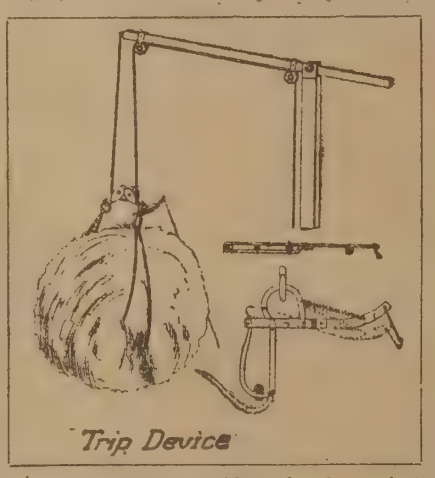
Holder and Grip.



These implements make it an easy matter to open a sealer or to close it

securely. The more firmly the handles are grasped, the more securely the jar and cap are held.

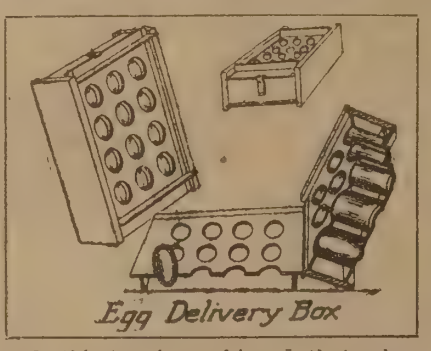
Hog Oiler.



The roller shown here rests on a similar roller (not shown) in the tank beneath; both are made of wood and

are covered with felt or wound with rope or wire. The tank holds the disinfecting oil.

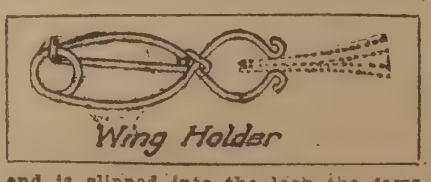
Trip Device for Hay Carriers.



The bill of this simple trip is held

securely against accidental release, but drops readily when tripped.

Egg Tester and Delivery Box.



There are two special features of this box: First, the top and bottom have holes through which all the eggs can be candled at one time; and, sec-

ond, the top is so hinged that when the box is inverted and turned about the hinges, the eggs are left on the cover, from which they can be easily removed.

Poultry Wing Holder.

The central part of this holder is a locking device, which is so made that when its loop end is free the jaws of the holder can be moved, but when this

end is slipped into the loop the jaws are locked. The holder is used when hens are being dusted with germicide.

Canada Offers 160 Acres Land Free to Farm Hands

Bonus of Western Canada Land to Men who Assist in Maintaining Needed Grain Production

The demand for farm labor in Canada is so great that as an inducement to secure at once the necessary help required, Canada will **give one hundred and sixty acres of land free as a homestead** and allow the farm laborer, who files on land, to apply the time he is working for other farmers as residence duties the same as if he had lived on the land he had applied for. This offer made only to men working on Canadian farms for at least 6 months during 1917, thus reducing the necessity of actual residence to 2 years instead of 3 years, as under usual conditions. This appeal for farm help is in no way connected with enlistment for military service, but solely to secure farm laborers to increase agricultural output. A wonderful opportunity to earn good wages while securing a farm. Canadian government will pay all fare over one cent per mile from Spokane to Canadian destination. Information as to low railway rates, etc., may be had on application to

J. N. GRIEVE.
Canadian Government Agent.
Cor. 1st and Post St., Spokane, Wash.

REAL HOMES at Milan Farms

on Great Northern Railroad, only 25 miles from Spokane, the metropolis of the Inland Empire and live stock, fruitgrowing and grain center of the Pacific Northwest.

Especially adapted to dairying, diversified farming, stock and poultry raising. Free rural delivery daily, excellent schools, splendid roads, long distance telephones and near fine lakes and streams. Soil rich, with ample moisture.

Every acre put on the market last year was sold, indicating attractiveness of our proposition. Additional acreage now ready at prices from $7.50 an acre up, on terms to suit purchaser.

SPECIAL OFFER TO JUNE 1

All purchases to June 1 secure service of man with team, stump puller and carpenter for one week free.

Write for attractive folder giving exact facts about these lands and the best opportunity for securing the most attractive farm home in the northwest.

MILAN FARMS DEVELOPMENT CO.
1322 Old Nat'l Bank Bldg., Spokane.

WANTED—Farmer or Farmer's Son with rig or automobile to call on regular trade and supply them with the Big Shores Line of Family and Veterinary Remedies, Farm and Household Supplies, Extracts, Spices, Baking Powder, Toilet Articles, etc. A Big Line of Machine and Auto Oils, Greases, Stock Powders and Poultry Supplies.

If you are industrious and willing to work this is A Good Job For You. No experience required. Capital not necessary. We furnish the goods, also supply wagons or auto body on easy monthly payments.

WHEN KNIGHTHOOD WAS IN FLOWER

or, the Love Story of Charles Brandon and Mary Tudor, the King's Sister, and Happening in the Reign of His August Majesty, King Henry the Eighth.

By EDWIN CASKODEN (Charles Major).

Copyright, 1898, The Bobbs-Merril Co.

CHAPTER XV.—(Continued.)

I have spoken before about the quality of bravery. What is it, after all, and how can we analyze it? Women, we say, are cowardly, but I have seen a woman take a risk that the bravest man's nerve would turn on edge against. How is it? Can it be possible that they are braver than we? That our bravery is of the vaunting kind that telleth of itself? My answer, made up from a long life of observation, is: "Yes! Given the motive, and a woman is the bravest creature on earth." Yet how foolishly timid they are at times!

I admitted the girls, and when the door was shut Mary unclasped the brooch at her throat and the great cloak fell at her heels. Out she stepped, with a little laugh of delight, clothed in doublet, hose and confusion—the prettiest picture mortal eyes ever rested on. Her hat, something on the broad, flat style, with a single white plume encircling the crown, was of purple velvet trimmed in gold braid and touched here and there with precious stones. Her doublet was of the same purple velvet as her hat, trimmed in lace and gold braid. Her short trunks were of heavy black silk, slashed by yellow satin, with hose of lavender silk; and her little shoes were of russet French leather. Quite a rainbow, you will say—but such a rainbow!

Brandon and I were struck dumb with admiration and could not keep from showing it. This disconcerted the girl, and increased her embarrassment until we could not tell which was the prettiest, the garments, the girl or the confusion; but this I know, the whole picture was as sweet and beautiful as the eyes of man could behold.

Fine feathers will not make fine birds, and Mary's masculine attire could no more make her look like a man than harness can disguise the graces of a gazelle. Nothing could conceal her intense, exquisite womanhood. With our looks of astonishment and admiration Mary's blushes deepened.

"What is the matter? Is anything wrong?" she asked.

"Nothing is wrong," answered Brandon, smiling in spite of himself; "nothing on earth is wrong with you, you may be sure. You are perfect—that is, for a woman; and one who thinks there is anything wrong about a perfect woman is hard to please. But if you flatter yourself that you, in any way resemble a man, or that your dress in the faintest degree conceals your sex you are mistaken. It makes it only more apparent."

"How can that be?" asked Mary, in comical tribulation; "is not this a man's doublet and hose, and this hat—is it not a man's hat? They are all for a man; then why do I not look like it is not a man's hat? They are all for a man; then why do I not look like one, I ask? Tell me what is wrong. Oh! I thought I looked just like a man; I thought the disguise was perfect."

"Well," returned Brandon, "if you will permit me to say so, you are entirely too symmetrical and shapely ever to pass for a man."

The flaming color was in her cheeks as Brandon went on. "Your feet are too small, even for a boy's feet. I don't think you could be made to look like a man if you worked from now till doomsday."

Brandon spoke in a troubled tone, for he was beginning to see Mary's perfect and irrepressible womanhood an insurmountable difficulty right across his path.

"As to your feet, you might find larger shoes, or, better still, jack boots; and as to your hose you might wear longer trunks, but what to do about the doublet I am sure I do not know."

Mary looked up helpless and forlorn, and the hot face went into her bended elbow as a realization of the situation seemed to dawn upon her.

"Oh! I wish I had not come. But I wanted to grow accustomed so that I could wear them before others. I believe I could bear it more easily with any one else. I did not think of it in that way," and she snatched her cloak from where it had fallen on the floor and threw it around her.

"What way, Mary?" asked Brandon gently, and received no answer. "But you will have to bear my looking at you all the time if you go with me."

"I don't believe I can do it."

"No, no," answered he, bravely attempting cheerfulness; "we may as well give it up. I have had no hope from the first. I knew it could not be done, and it should not. I was both insane and criminal to think of permitting you to try it."

Brandon's forced cheerfulness died out with his words, and he sank into a chair with his elbows on his knees and his face in his hands. Mary ran to him at once. There had been a little moment of faltering, but there was no real surrender in her.

Dropping on her knee beside him, she said, coaxingly: "Don't give up; you are a man; you must not surrender and let me, a girl, prove the stronger. Shame upon you when I look up to you so much and expect you to help me be brave. I will go. I will arrange myself in some way. Oh! why am I not different; I wish I were as straight as the queen," and for that first time in her life she bewailed her beauty, because it stood between her and Brandon.

She soon coaxed him out of his despondency, and we began again to plan the matter in detail.

The girls sat on Brandon's cloak and

"Goodby, my friend," and she flew her bird.

he and I on the camp-stool and a box.

Mary's time was well occupied in vain attempts to keep herself covered with the cloak, which seemed to have a right good will toward Brandon and me, but she kept track of our plans, which, in brief, were as follows: As to her costume, we would substitute long trunks and jackboots for shoes and hose, and as to the doublet, Mary laughed and blushingly said she had a plan which she would secretly impart to Jane, but would not tell to us. She whispered it to Jane, who, as serious as the lord chancellor, gave judgment, and "thought it would do." We hoped so, but were full of doubts.

This is all tame enough to write and read about, but I can tell you it was sufficiently exciting at the time. Three of us at least were playing with that comical old fellow, Death, and he gave the game interest and point to our heart's content.

Through the thick time-layers of all these years, I can still see the group as we sat there, haloed by a hazy cloud of tear-mist. The figures rise before my eyes, so young and fair and rich in life and yet so pathetic in their troubled earnestness that a great flood of pity wells up in my heart for the poor young souls, so danger-bound and suffering, and withal so daring and so recklessly confident in the might and right of love, and the omnipotence of youth. Ah! If God had seen fit in his infinite wisdom to save just one treasure from the wreck of Eden, what a race of thankful hearts this earth would bear, had he saved us youth alone to thereby compensate for every other ill.

As to the elopement, it was determined that Brandon should leave London the following day for Bristol, and make all arrangements along the line. He would carry with him two bundles, his own and Mary's clothing, and leave them to be taken up when they should go a-shipboard. Eight horses would be procured: four to be left as a relay at an inn between Berkeley Castle and Bristol, and four to be kept at the rendezvous some two leagues the other side of Berkeley for the use of Brandon, Mary and the two men from Bristol who were to act as an escort on the eventful night. There was one disagreeable little feature that we could not provide against nor entirely eliminate. It was the fact that Jane and I would be suspected as accomplices before the fact of Mary's elopement; and, as you know, to assist in the abduction of a princess is treason—for which there is but one remedy. I thought I had a plan to keep ourselves safe if I could only stifle for the once Jane's troublesome and vigorous tendency to preach the truth to all people, upon all subjects and at all times and places. She promised to tell the story I would drill into her, but I knew the truth would seep out in a thousand ways. She could no more hold it than a sieve can hold water. We were playing for great stakes, which, if I do say it, none but the bravest hearts, bold and daring as the truest knights of chivalry, would think of trying for. Nothing less than the running away with the first princess of the first blood royal of the world. Think of it! It appals me even now. Discovery meant death to one of us surely—Brandon; possibly to two others—Jane and me; certainly, if Jane's truthfulness should become unmanageable, as it was so apt to do.

After we had settled everything we could think of the girls took their leave; Mary slyly kissing Brandon at the door. I tried to induce Jane to follow her lady's example, but she was as cool and distant as the new moon.

I saw Jane again that night and told her in plain terms what I thought of her treatment of me. I told her it was selfish and unkind to take advantage of my love for her and treat me so cruelly. I told her that if she had one drop of generous blood she would tell me of her love, if she had any, or let me know it in some way; and if she cared nothing for me she was equally bound to be honest and tell me plainly, so that I would not waste my time and energy in a hopeless cause. I thought it rather clever in me to force her into a position where her refusal to tell me that she did not care for me would drive her to a half avowal. Of course, I had little fear of the former, or perhaps, I should not have been so anxious to precipitate the issue.

She did not answer me directly, but said: "From the way you looked at Mary today I was led to think you cared little for any other girl's opinion."

"Ah! Miss Jane!" cried I joyfully, "I have you at last; you are jealous."

"I give you to understand, sir, that your vanity has led you into a great mistake."

"As to your caring for me or your jealousy? 'Which?' I asked seriously. Adroit, wasn't that?

"As to the jealousy, Edwin. There, now; I think that is saying a good deal. Too much," she said, pleadingly; but I got something more before she left, even if it was against her will; something that made it almost impossible for me to hold my feet to the ground.

Jane pouted, gave me a sharp little slap and then ran away, but at the door she turned and threw back a rare smile that was priceless to me, for it told me she was not angry; and, furthermore, shed an illuminating ray upon a fact which I was blind not to have seen long before; that is, that Jane was one of those girls who must be captured vi et armis.

Some women can not be captured at all; they must give themselves; of this class preeminently was Mary. Others again will meet you half way and kindly lend a helping hand; while some, like Jane, are always on the run and are captured only by pursuit. They are usually well worth the trouble, though, and make docile captives After that smile from the door I felt that Jane was mine; all I had to do was to keep off outside enemies, charge upon her defenses when the times were ripe and accept nothing short of her own sweet self as ransom.

The next day Brandon paid his respects to the king and queen, made his adieus to his friends and rode off alone to Bristol. You may be sure the king showed no signs of undue grief at his departure.

CHAPTER XVI.

A few days after Brandon's departure, Mary, with the king's consent, organized a small party to go over to the Windsor for a few weeks during the warm weather.

There were 10 or 12 of us, including two chaperons, the old Earl of Hertford and the dowager Duchess of Kent. Henry might as well have sent along a pair of spaniels to act as chaperons—it would have taken an army to guard Mary alone—and to tell you the truth our old chaperons needed watching more than any of us. It was scandalous. Each of them had a touch of the gout, and when they made wry faces it was a standing inquiry among us whether they were leering at each other or felt a twinge—whether it was their feet or their hearts, that troubled them.

Mary led them a pretty life at all times, even at home in the palace, and I know they would rather have gone off with a pack of imps than with us. The inducement was that it gave them better opportunities to be together—an arrangement connived at by the queen, I think—and they were satisfied. The earl had a wife, but he fancied the old dowager and she fancied him, and probably the wife fancied somebody else, so they were all happy. It greatly amused the young people, you may be sure, and Mary said, probably without telling the exact truth, that every night she prayed God to pity and forgive their ugliness. One day the princess said she was becoming alarmed; their ugliness was so intense she feared it might be contagious and spread. Then, with a most comical seriousness, she added:

"Mon Dieu! Sir Edwin, what if I should catch it? Master Charles would not take me."

"No danger of that, my lady; he is too devoted to see anything but beauty in you, no matter how much you might change."

"Do you really think so? He says so little about it that sometimes I almost doubt."

Therein she spoke the secret of Brandon's success with her, at least in the beginning; for there is wonder-

Mark talked, and laughed, and sang, healthy little doubt.

We had a delightful canter over to Windsor, I riding with Mary most of the way. I was not averse to this arrangement, as I not only relished Mary's mirth and joyousness, which was at its height, but hoped I might give my little Lady Jane a twinge of jealousy perchance to fertilize her sentiments toward me.

Mary talked, and laughed, and sang, for her soul was a fountain of gladness that bubbled up the instant pressure was removed. She spoke of little but our last trip over this same road, and, as we passed objects on the way, told me of what Brandon had said at this place and that. She laughed and dimpled exquisitely in relating how she had deliberately made opportunities for him to flatter her, until, at last, he smiled in her face and told her she was the most beautiful creature living, but that

after all, 'beauty was as beauty did!'"

"That made me angry," she said. "I pouted for a while, and, two or three times, was on the point of dismissing him, but thought better of it and asked him plainly wherein I did so much amiss. Then what do you think the impudent fellow said?"

"I can not guess."

"He said: 'Oh, there is so much it would take a lifetime to tell it.'

"This made me furious, but I could not answer, and a moment later he said: 'Nevertheless I should be only too glad to undertake the task.'

"The thought never occurred to either of us then that he would be taken at his word. Bold? I should think he was; I never saw anything like it! I have not told you a tenth part of what he said to me that day; he said anything he wished, and it seemed that I could neither stop him nor retaliate. Half the time I was angry and half the time amused, but by the time we reached Windsor there never was a girl more hopelessly and desperately in love than Mary Tudor." And she laughed as if it were a huge joke on Mary.

She continued: "That day settled matters with me for all time. I don't know how he did it. Yes I do * * *" and she launched forth into an account of Brandon's perfections, which I found somewhat dull, and so would you.

We remained a day or two at Windsor, and then, over the objections of our chaperons, moved on to Berkeley Castle, where Margaret of Scotland was spending the summer.

We had another beautiful ride up the dear old Thames to Berkeley, but Mary had grown serious and saw none of it.

On the afternoon of the appointed day, the princess suggested a hawking party, and we set out in the direction of the rendezvous. Our party consisted of myself, three other gentlemen and three ladies besides Mary. Jane did not go; I was afraid to trust her. She wept, and, with difficulty, forced herself to say something about a headache, but the rest of the inmates of the castle of course had no thought that possibly they were taking their last look upon Mary Tudor.

Think who this girl was we were running away with! What reckless fools we were not to have seen the utter hopelessness, certain failure, and deadly peril of our act; treason black as Plutonian midnight. But, Providence seems to have an especial care for fools, while wise men are left to care for themselves, and it does look as if safety lies in folly.

We rode on and on, and although I took two occasions, in the presence of others, to urge Mary to return, owing to the approach of night and threatened rain, she took her own head, as everybody knew she always would, and continued the hunt.

Just before dark, as we neared the rendezvous, Mary and I managed to ride ahead of the party quite a distance. At last we saw a heron rise, and the princess uncapped her hawk.

"This is my chance," she said; "I will run away from you now and lose myself; keep them off my track for five minutes and I shall be safe. Good-bye, Edwin; you and Jane are the only persons I regret to leave. I love you as my brother and sister. When we are settled in New Spain we will have you both come to us. Now, Edwin, I shall tell you something: don't let Jane put you off any longer. She loves you; she told me so. There! Good-bye, my friend; kiss her a thousand times for me." And she flew her bird and galloped after it at headlong speed.

As I saw the beautiful young form receding ffrom me, perhaps forever, the tears stood in my eyes, while I thought of the strong heart that so unfalteringly braved such dangers and was so loyal to itself and daring for its love. She had shown a little feverish excitement for a day of two, but it was the fever of anticipation, not of fear or hesitancy.

Soon the princess was out of sight, and I waited for the others to overtake me. When they came up I was greeted in chorus: "Where is the princess?" I said she had gone off with her hawk, and left me to bring them after her. I held them talking while I could, and when we started to follow took up the wrong scent. A short ride made this apparent, when I came in for my full share of abuse and ridicule, for I had led them against their judgment. I was credited with being a blockhead, when in fact they were the dupes.

We rode hurriedly back to the point of Mary's departure and wound our horns lustily, but my object had been accomplished, and I knew that withing 20 minutes from the time I last saw her, she would be with Brandon, on the road to Bristol, gaining on any pursuit we could make at the rate of three miles for two. We scoured the forests far and near, but of course found no trace. After a time rain set in and one of the gentlemen escorted the ladies home, while three of us remained to prowl about the woods and roads all night in a soaking drizzle. The task was tiresome enough for me, as it lacked motive; and when we rode into Berkeley Castle next day, a sorrier set of bedraggled, rain-stained, mud-covered knights you never saw. You may know the castle was wild with excitement. There were all sorts of conjectures, but soon we unanimously concluded it had been the work of highwaymen, of whom the country was full, and by whom the princess had certainly been abducted.

The chaperons forgot their gout and each other, and Jane, who was the most affected of all, had a genuine excuse for giving vent to her grief and went to bed—by far the safest place for her.

What was to be done? First we sent a message to the king, who would probably have us all flayed alive—a fear in which the chaperons shared to the fullest extent. Next, an armed party rode back to look again for Mary, and, if possible, rescue her.

(To be continued in next issue.)

One for the Girl.

"Girls make me tired," said the fresh young man. "They're always going to some of these palmists to have their hands read."

"Indeed!" said she sweetly. "Is that any worse than men going into saloons to get their noses red?"

Insufficient Bait.

A teacher was one afternoon examining a class of young boys in geography. He said:

"Now, boys, what do you think that Noah did while he was in the ark?"

After waiting several minutes he saw one hand go up, and the little chap on being asked what he thought Noah did replied:

"Sir, I think that he might have fished some."

"Yes," said the instructor, "that is possible; he might have fished some."

Presently another small hand went up. The teacher asked this one also what he thought about it.

The small boy said: "I don't think that he fished very long, because he only had two worms."

Sidelights

Parodies on Nature.

The horsefly has no hoofs on its complacent feet; the angleworm is full of curves, without a corner neat. The bumblebee is not a bum, the hornet has no horn; and sound is silent when it breaks upon an ear of corn. The yellow jacket wears no clothes, the pieplant grows no crust; the rubber plant can not be stretched, the goldbug has no dust. A lighting plant don't grow from roots, a jailbird has no wings; a baseball diamond's on the square, and so are all prize rings.

But the Egg Was Good.

A middle-aged bachelor was in a Leadville restaurant at breakfast, when he noticed this inscription on an egg: "To Whom It May Concern: Should this meet the eye of some young man who desires to marry a farmer's daughter, 18 years of age, kindly communicate with —— Goodland, Kansas." After reading this he made haste to write to the girl offering marriage and in a few days received this note: "Too late. I am married now and have four children."

She Would Not Call Names.

The county superintendent of schools, Miss Whitehead (whose hair was almost white) was paying a visit to a country school. At the close of the school, when the children went trooping out, each one said, "Goodby, Miss Whitehead." But one little girl, with red hair, said nothing, and hung her head. As she was about to pass Miss Whitehead put out her hand and said:

"Nellie, are you not going to say goodby to me, as the others have?"

"No, I'm not," answered Nellie. "I know what it is to be called 'Miss Redhead,' and I'm just ashamed of the others."

Safety First.

Railroad Foreman—Sambo, if we had war, wouldn't you like to be a captain and get in front and holler, 'Come on, boys!'"?

Sambo—No, suh, boss. I'd ruther git behind and holler, "Go on, boys!"

Farm Hands Wanted

Western Canada Farmers Require 50,000 American Farm Laborers AT ONCE!

Urgent demand sent out for farm help by the Government of Canada. Good wages. Steady employment. Low railway fares. Pleasant surroundings. Comfortable homes. No Compulsory Military Service. Farm hands from the United States are absolutely guaranteed against Conscription. This advertisement is to secure farm help to replace Canadian farmers who have enlisted for the war.

A splendid opportunity for the young man to investigate Western Canada's agricultural offerings, and to do so at no expense. Only those accustomed to farming need apply.

For particulars as to railway rates and districts where labor is required, or other information regarding Western Canada, apply to

J. N. GRIEVE, Cor. First and Post Sts., Spokane, Wash.

$17

This is Styleplus Week from Maine to California!

The price remains the same!

Leading merchants the nation over are this week featuring Styleplus Clothes $17. Today more than ever before this price stands out to the nation. Our Style, our Quality, our Guarantee of Satisfaction have created a new standard of value at $17 from Maine to California!

Styleplus Clothes $17

TRADE MARK REGISTERED

The same price the nation over.)

(Price in Cuba $23)

By contracting for great quantities of cloth at the outbreak of the war, by doubling our output and so decreasing our costs, by our scientific plan of concentrating on this one-price suit we have effected great economies and kept our price the same. The same style in the fabrics—all-wool or wool and silk. The same honest, sincere workmanship throughout. The same smooth fit and splendid wear. The same guarantee! The same price!

Of course you realize how big an advantage it is to *see* and *try on* the clothes *before* you buy them. If you buy direct from the nearest Styleplus dealer, you know exactly what you are getting. Look for the Styleplus Label in the coat collar. If there should not be a Styleplus Store in your town, ask your favorite dealer to order a Styleplus suit for you.

STYLE PLUS

All-wool fabrics + perfect fit + expert workmanship + guaranteed wear

Fitting for Work

Occupations Are Open to Women

By ALICE W. BARLAND.

Dear Girls on the Farms: I read not long a go a list of trades and professions now being followed by women. It set me thinking about the difference in the times since I was a school girl. Among the things I used to wonder about in my moonlight communions with myself was what I should like to fit myself for. It did not take long at that time to run through in my mind the occupations common to women and girls.

There was teaching, dressmaking, millinery and occasionally a woman employed in a telegraph office. So far I can now remember, these were about all the avenues open for girls where special training was required. As to housework—we call it domestic service now—almost all the girls of my acquaintance at that time, were fitted to go into any ordinary home and assist with the housework and cooking. It was the good old-fashioned way with mothers to keep the little girls around with them while "doing up the work" and they learned how without knowing they absorbed the knowledge.

Don't imagine I am one of the croakers who are quoting "the good old times." No one believes stronger than I do, that we are now living in the very best age, but in the item of child training, I feel strongly that the new methods are no improvement on those of the past half century.

However, I did not intend to preach or moralize to you girls: I only set out to compare the few openings for young women when I was a girl with the almost limitless number now.

I never heard of a woman lawyer when I was a young girl, but from a paper called "The Woman Lawyers' Journal," I got some very wonderful statements.

I learned that there are in this country 238,077 women stenographers, 7300 physicians, 7395 preachers, 1010 lawyers, about the same number who are architects and designers, 429,000 in various other professions, such as nursing, hairdressing, etc. There are also over 480,000 in various trades, and now listen girls, there are in this country 770,055 women engaged in architecture. I am not mentioning the great number of teachers, for that field has always been open to girls. And I have not mentioned the great number of girls in telephone offices.

Surely with all these opportunities open to chose from, it is up to the girl, isn't it? The more one knows about all kinds of things the better fitted he is to hold any kind of position, but the solid old foundation of all book knowledge is the same now as it was a 100 years ago. Namely, reading, writing, spelling, arithmetic, geography and grammar.

These branches are all they used to teach in country schools, but many a great man and woman, having had only these branches, has, by persistent effort, added to that foundation till he or she has acquired a liberal education.

The schools now, even the country schools, teach many more branches than they used to and since the system of consolidated school districts is becoming popular, the farm girls and boys are having the equal chance with those who live in the cities, for an education.

I am sure life would have been much more interesting for me and I should have been more useful in the world if some one had taken more interest in impressing on my mind the value and purpose of school.

I was sent to school when I was four years old because I lived very close to the school house and I was safe and out of the way. I was quite a girl before I realized that school days were valuable and for the purpose of fitting me for usefulness in life. A realization of the value of education came to me finally, and with it a great longing to know all about things. That desire is still with me and increases with the years and I am sure it will never be satisfied, for the longer one lives the more there seems to be to learn.

The wish of my heart for you girls, is that you may have a wholesome curiosity concerning the common things with which we daily come in contact. A desire to know about them will set you to finding out and you will be busy and interested, which always makes one happy.

For instance, do you know about these common things? What is coal made of and what makes it hard? How many kinds of trees do you know the names of and what are many of them especially used for, and where do they grow? What kind of wood is best for lead pencils and what is the material in them that we call "lead?"

How many birds, that you see or might see, do you know the names of, and do you know where they build their nests?

Oh, my girls, this world is full of the most interesting things!

Get busy and see how many things you can discover, that are very common, that you know little or nothing about, then see how interested you will get learning about them.

Wouldn't it be jolly if we could meet and talk it over and tell each other that we have found out day to day? In my next letter I will tell you about some of my country school experience.

Plant Nasturtiums.

Every householder, in planning the flower and vegetable garden, should plant a goodly number of nasturtiums, not alone for their profusion of beautiful blooms, lasting from early summer until late autumn, but also on account of their condiment value. Both the leaves and seeds of nasturtiums have a sharp, peppery taste and add very much to the flavor of a salad. A few of the leaves mixed in with lettuce leaves in a salad almost take the place of pepper.

For use in sauces, the seeds should be gathered while still tender. They can be dropped, as gathered from day to day into a ready prepared pickling fluid of vinegar, salt and spices, and thus preserved for future use; or ground or pounded up, they may be sprinkled into soups, sauces and salad dressings, but it is well to remember, that like most finely ground up things, they easily lose their flavor after being put into that state, and should be tightly covered until used.

L. C. F.

They Had 'Em in Those Days.

"Why is George Washington described as 'First in war and first in peace'?"

"I dunno," replied Senator Sorghum. "I suspect somebody was trying to square him with both the preparedness people and the pacifists."—Washington Star.

Angels Could Do No More

Than One Puzzle Contestant Thinks He Did

By THE CONTEST EDITOR.

Contestants who submitted the correct solution on the figure puzzle have been entangled in a maze of dots and dotted lines during the last two weeks. Of the 919 persons who correctly solved the figure problem all but a few have managed to wade through the dots and the winners in this, the tie-breaking contest, will be announced as soon as the judges have examined the charts and determined the final winners. The names of all persons who tied also will be published.

As a result of delayed trains in many sections, due to blockades, an unusual length of time has been necessary for the return of the charts and all will be considered and examined carefully in all cases where the postmark shows the letters were forwarded on or before April 3, the date set for the closing of the last contest. It will be a week or 10 days before the contest editor knows who the winners are.

Good Nature and Merriment.

Marked by a great deal of good nature and merriment the last days of the contest have been almost pleasant ones for the contest editor who ordinarily thinks he is beset with all the woes of the universe. Some have expressed keen disappointment because the prize money could not be forwarded in time for the purchase of Easter bonnets.

Like many of life's contests, the number of disappointed participants far exceeds the number of victors and in times like this it is indeed refreshing to receive a letter like the following from Paul D. Porter of Port Blakely, Wash. As this is written no count has been made of the charts, so we don't know whether Mr. Porter is a loser or not. If he is, he is a good one:

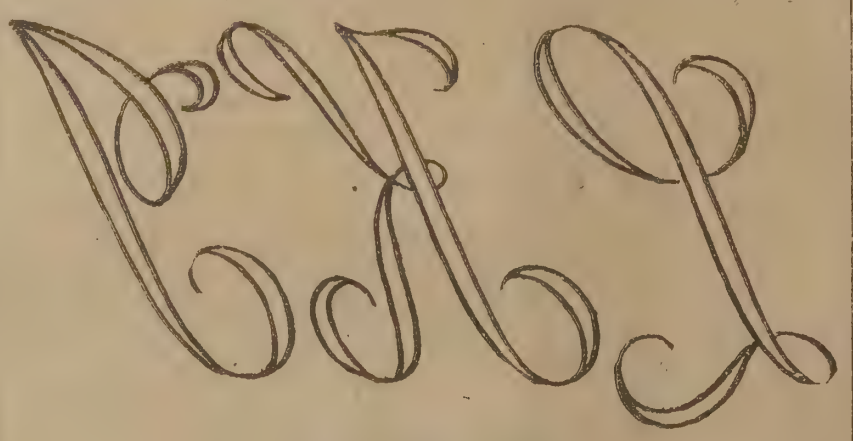
"Angels Can Do No More.

To the Contest Editor: Attached herewith find my effort to win the capital prize of $275 in the tie-deciding contest following the figure puzzle:

I have counted the dots in accordance with your instructions and have been able to pass the line through 434.

If there are other contestants who submit a correct drawing with more dots than mine, I shall gladly bow to them. I have none of the "Arthur Lamb" feeling about a contest of this kind. In fact, about any kind of a contest, whether it be dependent upon skill, education or pure luck. I congratulate myself on being a good loser. In other words, I am for the man who beats me in anything. Those are generally the ones from whom we can learn something.

The wife thinks I am just about "it," anyway. She knows I have submitted the highest total of dots; knows that I will receive your check promptly, and, in addition, she has already figured out exactly what she is going to do with it. Needless to say $200 goes in the savings account for the kiddies, the balance—well, you know, spring, Easter and all those kind of things are in the air—and the shopping list is practically completed.



Seriously, I have enjoyed this contest, feel that I have profited by it, win or lose; and what impresses me most is the spirit of fairness that has pervaded the whole thing. My congratulations to the winner. I have done my "d—st," and, like the Texas cowboy's epitaph, "Angels can do no more." Very truly yours,

PAUL D. PORTER.
Box 25, Port Blakely, Wash.

Bossy Is Beloved.

All the shortcomings of the cantankerous "critter" that knocked the daylights out of you last summer when the flies were bad; all the golblasted maneuverings of the old lunkhead who refused to eat the carrots you had chopped with the cow-barn shovel; all the pesky, low-lived tricks a bellowing bovine ever was guilty of—everything is apparently forgiven and forgotten by those who have submitted answers to question 45 in the Farm Information contest which closes April 19. If Bossy could see herself framed in the word picture painted by the essay writers; if she actually knew what a beloved and adored individual she actually is, it is quite possible she would insist on an eight-hour day, an increase in her wage scale, six months' vacation and an old-age pension. Besides the very liberal prize offer, details of which are given elsewhere in this issue of The Farmer, the Farm Information contest has educational qualities of real worth and to many persons it has brought a store of much-needed information about the most ordinary things. There is still time to enter the contest if you act now.

Script Initials for Embroidery

By WINNIFRED WORTH.

To transfer this design, put some soap in a pint of hot water, stir and remove excess moisture by partially drying design. Place material on a hard, flat surface and lay the design, face down, upon the material, cover with two folds of newspaper and, with a tablespoon, rub, pressing hard, until the design is entirely transferred.

White embroidery floss of a linen quality, or the mercerized, is the best for making letters. Always soap the fabric with white soap under an initial before embroidering. It aids one in washing the color from the finished design.

Sweet is the breath of morn, her rising sweet,
With charm of earliest birds; pleasant the sun
When first on this delightful land he spreads
His orient beams on herb, tree, fruit and flower,
Glistning with dew; fragrant the fertile earth
After soft showers; and sweet the coming on
Of grateful ev'ning mild; then silent night
With this her solemn bird and this fair moon,
And these the gems of heaven, her starry train.

—Milton.

Cream That Will Whip.

Cream to whip well should contain at least 25 per cent of fat, while the cream ordinarily sold is required by North Dakota law to contain 18 per cent of fat. The cream should be cold, not over 40 degrees F., to whip well. Adding a little sugar sometimes improves the whipping qualities of cream. The cream should be aged at least 24 hours before whipping.

Meaning of "Amen."

The word "amen" literally means "true." Used as a substantive, "that which is true," or "the truth." In the synagogues and private houses of the Hebrews it was customary for the people or the members of the family to say "amen" to the prayers offered by the priest or the master of the house. The custom was carried into the early Christian church.

In Reverse Order.

It was just after the Christmas dinner and toasts were in order. The toastmaster arose to introduce a prominent elderly speaker, as follows

"Gentlemen, you have just been giving your attention to a turkey stuffed with sage. Now you will listen to a sage stuffed with turkey."—McClary's Wireless.

Increase in Wooden Toys.

Since the war has cut off the importations from Germany there is a great increase in the manufacture of wooden toys in the United States. The largest toy-producing center in this country is the town of Winchendon, Mass.

Patterns

2035-2020—Ladies' costume. Waist, 2035, cut in seven sizes—34, 36, 38, 40, 42, 44 and 46 inches bust measure. Skirt, 2020, cut in seven sizes—22, 24, 26, 28, 30, 32 and 34 inches waist measure. The skirt measures about three and a third yards at the foot and will require four yards of 44-inch material for a 24-inch size. The waist requires two and a half yards of 44-inch material for a 36-inch size. TWO separate patterns, 10 cents FOR EACH pattern.

2029—Ladies' night dress. Cut in four sizes, small, medium, large and extra large. A medium size will require six yards of 36-inch material. Price 10 cents.

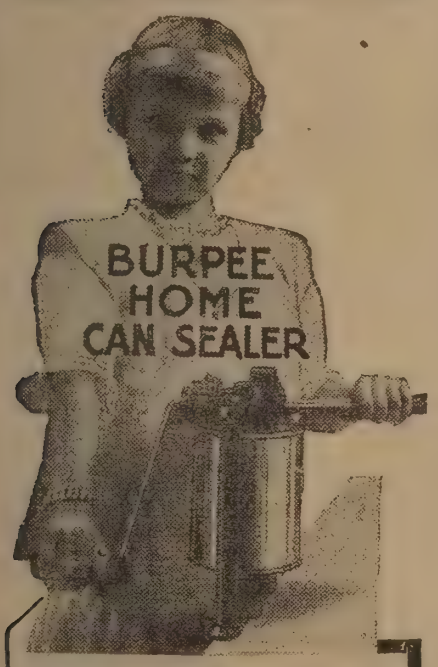
Skirt 2027, cut in seven sizes: 22, 24, 26, 28, 30, 32 and 34 inches waist measure and require four and one-quarter yards of 44-inch material for a medium size. The skirt measures three and one-quarter yards at the foot. Two separate patterns, 10 cents for each pattern.

He Saw the Light.



A minister received an invitation to the pastorate of a finer, wealthier church than any he had ever served, but as was his custom he deferred action until he could pray and think over the matter. One day a friend saw the preacher's youngest son and inquired: "Well, Charles, is your father going to take the new pastorate."

"Dad is still praying for light," replied the somewhat irreverent youngster, "but between you and me he's got most of the goods packed."

Slim Fodder.

"Get down out of that tree!" General Pershing ordered a Yankee trooper whom he saw up in a persimmon tree. "Those green persimmons aren't fit for food."

"I'm not using them for food," replied the private. "I'm eating them to draw my stomach up to fit my rations."

$10 Starts a Paying Business

With a $10 Burpee Home Can Sealer you can put up the surplus products of your farm and sell them direct to the consumer, AT RETAIL PRICES. Big market all the year round for all you can put up. Cans easily secured.

No Solder—No Acid

This sealer—produced by one of the biggest canning factories in the country—is one of the greatest devices of the age. Seals cans absolutely airtight without solder. So simple a child can use it. Satisfaction guaranteed or money back.

Free Literature

Our free illustrated folder tells you how to make money with the Burpee sealer. Free book of complete canning recipes compiled with the assistance of U. S. Dept. of Agriculture also goes with each machine. Write today for full information.

Happy When Little Sister Was Found.

Dear Aunt Nellie: On one sunny October day when the leaves were golden brown and red, as I was walking home from school I met Mrs. Whitcomb and Mrs. Palmer. They told me that my 1-year-old sister, Myrtle, was lost. They had to go home to get supper for the hungry crew of men who were constructing a road nearby, but told me that if we didn't find her soon to send one of the kids over to camp and they would send the men over to help hunt. I hurried on to the "Little Hill" as we call our homestead. Mama had been hunting ever since 3 o'clock, and it was about 4:30 then. I went all over the small clearing which was nearly covered with blackberry briars. I hunted in the orchard and followed up a number of trails, but I didn't find her. Then papa came. He thought he could find her in a little bit. It was dusk when the boys got home and one of them went immediately to camp. It soon became pitch dark. The boys had a roaring fire of pine knots to take a little of the chill off, for it was very cold. There are a number of trails leading from Little Hill. We followed up every one of them, I believe, but still we found no trace of the girl, not even a track. Every hour of the night we met at the fire to exchange ideas, but no one had anything to tell except what they guessed. A man phoned Ollie Ford to bring his hunting dogs down. At 2:30 a. m., October 3, we all went home. Early the next morning we went back to hunt some more. At about 9:30, Eddie Eltrich found a single track in the soft ground. Mary and I went and looked at it and being sure it was her's we went back to Little Hill and when ever any one would come to the fire we would take them up to show them the track. At 10:30 Eddie Eltrich found our little sister and the men brought her back to the fire, where we warmed her. Mary and I were the happiest girls in the whole world. Myrtle was not able to walk well for about a half day on account of her feet being swollen so much, but that was all. When someone asked her where she slept she said: Oh, on a mossy log, but but if it had been a bed there I'd a-slept on it." When asked if she was afraid she said, "No, the tougars never tomed, did dey?"—Annie L. Hutsell, Mora, Wash.

Highest Ambition to Be a Teacher.

Dear Aunt Nellie: I live on a 12-acre farm. We have four calves and two cows. The names of the calves are Spot, Daisy, Rose and Lily, and the cows are Beauty and Bess. I have a black and white dog and a gray cat. The cat's name is Kitty Rose. The dog's name is Kazan. He is a very good dog and he will do lots of tricks. I have five sisters and two brothers. My brothers' names are George and James. I am 13 years old and I am in the fourth grade, but I am sick most of the time and do not get to go to school very much. I have to walk two miles to school every morning. My teacher's name is Miss Effie Mann. There are two rooms in our school. My playmate's name is Mildred. I like her very much. There are 32 pupils in our room and 20 in the other room. I can crochet and tat. I help mother in many ways. I wash the dishes and take care of my bedroom. I have only two brothers. The oldest is traveling and the youngest is only 5 years old. My highest ambition is to be a teacher. I would like to correspond with Agnes Lund—Anna Astel, East Stanwood, Wash.

Kitty Won't Scratch or Bite.

Dear Aunt Nellie: I am going to tell you about my pet kitten. She is 3 years old. I like her very much because we can play with her and she won't bite or scratch us. She is black and white with brown eyes. I have four brothers; one is 16 years old, another is 11 years old, another is 9 years old and the other is 4 years old. I will be 13 years old the 13th of June. I go to the Firwood school. I am in the seventh grade. I like school very much. We have about nine acres all together. We have 36 chickens, two geese, one horse, one cow and one pig. I like to feed the chickens and geese. My grandma and grandpa live about two blocks from us. They have a quarter of an acre. I go to Sunday school every Sunday. My teacher's name is Miss Nellie Gale. I like her very much. There are about 30 that go to church and Sunday school.—Hazel Rankin, R. F. D. 1, Box 219 Puyallup Wash.

Grandpa Caught a Bear This Winter.

Dear Aunt Nellie: I like the letters of the other children. I am the oldest child in our family. I am 10 years old and will be 11 the 19th of April. My oldest sister is 9 and will be 10 the 12th of June. Martha will be 9 in October. Dorothy, my youngest sister, is 5 years old. My youngest brother, Albert, is 6 years old. I live near Boundary Lumber company. We have a cow named Boss and a calf named Blackey. There are 12 children going to our school. Our teacher's name is Miss Sinclair. I like to go to school. I have nothing to do at home. I like my teacher. I am in the fifth grade. My grandpa killed a bear this winter. He shot him in the brain. His fur was thick. He caught him in a trap. Grandpa would not own up that he shot him. He tried to joke us, but he couldn't do it, for we knew he did. It was not very big. It was about 2 years old. One time we saw a deer in our back yard. He went up the hill, then I saw it on the plain about an hour after. The Indians live about one mile from our house. We live in a big log house. Our schoolhouse is of logs, too.—Cassius Franklin Orr, Northport, Wash.

More Pleasure From Their Homes.

Dear Aunt Nellie: My subject is "Fun on the Farm." In the summer we wade in the ponds and fish in the creek. We roll over the hay and play "Hide and Seek." We ride horseback. In the springtime we go into the woods and pick wild lilies and violets and Johnnie-Jump-Ups. Then in April there are the little purple May flowers that come out. In the autumn we have fun picking apples and getting in the garden vegetables, such as squash and pumpkins and the string beans. In the city some of the children have never seen birds or a field of wheat. The country children get more pleasure out of their home than the city children do. My birthday is just one day after Labor day, the 5th of September. I will be 10 years old this year. My father's birthday is the same day as mine, so we can celebrate it together. I would like to correspond with some girl who lives near me.—Grace Elizabeth Balsley, Enumclaw, Wash.

Snip, Snap and Pussy-Willow.

Dear Aunt Nellie: I enjoy reading the letters in the Corner. We have 10 acres. We have two cows, four calves and one horse. The cows' names are Molly and Buttercup, the calves' names are Beauty, Maidie, Brownie and Fussy and the horse's name is Dick. We have about 50 chickens. I have three cats. Their names are Snip, Snap and Pussy-Willow. They like to play. My papa built me a playhouse last summer. I like to play in it. I am 10 years old. My birthday is on the 20th of January. I am in the fourth grade. I have one sister. Her name is Mildred. She is 22 years old. I would like some of the girls of my age to write to me.—Margaret Binnings, Tacoma, Wash.

Just Loves That Baby Brother.

Dear Aunt Nellie: I am eight years old. I am in the third grade. I have three brothers and one sister. My mother has white leghorn hens. My teacher's name is Miss Hull. I live on a farm of 48 acres. One of my brothers is a baby. I just love him. He is not a year old yet. My sister is 2 years old. Her name is Helen. My brothers' names are Raymond, Ralph and Sidney. —Claire Beckwith, Elma, Wash.

Dog Hauls Him in His Wagon.

Dear Aunt Nellie: I enjoy reading the letters very much. I am seven years old and am in the first grade. I have read one book through and am almost through with another. I have two pets and they are dogs. One is big and the other is small. The big one's name is Shep and the little one's name is Chub. The big dog hauls me in my wagon.—Merton Mallory, Olalla, Wash.

Written Many Stories and Poems.

Dear Aunt Nellie: I am 12 years old and in the sixth grade at school. I have written several letters to the Corner and I hope I can win a prize. I have read many nice letters in the Corner and am always looking forward to the day when The Washington Farmer comes. I live on a farm of over 840 acres. We have an automobile and a phonograph and our home is equipped with electricity. I live two and a half miles east of Goldendale. I am sending you a poem I am author of. It is entitled "The Starry Firmament." I had no help in writing it so it is not very good. I like to write and to read and have written many stories and poems. —Harvey Norris, Goldendale, Wash.

Her Pets Are Spot and Snowball.

Dear Aunt Nellie: I am going to write about my school room. It has four windows on the west side. There is another room. I like my teacher fine. I was promoted to the fourth grade about the middle of January. I am getting along well in school. My teacher's name is Mrs. Wrye. I enjoy the letters of the nephews and nieces. I was 9 years old the fourth of July. I have one brother younger than I am. His name is Edgar. He is 7 years old and in the first grade. I have a little dog named Spot and we have a cat named Snowball. We have eight head of horses and four colts and three cows and three calves.—Delma Fouts, La Crosse, Wash.

We're Glad to Hear From Mary.

Dear Aunt Nellie: I am 9 years old. My birthday is October 24th. I am in the fourth grade. I have two sisters and five brothers. Their names are Clyde, Claude, Arthur, Owen, Jimmie, Gladys and Grace. They are all in school but two. There are 30 pupils in our school. Our teacher's name is Miss Olive Pope. My mother takes The Washington Farmer. I read the Children's Corner and like it very much. I would like for some of the cousins to write to me. We have about five inches of snow. I live on a 10-acre farm. We have four cows and some twin calves. We have one dog named Curly.—Mary Burgess, Box 14, Park, Wash.

The Bible Says:

Hazel Sold Her Horse for $100.

Dear Aunt Nellie: My chum, Josie Gustafson, sent you a letter and had it put in the Children's Corner, so I thought I would write one, too. I am 9 years old and like to ride horseback. We own a 1040-acre farm and we have a six-cylinder Super Six Hudson automobile. I had a horse given to me by my brother, Deane, when I was quite young. The horse was a colt then. I sold the horse and I will get $100 for her. I have five brothers and one sister. I like the Farmer very much. I live one mile and a quarter from school. I ride to school in a buggy. I like the country.—Hazel Miller, La Crosse, Wash.

Raymond Calls His Dog "Bum."

Dear Aunt Nellie: I read all the letters and think they are nice, so I thought I would write. I have a dog whose name is Bum. He is a Spitz and he is black and white. We have a horse. His name is Sam. He will come when you call him. We have a cow and about 18 chickens and I have a bantam rooster. I did have two cats, one was an Angora and it went away with the old one and has not come back yet. The other got killed on the railroad track. I am 13 years old and in the sixth grade. I am four feet eight inches high and weigh 88 pounds.—Raymond Patten, Factoria, Wash.

Buster and Rowdy Are Two Fine Dogs.

Dear Aunt Nellie: I have intended to write for a long time. We live on a 40-acre ranch. There are 20 acres in orchard and 10 acres of corn. We are milking nine cows and there are three calves. We have 22 chickens and two dogs and their names are Buster and Rowdy. They are fine dogs. We have a span of mules and a team of horses. I am 11 years old and in the fifth grade and my teacher's name is Miss White, and there are about 50 in our schoolroom. I have two sisters and six brothers. And I forgot to tell you that there are eight pigs on the place.—George W. Wilkins, R. F. D. 1, Zillah, Wash.

Hope It Won't Bet the Last Time.

Dear Aunt Nellie: This is the first time I have written to the Corner. I don't think it will be the last time. We take the Farmer and I always read the letters. We live on a 10-acre farm, but we are renting it. We have 70 acres that belong to us, but it is all in timber. We have three milking cows and five heifers, two pigs and two horses. Dan and Dick are the horses' names. I have three brothers and one sister. We have three cats—Nancy, Tom and Betty.—Sarah Clauson, Tumwater, Wash.

Hopes Viola Will Write to Her.

Dear Aunt Nellie: I was reading the letters this morning and saw one was from Viola Augst and one from Lyda Augst. Both were from Box 30, Beebe, Wash. I was very glad to see letters from them as I live at Beebe. Our box is No. 4. I was 17 the 15th of March. I stay in Chelan to go to school. I am a sophomore in high school. It is lonesome at Beebe in the summer as there are not any girls down there except my sister. Her name is Jean. She is 8 years old. I hope Viola will write to me. My address is just Beebe, Wash.—Willo A. Oules, Beebe, Wash.

Wants the Girls to Write to Her.

Dear Aunt Nellie: I have never written to the Children's Corner before. I am 11 years old and in the fifth grade at school. My birthday is July the 11th. My teacher's name is L. E. Hutt. I like him fine. There are eight children in our school. There are five girls and three boys in our family. Their names are Louise, Aline, Walter, Alta, Lester, Lillian, Johnnie and Mary. I wish some of the girls would write to me. Elma Eaton, Dayton, Wash.

Ginger Is Marie's Pet Pony.

Dear Aunt Nellie: I have never written to you before, so I will write to you now. I was 8 years old February 21. I am in the third grade. My teacher's name is Miss Greene. I have one sister, Cora; she is 13 and is in the sixth grade. I have a brother and his name is Elmer. He is 1 year old. I have a pet sheep and its name is Ida. We have a pony and his name is Ginger. I like to ride him very much.—Marie Hawk, White Bluffs, Wash.

Milks Two Cows and Feeds the Calf.

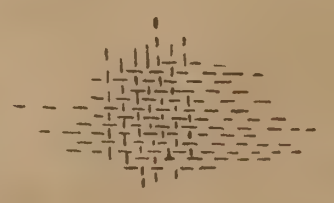
Dear Aunt Nellie: I have a mare and her name is Queen. Papa has two horses and seven cows. I have a dog. He is a good cattle dog and he catches rats and he kills some minks. I milk two cows and feed a calf. The calf has curly hair. I named the calf Blossom. I walk two miles to school. I am in the third grade. I am 9 years old. I live on a 48-acre farm.—Raymond Beckwith, Elma, Wash.

Cross the Columbia on a Ferry.

Dear Aunt Nellie: I am 9 years old. I am in the fourth grade. I like to go to school. I have two brothers and two sisters. We have one cow, one calf and 30 chickens. We live in a log house, five and one-half miles from Northport. The snow is one and a half feet deep here. I live across the Columbia river and we have to cross on the ferry every time we go to town.—Maxine Orr, Northport, Wash.

Goes to School in Union Valley.

Dear Aunt Nellie: I am 10 years old. My birthday is May 6. I am in the fifth grade. I go to school in Union Valley. I have three brothers and three sisters. My brothers' names are Ivan, age 18; John, age 5; Arthur, age 1, but nearly 2. My sisters' are Helen, age 16; Thelma, age 14; and Lola, age 8.—Irene Wesley, Chelan, Wash.



Wants to Be Happy All Her Life.

Dear Aunt Nellie: I wish I could be happy all my life. It is George Washington's birthday today. We have always had a holiday on Washington's birthday. I have a Mr. Tick Mouse Two-Minute Bedtime story baak. My little niece can write good. She sent mama a valentine. This is the first time I have written to the Corner.—Ethel Hawk, Tekoa, Wash.

The Washington Farmer is glad to announce the receipt of letters for the "Children's Corner" from the following during the last week: Stella Shaw, Louis T. Talbot, Georgia Buck, Esther Carslin, Robert Carter, Nellie E. Dorman, Madelyn Hughes, Letha Dwire, Evelyn Willey, Leonard Clark, Willie Righetti, Beatrice Hett, Arthur Elphick, Brenda Ward, Ronald Ward, Edna Light, Carrie Fjerlie, Theresa Wilson, Nellie Neil, Nellie Salvage, Violet Howell, Mary Limmet, John Carslin, Richard Lefors.

Mending Table Linen

When mending table linen it is well to have threads drawn from a piece of similar damask. If this can not be obtained use soft linen floss. A needle as fine as will hold the thread should be used. Fine long-eyed needles are best.

The following directions for mending table linen are given in a bulletin on sewing, prepared by Margaret Sweet of the Idaho State university:

For Very Small Hole.

For ordinary mending use plain weave as for mending stockings. Trim off only those threads which are badly frayed. Without making knot, begin weaving in the warp threads. Be sure to weave well beyond the worn place and place threads close together. The shape of the darned place should be irregular as such an edge wears better. Weave woof regularly over and under the warp threads, crossing them at right angles.

For Larger Hole.

For larger hole, place piece of damask as near like the table linen to be mended as possible. Baste in place and proceed as for darning woolen cloth in Bulletin 1, making stitches as in illustration below.

Davis Holstein Sale

Eighty-Six Animals Average $340 Per Head

By D. G. SUTHERLAND

The sale of H. C. Davis, held on his ranch at Granger, Wash., April 2, closes out one of the best herds of Holsteins in the United States. The day was ideal, the stock was all in fine breeding and producing condition.

A spectacular scene was enacted when No. 11 Model Bonnie Echo was led into the sale ring by Miss Opal Davis, the cow being the daughter's individual property. The affection shown for her owner, the gentleness with which she responded to every touch was almost pathetic. When the cow was knocked down at $525 the crowd seemed to think the auctioneer had stopped too soon.

It was a surprise to many when they learned that Emmons Blaine of Lake Mills, Wis., a grandson of the late James G. Blaine, had come out here specially to purchase the Davis-Marks herd bull Mutual Fobes Longfield De Kol, which he did at private sale, and bought 10 of his daughters at public sale. Mr. Blaine remarked that in the purchase of this bull and his daughters he had secured the nearest his ideal of the Holstein breed obtainable in the United States. This bull is very closely related to the cow which leads the world today as a butter producer.

Wisconsin, Idaho, Oregon and California breeders attended the sale and took home with them some of the Holstein herd that has helped to make the Yakima valley famous as a breeding place for "blacks and whites."

A total of 86 head was sold for $29,260, or a little better than $340 a head. When it is considered that 50 of the females sold were less than 15 months old, and 40 of these were born last August, or since that time, the record of the sale is even better than the average per head appears.

The heaviest buyer of the sale was Emmons Blaine of Lake Mills, Wis., who took home a carload of heifers, headed by the Davis-Marks herd bull Mutual Fobes Longfield De Kol. The top price of his auction purchases was a calf dropped last August, for which he paid $880.

J. von Herberg of Seattle topped the sale by the purchase of May Lilu Hylaard Segis II., a 3-year-old heifer, for $1000. It was the August calf of this heifer that cost Mr. Blaine $800. J. P. Iverson and Owen Duffy of the California state hospital purchased six heifers and Mr. Higdon of Tulare, Cal., took home nine to add to the 10 he purchased here from Davis & Marks about a year ago.

Auctioneers were George A. Gue, Harry Cranke, George Gochnour and Edward Hobson. George A. Gue did the selling.

Cows and Heifers.

Bessie Queen Fayne, 277579, born May 1, 1914, Emmons Blaine, Lake Mills, Wis.; $405.

Bessie Johanna Hill Black, 247861, born January 14, 1914, California State hospital, Napa, Cal.; $410.

Bessie Johanna Lucy, 247863, born January 20, 1914, W. J. Higdon, Tulare, Cal.; $350.

Bessie Johanna Fayne, 285177, born July 8, 1914, W. J. Higdon; $390.

Bessie Pearl Fayne, 244104, born June 19, 1913, J. von Herberg, Seattle; $375.

Bessie Fayne Rose, 247800, born May 5, 1914, George A. Gue, North Yakima, Wash.; $330.

Bessie Fokes Sunnyside, 244106, born June 9, 1913, W. J. Higdon; $625.

Heifer calf, daughter of Bessie Fobes Sunnyside, 244106, Harry Paul, Mabton, Wash.; $280.

Miss Model Fobes, 337334, born May 23, 1916, E. T. Robinson, Toppenish, Wash.; $165.

Corona Clothilde De Kol Girl II., 128314, born February 1, 1906, Dr. A. L. Pierce, Granger, Wash.; $225.

Tritomia Hengerveld Fobes, 247955, born November 9, 1913, W. F. Lovejoy, Sandpoint, Idaho; $290.

Miss Bonnie Fobes, 289045, born August 18, 1914, Emmons Blaine; $500.

Heifer calf of Miss Bonnie Tobes, born September 5, 1916, Emmons Blaine; $310.

Victoria De Kol Model, 168000, born December 9, 1911, George A. Gue; $505.

Heifer calf of Victoria De Kol Model, Morehead & Hobson, Outlook, Wash.; $290.

Model De Kol Bessie, 287825, born February 21, 1915, William McKinney, Naches, Wash.; $425.

Model Pietye Twisk, 287826, born July 18, 1915, Herman Younge, Centralia, Wash.; $355.

Model Terpstra Pontiac, 287827, born May 18, 1915, John L. Smith, Spokane, Wash.; $125.

Terpstra Pontiac, 226085, born February 19, 1913, John L. Smith; $825.

Spofford Pontiac, 226087, born May 2, 1913, W. J. Higdon; $750.

Heifer calf of Model Terpstra Pontiac, 287827, born the morning of the sale, Dr. L. G. Stickney, Toppenish, Wash.; $160.

Bull calf, sire, Sir Bessie Fobes Tritornia, 125,864; dam, Princess Wynima Pontiac, 226,086, C. J. Corson; $110.

At the close of the Davis sale it was announced that all purchasers and members of the association were invited, as the guests of Mr. Davis, to a banquet to be served at the Commercial hotel. There were about 50 present. After a bountiful spread was served W. K. Newell, president of the association, called the meeting to order. The report of the secretary was read and approved.

Holstein Association.

The Northwest Holstein Breeders' association held its annual meeting at North Yakima April 2.

Mr. Gue called attention to what had been accomplished in the last year. For the first time in its history the association had secured representation on the board of the national association. He considered Mr. Bishop of Chimacum, Wash., a good representative and well able to take care of the interests of the northwest.

The following officers were elected for the ensuing year::

President, John L. Smith, Spokane.

Vice president, Alex Todd, North Yakima.

Secretary and treasurer, E. B. Marks, Ahtanum.

The entire executive board was reelected for another year.

H. C. Dempsay, who has had charge of the work of the cow-testing association of the Sunnyside district, leaves with a carload of Holsteins purchased at the Davis sale by Emmons Blaine of Lake Mills, Wis. While there Mr. Dempsay expects to visit other herds and study the work of other testing associations.

Inland Empire Milk Producers.

The Inland Empire Diary Producers' association met at Spokane Saturday and reported a total enrolment of 150.

"The problem of producing milk at the prices now paid by distributors was threshed out and it was unanimously agreed that a price of at least 20 cents a gallon, f. o. b. Spokane, for the entire year would be necessary before dairy cows would return a reasonable interest of 6 or 7 per cent on the investment," said P. E. Smead, the secretary.

The bylaws and constitution were changed to admit as honorary members men who are interested in dairying, but who are also members of the large distributing companies. These members will have a seat and the privilege of the floor, but not a vote.

Farm Sold for $40,000.

The Fred Johnson place of 320 acres of wheat land north of Freewater, Ore., has been sold to J. McEwen of Athena for $40,000.

Market Pork Without Shrinage.

It is estimated that a 320-pound hog will shrink 20 pounds on the way to market if conveyed in the old-fashioned springless farm wagon. Part of the loss is due to the jolting and vibration and the rest to loss of time on the road. With hogs quoted close to the $15 mark, this loss amounts to considerable on a good-sized load—particularly as at least part of the shrinkage is avoidable.

Roy Hickman of Colfax, Wash., points out one of the ways of remedying the trouble. Mr. Hickman has a three-and-a-half-ton G. M. C. truck, originally fitted with a flat wheat body. Having 30 hogs to market, this eastern Washington farmer put rack sides on the truck, loaded the hogs, and had them in Colfax before any of the precious pork had time to take unto itself wings.

In addition to this use in conveying live stock to market, the new arrangement enables Mr. Hickman to use his truck for hauling large loads of hay, machinery, etc., and, in fact, to do all the hauling on his large farm.

Certified Seed Potatoes.

B. W. Cooney, Klickitat county agricultural agent, makes the timely suggestion that "there is a wide open field in the state of Washington for the grower or growers that will enlighten themselves on the various factors governing the production of certified seed potatoes. There is one factor if overlooked that will defeat any grower, and that is the disease end of the business. Every man growing potatoes should acquaint himself with all the diseases affecting the potato in the state, so that he may be able to detect its coming to his field, and put into practice any control that has been found effective. This seems to me to be the corner stone on which rests the future of our state as a potato producing one."

A Silo or Two.

Donald Urquhart of Wilson Creek, in Grant county, has become interested in the matter of putting up one or two silos for his cattle. He is milking 25 or 30 head at present and intends to increase his herd. He has been talking with County Agriculturist Reaugh as to what is the best crop to grow for silage.

Stock on Forest Reserves.

L. E. McDaniels, deputy supervisor of the Okanogan forest reserve, declares that that reserve produces the best grass fatted stock in the state. "It is nothing uncommon for us to turn off 1400-pound steers from the range," he said. There are 10 cattle and horse associations and one sheep associtaion on that reserve.

Cows on Honor Roll.

Numerous farmers in the Hannaford valley, north of Centralia, have enrolled in the Chehalis District Cow Testing association, according to the February report of B. C. Wright, official tester of the association. The report also shows that of the 30 cows on the honor roll of the association last month, those fed ensilage produced milk at an average cost for feed of 70 cents per 100 pounds of milk, while the cost for feed for those not fed ensilage was $1.05 for each 100 pounds of milk.

BROCCOLI CROP SOLD
Flat Price Per Acre Offered.

Contracts to purchase the broccoli raised in the season of 1917-1918 on 300 acres of Lane county (Ore.) farm lands have been signed by H. A. Rasor and W. T. Langlois of the Western Broccoli association, which recently was organized in Eugene. The crop is expected to reach 60,000 crates. Nearly 50 growers have signed with the company to care for the crop under the direction of the broccoli association, and to turn over the crop to the company in the winter of 1917-1918.

Wealth in Fresh Manure.

With the absolute lack of potash in all commercial fertilizers due to the war, and the high price of nitrogen, there is the most imperative need for not only the saving, but the proper handling of all barnyard manure. On account of the potash it contains, manure may be estimated to be worth double its normal value. We have now had two full years of no potash in commercial fertilizers—examine the fertilizer sacks and see if you can find any potash in the analysis—and no soil on which fertilizer is used at all can stand two years of potash robbing. Therefore a load of barnyard manure, which is ordinarily worth $1 or $1.50, according to locality, is now worth $2 or $3.

Grain and Produce Markets

Chicago Grain.

CHICAGO, April 7.—Frantic buying and price advances of unparalleled rapidity and extent resulted in the wheat market today from a government crop report that was characterized as the most sensational ever issued in the United States. The closing was wild and in some instances at the zenith quotations reached, with the market as a whole 6c to 14½c net higher. May, $2.12 to $2.12¼, and July, $1.88 to to $1.88⅝. Corn gained 3⅝c to 5½c; oats, 1⅜c to 3⅜@3½c and provisions 32c to $1.65.

Cash Quotations.

CHICAGO, April 7.—Wheat—No. 2 red, nominal; No. 3 red, $2.24⅜; No. 2 and No. 3 hard, nominal.

Corn—No. 2 and No. 3 yellow, nominal; No. 4 yellow, $1.34.

Oats—No. 3 white, 68⅜@69c; standard, 69½@70¼.

Rye—No. 2, nominal.

Barley, $1.10@1.40.

Timothy, $4@5.75; clover, $12@18.

Pork, $37.15; lard, $21.20; ribs, $19.30 @19.65.

Pacific Northwest Grain.

PORTLAND, Ore., April 7.—Wheat strong; trading light; all records smashed; spot bids, 3 to 5 cents higher; bluestem, $1.86; fortyfold, $1.82; club, $1.81; red Russian, $1.78.

Oats advanced, $2.75 ton; No. 1 white feed, $45.25; new record.

Barley, $1.25 ton higher; No. 1 feed, $44.50, record.

SEATTLE, April 7.—Wheat—Bluestem, $1.90; turkey red, $1.90; fortyfold, $1.85; club, $1.85; fife, $1.85; red Russian, $1.81.

Barley, $44 per ton.

TACOMA, April 7.—Wheat—Bluestem, $1.85@1.86; fortyfold, $1.82; club and fife, $1.80; red Russian, $1.75.

WILBUR, Wash., April 7.—Bluestem, $1.70; club, $1.65. Oats, $37. Barley, $37. Flour is $2.35 per 50-pound sack.

WALLA WALLA, April 7.—Club wheat, $1.66; bluestem, $1.72. Barley, $40.

Minneapolis Grain.

MINNEAPOLIS, Minn., April 7.—Wheat prices shot upward on the bullish government report, corn and oats strengthening in sympathy. Wheat receipts, 714 cars, compared with 515 a year ago.

Wheat—May opened, $2.01 to $2.01 1-2; high, $2.10 7-8; low, $2.00 3-8; closed, $2.10 7-8.

July wheat opened, $1.96 to $1.96 1-2; high, $2.07 7-8; low, $1.95 1-2; closed, $2.07 7-8 to $2.07 3-4.

Cash, No. 2 hard, $2.24 7-8@2.26 7-8; No. 1 northern, $2.18 7-8@2.20 7-8; to arrive, $2.12 7-8; No. 2 northern, $2.14 7-8@2.20; No. 3 wheat, $2.10@2.14 7-8; No. 2 durum, $2.28 1-2@2.31; No. 2 hard, Montana, $2.17 7-8@2.19 7-8.

Corn—No. 3 yellow, $1.28 1-2@1.31.

Oats—No. 3 white, 65@67c.

Flax—$2.14@3.17.

Flour—Fancy patents advanced 40 cents, quoted at $10.80; first clears, advanced 40 cents, quoted at $9.40; second clears, advanced 50 cents, quoted at $[illegible]. Shipments, 131,501 barrels.

Barley—$1.02@1.31.

Rye—$1.69@1.70.

Bran—37@38.

Portland Market.

PORTLAND, Ore., April 7.—The scarcity of butter is responsible for another advance in city price quotations. The rise is thought to be only temporary and the buying price of butter fat has not been changed. A government order for 50,000 pounds was on the market, but could not be filled.

Oats—No. 1, $45.25@45.75 per ton.

Corn—Whole, $59; cracked, $60 per ton.

Millstuffs—Bran, $34 per ton; shorts, $37.

Barley—No. 1 feed, $44.50; brewing, nominal; rolled, $47@48.

Hay—Buying prices: Timothy, eastern Oregon, $20@22; alfalfa, $17@20; grain, $13@15.

Eggs—Oregon ranch, case count, 29@29½c per dozen; candled, 31c.

Poultry—Hens, 21@22c; ducks, 22@23c; turkeys, live, 20@22c; dressed, 23@28c; geese, 12@14c.

Butter—City creamery, prints, 44@45c per pound; cubes, 41c.

Cheese—Oregon triplets, 23c; young Americas, 25c.

Dressed meats—Veal, 14 1-2@15c; pork, 18c.

Hops—1916 crop, 3@7c per pound.

Potatoes—Oregon, jobbing price, $3.25@3.50.

Onions—Jobbing prices: No. 1, $12.50.

Wool—Eastern Oregon, fine, 30@35c; coarse, 40c; valley, 40c.

Beans—Oregon small white, 10c; California small white, 13c; large white, 12½c per pound.

Hides—Salted hides (25 lbs. and up), 18c, salted stags (50 lbs. and up), 14c; green and salted kip (15 lbs. to 25 lbs.), 18c; green and salted calfskins (up to 15 lbs.), 27@28c; green hides (25 lbs. and up), 17c; green stags (50 lbs. and up), 13c; dry hides, 30c; dry salt hides, 25c; dry horse hides, $1@2; salt horse hides, $3@5.

Spokane Market.

The wholesale prices quoted in the list below are not the prices paid to producers or shippers; they are those charged by the Spokane commission houses to the retail trade for standard produce. The prices quoted for live stock, however, are the prices given to the producer:

Potatoes—Potatoes, $3@3.25 cwt; sweet potatoes, $6.

Seed Potatoes—Early Ohios, 3½c lb; Early Rose, 3½c lb; white potatoes, 3½c lb; Early Six Weeks, 5c lb.

Apples—Washington apples, cooking, 75c @$1; eating, $1@1.25; Wageners, $1 box; Rome Beauties, $1@1.40 box; Winesaps, $1.75@2 box; Y. N. Pippins, $1.75@2 box.

Butter—Blanchard cartons, 44c lb; Medo-Maid, 44c lb; Cascade, 44c lb; Gold Coin, 37c lb; Gold Leaf, 44c lb; Jersey Belle, 43c lb; Attalia, 44c lb; Diadem, 44c lb; Jersey, 40c lb.

Cheese—Wisconsin full cream, twins, 28c; triplets, 22½c; Hazelwood full cream, triplets, 23c lb; Hazelwood Young America, 24c lb; Wisconsin limburger, 28@29c lb; brick cheese, 28c lb; domestic Swiss, 33c lb; Young Americas, 25c lb.

Eggs—Fresh local ranch eggs, $9@9.50 case.

Live Poultry—Hens, 18@19c lb; old roosters, 10c lb; ducks, 13c lb; turkeys, 20@25c lb; geese, 11c lb.

Dress Poultry—Hens, 22c lb; springers, 21c; old roosters, 13c; ducks, 16c; geese, 14c; turkeys, 28c.

Hide Quotations.

Green cows and steers—25 lbs and up, 17½c; salted cured, 20c; green bulls and stags, 13c; salted cured, 16c; kip, 15 lbs. to 25 lbs., 23c; calf skins up to 15 lbs; 31c; dry flint hides, 34c; dry salted, 27c; dry calf skins, under seven lbs., 42c; dry sheep pelts, full wooled, 22@26c; dry shearlings, 10 to 75c each; green horse hides, $3 to $5 each; dry horse hides, $1 to $2.50 each.

Seattle Market.

SEATTLE, April 7.—With approximately 125 carloads of potatoes in storage here between the visible supply and actual famine, wholesalers are endeavoring to distribute holdings in such a way that they will reach the farthest in order to make it unnecessary for the government to commandeer foodstuffs or take any action toward fixing prices, a contingency that many now fear.

The market has once more touched the high point of last winter at $80@85 for Yakima gems and $70@75 for locals, with the visible supply reduced probably 50 per cent. Buyers of Chicago, Milwaukee and Minneapolis are actively in the market, although their bids of $60 for locals and $65 for Yakima gems have fallen on deaf ears. It is estimated that there is less than a dozen carloads of Yakima potatoes here and for these quotations have been withdrawn.

BUYING PRICES.

Unless otherwise stated the following prices are fixed upon a jobbing basis and are average prices obtained in reports of transactions by jobbers.

The following prices are offered to the producer by the local dealers for delivery in round lots f. o. b. Seattle.

Eggs—Local, 28@29c per dozen.

Poultry—Live hens, fat, over 4 lbs., 20c per lb.; do 3 lbs. and under, 9c; old roosters, 12c per lb; springs 21c; ducks, 20c per lb; squabs, large, 50c per dozen; geese, fat, 16c per lb.

Butter fat, 47c per lb; dairy butter, 30c per lb.

Beef—Buying price: Prime beef steers, 7@8c per lb; cows, fat, 7@8c per lb.

Hogs—Light, 14@15½c per lb; do heavy, 10@12c per lb.

Veal—Fancy light, 13@14c per lb; do heavy, 9@13c per lb.

Hides—Salted, 20c per lb; salt kip, 22c per lb; salted calf, 32c per lb; green hides, 16c per lb; salted bulls, 15c per lb; dry hides (short trim), 36c per lb; dry calf (under 6 lbs.), 40c per lb; bull and dry salts, 4c per lb. less; green bulls, 12c per lb; dry butcher full wool sheep pelts, 25@28c per lb.

Butter, Eggs, Cheese.

SAN FRANCISCO, Cal., April 7.—Butter—Fresh extras, 40c.

Eggs—Extra pullets, 27 1-2c.

ELGIN, Ill., April 7.—Butter, 25 tubs at 44c.

CHICAGO, April 7.—Butter unchanged. Eggs lower; receipts, 17,671 cases; firsts, 29 1-2@30 1-4; ordinary firsts, 28 1-2@29 1-2; at mark, cases included, 28@30c.

Live Stock Quotations.

At Omaha.

OMAHA, April 7.—Hogs—Receipts, 6900. Higher. Heavy, $15.60@15.80; light, $15.25@15.65; pigs, $12.50@15; bulk of sales, $15.45@15.70.

Cattle—Receipts, 300; steady. Native steers, $9.50@12.80; stockers and feeders, $6.75@10.25; calves, $8@12; bulls, stags, etc., $7@9.75.

Sheep—Receipts, 100; steady. Yearlings, $13@13.75; wethers, $11.50@12.75; lambs, $14@15.25.

At Chicago.

CHICAGO, April 7.—Hogs—Receipts, 10,000; strong, mostly 5c above yesterday's average. Bulk, $15.70@15.95; light, $15.05@15.95; mixed, $15.35@16; heavy, $15.25@16; rough, $15.25@15.40; pigs, $11.25@14.75.

Cattle—Receipts, 500; steady. Native beef cattle, $9.35@13.15; stockers and feeders, $7.25@10; cows and heifers, $5.65@11; calves, $9.25@13.75.

Sheep—Receipts, 4000; steady. Wethers, $10.50@13; lambs, $11.75@15.50.

At Portland.

PORTLAND, Ore., April 7.—Hogs—Receipts, 292. Steady. Bulk of packing grades, $14.25@14.40; heavy packing, $14.35@14.50; light packing, $14.20 @14.35; rough heavies, $13@13.50; pigs and skips, $12.75@13; stock hogs, $11.50@12.75.

Cattle—Receipts, 11. Steady. Steers, prime light, $9.50@9.75; prime heavy, $9.35@9.65; good, $8.90@9.25; cows, choice, $8@8.25; medium to good, $7@7.75; ordinary to fair, $6.25@6.75; heifers, $6.50@8.50; bulls, $5@7.25; calves, $6@10.

Sheep—Receipts, none. Steady. Lambs, east of mountains, $13.25@13.50; lambs, valley, $13@13.25; lambs, shorn, $13.75@12.25; prime wethers, $11.50@12; choice ewes, $10.50@11; heavy ewes, $8.75@9.25.

At Seattle.

SEATTLE, April 7.—Receipts: 151 hogs, 16 cattle. Sheep and cattle steady; hogs 10 cents higher.

Hogs—Prime light, $14.65@14.75; medium to choice, $14.50@14.60; smooth heavies, $14@14.25; rough heavies, $13.50@14.75; pigs, under 150 pounds, $10@13.75.

Cattle—Prime steers, $9.75@9.90; medium to choice steers, $9.25@9.50; common to good steers, $6.50@9; best cows and heifers, $8.50@8.75; medium to choice, $8@8.25; common to good, $4@4.75; best bulls, $6.50@7; common to good bulls, $3.50@6; calves, $6.50@10.

Sheep—Prime lambs, $12.50@13.75; good lambs, $12.25@12.50; wethers, $10.25@10.50; ewes, $9.10.

Wool.

BOSTON, April 6.—The Commercial Bulletin will say tomorrow:

"The Boston wool market has been at a standstill since Tuesday, when the trade vountarily suspended all business pending the needs of the federal government in raw wool. Prior to this action speculation in scoured wools, upon the practical certainty of war, had become excited, and prices advanced 5 to 10 cents a pound. Greasy wools did not advance.

"Buying in the west has practically ceased. Manufacturers are well occupied on old contracts and fairly well covered for wool."

Oregon—Eastern No. 1 staple, $1.25 @1.30; eastern clothing, $1.10@1.15; valley, No. 1, 95c@$1.

Portland Wheat.

PORTLAND, Ore., April 7.—Wheat prices were lifted 5 cents at the close of the week in response to the eastern advances caused by the crop report. April bids at the exchange were: Bluestem, $1.86; fortyfold, $1.82; club, $1.81; red Russian, $1.78. There were sales.

The real feature of the market was the bulge in oats Saturday, bids being $2.75 a ton over those of Friday. The big demand from the government is supposed to be the cause of the strength of oats and the fact that stocks in the interior are much reduced. Barley kept pace with the advance in oats.

Flour prices were lifted another 40 cents to the $9.40 basis for patents. Mill feed prices are also climbing.

Crop and Live Stock Report.

A summary of the April crop and live stock report for the state of Washington and for the United States, as compiled by the bureau of crop estimates, and transmitted through the weather bureau, United States department of agriculture, is as follows:

Wheat.

State: Condition April 1, this year, 70 per cent of normal; 10-year average condition figures for April 1, 94 per cent.

United States: Condition April 1, this year, 63.4 per cent; 10-year average April 1 condition, 86.2 per cent.

Rye.

State: Condition April 1, this year, 86 per cent; 10-year average April 1 condition, 97 per cent.

United States: Condition April 1, this year, 86.0 per cent; 10-year average April 1 condition, 89.6 per cent.

Hogs.

State: Losses from disease last year, 1.6 per cent; 10-year average, 1.9 per cent.

United States: Losses from disease last year, 4.87 per cent; 10-year average, 6.78 per cent.

Cattle.

State: Losses from disease last year, 1.5 per cent; 10-year average, 1.6 per cent. Losses from exposure last year, 1.1 per cent; 10-year average, 1.5 per cent.

United States: Losses from disease last year, 1.94 per cent; 10-year average, 2.00 per cent. Losses from exposure last year, 1.45 per cent; 10-year average, 1.44 per cent.

Sheep.

State: Losses from disease last year, 1.3 per cent; 10-year average, 1.8 per cent. Losses from exposure last year, 2.5 per cent; 10-year average, 2.2 per cent.

United States: Losses from disease last year, 2.17 per cent; 10-year average, 2.45 per cent. Losses from exposure last year, 3.28 per cent; 10-year average, 3.06 per cent.

Horses and Mules.

State: Losses from disease last year, 1.5 per cent; 10-year average, 2.1 per cent.

United States: Losses from disease last year, 1.69 per cent; 10-year average, 1.94 per cent.

Prices.

The first price given below is the average on April 1, this year, and the second the average on April 1, last year.

State: Wheat, $1.55 and 84c per bu; corn, $1.05 and $1.03; oats, 59c and 40c; potatoes, $1.63 and 78c; hay, $14.30 and $16 per ton; eggs, 28c and 20c per doz.

United States: Wheat, $1.80 and 98.6c per bu; corn, $1.13 and 70.3c; oats, 62c and 42.0c; potatoes, $2.35 and 97.6c; hay, $13.05 and $11.78 per ton; cotton, 18.0c and 11.5c per lb.; eggs, 26.0c and 17.9c per doz.

Sells Big Farm.

County Commissioner B. T. Manchester of Whitman county, Wash., has sold his large farm of about 900 acres five or six miles south of Colfax to Ed. Reinhard, who owns adjoining land. The purchase price was $80 an acre. The total purchase price was $72,080.

Portland Shorthorn Sale

Good Prices and Satisfied Lot of Buyers

By HORACE ADDIS

The annual Shorthorn sale at the North Portland stockyards, April 3, resulted in good prices and a satisfied lot of buyers. Fifty-one bulls went through the ring for an average price of $248.32, and 33 females for an average of $322.27. The total received for the 84 head was $23,325, or an average of $277.67, about $70 more than the average of last spring's sale.

Top price of $725 was paid for Supreme Goods, just a year old, a very perfect roan that was champion of the previous day's show, consigned by Day & Rothrock. He was bought by Elvin Witham of Corvallis, Ore., a beginner who has started right. Next in price for bulls was Hannah's Pride, another grand young bull, of the Cornett consignment. Mr. Hill of Payette got him and he was one of the best bidders, taking 16 head for a total of $5065. He has recently closed out a grade herd at good figures, and his selections prove that he is starting right in purebreds.

W. O. Minor's two-year-old, Maple's Violet, went at top price for females —$575, to Felzer Bros. of Tangent, Ore., his sweet Topsy Girl going for only $5 less to Dr. Armstrong of Tacoma, Wash., who also took the champion heifer, Lostine 5th, consigned by Day & Rothrock, for $540. Age determined price to a greater degree than usual, bred heifers and cows being much preferred to the younger animals.

W. F. Harding, president of the American Shorthorn association, was present and lent encouragement to the sale, and Colonel Kraschel of Iowa, who was on the block, was efficient, as he always is.

The steady growth in Shorthorn popularity is shown by the prices received at this sale, as well as the one last December. The breeders who sacrificed some of their best animals when the sale was young six years ago are now reaping their reward.

The following is a complete list of consignors, animals sold, buyers and prices paid:

FEMALES.

Consignor, W. O. Minor, Heppner, Ore.
Topsy Girl, born Sept. 25, 1915—Dr. Armstrong, Tacoma, Wash. $575

Northwest Shorthorn Association

In the evening after the sale there was a meeting of the Northwest Shorthorn association. F. W. Harding, secretary of the American Shorthorn association, gave a most interesting talk on Shorthorn conditions in the south and southwest.

O. M. Plummer presented the matter of raising money for the erection of a new coliseum for the Pacific International, and at the meeting $2000 worth of stock was subscribed. Among the subscribers were Day & Rothrock of Spokane, J. B. Cornett of Shedds, Ore.; Frank Brown of Carleton, Ore.; Frank Robertson of Portland, Alex Chalmers of Forest Grove, Ore.; W. J. Townley of Union, Ore.; A. D. Dunn of Wapato, Wash.; T. T. Miller of Los Angeles; the Rural Spirit, the American Shorthorn association, and the Northwest Shorthorn association.

An election of officers was also held and the following elected: President, A. D. Dunn; vice president, F. M. Rothrock; secretary-treasurer, E. J. Foster; directors, Alex Chalmers, Frank Brown, J. H. McCroskey, Joe Turne H. M. Elberg, William Mulhall and Harry Summers.

Eight Carloads of Horses.

During the month of February, Frank Burnett of Pullman, Wash., sold and shipped eight carloads of horses

A Gallon of Gasoline.

The Wall Street Journal names the following wonders which a single gallon of gasoline can accomplish on the farm: It will milk 300 cows, bale four tons of hay, mix 35 cubic yards of cement, move a truck 14 miles, plow three-fifths of an acre or generate enough electricity to illuminate the farmhouse for 30 hours.

Hides, Fur, Wool, Horse Hair, Metal and Rubber. We are the largest dealers in the Inland Empire. Highest markets paid. Prompt returns. Deal with a home firm.

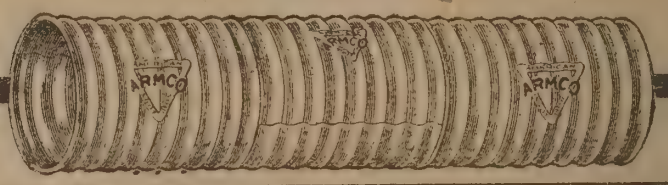
How Old was The Old Oaken Bucket?



THE "iron-bound" bucket that hung in the well was covered with moss but the hoops were always tight and the bale was always secure. Time left its impress on the wood and on the metal but *rust* did not eat through the iron although the bucket was subjected to the severest of exposures. The iron was *pure* iron and pure iron resists rust.

"ARMCO" IRON CORRUGATED CULVERTS

By chemical analysis these are purer iron than were the hoops of the old oaken bucket. Under similar conditions "Armco" Iron should outlast even the old-fashioned iron. Under highways and railroads all over the country, "Armco" Iron Culverts give service like that of the old oaken bucket. They are the only metal culverts that can be counted on to outlast the generation that installs them.

For full information on "Armco" Iron Culverts, Flumes, Sheets, Roofing, and Formed Products, write the manufacturer in your vicinity, or

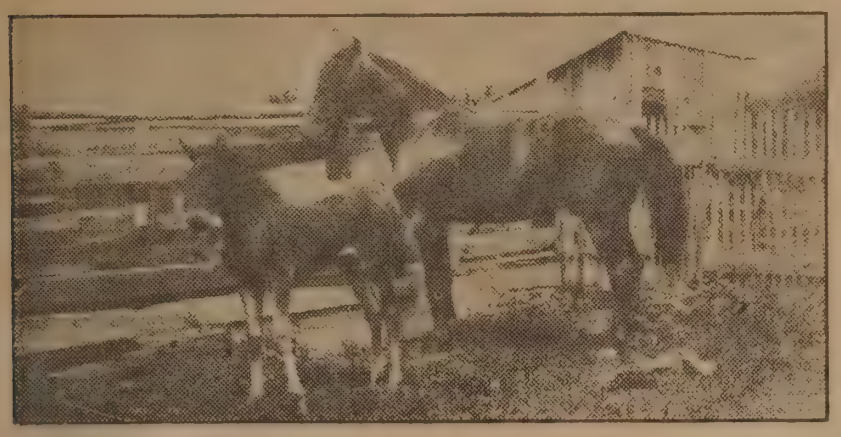
CINCINNATI, OHIO

WE WILL PAY SALARY

to farmer with rig or saddle horse. The publisher of The Washington Farmer wants men to secure and renew subscriptions to this paper in various farming districts throughout the state. We are paying good salaries to those who can do the work and are offering these positions only to farm owners or renters.



We want to hear only from those who will be willing to give our proposition a fair trial for at least a month and who will put in good, hard licks for good pay. For men with these qualifications the opportunity is a splendid one. This work isn't easy; but you can do it and earn a good salary. We give you full instructions and the right kind of help.

You will be able to earn a salary of from $25 to $150 per month or even more, dependent upon the amount of time and effort you can give to the work. Salary check will be sent promptly at the end of each month.

We will not consider an applicant who does not live on a farm and who does not have a rig, saddle horse or automobile. In writing us tell whether married or single, whether you own or rent your place and give the names of two merchants with whom you trade. There isn't any red tape about our proposition, but we must know something about those workers we put on our payroll to receive a monthly salary check.

Give full details in your first letter to The Washington Farmer, Review Building, Spokane, Wash.

Electra Light and First Get

To the Editor: I am sending you a photo of our stallion, Electra Light, and his first get, a little filly. This horse was raised by old Airlight, a 2-minute pacer, and we think him one of the best of his kind in the west. H. H. LITTLE.
Cove, Ore.

Shorthorn Show

Second of Its Kind in the West

By E. L. POTTER.

The Shorthorn show held in Portland April 2 in connection with the sale was the second event of its kind in the west. Only cattle listed in the sale the day following were entered in the show. The prime object of the show was to give the buyer opportunity to look the cattle over carefully before they were brought into the ring and to meet in this manner the very common objection that an auction sale does not afford the buyer sufficient opportunity to carefully examine the animals. A show of this kind also has a very considerable effect in stimulating better cattle.

The classes were very heavy and ranged from seven to 24. Twelve money prizes were offered in each class, but only six ribbons. The prices the day following did not in all cases follow the judging, but then that is to be expected, as there may be many things influencing the price of an animal other than its ability to win in the ring at that exact moment. The champions were in each instance very choice animals, and the champion bull topped the sale and was well deserving of that honor.

List of Awards.

The list of awards follows:

Bulls calved before Sept. 1, 1915—First, Cornett on Hannah's Pride; second, Minor on Lord Golden; third, Gibson Estate on Roan Victor; fourth, Dunn on Lind's Delight; fifth, Dunn on Director; sixth, Witham on Highland Laddie.

Bulls calved after Sept. 1, 1915: First, Day & Rothrock on Supreme Goods; second, Gibson Estate on Ring Glory; third, Day & Rothrock on Crescent Goods; fourth, Day & Rothrock on Royal Hero; fifth, Brown on Imperial Prince; sixth, Day & Rothrock on Royal Goods.

Cows calved before Sept. 1, 1915: First, Dunn on Sincerity; second, Day & Rothrock on Irene 2d; third, Minor on Maple's Violet; fourth, Gibson Estate on Roselawn Flower, fith, Dal & Rothrock on Roxana 3d; sixth, Gibson Estate on Ringleader's Lass.

Cows calves after Sept. 1, 1915: First, Day & Rothrock on Lostine 5th; second, Minor on Topsy Girl; third, Dunn on Fairy's Last; fourth, O. A. C. on Choice Queen; fifth, Cornett on Lady Clifton; sixth, Cornett on Pretty Maid.

Champion bull, Supreme Goods.
Champion female, Lostine 5th.

Outlook for Sheep Business.

State Senator C. L. Hawley of C. L. Hawley & Son, pioneer Lincoln breeder of the Willamette valley, says: "The outlook for the sheep business is splendid. I regard the future as propitious. The Willamette valley will always be the breeding ground for the stud flocks of the range, men who want sires of middle and long wool breeds. The market for wool, as well as for sheep of all kinds, is better than it ever has been. The demand for sheep, especially pure bred sheep, is several times over the supply and prices are higher than ever before. A golden opportunity for the farmers of the Willamette valley is to keep small flocks of sheep on the farm, pure-breds preferably, but good flocks with pure-bred sires will do and all rams can be sold if desired. The wonder is that more of our farmers do not keep small flocks of sheep. Nothing else goes so well with seed clover and it is a very profitable crop.

C. L. Hawley.

BIRMINGHAM SHOW AND SALE.

At the Birmingham show and sale just held in England the general average for the 198 sold was $319.14 as against $258.58 for 152 last year. Some people expected higher prices for the champion and reserve champion bulls, but the general average was in excess of the expectation, particularly after the slackness of the first day, says the London Live Stock Journal. The lower grade bulls sold at a higher range than anticipated. The top price was $3060 for the champion bull as against $2601 last year. Mr. Gill's winning group gave the grand average of $1515.44, and one worthy of the occasion, for we find no previous record where an exhibitor has owned both the champion and reserve champion at this show and sale. Last year the winning group averaged $805.20.

IMPORTS SHORTHORN SIRE.

Day & Rothrock of Sprague, Wash., breeders of Shorthorn cattle, have announced the purchase in Scotland of a high-priced bull to head the herd at their Hercules farm, near Sprague. The animal has been purchased by Leslie Smith of St. Cloud, Wis., who went abroad recently under commission to purchase a number of purebred animals for various producers in this country. The price of the animal coming to the northwest has not been announced.

LOOK THIS UP

The Breeders' Department in this issue contains the names of many prominent live stock breeders. Their offers are worthy your consideration.

In answering advertisements don't fail to mention this paper.

That House of LILLY'S -Pioneer

Side by side with the growth of the pioneer, the settler and the modern farmer has grown the house of LILLY'S. The buildings here only suggest the great size of LILLY'S. They do not show the beehive of industry within, an industry that has pioneered with the pioneer since 1885—an industry that has anticipated the needs of the farmer, the stockman and the poultryman.

Always the question has been "What will your next need be?" Tested seeds, acclimated to western soils and conditions? Yes, the House of LILLY'S has produced them. Calf meal, fresh, sweet and the burden of freight cost removed? LILLY'S has made it. Poultry Foods, insecticides, fertilizers? The House of LILLY'S has industriously, by research, experiment and investment always anticipated the pressing need.

The House of LILLY'S is a House of Quality. When you buy LILLY'S brand you get honest goods, honest service. Let us send you our 1917 annual. Write

Big, Rugged, Two-Fisted Benson Plans to Crystallize Farm Intelligence

E. F. Benson who has just entered upon his duties as the new commissioner of agriculture in the State of Washington

Hogs Once Sold at Two Cents

Now They Are Hard to Find at Fourteen Cents on Foot; Seed Potatoes Command High Prices; Some Wheat Must Be Reseeded.

BRUCE, Adams county, Wash., April 4.—This is a very late spring; very little seeding was done before April 1, farmers are busy and in two weeks all will be in. Rye pastures are showing green and stock looks well. Feed is high. Potatoes are $4.75 per 100 pounds, for seed and a small acreage will be planted. Hogs are scarce and one can hardly realize a hog on foot at 14 cents when we once sold hogs at 2 1-4 cents. The high winds did a good deal of damage and caused some reseeding and a good deal of discouragement. Lands have been offered for $10 to $12 per acre and no deals to date. The roads are nearly impassable in spots because of sand drifts. The railroad track was covered for more than a mile up to four feet in depth and traffic was delayed. The annual picnic was held at Scootnai Springs on Easter Sunday. A community club has been organized at Othello and hopes are entertained that much good may be done. The officers are lice wires. A. O. LEE.

Hay Is $30 Per Ton.

MARIETTA, Whatcom county, Wash., April 7.—Farm labor is generally equal to demands in this community. Wages are on an average going to be about $10 per month higher this year. Dairy farms or farms that handle about 20 cows and raise grain enough to feed them, with a few acres of potatoes would pay to keep a man the year round. Stock is generally looking well, although as yet there has not been much signs of grass; while the winter was not severe, it has been a very long one. Some farmers are still trying to buy hay, but it has been mostly bought up and is very scarce here. Thirty dollars per ton is asked for hay and good straw is bringing $14 per ton.

F. B. MAYHEW.

Roads in Good Condition.

CENTERVILLE, Pacific County, Wash., March 21.—Our farm work here is mostly summer fallow work, as the main crop is winter wheat, with a small proportion of spring crop, and that starts as soon as the ground is in plowing shape. We don't do any fall plowing, as it is generally too dry, but the dry fall usually helps out the harvesting and late threshing. It has been too dry the last two fall seasons to sprout the wheat, so consequently we have a poor condition in winter wheat again this season, with a great deal of wheat to sow over again. It is hard to get the necessary amount of seed spring grain, as we raise principally winter grain. It is still storming here, making a very late season. There has been a complaint of short moisture gathered during the winter weather, but the late rains are helping out. There has not been many warm days so far, so that the fruit trees are not in a very advanced condition yet, with no chance of loss by frost. Help seems to be just fairly well supplied to the ranches, with a demand for all the extra men. Road work is progressing slowly on account of the rainy weather, but are in a good condition, generally, as the drag is used mostly here for leveling up the roads. Some stock men have already moved their stock toward the mountain pasture, which is in a fair condition, but has too much snow at the present time.

CLARENCE A. LESTER.

Rapidly Cutting Lands.

CHEHALIS, Lewis county, Wash., March 30.—Southwestern Washington is a mining, lumbering, and manufacturing country, paying larger wages than farmers and dairymen can stand. There seems to be plenty of men and boys not able or willing to take the risks of mining or working in mills and camps. On dairy farms they have very steady work, good homes and board, and in the long run will lay up on the average far more money than many that get more daily pay. All wages are a little better than in recent years. Lands are rapidly being cut up into small homes on which the family does most of the work; often the man and older sons work in the mills and camps most of the time and the girls, when through school, go to the cities for jobs. A 10-acre garden or fruit place can hire a man, but it takes 100 acres or more, at general farming, to afford a man the year round. Employers could pay far more if men would stay longer and strive more diligently to earn a little more every day for the owner and learn the ways of the place better. L. K. COGSWELL.

To Build Nine Silos.

SOUTH BEND, Pacific County, Wash., March 30.—Farm labor is not equal to the demands in this county. Wages are increasing with the advanced cost of living. All dairy farms that have 15 or more cows on the land employ help the whole year. The weather is cold and the fall crops develop very slowly. Very few have done much spring planting. It has rained continually through the month of March. The rains have been cold, often ending in a light fall of snow. The fruit buds have not been injured. Nine silos will be built this spring—there will be twice as many built this year as were built last year. Hay is increasing in price again due to the cold wet weather which keeps the pasture from growing. In the night of the 27th of March the cheese factory at Menlo owned and operated by the farmers of the vicinity burned. There is some insurance which covered half the loss. Reports are that it will be rebuilt.

MRS. WINNIFRED BUCKINGHAM.

Fall Planting Looks All Right.

LITTLE ROCK, Thurston county, Wash., March 31.—Farm labor is scarce as the mills and logging camps are in need of men and offer higher wages than the farmers can afford to pay. The average farm is only partly cleared and can't pay enough to keep a man the year 'round. It requires from 15 to 40 acres of tillable ground and about the same of pasture land to make it pay to keep a man all-year 'round. This depends on the ability of the employer, the quality of the soil and the success he has in getting the right man. There is a certain class that are either no good in the lumber business or are fraid of the risks that do most of the farm work. As a whole these are second-class farm hands but occasionally a good one is found among them. They do not care to stay long in a place and for that reason are not very efficient. Wages are about the same as usual. It has been cold and rainy which has kept back the spring work. Everything is late. Grain sown early in March is just coming up. The fall planting is looking all right. Live stock is in pretty good condition, but will soon show the effect from the raise in hay and grain unless spring comes on before long.

Season Is Backward.

CHIMACUM, Jefferson County, Wash., March 30.—Up to the present date in this part of the county we have been able to get the men needed to do farm work, and so far they have been satisfactory. Wages are about the same as last year this time. The old hands that stay the year around are apparently satisfied, but the new ones are not apt to stay long, only long enough to get enough money to pull out to some other part of the state or Alaska. The average farmer has to milk 20 cows the year around to afford to keep a man steady. The season is very late so far, and a little snow has been on the ground of late, with very cold winds. Live stock is looking good and have come through the winter in good shape.

JOHN VAN TROJEN JR.

Snow Hangs On.

TWISP, Okanogan county, Wash., April 2.—The time varies from March 15 for sowing wheat and oats. Farm work is started in a few days after the snow is gone. The snow is hanging on longer than usual this spring. We won't get much plowing and seeding done before April 15 this year. Some orchardists are pruning, but unless the one that is pruning has good warm foot wear, pruning soon becomes a very disagreeable task while the snow is on. Very little summer fallowing is done here. Fall seeding should be done in September. Grain harvesting is usually done from July 14 to the first of August. Alfalfa harvest begins about June 20 and again about August 1. Spring work is two weeks later than usual. Fall sown grain doesn't look very promising.

GEORGE LA RUE.

Cold Nights Hold Snow.

METHOW, Okanogan County, Wash., March 30.—Spring plowing generally starts about the second week of April and seeding the same time. Fall plowing when it rains, generally the first week in September, and seeding the same time. Summer fallowing is done the second week in May to the first of June; alfalfa haying starts the second week in June, grain haying the first week in July, wheat or oats for grain the first to the middle of August. I can't say this spring is coming in normal. February was much warmer than March. Cold nights seem to hold the snow from thawing. Farm work, I believe, will be normal providing it warms up in two weeks. As the fall wheat is still under the snow it is impossible to say how it will come out.

CHARLES GRANT.

Horses in Demand.

SUNSET, King county, Wash., March 25.—No farm work has been done here yet, but the snow is all off from the south slopes and mostly from the north slopes except where drifted. Under present weather conditions there will be very little farming done before the second week in April. Hay is getting scarce and very little offered at $20 per ton. There is very little fear here of having to reseed the fall sown land. A large portion of the water is going into the ground as the snow melts, which will insure a good crop if it can be put in in time. There is a good demand for horses and farm labor. Horses are commanding a good price. Very few hogs are offered for sale here. Prospects are good for fruit. Coal and other fuel is scarce and has been all winter. Last year's wheat is practically all sold. LUTHER GILES.

What Is the State Department of Agriculture?

E. F. Benson, Its Newly Appointed Head, Issues a Statement to the Readers of the Farmer

The Washington state department of agriculture is an important part of the state government. It probably has more to do with the largest development of the state than any other department of the state government, yet how many of our readers are fully informed as to the work of the state department of agriculture, how it is organized, how it works and what are its chief purposes?

The following informative article was prepared by the newly appointed state commissioner of agriculture, E. F. Benson, at the request of the Washington Farmer, and will be read with much interest.

To the Readers of The Washington Farmer: Complying with your request that I say something now regarding the work of the state department of agriculture, I beg to remind you that one's knowledge of his work the first day he takes it up is necessarily limited.

I hope to find in it the possibilities that some of my enthusiastic friends prophesy. While the field is large, there are many other workers in it. The state college is the great force engaged in educational and demonstration work, and also directing the county agricultural agents wherever they may be employed and supervising the new bureau of markets created by the last legislature.

The work of my department is very largely of a regulatory nature, much of it being police work. The dairy and live stock division—working to eradicate tuberculosis in the dairy herds and to prevent diseased and impure milk being sold to an unsuspecting public; and working to improve creamery conditions and to establish, as much as possible, a uniform quality of creamery products.

The horticultural division—working to prevent the importation of dreaded insect pests and plant diseases from other states and foreign countries; and to combat the pests we already have; and working to maintain the established standard of horticultural products that the public may be protected against diseases, and that the grower may get paid a price that standard goods should command.

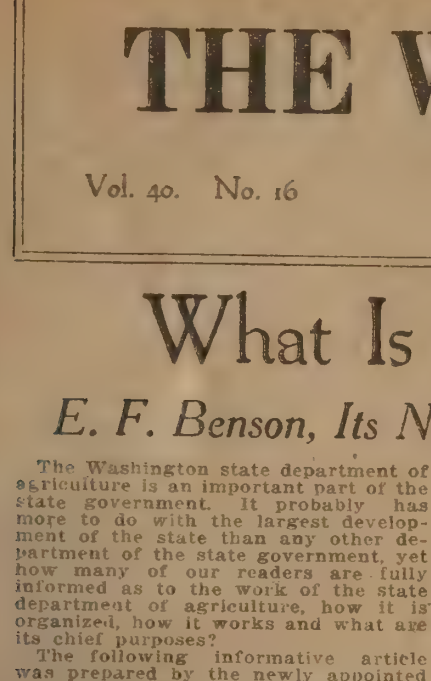
The division of food, feeds, fertilizers, drugs, oils and bakery inspection—doing its work in the interest of public health and safety in the discovery and destruction of impure and poisonous foods, and maintaining the standards of such commodities as come within its jurisdiction.

The seed-testing division—testing such seeds as merchants and farmers send in for the purpose, sampling seeds offered for sale in the various markets of the state in an effort to eradicate noxious weeds and maintaining a high standard on all seeds sold within the state.

While these are the duties prescribed by law, there are many incidental services of great importance.

Some of the horticultural inspectors find it absolutely necessary to conduct special research work, as well as investigational work, in order to render most efficient service in their different districts. The varying climatic and soil conditions in this state make it practically impossible for the state college to do all of this, hence the overlapping of effort seems justifiable at this time. This division gathers information as to orchard area and probable fruit output, and this has been found to be the most accurate data obtainable, and is of much benefit in connection with the problems of marketing the fruit.

The dairy and live stock inspectors can do something more than test the cows and examine the creameries. If they can gather data as to number of cows, quantity of milk and cream output and the cost and profits, and offer suggestions in some places that may be helpful, gather information as to where good milk cows are for sale, and give that to others who are anxious to buy such cows, they are serving the public by so doing.



All this information will be available for the bureau of markets soon to be established. This work also laps over, and may be some duplication of the work of the county agricultural agents, and since less than half of the counties have agricultural agents, and since their work is confined to the counties in which they are located, while the work of this department extends over the entire state, it would seem that the only sensible course to pursue would be a generous cooperation by and with the county agents, county assessors and the farmers themselves. Unless the farmers understand that this work is primarily in their interest, that they help to pay for it any way, and ought to get everything possible out of it, the work can not be as successful as it should be.

Some of this work might be resented in some places, but it is hoped that any person who can offer suggestions that would improve the efficiency of this department and make it of more value to the farmers of this state, will not hesitate to come forward with their suggestions. We are more than anxious to consider the ideas and the viewpoint of the other fellow, and if our suggestions may in some cases seem unwarranted and of the butinski order, we will simply plead good intentions and try to make ourselves better understood.

If by honest team work on the part of every employe in this department, and by earnest effort on our part to cooperate with every other agency in the development and betterment of agricultural conditions in this state, something may be added to the pleasure and profit of the farmers and their families, and if I may be of some assistance in this work it will me the greatest pleasure to render such a service.

E. F. Benson

Washington Portraits No. 11.

R. V. Peringer.

The ambition of R. V. Peringer of Belmont, a prominent farmer of Whitman county, is to introduce as rapidly as practicable nitrogen producing crops in rotations, and live stock, believing that by so doing he will raise more grain and also add appreciable profits from the side issues. Mr. Peringer, with his parents, moved to Umatilla county, Oregon, from Seattle, when he was 10 years of age. He began immediately to do regular team work going through every job common to the wheat farm. He worked his way through Whitman college, graduating in 1908. He came directly to the Palouse country to take charge of 2000 acres rented from Whitman college, and has since bought 1280 acres of that land.

The next in the series of Washington portraits will be that of Arthur R. Brown of Centerville, and will be given in next week's issue of The Washington Farmer.

E. F. Benson, the Man

Washington State Commissioner of Agriculture

E. F. Benson, the recently appointed commissioner of agriculture for the state of Washington, was born at Swan's Island, Maine, February 2, 1861. He has been a resident of this state since March, 1883. His first work was at Cheney, then the county seat of Spokane county, where he was employed by the law firm of Nash, Andrews & Stout. He was a graduate of the Boston University Law school in 1881, and had been admitted to the Boston bar, but the lure of the land in the new west took him into the Big Bend country, where he used his preemption and timber culture rights near the present town of Creston.

In the fall of 1884, he was elected probate judge of Lincoln county, serving one term, the county seat then being at Sprague.

In the spring of 1887 he took up a homestead in the northern part of the county, a few miles north of Sherman postoffice. When the town of Wilbur was started, in 1888, he moved there and engaged in the real estate business, but continued to operate his ranch near Creston and run a small bunch of cattle and a few horses. During the severe winter of 1889 and 1890, he ran out of feed buying prairie hay and weeds shipped in from North Dakota at $35 a ton. This enabled him to bring his stock through, but by the time they could be turned out on bunch grass, he was broke.

In 1891, he moved to North Yakima to sell lands under the Sunnyside canal for Paul Schulze, then head of the Northern Pacific land department in the west, and the chief promotor of that irrigation system. His enthusiasm for those irrigation lands, which made him a successful land agent, naturally drew him into the farming game and he has continued to own and operate farm lands in the Yakima valley ever since.

A dull real estate business and farming operations during the panic years of 1893-94-95, left him broke again, and in '95, he went to work for the Northern Pacific Railway company as land examiner under Thomas Cooper, western land agent. Land sales were at a very low ebb and most real estate men either went broke or engaged in some other business. The Northern Pacific railway system of leasing its land grant ownership was introduced at this time and approximately 2,000,000 acres were leased in this state, Mr. Benson doing the field work, interesting the stock men in the importance of controlling their ranges and arranging for such range divisions as would be fair and businesslike to the company and to the stock men.

In 1899, the Prosser Falls Land company, an irrigation pumping plant, was sold at receiver's sale. A plant that had cost $160,000 was to be sold for at least enough to pay an indebtedness of $8000 resulting from a four years' receivership. Mr. Benson induced Mr. Levi Ankeny to put up the money and they bought it on a partnership basis, Mr. Ankeny furnishing the money, and Mr. Benson the experience.

In 1902 he left the railway employ

President Summons Farmers to War Needs

Urges Mobilization of Industrial Life of Country for Its Very Real Part in World Conflict

President Wilson, besides calling the army and the navy to arms in defense of human liberty and human rights, has issued a formal appeal to the industrial life of the country to mobilize for its very real part in the world war. His formal appeal follows:

"My fellow countrymen:

"The entrance of our beloved country into the grim and terrible war for democracy and human rights which has shaken the world creates so many problems of national life and action which call for immediate consideration and settlement that I hope you will permit me to address to you a few words of earnest counsel and appeal with regard to them.

"We are rapidly putting our navy upon an effective war footing and are about to create and equip a great army, but these are the simplest parts of the great task to which we have addressed ourselves. There is not a single selfish element, so far as I can see, in the cause we are fighting for. We are fighting for what we believe and wish to be the rights of mankind and for the future peace and security of the world. To do this great thing worthily and successfully we must devote ourselves to the service without regard to profit or material advantage and with an energy and intelligence that will rise to the level of the enterprise itself. We must realize to the full power how great the task is and how many things, how many kinds and elements of capacity and service and self-sacrifice it involves.

"These, then are the things we must do and do well, besides fighting—the things without which mere fighting would be fruitless:

"We must not only supply abundant food for ourselves and for our armies and our seamen, but also for a large part of the nations with whom we have now made common cause, in whose support and by whose sides we shall be fighting.

"We must supply ships by the hundreds out of our shipyards to carry to the other side of the sea, submarines or no submarines, what will every day be needed there, and abundant materials out of our fields and our mines and our factories with which not only to clothe and equip our own forces on land and sea, but also to clothe and support the people for whom the gallant fellows under arms can no longer work: to help clothe and equip the armies with which we are cooperating in Europe and to keep the looms and manufactories there in raw materials; coal to keep the fires going in ships at sea and in the furnaces of hundreds of factories across the sea: steel out of which to make arms and ammunition, rail here and there; rails for wornout railroads back of the fighting fronts; locomotives and rolling stock to take the place of those every day going to pieces; mules, horses, cattle for labor and for military service; everything with which the people of England and France and Italy and Russia have usually supplied themselves, but can not now afford the men, the materials or the machinery to make.

"It is evident to every thinking man that our industries, in farms, in shipyards, in the mines, in the factories, must be made more prolific and more efficient than ever, and that they must be more economically managed and better adapted to the particular requirements of our task than they have been; and what I want to say is that the men and the women who devote their thought and their energy to these things will be serving the country and conducting the fight for peace and freedom just as truly and just as effectively as the men on the battlefield or in the trenches.

"The industrial forces of the country, men and women alike, will be a great national, a great international service army—a notable and honored host engaged in the service of the nation and the world, the efficient friends and saviours of freemen everywhere. Thousands, nay, hundreds of thousands of men otherwise liable to military service will of right and of necessity be excused from that service and assigned to the fundamental, sustaining work of the fields and of the factories and mines and they will be as much part of the great patriotic forces of the nation as the man under fire.

"I take the liberty, therefore, of addressing this word to the farmers of the country and to all who work on the farms: The supreme need of our own nation and of the nations with which we are cooperating is an abundance of supplies, and especially of foodstuffs. The importance of an adequate food supply, especially for the present year, is superlative. Without abundant food, alike for the armies and the peoples now at war, the whole great enterprise upon which we have embarked will break down and fail.

"The world's food reserves are low. Not only during the present emergency but for some time after peace shall have come, both our own people and a large proportion of the people of Europe must rely upon the harvests in America. Upon the farmers of this country, therefore, in large measure, rests the fate of the war and the fate of the nations. May the nation not count upon them to omit no step that will increase the production of their land, that will bring about the most effectual cooperation in the sale and distribution of their food products? The time is short. It is of the most imperative importance that everything possible be done, and done immediately, to make sure of large harvests. I call upon young men and old alike, and upon the ablebodied boys of the land to accept and act upon this duty—to turn in hosts to the farms and make certain that no pains and no labor is lacking in this great matter.

"The government of the United States and the governments of the several states stand ready to cooperate. They will do everything possible to assist farmers in securing an adequate supply of seed, an adequate force of laborers when they are most needed at harvest time, and the means of expediting shipments of fertilizers and farm machinery, as well as of the crops themselves when harvested. The course of trade shall be as unhampered as it is possible to make it and there shall be no unwarranted manipulation of the nation's food supply by those who handle it on its way to the consumer. This is our opportunity to demonstrate the efficiency of the great democracy and we shall not fail short of it.

"This let me say to the middle men of every sort, whether they are handling our foodstuffs or our raw materials of manufacture, or the products of our mills and factories:

"The eyes of the country will be especially upon you. This is your opportunity for signal service, efficient and disinterested. The country expects you, as it expects all others, to forego unusual profits, to organize and expedite shipments of supplies of every kind, but especially of food, with an eye to the service you are rendering and in the spirit of those who enlist in the ranks, for their people, not for themselves. I shall confidently expect you to deserve and win the confidence of people of every sort and station.

"To the men who run the railroads of the country, whether they be managers or operative employes, let me say that the railroads are the arteries of the nation's life and that upon them rests the immense responsibility of seeing to it that those arteries suffer no obstruction of any kind, no inefficiency or slackened power. To the merchant let me suggest the motto: 'small profits and quick service,' and to the ship bulider the thought that the life of the war depends upon him. The food and the war supplies must be carried across the seas no matter how many ships are sent to the bottom. The places of those that go down must be supplied and supplied at once.

"Let me suggest also that every one who creates or cultivates a garden helps and helps greatly to solve the problem of the feeding of the nations; and that every housewife who practices strict economy puts herself in the ranks of those who serve the nation. This is the time for America to correct her unpardonable fault of wastefulness and extravagance.

"Let every man and every woman assume the duty of careful, provident use and expenditure as a public duty, and an act of patriotism which no one can now expect ever to be excused or forgiven for ignoring.

"In the hope that this statement of the needs of the nation and of the world in this hour of supreme crisis may stimulate those to whom it comes and remind all who need reminder of the solemn duties of a time such as the world has never seen before, I beg that all editors and publishers everywhere will give as prominent publication and as wide circulation as possible to this appeal. I venture to suggest also to all advertising agencies that they would perhaps render a very substantial and timely service to the country if they would give it widespread repetition. And I hope that clergymen will not think the theme of it an unworthy or inappropriate subject of comment and homily from their pulpits.

"The supreme test of the nation has come. We must all speak, act and serve together!"

"WOODROW WILSON."

Enormous Loans Sought

Farm Loan Bank Is Asked for Many Millions

By N. W. DURHAM, Chairman Spokane Committee on Federal Loan Bank.

While the officials of the Spokane federal bank can not set a definite date when they will begin the making of mortgage loans, they hope to open for business within 30 days.

"Some of the banks in the east were started ahead of us," said Secretary George W. Jewett, "but I do not know of any of the banks actually making loans. We are making every effort to get to actual results as soon as possible."

"The incorporation of all of these associations that have been organized and are being organized to borrow money from this bank will take time," said President Daniel G. O'Shea. "Once these associations are incorporated they are permanent, and we shall have

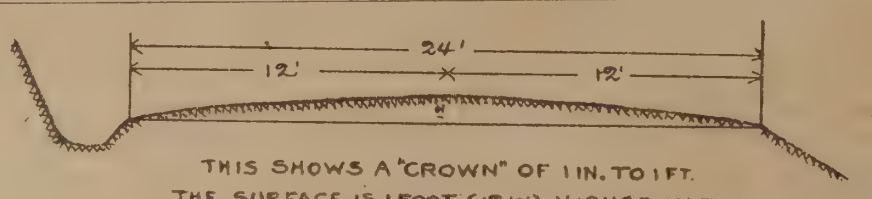
(Continued on page fifteen.)

The A B C of Road Construction

"Crown" Should Be About One Inch Rise to the Foot

By FRANK W. GUILBERT,

Chairman Executive Committee, Washington State Good Roads Association.



There are a number of fundamentals having to do with road construction and maintenance which are well worth naming and describing. The reasons certain things are done, such as shaping up the surface, giving pitch to the ditches, placing culverts and riprap, etc., will be taken up and discussed in several papers being prepared upon the different subjects. All fundamentals have to do with two principles which must be taken into consideration in all road work. These are drainage and elimination of excessive grades, or hills. Drainage is, of course, the most important thing to be considered.

We often hear persons who have to do with road matters use the term "the crown of the road." The assumption is that every one knows what that means. As a matter of fact a large percentage of people do not know what is being referred to when some of these simple designations are used and it will be the purpose of these articles to define, as simply as possible, these commonly used words so that the readers of this paper will understand what they mean.

The "crown" is the difference in height between the edges of the surface of the road and the center of the road. On ordinary earth roads the crown should be about one inch rise to one foot of distance from the edge to the center. If the surface of the road is 16 feet wide from edge to edge, the center of the road should be eight inches higher than the edge. If a road is surfaced with some hard, compact material the crown need not be so high. On a concrete road, as example, the crown is used as low as one-fourth inch to each foot of width.

On earth roads the crown should be greater on hills than on the level. The reason for this is to get the water to the sides of the road as quickly as possible so that it will not start down the road surface towards the bottom of the hill and wash it out. Of course the purpose of making the road higher in the middle than at the sides is to get the water to the side ditches quickly.

The only road which does not need to be crowned is one of sand. Moisture improves a sand road.

Announcement of Contest Winners Delayed by Tie for the Second Place.

Two persons are tied for second place in the dot puzzle contest and no announcement of the winners will be made until the tie has been broken. A second tie-breaking problem has been sent to the two tied contestants with the stipulation that their solutions are to be returned to the contest editor not later than April 24, as shown by the postmark on their envelopes.

Horses Sell Well

At Spokane Stock Yards Auction

With W. H. Ralph of Spokane wielding the hammer, over 100 horses were sold at auction last week at the Spokane Union stockyards, the sale being one of a series held at the yards every 20 or 30 days.

In numbers buyers were few, but on the whole a fair average price was received for the stuff offered. The best prices were paid by farmers seeking good heavy work horses. Work teams sold all the way from $375 to $567, George Smith paying the latter price for a team of 6-year-old mares consigned by J. R. Hindshaw. Norton Morrison of Fairfield bought a team of mares at $445.

H. W. Raymond of Rosalia paid $430 for a 6-year-old team of grays, consigned by E. S. Sweet of Grangeville, Idaho, while Mr. Morrison also bought a team—a gray and a black, 7 and 9 years old—from Mr. Sweet for $425. I. J. Davis, buyer from Miles City, Mont., paid $425 for a splendid team of bays consigned by Frank Pentecost of Seattle, while Wesley Hannan of Spokane paid the same price for a team of mares consigned by J. R. Hindshaw, Spokane. Mr. Davis bought two other teams of gray mares from Mr. Pentecost, paying $400 for one and $417.50 for the other, and one mixed team for $395. Myers of Buckeye, Wash., paid $575 for a heavy team consigned by J. Richardson of Colfax. Single animals, both horses and mares, brought anywhere from $100 to $245. Four mules were offered by Mr. Richardson, but no bid was made.

Among the principal horsemen offering stuff for sale were I. J. Davis, Miles City, Mont.; Wesley Hannan, A. J. Reed and J. B. McGinn, Spokane; E. S. Sweet, Grangeville, Idaho; B. Bartholomew, Deep Creek; J. Richardson, Colfax, and C. P. Myers of Buckeye.

Nearly all these men were also buyers.

Kegley Resorts to Childish Defense

Grossly Misuses the State Grange News to Boost Himself for Reelection

"Certain papers have tried to give the impression that some of the grange leaders lent their influence to induce members of our order to purchase stock in the Northwestern General Trading company when it was not flourishing. In the trial of the five men who were interested in that company there was nothing brought out to show that the company was not flourishing at the time the recommendation was given."

The foregoing quotation is from the editorial page of the Agricultural Grange News, the personal organ of C. B. Kegley, master of the state grange of Washington, who is now using its columns to boost himself for reelection. Mr. Kegley's name appeares at the head of the editorial page as an "associate editor," but the fact is well known that he is its editor in chief, dictating its policies and directing what it shall and shall not say.

Mr. Kegley is now misusing the Grange News, which is supported by the money of members of the grange, to excuse the swindling operations of the gang of financial pirates who plundered the farmers of the Pacific northwest out of hundreds of thousands of dollars of hard-earned savings.

If he and his personal organ were doing their duty, they would be helping The Washington Farmer to warn the grange members and other farmers against such predatory concerns as the Northwestern General Trading company. They would be commending us for the fight we are making to protect the farmers of this section.

The quotation from the Grange News is a bald falsehood. The five men who were ringleaders in this gigantic swindle stand convicted of crime in the United States court. After a long and fair trial, where they were defended by able counsel, 12 jurors found them guilty.

The record of that trial proves beyond all question that the Northwestern General Trading company was never in a flourishing business condition. It was unsound and a losing venture when Mr. Kegley gave it this indorsement.

> Patrons of Washington:
> Your executive committee have made a personal investigation of the resources and liabilities, methods of business and quality of merchandise of the Northwestern General Trading company. We are satisfied that it is on a sound financial and cooperative basis, and through the proposed plan of a distributing center with each subordinate grange, and the active cooperation of the patrons, can be made to fill the need of the wholesale supply house for the grange members.
> Executive committee Washington State grange.
> C. B. KEGLEY.
> J. O. WING.
> J. T. COMPTON.

Mr. Kegley declared to the members of the grange that he had made "a personal investigation" of this fraudulent concern and found it on a "sound financial and cooperative basis," and fortified with that statement the stock salesmen of the company went out and sold the worthless stock to farmers.

But when Mr. Kegley was on the witness stand in the United States court he was asked this question by United States District Attorney Garrecht:

"Did you examine the books when you were at the Trading company's store for two or three days?"

"It was impossible," replied Mr. Kegley. "We simply took the reports of the accountant, Wilson, Mr. Lawrence and Mr. Delivuk." The accountant, Wilson, and Mr. Lawrence were on the payroll of the swindling concern.

"Did Lawrence tell you of their stock sales commissions?"

"No, I already knew that myself."

"You knew of the rate of commission paid?"

"Yes, I knew they paid 20 and 25 per cent."

"Did you know how much had been paid on commissions?"

The witness had forgotten.

"Did you know how much was due on notes and whether the same was a collectable asset?"

"The sum due was then reported and the notes were said to be good."

"Did you know that 75 per cent of the notes were past due?"

"No."

"They did not tell you that?"

"No."

At the trial the fact was established beyond contradiction that the North western General Trading company never was on a sound basis. It was losing money continuously, and in the faces of those losses the stock was boosted up by stages from $20 to $75.

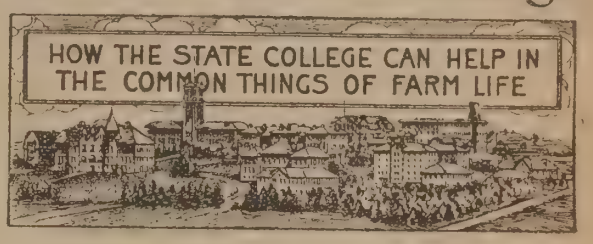
For instance, when Olin C. Fowler, one of the five defendants, was on the witness stand he was asked this question by Judge Van Fleet, before whom the case was tried:

"Did the books at any time show that the company was doing business at a profit?"

"Really, I never believed we were on a paying basis," admitted the witness.

Witness House, the government's expert investigator, who went all through the tangled affairs of the company, was asked this question when on the stand:

"Mr. House, what was the condition of the company as regards indebtedness June 30, 1912?"



"It owed $15,000 on money borrowed and on merchandise bought, and on July 1, 1912, the stock was raised to $75 a share; the company operated at a loss that year," was the answer.

Witness testified that the company also operated at a loss in 1911.

Yet, in the face of that record, Mr. Kegley's personal organ has the audacity to say that at the trial "there was nothing brought out to show that the company was not flourishing at the time the recommendation was given" by him.

Learn to Use the State College

Make It Plain Just What You Want Experts to Tell You. Give Details.

In the series of articles on the ways in which the college can help the farmer, which I will now bring to a close, I have dealt with the different phases of farm life and have referred, very incidentally, to the instructional, the experimental and the extension functions of the state college. That you may use the college more advantageously in your work on the farm I want to emphasize these three very distinct functions.

First, there is the college proper. That is the buildings, shops, laboratories, barns, etc., here at Pullman, with the faculty of instruction, the library, the apparatus, the live stock, the tools and machinery for doing the different kinds of work. The college of instruction has its several departments. Those relating to your work include the departments of agriculture, horticulture and veterinary science, engineering and architecture. Closely akin is the department of home economics. Besides these there are various other departments, such as science, language, etc. There is also a department of elementary science, very practical, in which youths who have not completed high school may study in a practical way. This department of instruction ordinarily called "the college" is for your sons and daughters and yourself—if you are not too old to learn.

Not all things which the agriculturist should know are taught by the department of agriculture. For this great science rests on more fundamental sciences—chemistry, botany or plant life, entomology or insect life, physics, etc., without which we would be blind leaders of the blind. This great division of the institution—the instructional—is mainly for the farmers' sons and daughters who can attend for one or more years. But the short winter courses are for fathers and mothers as well as the sons and daughters, and happy it would be if every winter one or more of the family should spend from one to six weeks at the college and carry back into the home and on the farm, messages there received.

Then there is the experiment station. In more senses than one this is the most fundamental of the three grand divisions of the institution. It is constantly engaged in the investigation of important problems of the farm of the more fundamental sort and has already throughout the United States laid broad and deep the basis of agricultural science. You should receive all of the bulletins which relate to your kind of farming and should look to it as a sympathetic friend and helper.

The third division of the institution is the extension department. It is the business of this division to carry to the farm homes the gospel of the new agriculture. It will, in time, be a very great department. At its head is a director. At the head of one of the subdivisions is a state leader and under his direction are a county agriculturist, one in every county that will receive him and cooperate in the work. Then there are half a dozen or more state-wide leaders—each a specialist in his line—who will go into every county to aid with the work. Then there is a division for the boys' and girls' club work, with its canning clubs and pig clubs and crop clubs and its thousands of boys and girls organized and directed in the intelligent study of agriculture. Then there is the division of farm management, gathering data and advising locally. Then there are the dairy specialists, with their cow-testing associations, and their propaganda for good dairying. Then there is the division of publication with its vast quantities of free printed matter of a helpful character. It is a vast, beneficent organization for the betterment of every phase of farm life.

All of them taken together we call "The State College," and when we speak of it we mean not one of the buildings, but all combined—a trinity in unity under one head, guided by one governing board, animated by a single purpose, viz., the advancement of the industries of life and the betterment of the industrial classes.

E. A. Bryan

Reorganize Experiment Station

Director Cardiff Will Retire Within Short Time

Announcement has been made by the board of regents of the state college at Pullman that Dr. Ira D. Cardiff, director of the college experiement station, will sever his conection with the institution within a few weeks, and that another man will be appointed to fill the vacancy. The position has been offered to W. J. Spillman, head of the bureau of farm management of the U. S. department of agriculture, and who was for several years professor of agriculture at Pullman. Professor Spillman organized the department of which he is now head.

The board of regents declined to state the exact reasons for the retirement of Director Cardiff, but it is known that harmony between the experiemnt station and other departments of the agricultural college was imperfect under his administration.

Following a long meeting of the board of regents in Spokane, at which meeting the departure of Dr. Cardiff was determined upon, President W. M. Pease of the board said that "full cooperation has not been evidenced between the experiment station, the department of agriculture and the extension service of the college. Today is the time for full cooperation and the highest efficiency in the campaign for agricultural preparedness. There should also be full cooperation between the college and the agricultural organizations of the state."

State Is Active

In Furtherance of Preparedness

In accordance with the proclamation issued some time ago by Governor Ernest Lister urging united effort looking toward increased farm crops this season, meetings were called generally throughout the state last Saturday and organizations perfected.

Wide-spread interest was manifested throughout the state in the proposal to increase crop acreage, plant all vacant lands to some food articles and practice the greatest economy in the use and handling of foodstuffs during the war into which this country has been drawn.

The organizations have been drawn up so as to reach into nearly all communities of the state, both town and farming districts. Committees in many instances were appointed to carry the organizations and their work further.

The movement in this state is in accord with a nationwide movement looking toward maximum production of footstuffs to meet the unprecedented demands brought about by the world war.

Enrolment Blank for

THE PATRIOTIC LEGION OF WASHINGTON

Membership Open to Men, Women and Children.

I am a loyal and patriotic American. I most earnestly desire to do my share in helping to defend the honor of my country in time of war. I therefore request enrolment as a member of THE PATRIOTIC LEGION of WASHINGTON and pledge myself to the work of increasing our nation's food supply during the war into which our country has been plunged.

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unusued portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction, and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

State Grange Should Find Fit Leader to Replace Kegley

The assertion of C. B. Kegley's personal organ, that the Farmer is trying to "dictate whom the patrons of Washington shall elect as master" is wholly without foundation of fact, as our readers well know.

Equally false is its further assertion that this journal is striking at the members of the grange when it prints the facts—facts proved in the United States court—regarding Mr. Kegley's indorsement of the swindling Northwestern General Trading company.

The bared record of that deplorable transaction proves beyond question that Mr. Kegley is unfit for leadership of the grange of Washington. Instead of lending his influence to the swindling gang that buncoed the farmers of the Pacific northwest out of hundreds of thousands of dollars he should have thrown his counsel and influence against them. Instead of attacking the Farmer for its exposure of the dishonest methods of a disreputable concern, he should be commending it and using his personal organ to guard the public against similar pitfalls.

Mr. Kegley is laboring under the delusion that he is the grange, and its large membership has no one capable of serving it as master. The fact is he has proved his unfitness for that high and responsible office. The fact is that the grange has scores of capable, earnest men who are better qualified than he to direct its activities and stand guard over the welfare of its members. His plea that "there are certain papers that lose no chance to strike a blow at the grange through our leaders" is childish.

Boys and Girls as Money Makers

During the year 1916 the boys and girls of the state of Washington who were members of pig clubs, garden clubs, potato clubs, canning clubs, apple clubs and the like, under the leadership of the boys' and girls' club work organization, produced things with a market value of about $18,000.

Eighteen thousand dollars is a lot of money, and the report of the work in Washington indicates just how practical from the money standpoint the club work may be made, and just how great a part the boys and girls can play in earning money for their own needs.

This year affords another opportunity, an opportunity even greater than before. This year there is a nationwide movement looking toward increased production of food stuffs to supply the needs of war time. Prices are now high, and there is apparently no probability that they will be low at any time this season, though they may not remain abnormally high.

Every boy and girl of school age should produce something. Every one should have a potato patch, a garden, a pig, a berry patch or should be a member of a canning club, or sewing club or something by means of which something actually worth while could be grown or made.

Fathers and mothers should inspire their children to take up work of this kind. They should provide the ground or the "capital" for the enterprise, and should supervise the work and help make it worth while. Money considerations alone are sufficient to warrant the undertaking. But the value to the boy or girl in the form of appreciation of values, appreciation of nature, respect for toil and toilers, self confidence and self reliance is even greater.

This Is No Time for Luxury

If the present war is to result in good to the world, one element of that good will be the lesson of simple living and efficieney.

Germany is renowned for the simple, practical living of her people, and for her efficiency in production, and she alone of all the nations of the world was ready for the war that has come. She has battled against half the world with startling success because of this practical efficiency. Her enemies, if they are to succeed, must learn and apply her lessons.

Today our own country is entering upon the war that may last one year or several years. Our country has long nestled comfortably in the lap of luxury, but the hour to arouse ourselves is at hand. America must arise in all the power of her greatness, must shake off her love of creature comforts and play a part worthy of the Pilgrim fathers and colonists of 1776.

Simplicity is power; luxury is weakness. America must return to the simple life. She must produce necessities in abundance as never before. She must apply her resources to useful purposes. She can not win against enemy nations unless her latent and scattered powers are developed and unified.

Efficiency must become the watchword of the hour. America's every resource must be made available. Practical usefulness must be the measure of value. Nothing should be wasted on luxury.

That man or woman who produces more of life's necessities and dedicates them to the use of the nation in this trying time is as true a patriot as the young man who marches off to the trenches or the young woman who goes to the battlefield with the hospital corps. This is our opportunity not only to join in the world-wide battle for human rights and a world solidarity built on that principle, but to re-establish in this country an appreciation of service rather than show, of rugged enterprise rather than ease, of simplicity rather than luxury.

Ancestry of Plants.

The gardener plants his seed. Already the factor of heredity lies behind, for the parents of that seed, the variety and the strain, have imparted to it certain characteristics which not all the hoeing or the spraying in the universe can greatly modify. We do not sufficiently consider this matter of ancestry or heredity in planting; the dairyman is beginning to realize that the productive possibilities of his cows are to a large extent born with them, and the poultryman seeks by line breeding and other highly technical processes to get back of his flock the momentum of generations past; but the farmer still considers that wheat is wheat and corn is corn, no matter what its ancestry. Just as surely as sunshine and shadow, however, a time is coming when men will plant only seed of known and approved ancestry. We must have purebred seeds, just as we must have purebred live stock.

Washington Gleanings

A $20,000 cheese factory is to be erected at Toppenish.

Harry M. Bieberstein of Portland has opened the N. C. Hall cheese factory at Ridgefield.

Early estimates of the fall wheat crop in the Walla Walla country are for a 70 per cent crop.

According to President William Ford of the Whatcom county Poultry association, more than 1,000,000 chicks will be hatched in the county this spring.

A new warehouse is assured for the Kennewick District Fruit Growers' association at Kennewick, and facilities will be provided at Vista for packing and shipping.

Reports from the Yakima valley state that flockmasters are having good success with their sheep this spring. Lambing is well along in the valley and the losses have been small.

Peter Oliver of North Yakima has sold his sheep range of 4880 acres and 2270 sheep to W. A. McGuffie. This is one of the largest sheep deals that have been made in that vicinity this year.

The Winlock Cooperative creamery has awarded a contract for the construction of an addition to its plant. The creamery company will spend about $2200 in building and equipping the new structure.

Committees have been appointed to arrange for a big strawberry festival at Rochester in the midst of the season. It is proposed to make the festival an advertisement of the resources of that locality.

The Lewis county commissioners have begun to gravel the road between Tono and Centralia. Thurston county commissioners will start graveling the road between Tono and Tenino as soon as it is in proper condition.

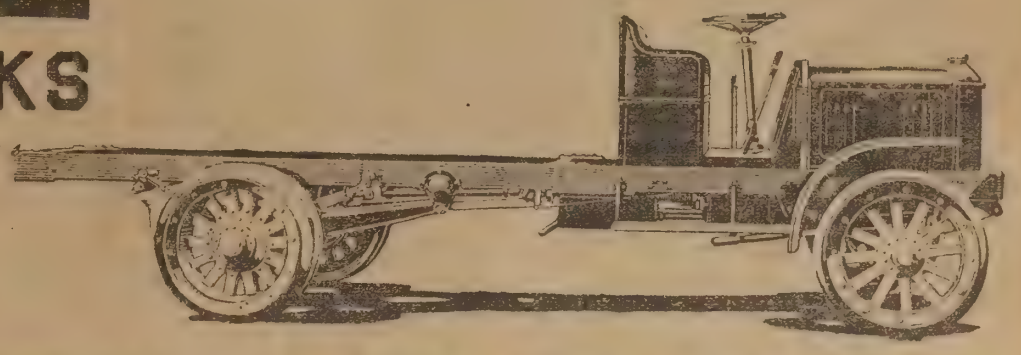
Representatives of the Spokane Chamber of Commerce are soliciting business men for $40,000, Spokane's share of the $250,000 capital stock of the company being organized by W. H. Paulhamus to take the fruit canneries in the state and build a cannery in Spokane.

Snohomish county will receive $65,000, less 7 1-2 per cent, from the state highway appropriation made by the last legislature. State Highway Commissioner Allen will use this amount to construct a new bridge at Silvana and to build a new road between Silvana and Stanwood.

Peter Kurre and J. L. Murdock of Independence and Monmouth, Ore., have purchased the Kelso creamery from W. O. New. They plan to build a modern fireproof building. In addition to operating a creamery the new owners plan to install a commercial ice plant with a capacity of 10 tons or more a day.

To extend the market for Clarke county prunes the women of Clarke county are to take a hand in putting out a cook book containing many choice recipes, in which Clarke county prunes are to be the chief and prominent ingredient. Mrs. W. B. Burrell is chairman of a special committee to gather recipes.

Constructive National Service



(From the Portland Oregonian.)

There is utility in the plan of the National Woman Suffrage association to set its members to work in promoting the home-garden plan. There are many things that women can do, and will do, to prepare the nation for any emergency, but as has been pointed out heretofore, there are few duties more important than providing a food supply. So, without abating the demand for the ballot, and without diminution of determination to prepare women to exercise the right of suffrage as fast as it may be granted, the association proposes to assume in addition a "new plan of gripping suffragists together for constructive national service," so the formal announcement reads.

Organization is to be complete in every detail. In addition to a "chairman of suffrage agriculture" in each state, there will be an agricultural chairman for each local league. It will be the duty of these officials to enlist women in the special work of feeding the nation. The idea is to induce as many women as possible to take up personally the work of spading, seeding and cultivating. It will be good exercise, all out of doors, and it will serve a good purpose, whether it produces a great quantity of food or not, if it only puts the men and boys on their mettle. It ought to stimulate enterprise and competition, and the home garden is admitted to be greatly needed. This is just the season of the year to begin.

There is serious purpose behind the project and it ought to succeed. The assault on the forces of General High Cost of Living needs only proper preparation and determination to result in victory. The suffragists, with their 2,000,000 members, and recruits coming in every day, ought to be a potent force.

FEDERAL
MOTOR TRUCKS

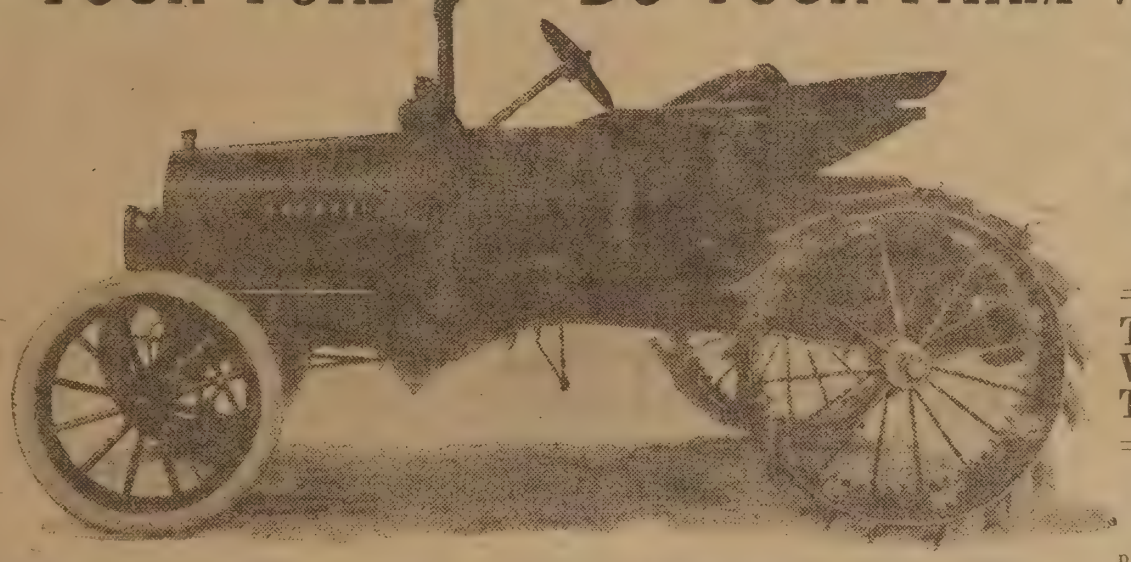
THE FARMER'S BEST FRIEND

The Motor Truck has reduced the distance to market for farmers to less than half the old way of drawing your grain to market by horses.

On the farm of William Reinboldt, seventeen and one-half miles northwest of Davenport, a three and one-half ton **FEDERAL TRUCK** made three round trips each day for ten consecutive days. **Seventy sacks of wheat was the smallest load carried** and eighty sacks the most; the average load was seventy-five sacks of wheat. Forty-five sacks would be a good load for four horses and Mr. Reinboldt informs us that it is impossible to haul a load each day with horses. Three loads a week is as much as the teams will stand. With this illustration it is easy to see the wonderful advantage of the **FEDERAL TRUCK** to do your hauling to and from the railroad.

The **FEDERAL TRUCK** is by far the leading truck in the Inland Empire. There are more **FEDERAL TRUCKS** in Eastern Washington and Northern Idaho than there are of any other two makes of trucks of a capacity of from one and one-half to three and one-half tons. The **FEDERAL COMPANY** has never made a smaller truck than one and one-half tons until this year.

We have and carry in stock in Spokane the largest stock of parts carried by any other two truck dealers in Eastern Washington and Northern Idaho.



The **FEDERAL** is now made in five sizes with prices as follows, F. O. B. Spokane:

One Ton	**$1775.00**
One and one-half Ton	**$2250.00**
Two Ton	**$2475.00**
Three and one-half Ton	**$3200.00**
Five Ton	**$4250.00**

All models except one-ton have the four-speed transmission.

MAKE YOUR FORD DO YOUR FARM WORK

Common Sense, a Monkey Wrench, a Pair of Pliers is all that is Needed to Make the TracFord and Ford Combination

$160
F. O. B. SPOKANE

The Cost of One Horse Will Do the Work of Three Horses.

Nine Times Drawbar Power

A hardened steel roller pinion replaces the regular Ford rear wheels. This roller pinion engages an internal gear on the inside of the TracFord wheel rim. The result is a 9-to-1 reduction, which means that the speed of the Ford car is reduced nine times, thus increasing the power at the drawbar ninefold.

Where the TracFord Excels

The TracFord excels not only for open field work, but also as an ideal orchard tractor as well; the low construction permits the plows, disc, drag and harrow to be run close up to fences and trees. Our dead axle being placed in front of the Ford axle affords a short wheelbase, thus permitting the machine to turn in little space; in fact, the TracFord has a shorter turning radius than the Ford car to which our attachment is attached. All strain and pull is on the attachment. The combination of our attachment to a Ford makes a rigid, solid combination in every respect.

How to Get a Real Tractor for Little Money

Remove the rear wheels, fenders, rear springs and rear running-board and bore a single half-inch hole in the Ford frame on each side about half way of its length, replace the straight water pipe with our circulating pump to the left of the motor, then attach our TracFord equipment and you have a complete tractor, with which you can do everything that four horses will do—pulling plows, manure spreaders, drags, spring-tooth and disc harrows, drills, binders, corn harvesters, road scrapers, mowers, potato diggers and trailers. It is a wonder. The TracFord is not an experiment. In a single hour you can make the change and have a practical and economical tractor, which will cost much less to operate than four horses or mules. The TracFord has amazed us and it will surprise you. It has created a sensation and thousands of farmers are placing orders for the machine. The TracFord is simple in construction and you can easily connect the attachment yourself by following the instructions. The TracFord makes horses too expensive to keep.

Over 6000 TracFords Sold in Three Months

Good, live agents have the opportunity of getting their territory allotted now. Write at once and secure your agency.

Dairy Questions

Are Answered by A. B. Nystrom

We have a taste in our milk that we think comes from our silage, also in the butter. We feed silage after milkings, from a silo in the barn. The silage is whole hay, and has a very strong odor in the barn. It did not taint the milk when we fed it once a day, with roots, but our roots are gone, so we have been feeding the silage twice per day. What can be done to eliminate this trouble?

J. G., Ocosta, Wash.

If it is true that the silage odor in the barn is the cause of your not being able to make good butter, I believe that the only thing you can do is to see that very little silage is left in the manger and that the barn is properly aired. Is it not possible for you to shut off the silo chute so that the odor will not come directly into the barn? Aerating the milk should also help, and, of course, this should be done in a room that is strictly free from odor and dust. You can perhaps make better butter if you will use a starter in ripening your cream. This will tend to sour it in a shorter time, and perhaps the bad odors will not develop so easily.

Use of Rennet and Pepsin.

Will you advise me as far as possible as to the relative merits of a good starter, rennet and pepsin, in making cottage cheese? We have been using a starter entirely, but at times this seems to give a rather sour cheese. Does the use of rennet or pepsin make the cheese indigestible?

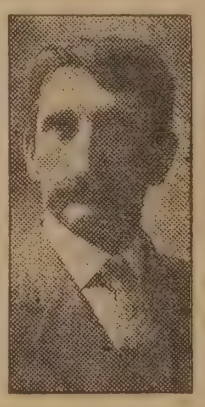
L. J. G., Seattle.

I have never used pepsin in making cottage cheese, but I have made this cheese with starter and with rennet, and I find that while the rennet extract makes a finer grained cheese it usually develops more acid than that obtained without the rennet, and the flavor is not nearly so good. I notice that you are getting a sour cheese by the use of starter, but I think that if you will control your temperatures properly you should be able to make the highest quality of cheese with the starter method.

We prefer putting the starter in at a temperature of 90 to 95 degrees F., and hastening the curdling process. If you ripen at a lower temperature the curd must be a good deal higher acid in order to have the curd firm enough. As soon as it is ready to cut we raise the temperature to about 104 degrees F., keeping the curd constantly stirred during this heating process. Continue stirring slightly for 30 to 40 minutes, when the whey may be drained off. The handling of the curd for the rest of the operation is, of course, the same as in handling any kind of cottage cheese curd.

Rennet cheese is not as digestible as is that which is made from good starter.

Silage the Year Around.



We will have very little or no pasture this summer, and were wondering if it would be advisable to feed ensilage all the year around. We wish to fill the silo with vetch for summer feeding or would field peas be better? About how much ensilage could we expect per acre if sowed with some other grain?

I. M., Moxee City, Wash.

We find that where it is impossible to get any pasture there is a decided advantage and no detrimental effects whatever from feeding ensilage all the year around. Vetch should make a food feed as silage, but I would prefer mixing it with some of the cereals, such as oats or barley, because we find that any legume makes better silage when mixed with one of these cereals. The field peas will make just as good silage as vetch, and while we have not had any experience at this station in making vetch silage, we have made some excellent pea and oat silage, and the kind that you should use would depend somewhat upon the yield that you can get. Our yields have been as high as 10 tons per acre.

Brown Swiss Is Dairy Breed.

Theo. Brugger of Gresham, Ore., breeder of Brown Swiss cattle, and a native of Switzerland, says: "Milk is now being sold from our plant to people who used to patronize saloons; there is no question but that prohibition is a help to the dairy business. Unless I want to predict general conditions, I would not predict the dairy market, as it is contingent on other conditions, but I think it is on the up-grade to stay. Still, a dairyman, to succeed, must raise most of his own feed. Brown Swiss cattle are more and more recognized as a dairy breed. At the same time, farmers now, more than ever, want a cow that has something to her besides milk. Brown Swiss put on flesh easily, are of good size. I sell readily all I can spare, most of the demand coming through my advertisement in the Oregon, Washington and Idaho Farmers, and Brown Swiss breeders all report a good demand. Our outlook is excellent."

Theo. Brugger.

Lead.

Lead was early known to the ancients. Allusions to it in scripture indicate that the Hebrews were well acquainted with its uses. The rocks in the neighborhood of Sinai yielded it in large quantities, and it was found in Egypt.

The OILPULL burns the fuel that is cheapest for you to get

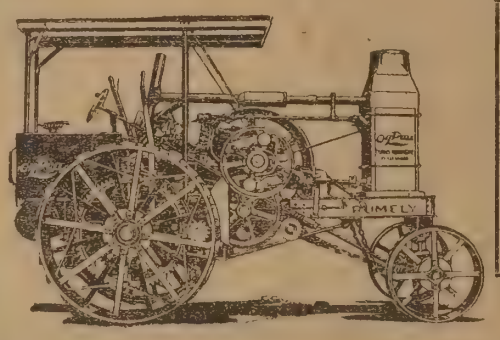
"It is remarkable," said a prominent OilPull owner the other day, "how flexible the Rumely tractor is on the fuel proposition."

This man uses "stove tops" in his OilPull—it's easy to get and the cheapest fuel oil he can buy.

The point we emphasize is that the same ***high degree of efficiency*** is possible whether it is cheaper for you to buy low test stove oil, distillate or kerosene, and our ***written guarantee*** holds good on whatever of these fuels you use.

Other OilPull advantages that Coast owners appreciate are strong, sturdy construction, and protection to all parts, which mean ***low cost of upkeep.*** The air intake extends high up out of the dust.

Oil cooling does away with need of hauling water and prevents the radiator from freezing. A pre-heater and self-starter are recent added features of importance to the prospective tractor owner.



As a threshing engine the OilPull is unequalled, because of its close regulation. The power the OilPull furnishes is smooth and steady regardless of the load—the speed of the engine is ***automatically*** and ***instantaneously*** adjusted to meet every change in the load.

For all around work, draw-bar or belt, money can buy no better value than the OilPull. Two sizes—15-30 and 30-60 horsepower.

Ask our nearest branch for special OilPull catalog.

ADVANCE-RUMELY THRESHER CO.
LA PORTE (*Incorporated*) INDIANA

Address the branch nearest you
Spokane, Wash.—Portland, Ore.

Guarantee

We guarantee the OILPULL tractor to operate successfully *at all loads and under all conditions*, not only on all grades of kerosene permitted by law to be sold in the United States and Canada, but on distillates and fuel oils free from earthy matter.

There's Only One OilPull— Rumely, LaPorte

43½ Bu. Wheat Per Acre

Mr. W. Loat of Manitoba, **writes:** "I had 203 acres of wheat that averaged 43.5 bushels an acre, 17 acres of oats that averaged 65 bushels, 25 acres of barley that averaged 50.5 bushels an acre."

This is only one of thousands of good reports coming from Western Canada. The total value of all farm crops in Manitoba alone for one year was $201,100,000.00. Recently surveyed 160-acre Homesteads are now open to you in this fertile farming section.

160-Acre Farm FREE

Go get a homestead free this year. No matter where you have been farming, a **fortune awaits you** if you **go now** and get one of the **recently surveyed** 160-acre **free homesteads** in the rich districts in Saskatchewan, Alberta, Manitoba and British Columbia, reached by the Canadian Northern Railway, the newest **transcontinental** railroad of America, "The Road to Opportunity." Here you can **make a fortune** at growing **grain, mixed farming, raising cattle, hogs** and **poultry. Easily accessible markets** make conditions and opportunity of settlement excellent now.

Special LOW RATES

Low round-trip home-seekers' fares to Western Canada are in effect every Tuesday, March to November inclusive. Also one-way low-fare for settlers. Even if you have already selected your farm, it will pay you to travel to Western Canada via the Canadian Northern Railroad. **21-year grazing land grants** may be procured at very low cost. **Outdoor feeding** of beef cattle on native grasses bring even **better results** than indoor feeding. **Country roads** are **good** and the public **school system** is well abreast of the times.

Free Book Be sure to write today for a free copy of the "Home-Seekers' and Settlers' Guide," full of complete and authentic information. **A fortune is waiting for you.**

Angora Goats

Mohair, Pasture and Breeding

To the Editor: I should like to find out something about Angora goats. How many pounds of mohair should an Angora goat produce? Is there much difference between the quantity and the quality? How about the price for the mohair, according to length? Is it necessary to have some kind of bushes in the pasture for them? Can they be kept like sheep? At what age can they be bred? How many females should there be to one buck? M. H. Vader, Wash.

Regarding the above questions, William Hislop, professor of animal husbandry at the Washington State college, says:

Professor Charles S. Plum, the well known live stock expert, states "that a registered Angora goat of good breeding will produce a fleece in a year that would weigh from five to six pounds." The average weight of fleece is two and one-half pounds. Inferior animals will shear about one-half of that weight. Both the quality and the quantity of the mohair produced is dependent directly upon two things: First, the breeding and individuality of the goat; second, the manner in which it is maintained. If the goat s poorly cared for at any particular season, the mohair produced will be poor. If the goat is well cared for throughout the entire year, the mohair will be most uniform. The care, feed supply and breeding determine the character and the quality of the fleece.

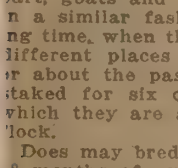
In reference to the price of long mohair, L. Levussove, 1523 Third avenue, New York city, an importer and manufacturer of mohair products, states that he is willing to pay $4 a pound for any part of the fleece where the staple measures 16 inches. He will pay $10 for mohair which measures 24 inches.

It is not necessary to have bushes in any pasture. Of course, it is better to have shade trees. For the most part, goats and sheep can be handled in a similar fashion, except at lambing time, when the goats are staked at different places in the kidding shed or about the pasture. They are kept staked for six or eight weeks, after which they are allowed to follow the flock.

Does may bred for the first time at 18 months of age. Forty to fifty females may be placed with one male, provided all are mature. A young buck will take care of 25 does his first year, with 40 to 50 the second, and 60 being about the maximum, depending upon the charactеd of the country or range and the vigor of the buck. The meat is marketable in any of the big packing centers. Packers buy it readily.

Veterinary

Dr. S. B. Nelson



I have an old mare that has had bad feet for two years. Her hoofs break off in little pieces and she is very lame. I can not work her without irons at all. They break off clear up to the hair line. How can I cure a sweeney on a horse's shoulder? Odessa, Wash. D. G. R.

The trouble that you mention regarding your mare is a very serious one, and it would really take a personal examination to determine specifically what the cause of the brittleness of the hoof is. While you can get services from us in a general way, yet we can not definitely say that the treatment will be successful. However, I would recommend to you first to soak the mare's feet in a 3 per cent solution of creolin for say half of one day. The next day blister her just at the hair line about half to three-quarters of an inch wide, using the following blister: Red iodide of mercury, one part; cantharides, one part; lard, eight parts. After the blister has taken effect, which will take approximately three or four or five days, then begin painting the hoof with one part of lard and one part of pine tar. Heat the lard and mix the tar with it, then paint this just at the hair line morning and evening. It has taken a long time for the mare's feet to get into this condition and it will take a long time for them to get well.

For the sweeny, if it is just a light case, I would recommend rubbing it tolerably hard and picking up the skin once daily, also use her for light work, not for hard work. Sweenied horses generally do better if they are worked a little rather than letting them stand still.

I have a cow that was running with the herd that has not been doing very well. Noticing that she was getting thinner I gave her special care and one morning had to help her up. Now she can not get up at all.—J. L. R. Chesaw, Wash.

I wish you would advise me whether or not the cow is with calf and when you expect her to come fresh. Give details of just what you were feeding her when you noticed her getting thinner. I will be glad to advise you immediately.

Purebred Registered HOLSTEIN CATTLE

A Cornell University test proves the value of a purebred Holstein bull in grading up a herd of ordinary cows. A cow three-quarters Holstein, in 45 weeks, produced 11,693 pounds of milk containing 13 pounds of butterfat, and another three-quarter blood Holstein cow, in 48 weeks, produced 13,574 pounds of milk containing 430 pounds of butterfat. A purebred Holstein bull is one of the most business-like investments a farmer or dairyman can make. There's big money in the big "Black and White" Holsteins.

Chalmers 7-Passenger Touring Car—Price $1350 Detroit

Daily You Will Find

New Charms in This Chalmers

Some cars are noted for their comfort. Others are distinguished for their beauty. Others, for the strength of their chassis. But the Chalmers is an all around car. It has power, comfort, beauty, strength. All four.

Comfort

Picture a 122-inch wheelbase. With a front seat 41 inches wide, and a tonneau that extends from front to rear more than the reach of the average man.

Power

Imagine the engine that weighs 550 pounds. And turns up 45 horse-power. One horse-power for every 12 pounds of weight. Which with a total car weight of 3005 pounds means power ease on the hill. One horse-power for every 67 pounds of car weight.

Strength

Then turn over in your mind the extreme strength there must be in a car that is largely built of drop forgings, chrome nickel steel, Lynite aluminum, crucible nickel steel and carbon steel.

All expensive metals. But placed in the Chalmers chassis for a specific purpose—to make it rugged and strong, though light in weight.

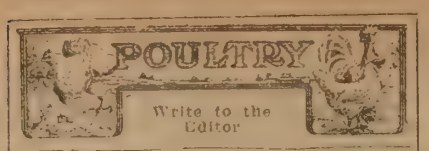
Such quality makes for durability and economy. For a thing made of good materials, always is well made.

Beauty

And a car made of this kind of materials you find everywhere in the Chalmers would be indeed incomplete without beauty and distinctiveness of lines.

See the high narrow radiator, the double cowl, the sweeping body lines, the finish that denotes hours of patience and care. And provides beauty, not for a day, nor for a month, but for years.

All the above means quality. The kind of quality you need in the car you buy and the kind of quality you GET in the Chalmers.



Touring Car, 7-passenger . $1350	Touring Sedan, 7-passenger $1850	Limousine, 7-passenger . $2550

SEASON FOR CHICKS
Brings Up the Same Old Troubles.

By O. G. SMALL.

The season for baby chicks, galore, is not far away, which gives rise to thoughts of the same old troubles of infertile eggs, chicks dying in the shell, hatched weaklings that live only a few days, and epidemics of white diarrhea. Every poultryman dreads these drawbacks, more or less, yet a very effective remedy has always been at hand.

It is safe to say that the increase in constitutional vigor, the more prolific egg yield, the quicker and larger growth of birds, the greater number of vigorous chicks hatched from a given number of eggs, would agreeably surprise the poultry keepers if they would refrain from mating breeders under 18 months old and none that had ever been infected with hereditary diseases, or that were closely related. This practice diligently followed up would almost entirely do away with these adversities, not to mention the fewer germs of tubercular nature that are transmitted from hen to man.

As it is; too many pullets matched late in the season are mated the following spring when 8 to 10 months old, male birds the same, although they can be matured ready for breeding in one year. Too many chicks also come from breeders closely related, or are hatched from the eggs of birds once badly infected with diseases of different character, the weakness of such breeders invariably being shown in the numerous puny specimens of the next generation. No pullet can be as strong as a two-year-old matured hen, all conditions but age being equal, and related blood can not give equal vigor of unrelated blood to the young, nor can breeders seriously weakened by disease sufficiently recover for their eggs, or the chicks hatched from them to escape being tainted with the same infection. Poultry is too short lived and is forced too hard for rapid yield to possess the vitality for quickly recovering from the ravage of infections developed to the last stages.

Strong embryo germs can be weakened or destroyed by eggs being exposed to extreme hot or cold temperatures; both before or after they are placed for incubation, and healthy chicks can be ruined for life through neglect after they are hatched.

Diseases that originate in constitutional weakness of breeders are deeply seated and difficult to cure, but infections starting with a cold or having their inception in filth, lack of proper nourishment, etc., will not seriously affect poultry if taken in time and the disease eradicated before it develops to dangerous proportions. If chicks could have a year and matured fowl at least six months in which to overcome unhealthy conditions before they are forced for yield, there might be fairly good chances for their eggs and young chicks to be healthy.

The conditions under which poultry must thrive are none too sanitary at the best, and in addition, they are subjected to the heavy strain of enforced abnormal yield which taxes even the most vigorous to the limit of their endurance. Much less should they be expected to supply the vitality for producing vigorous young when weakened by imperfect health. Constitutional vigor is the foundation for supporting heavy egg yield and for giving full strength to the succeeding generation, but when this foundation is undermined by disease, it is impossible to obtain thrifty poultry no matter how perfect the development of their other productive qualities.

The key note of good health is, not to breed baby chicks, father and daughter, mother and son, brother and sister, or specimens hopelessly diseased

Tells why chicks die

W. J. Reefer, the poultry expert, 466 Reefer Bldg., Kansas City, Mo., is giving away free a valuable book entitled, "White Diarrhoea and How to Cure it." This book contains scientific facts on white diarrhoea and tells how to prepare a simple home solution that cures this terrible disease over night and actually raises 95 per cent of every hatch. All poultry raisers should certainly write Mr. Reefer for one of these valuable FREE books.

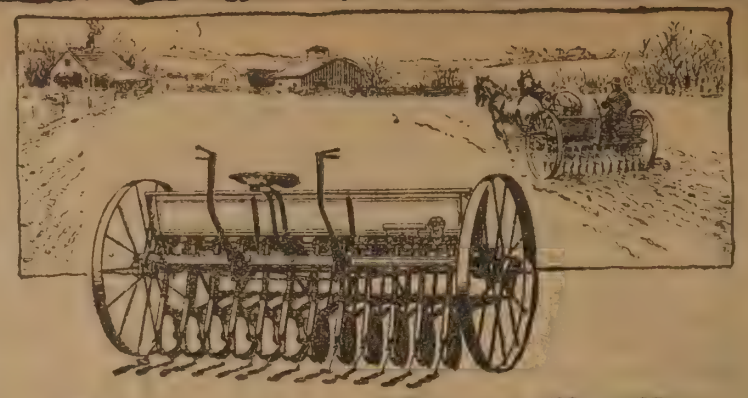
White Diarrhea.

"In regards to the cure of white diarrhea in chickens I have some very good stock and several of them have got it somehow. Please let me know of a cure. J. H.,

"Paradise, Mont."

"There is no known curt for bacillary white diarrhea in chickens. The chick gets the disease from the egg from which it is hatched, the seat of the disease being the ovary of the hen. One diseased chick may infect a whole brooder lot. The infection is spread by the chicks picking up food that has come in contact with the droppings of the infected chick. The only way to be absolutely certain of the disease is to have a bacteriological examination made. You will be able to have this examination made, no doubt, by applying to the state experiment station.

The way to get rid of the disease is to get rid of the hens that lay infected eggs. A test, called the agglutination test, has been found very accurate in finding the infected hens. This test has been described in these columns before. A laboratory examination of a sample of blood shows whether the hen carries the disease or not. The poultryman can then kill off the infected hens. By breeding only from hens that have been tested and found free of the disease there should be no trouble from the disease in the chicks.



J. D.

A Color Question.

"My hens are White Orpingtons, and I have just bought a White Orpington cock and already have two Buff cockerels. There are over 30 hens. I'd like the pure White Orpingtons for next winter. Will the chickens hatched from these eggs show if they are pure White Orpingtons or if they are mixed with the Buffs?"

Buhl, Idaho. B. G. W.

No, it will not be possible to distinguish all the crosses from the pure Whites. White is a dominant color. The progeny of a cross of a pure white chicken with a black or a buff will be white, or a large percenetage of them will be white. As the White and Buff Orpingtons are similar in other characteristics, it will be impossible to tell the crosses from the purebreds in a large majority of cases. J. D.

Remember These Drills

WITH land values where they are today and crop prices at the top notch, it is a very important matter to handle every operation of your seed sowing and crop growing in the way that means getting every dollar of profit. Nowadays every bushel added to your harvest yield counts!

That is why so many careful farmers put the seed in the soil with **Empire Jr., Hoosier,** or **Kentucky drills.** They know these drills have been proving for years that their use means not only more grain per acre, but better prices. Why? Because, deposited at even depth means all up, growing and ripe at the same time, uniformity, no half-ripe, half-green fields, no shriveled kernels in the grain.

These are the drills with the adjustable, fluted force feed that does the most accurate work measuring alfalfa, millet, broom and Kafir corn, small peas, navy beans, etc., as well as the usual small grains. They have a variety of furrow openers, interchangeable to fit your needs.

Your farm—no matter how "different" your soil or fields are—needs an **Empire Jr., Hoosier,** or **Kentucky drill.** This is a good time to know more about them. Send for our drill catalogues and folders. They are profitable reading.

Sulphur

Can Supply Our Orchard Needs

By GRANVILLE LOWTHER.

While I was in the south I learned that in Louisiana, near the gulf of Mexico, at Lake Charles, there is a deposit of sulphur that is perhaps the purest of any known in the world. I had seen samples of the Louisiana sulphur at the world's fair in St. Louis, but had forgotten it until my attention was called to it just a short time ago.

Now, since sulphur is one of the principal ingredients of the lime-sulphur spray, the fact that we have such a deposit in this country is important. Last year we shipped at great expense most of our sulphur used in the orchards from Japan. From the Encyclopedia Americana I copy the following:

"In the free state it occurs native in many parts of the earth, chiefly in volcanic regions, or in connection with gypsum and other allied rocks. The commercial supply comes largely from Sicily, though a considerable quantity is also obtained from the Chilean Andes and from certain parts of Mexico, China, Japan, India and the Philippine islands. The large deposits of southern Utah are now mined, and an extensive bed exists at Lake Charles, Calcasieu Parish, La. Three general methods have been employed for separating sulphur from the stony and earthy impurities with which it is usually associated in nature. (1) The 'ore' containing it may be heated to a temperature high enough to melt the sulphur and permit it to run out at the bottom; or (2) the 'ore' may be heated still more strongly, so as to cause the sulphur to volatilize and pass away in the form of vapor; or (3) the 'ore' may be lixiviated with a fluid (such as carbon disulphide) in which the sulphur is soluble, the sulphur being afterward recovered by evaporating the solvent. The method by melting is almost exclusively used in practice, the volatilization and solution methods being reserved for the subsequent purification of the product as first obtained by melting. The heat required for melting the sulphur in the original ore is obtained by various means. In some regions it is obtained by burning a part of the sulphur itself. This method is wasteful in sulphur, but it can be put into practice very simply, and hence its application does not call for skilled labor. In Nevada and California, and, to a more limited extent, in Italy and Sicily, the 'ore' is heated by steam under a pressure of 70 pounds or more, the yield by this method being considerably greater, though the expense of treatment is also much greater."

THE FARM GARDEN

Article 8.

The Garden Pests

Carelessness in many instances has resulted in the failure of some of the crops of the gardens. Cutworms, cabbage worms, turnip bugs, root maggots and the like must be combatted.

Some time ago Professor A. L. Lovett, crop expert of the Oregon Agricultural college, contributed the following directions for fighting these pests to one of the college's garden bulletins:

Cutworms—There is nothing better for cutworms than the regular poison bran mash—two pounds bran, one ounce paris green, two ounces sugar. Dissolve in water with a tablespoonful of salt. Place a heaping spoonful of this about each plant. Be sure to get the mash sloppy, as it will injure the plants if it packs.

Plant Lice—Use a solution of whale oil soap. Dissolve one pound of the soap in a gallon of boiling water and then dilute.

Leaf-Eating Insects and Worms—Make a dust of flour and paris green, using one part of paris green and 20 parts of the flour. Mix thoroughly and dust over the plants in the early morning, while the dew is on, if possible.

Cabbish and Radish Maggots—These are the small, dirty looking worms that often infest radishes, turnips and cabbage roots. Prepare a powder of five parts sulphur and one part tobacco dust. Treat the seed row with this powder when planting the radish or turnip seed.

Treating surface soil about the growing radishes or turnips with a lime carbolic solution will repel many of the maggots. This solution is prepared as follows: Slack rock lime and dilute to the consistency of whitewash. To one gallon of water add three pints of this whitewash and one tablespoonful of crude acid. Mix well and apply to the surface soil with a sprinkler. Repeat the treatment every 10 days.

When cabbage and cauliflower are set out, cut little tarred paper discs two and one-half inches in diameter with a slit running to the center. Slip over the stem of the plant and work them down flush with the surface soil. Where plants are already infested, use carbolic acid emulsion, prepared as follows: One pint crude carbolic acid, one pound whale oil soap, one gallon water. Dissolve soap in boiling water, remove from fire and add the acid with vigorous stirring. Dilute by using one part of this emulsion to 38 parts of water. Pour about the infested plants.

Delivers Full Power at the Drawbar

La Crosse Happy Farmer Tractor

Every pound of weight is placed where it counts in pounds pull. Simple construction—88 per cent of weight on the two drive wheels. Low in first cost and upkeep, too. Model "A," 8-16 H. P. Light Weight Tractor pulls 2 plows. Made a great 1916 record. **Write for Catalog.**

"Best in the Long Run"

We are pleased to announce that Erma V. Bowman, teacher at Turner, Wash., will receive the book offered as a prize to the teacher whose pupils turned in the largest number of subscriptions on Library day.

The interest in Kittitas county still continues. Four new schools have taken up the work, and without doubt a fine report will soon be received from each Red and Blue team entering the field from the following schools:

Wasson school, Elma Wilson, teacher; Badger Pocket school, Anna Peterson, teacher; Montgomery school, Florence M. Foster, teacher; Hazelwood school, J. N. Spicer, superintendent.

Honor Roll.

Thelma and Alice Nelson, South Basin school, Orin, Wash.

Jennie E. Hughes, Pioneer school, Colville, Wash.

Charlie Landor, Pioneer school, Colville, Wash.

Some teachers have written us asking when the remainder of the books which they ordered will arrive. In most cases where books are ordered the full list goes forward at one time, but ofttimes there are a few books which are temporarily out of stock. In such cases an order is placed at once with the publishers and these books will be sent forward to the schools just as soon as they arrive, which is generally within two weeks.

Books have gone forward this week to the following teachers:

Noella Gendron, Toppenish, Wash.
Lucy Lindsay, Stevenson, Wash.
Sudie L. Lee, Colville, Wash.
Clara E. Gollehon, Ford, Wash.
Mrs. Clara Peterson, Everson, Wash.
H. W. Blackenburg, Colville, Wash.

W. F. Smith of Lake Bay, Wash., writes: The books all arrived in first-class shape and we are much pleased with the binding and print. Anything we can do toward furthering the introduction to your Washington Farmer will be cheerfully done.

There may be some of the boys and girls who would be interested in obtaining a nice flag for their homes. If they do and will write to "The Washington Farmer, care of the Bookman," we will tell them how to get one.

Individual Contest.

There is no change in the standing of the contestants this week, as reports have been delayed because of vacation week. But next week, when the reports are in, the change will be announced.

E. F. Benson, the Man

(Continued from page three.)

to engage in partnership with the late W. H. Babcock, then the wheat king of Washington, operating in the Eureka flat district, but who had bought three or four townships of railway lands near Trinidad and Quincy. The firm of Babcock & Benson finally acquired 86,000 acres of land and leased from the state about 20,000 acres more. This was stocked with cattle and sheep. This is probably the largest area of farming and grazing land owned by any individual or partnership in the state up to this time.

In 1905 he sold out his interest to Mr. Babcock and bought out the interest of Mr. Ankeny in the Prosser plant, moving to Prosser where he lived from 1905 to 1908, giving his entire time to the development of the irrigation plant, electric light and city water works and to his farming operations in that vicinity.

In 1908 he again entered the employ of the railway as chief land examiner maintaining headquarters at Miles City, Mont., until 1910, when he resigned as chief land examiner and moved back to Tacoma, but continuing in the railway company's employ as special land examiner until April 1st, when assuming the duties of commissioner of agriculture he resigned from the Northern Pacific's employment, having served that company in one capacity or another since 1889, with the exception of six years from 1902 until 1908.

In 1911 he sold out the power and light plant and the city water works at Prosser to the Pacific Power & Light company and has since been most actively engaged in improving the lands owned by him in that district. A dairy and sheep ranch near Prosser and a sheep ranch and winter range twenty miles north of Prosser constitute his principal ranch interests now.

From 1913 to 1915 he was receiver of the Hanford Irrigation company, having been appointed by Judge Rudkin, and during the last year has been receiver of the Attalia Land company, an irrigation pumping plant on the Columbia river between Pasco and Wallula.

Mr. Benson was one of the first presidents of the Northwest Live Stock association, acting in that capacity for two years, and has been actively identified with the fruit growing interests of the state, having been vice president for several years and president one year.

He was elected president of the Washington Irrigation Institute when that organization was formed four years ago, and has been elected president each year since. It is one of the very valuable agricultural organizations in the state and its reports are of such interest and profit that every irrigation farmer in the state should read them.

Mrs. Benson was a Boston girl. They were married in December, 1884, and have one daughter, Mrs. L. N. Knettle, of Pomeroy, and two of "the most interesting" grandchildren.

For more than two years past, it has been known that Governor Lister desired to get Mr. Benson to accept this office, but to abandon the railway work and neglect his own business seemed more of a sacrifice than he felt like making. The desire of Mrs. Benson to have him stay at home more than heretofore was one of the inducements that moved him to accept this work.

Gets Every Weed

Mulches and pulverizes, with greatest ease in handling and working. The

"Acme" Foot Lift Weeder

destroys all weeds, cutting deep as desired, and fills perfectly. It's knife edges, presented to the ground at a slicing angle, make draft easy. Foot lift lever clears off the weeds and lifts the blades for transportation. 5 sizes, cutting 5 ft. to 12 ft. wide. Write today for book, *"The Acme Way to Crops That Pay"*. Describes the entire "Acme" line.

DUANE H. NASH INC., 343 E. Morrison St. Portland, Ore.

CHEAPER LAND CLEARING

A great artist was asked "With what do you mix your paints?" His reply was, "Brains."

Reducing land clearing costs is less a matter of lower priced explosives than of better use of explosives.

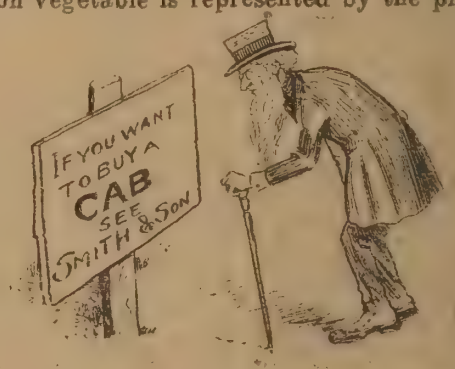
The Du Pont policy is (1) To make explosives as good as the knowledge of the world and our unsurpassed facilities permit; (2) To sell these explosives as cheaply as possible while maintaining the highest standard of quality, and (3) to tell users how to do their work with the smallest possible quantity of explosives.

DU PONT and Repauno Stumping Powders

as is generally acknowledged, are unsurpassed for Pacific northwest requirements. Their prices are as low as explosives of such reliable quality can be sold on a basis of moderate commercial profit. To reduce land clearing costs use one of these highly efficient explosives by the money-saving methods described and illustrated in our book.

Developing Logged-off Lands

Every settler, farmer and orchardist should ask for a free copy. In addition to stump removal it covers boulder blasting, ditching and orchard blasting thoroughly, practically and plainly.



Write for it today, stating where you read this offer.

E. I. Du Pont De Nemours & Co.

Seattle, Washington. San Francisco, Cal.

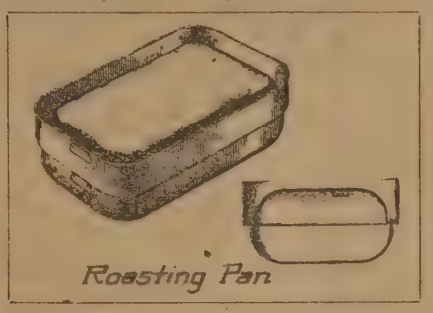
Just What You Want

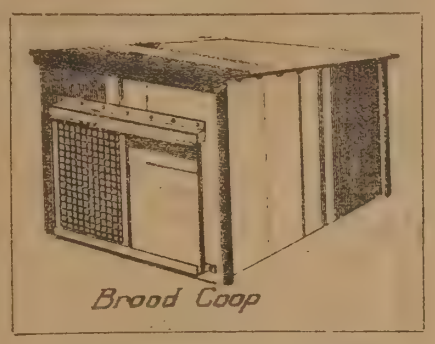


may be offered in this week's Want Ads at a bargain. It's a good idea to look them over every week.

Inventions

By C. J. LYNDE, Macdonald College, Quebec.

Cooking Utensil.

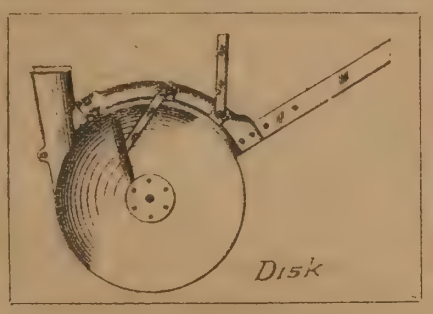


This self-basting roaster is similar to others, except that the space above the cover can be filled with water. This keeps the cover at or below the

Roasting Pan

temperature of boiling water and thereby prevents the top of the meat from burning and causes the condensed vapors to baste the meat.

Brood Coop.

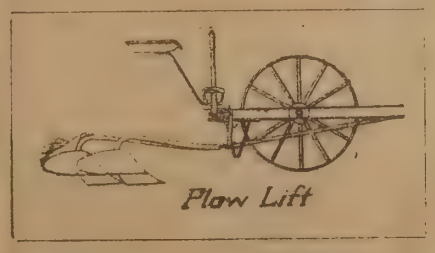


This sheet metal coop can be quickly set up or knocked down; the roof and floor are separate pieces, but the sides

Brood Coop

fold together on their rolled edges. It has two doors, one solid and the other of netting, which slide in parallel channels.

Single Disk Furrow Opener.

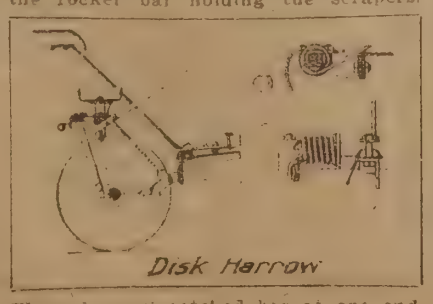


The improvement here is in the arch which supports the boot and toe scraper. It is made of pressed steel which has sufficient resiliency to hold the

Disk

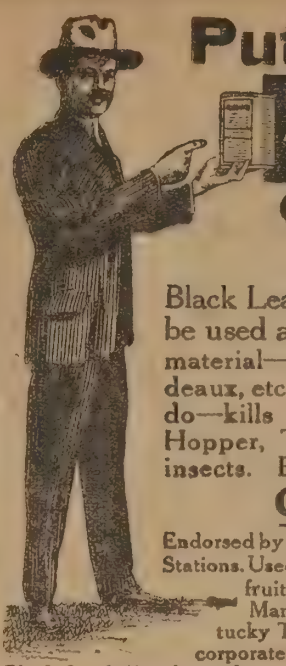
scraper against the disk under all circumstances, and at the same time has sufficient rigidity to support the boot and scraper properly.

Plow Lift.



A traction engine sinks when it strikes soft ground and the plows cut deep; the lift shown here enables the

Plow Lift



operator to avoid this by lifting the forward end of the plow beams at the proper time.

Disc Harrow.

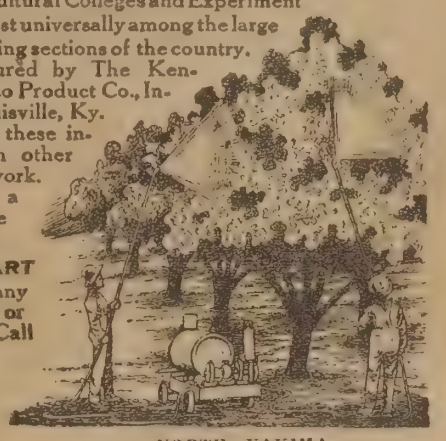
The improvement on this harrow lies in the springs, on the scrapers and on the rocker bar holding the scrapers.

Disk Harrow

These have a notched bar at one end, by means of which they can be tightened or loosened as desired.

Put Black Leaf 40 Kills Aphis

40% Nicotine



On Your Spraying Schedule

Black Leaf 40 is a spraying solution that can be used as recommended with other spraying material—Lime-Sulphur, Arsenate of Lead, Bordeaux, etc. It does what these solutions cannot do—kills Aphis, Woolly Aphis, Red Bug, Leaf Hopper, Thrips, and other soft-bodied, sucking insects. Black Leaf 40 helps you

Grow Better Fruit

Endorsed by Agricultural Colleges and Experiment Stations. Used almost universally among the large fruit-growing sections of the country. Manufactured by The Kentucky Tobacco Product Co., Incorporated, Louisville, Ky.

Black Leaf 40 effectively controls these insects, and when it is used with other sprays, involves no additional work. Being highly concentrated only a small amount is required and the cost is low.

BE SURE AND MENTION THIS PAPER

WE WILL PAY SALARY

to farmer with rig or saddle horse. The publisher of The Washington Farmer wants men to secure and renew subscriptions to this paper in various farming districts throughout the state. We are paying good salaries to those who can do the work and are offering these positions only to farm owners or renters.

We want to hear only from those who will be willing to give our proposition a fair trial for at least a month and who will put in good, hard licks for good pay. For men with these qualifications the opportunity is a splendid one. This work isn't easy; but you can do it and earn a good salary. We give you full instructions and the right kind of help.

You will be able to earn a salary of from $25 to $150 per month or even more, dependent upon the amount of time and effort you can give to the work. Salary check will be sent promptly at the end of each month.

We will not consider an applicant who does not live on a farm and who does not have a rig, saddle horse or automobile. In writing us tell whether married or single, whether you own or rent your place and give the names of two merchants with whom you trade. There isn't any red tape about our proposition, but we must know something about those workers we put on our payroll to receive a monthly salary check.

Give full details in your first letter to The Washington Farmer, Review Building, Spokane, Wash.

When you write to advertisers, be sure to say that you saw their advertisement in this paper.

Seven Billion Dollars

Is Appropriated to Carry on the War

Without an opposing vote, the house of representatives in congress, which has the power to make all appropriations, last week voted to raise $7,000,000,000 with which to carry on the war into which this country has been dragged. Of this huge amount, $5,000,000,000 will be raised by a bond issue, and $2,000,000,000 by the issuance of treasury certificates.

The government proposal for raising the funds with which to meet the bond issue and the treasury certificate issue is to extend further the income tax principle, and levy stamp taxes on all manner of so-called luxuries such as tobacco, cigars, liquors, patent medicines, perfumeries and the like. It has also been suggested that postage rates be increased from two to three cents on letters, and proportionately on other mail matter. It is argued that this would distribute the taxes more evenly than almost any other possible method. It is likely also that notes, checks, drafts and the like will be subjetced to war taxes also.

Neutral Nations Involved.

Following the example of the United States, a large number of the other nations until now attempting to be neutral, are taking active interest in the war. Cuba has formally entered into it. Brazil has severed diplomatic relations with Germany; Argentina is on the verge of similar action; the little republic of Panama has announced to the United States that its resources are available to help protect the Panama canal; even from Mexico comes semi-official word that that country is opposed rather than favorable to the German regime, and is friendly toward the part the United States is playing. Spain is on the verge of severing diplomatic relations with Germany.

Roosevelt Wants to Go.

Former President Roosevelt has asked congress for permission to organize an expeditionary force of men to sail for the fighting lines in France at the earliest possible date. He says he could put the United States flag on the firing line within three or four months.

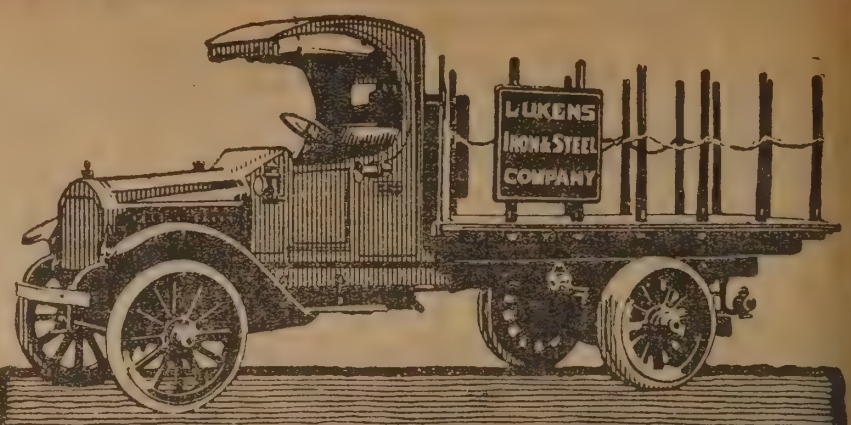
Meantime, the plans and preparations are going forward for the development of a great army on the principle of universal service. It is proposed to raise not fewer than 500,000 men by voluntary recruiting of the regular army and the national guard, after which compulsory service applying to men from 19 to 23 years of age would be put into effect. The age limit would be raised as the numbers in the army were increased.

Allies Make Gains.

Continued reports come of victories by the armies of England and France over those of Germany and Austria. For more than a month, gains have been reported daily, until a considerable portion of the territory taken by Germany from France, has been recovered. Whether the retreat on the part of the Teutonic forces is one of necessity or of strategic planning is a question.

Hints of Peace Heard.

During the last week rumors of a d desire for peace on the part of Bulgaria and Austria, allies of Germany, have been heard. It is said that these nations have made diplomatic overtures to neutral representatives looking toward the possible discussion of peace. No results of this nature have been seen, however.



Spokane Cannery Assured.

Announcement has been made that the proposed by-products plant at Spokane will be ready for operation within two months, when it will open under the supervision of W. H. Paulhamus of Sumner, for the handling of vegetables and fruits.

The first article handled will be spinach, of which 28 acres have been pledged by growers. Other fruits and vegetables pledged by growers include 500,000 pounds of strawberries, 1,000,000 pounds of tomatoes, 300,000 pounds of beans, 200,000 pounds of sour cherries, 200,000 pounds of Royal Anne cherries, 100,000 pounds of prunes, 10,000 pounds of dewberries, 50,000 pounds of gooseberries and 100,000 pounds of Bartlett pears.

Thomas Carmichael.

In last week's issue of The Farmer there appeared an error in the identification of the photographs of the men who are leading in the promotion of the Pacific National Dairy show, which was recently organized at Portland. In the grouped photographs both No. 7 and No. 9 were inadvertently made to read as Walter K. Taylor, Corvallis, Ore., a director. No. 9 should have been identified as Thomas Carmichael, Gaston, Ore., a director.

Just What You Want

may be offered in this week's Want Ads at a bargain. It's a good idea to look them over every week.

Enormous Loans Asked Under Government Act

(Continued from page four.)

passed a period of work that brings slow results. However, we shall be actually loaning money to farmers as soon as possible. The directors are working hard and leaving nothing undone to accomplish an early relief to farmers who are waiting for funds to develop their land."

Four hundred national farm loan associations have been organized, or are in process of organization, in this district. Since $20,000 is the smallest sum that an association may borrow, this would mean that the system will start off in the four states of Montana, Idaho, Washington and Oregon with a demand for more than $8,000,000. Probably the average association will want $40,000. On that basis the Spokane bank would have to supply $16,000,000.

Its capital of $750,000 will mean only a beginning. When that is loaned it will have $750,000 in mortgages in its vaults. Against these it will issue and sell $750,000 of bonds at par, and that $750,000 will then be invested in more mortgages. Against these additional mortgages more bonds will be issued and sold, and thus the process will go on in an endless chain.

Necessarily considerable time will be needed for the bank to appraise and examine the thousands of farms that are to be mortgaged, and time will be needed to market the bonds. It therefore looks as though it will be several months before the bank will be able to meet all the demands that are now before it.

An association must have not less than 10 members, so that if all of the 400 associations were down to that minimum there would be 4000 applications to examine and farms to appraise.

But $8,000,000 or $16,000,000 is only a small fraction of the great sums now loaned on farm mortgages in these four northwestern states. Data compiled by the federal farm loan board at Washington show that more than $117,000,000 is now loaned on the farms of these states.

Following is the compilation believed to show, in a general way, the facts as to the volume and average rate of interest on farm loans in the several states, state by state:

State.	Present volume of loans.	Present interest. rate.
Maine	$ 13,727,000	6.2
New Hampshire	6,100,000	5.3
Vermont	17,113,000	5.6
Massachusetts	24,000,000	5.6
Rhode Island	2,514,000	5.9
Connecticut	17,013,000	5.7
New York	168,234,000	5.6
New Jersey	35,610,000	5.8
Pennsylvania	130,678,000	6.1
Ohio	130,678,000	6.1
Indiana	132,325,000	6.2
Illinois	355,802,000	6.0
Michigan	118,950,000	6.6
Wisconsin	206,681,000	5.8
Minnesota	145,181,000	6.8
Iowa	469,063,000	5.9
Missouri	223,107,000	6.8
North Dakota	100,364,000	8.7
South Dakota	92,467,000	8.0
Nebraska	165,015,000	7.1
Kansas	180,706,000	6.9
Delaware	6,857,000	5.6
Maryland	22,393,000	6.1
Virginia	25,007,000	6.8
West Virginia	78,725,000	6.4
North Carolina	21,005,000	7.7
South Carolina	24,967,000	8.4
Georgia	29,711,000	8.7
Florida	4,490,000	9.6
Kentucky	41,305,000	7.1
Tennessee	25,468,000	7.9
Alabama	25,943,000	9.4
Mississippi	34,419,000	8.5
Arkansas	21,023,000	9.6
Louisiana	21,141,000	8.6
Oklahoma	73,129,000	8.4
Texas	184,321,000	9.0
Montana	17,111,000	10.0
Idaho	21,568,000	8.9
Wyoming	7,148,000	10.0
Colorado	36,767,000	8.9
New Mexico	4,685,000	10.5
Arizona	4,161,000	9.4
Utah	6,818,000	9.0
Washington	43,470,000	8.7
Oregon	35,535,000	8.0
California	124,752,000	7.6

From the foregoing table it appears that Washington has $43,470,000 in farm mortgages, with an average interest rate of 8.7 per cent. The federal land banks will loan at a uniform rate of 5 per cent. If all the farm mortgages in this state were on a 5 per cent basis, the total annual saving would be $1,607,390.

Oregon has $35,535,000 in farm mortgage loans, with an average rate of 8 per cent. Its saving would be $1,066,050 a year.

Idaho farmers pay on the average of 8.9 per cent on $21,566,000. Their yearly saving would be $840,974.

"The Bull With the Pull"

The Tractor That Increases Crop Yields

If you got nearly three times as much wheat per acre as your neighbor on the same kind of land, by plowing with a Big Bull Tractor, would you be convinced that the "Big Bull" does increase crop yields with the subsoiling feature of its single bull wheel running in the furrow?

Then listen to this—Mr. S. R. Conner, Pauls Valley, Oklahoma, raised approximately 26.27 bushels of wheat per acre on his Bull Tractor plowed land in 1916, while his neighbor, plowing with horses in adjoining field, secured only 9 1-3 bushels per acre. He also raised 53.84 bushels of oats per acre, while his neighbor got 31 bushels. Another neighbor of Mr. Conner's, with the same kind of soil, raised 10 bushels of wheat per acre. We have sworn affidavits from everybody concerned in this case.

Furthermore, we have hundreds of other reports from Bull Tractor owners showing

Crop Increases of From 10% to 33⅓%

as a direct result of the "Big Bull" subsoiling feature.

Does it pay to delay any longer in ordering your "Big Bull," when by so doing you are losing maybe more than its cost in one season?

Burns Either Kerosene or Gasoline

The subsoiling feature is only one of many exclusive advantages you get in the "Big Bull."

There's a distributor at your farm implement trade center. Order now to be sure of getting your machine when you want it.

Ups and Downs of a Bunch Grass Boy

By JOE L. ASHLOCK

(Copyright, 1917, Joe L. Ashlock.)

CHAPTER VII.

SITTING on the coupling pole of our prairie schooner I bade farewell to my Blue mountains. Our wagon was a stout-wheeled, springless affair with arching bows fitted into metal sockets on either side of the wagon box and covered over with strong, white canvas, which was as yet unsoiled by the gray road dust. The front and rear pair of wheels were held together with a connecting pole of stout oak, the coupling pole; and the coupling pole extended out from under the wagon bed a couple or three feet. On the end of this pole I rode, balancing with the adeptness of a nine-year-old, and kicking at the sage brush and tall bunch grass which grew in the middle of the road and brushed my bare feet and legs.

We had crossed Snake river at Lyon's cable ferry and pulled up the steep hill on the ridge of which I had my farewell look at the far away Blue mountains with their imagined giants and fairies, and wild animals of the kind pictured in my story books; and their forest clad slopes and wonderfully high summits which were crowned with snow till late in summer. We were pulling out of the Walla Walla valley in midspring, and the snow still blanketed the highest of the distant mountain tops. As we passed over the ridge the distant mountains sank from view till only the snow-capped summits lingered above the southern skyline; and the whiteness of them was by distance and the slight haziness in the air, colored gray—not greatly different, after all, from the gray-green ocean of bunchgrass spread all around, and indistinguishable except to my sharp boy's eyes that followed sadly the sinking of the distant mountain summits. Father and mother had told me that we were going a long way into the grayish green ocean of bunchgrass to find a home—and that I might never see the Blue mountains again.

I thought of that home a great deal. I supposed that when at last we found the place we wanted, we would drive up and be welcomed by the people who had prepared our home for us. There would be a nice white house, a windmill, a creek with lots of trees and shade and fish and birds' nests; there would be lots of ducks and geese and guineas and turkeys—all stealing nests out in the brush! I would find their hidden nests at once. Also, there would be a lot of children for me to play with, and a school house just like the old union school in Walla Walla valley near Aldrich's place on Dry creek. I had it all pictured out—knew just what kind of a home we were going to.

Mother occasionally called back to me to see if I was still sticking to the coupling pole. Always I was. Mother and father filled up most of the wagon seat, which had springs of a kind—the only springs about our outfit! That left me to ride back under the canvas on the bedding or horse feed, and the perpetual jolting wearied me. The coupling pole had a little spring in it; so I rode it as much as half a day at a time, and only once when the bind wheel rose over a big rock and dropped into a deep chuck-hole, was I shaken loose. In falling, I hit my head on the rock that had unseated me from the coupling pole, and would have cried, I suppose, but for the fact that at that moment the team began to trot downhill, and I had to run to catch up and clamber on the coupling pole. By the time I had done this, the hurt had subsided, and it did not seem worth while to cry. Also, if I did cry, I might have to explain; and an explanation would likely lead to my being ordered up under the canvas to ride on the horse feed. So I rubbed my bruised head in thoughtful silence, and that evening was noncommital when mother wondered how in the world that big bump got on my head.

Day after day we jolted on, and so far as I could tell ,one day's travel was precisely like the others. About us were miles and miles of bunchgrass, with wild horses and cattle grazing in the distance. We passed Indians, young and old, riding their small, wiry ponies of most outlandish colors. Some of the Indian ponies were yellow or "buckskin" with black mane and tail and a black or a brown streak along the spine. Such horses often had a white and a dar keye. I was told that a horse with a white eye and a streak down his back, was bad. Others of the Indian ponies were white and black in huge, irregular patches, or white and sorrel in huge, irregular patches. I was told that one seldom, if ever, saw a pony of three colors in these big, irregular patches. Such ponies were called "calicos."

The Indians always, or nearly always stopped and wanted to trade something. They would trade horses, blankets, beaded moccasins—anything, almost. They had ropes made out of horsehair twisted together not unlike hemp rope. If a band of Indians camped near where we were camping, several of their number usually strolled over our way and wanted to know something about the road; which road to take to this or that place, how far to the next water, and so on. All the while the rascals knew perfectly well the information they pretended to seek, for they and their ancestors, and ancestors' ancestors had for generations uncounted roamed these very bunchgrass hills.

Also, they often wanted to borrow something, which might be a pan, a water bucket, a pair of horse "hobbles," stake ropes, axes, anything they saw. Often they would nudge you off to one side and slyly ask for "fire water," showing money, perhaps, and rubbing their stomachs and smacking their lips in anticipation. Such a request was always accompanied by a devout "Me no tell," for in this country selling whisky to an Indian was equivalent to shooting up a town or stealing your neighbor's cattle.

They were not hostile, however, and honest so far as I can remember. Unfailingly they brought back the things they borrowed before we broke camp the next morning. Very seldom did the borrowed articles show ony signs of having been used. The Indians simply were curious about the "Boston men" and desired an excuse to hang about his camps.

The night we camped at Snake river preparatory to ferrying over the next morning, the Indians living on the sandy point between the juncture of the Palouse and the Snake, on the other side, were holding a war dance—not a real war dance, perhaps, though the whites called it such. It was a ritualistic, tribal dance in celebration of something or other connected with the Indians' superstitutions or religion. There were thirty or forty of them I think. We could see them across the river leaping in circles about a bright campfire, running first this way and then another. All the while they kept up a queer, changing yelling which at times rose to a wild screeching that echoed fantastically in the deep canyon of the Snake. Accompanying this was a steady rattling sound—deer's hoofs being cracked together, I think; and there was the incessant beating of some sort of drum. They kept it up for a couple of hours.

While we were grouped about our own campfire listening, the ferryman, Mr. Lyons, came over to talk. He told father that the chief of the tribe was called "Old Bones." Bones had lived there about a hundred years, he thought. He was wrinkled, toothless, skinny and blind, but could hop like a cricket. No doubt Bones was over there now, hopping around and yelling with the rest of the Siwashes. Nobody knew how long the Indians had lived on the sand bar; but he supposed they had been there always, long before Columbus discovered America.

The conversation drifted on in this wise for some time, while I listened breathless and eager, drinking in every word. Some of the Indians living over there owned hundreds of horses, Mr. Lyons said, and sold a good many of them. Once in a while a Siwash got stylish and built a house; and then took up his residence beside it in the teepee dwelling of his forefathers while his various dogs inhabited the house in summer, when it was hot and in winter when it was cold. One of the Indian families had moved into a new house and lived there for a year, till a member of the family died, then out they went, and now, drunk or sober, not a member of the family, or any other Indian of the tribe, could be dragged into the house. They all thought that the dead Siwash's spirit was in the house and unable to get out. It had never occurred to the idiots that the spirit of a dead Siwash ought to be able to get out of a house by the way of doors or windows, the same as could the living Indian himself.

The men talked on till late in the night. Finally the Indian fire across the river died low, and our own fire died to embers. The red men yelled singly and in chorus a few times more, and the echoes tossed wierdly back and forth in the deep, black canyon of the Snake—wierd, clamoring, fading tones like the voices of Indians dead generations ago and speaking out of the illimitible drifts of time that were the wandering-places of their souls.

The ferryman left us presently. Mother called me to bed; and soon I was dreaming that an Indian with a big hatchet and painted face was chasing me.

The Will, the Way

(From Child Betterment.)

If you think you are beaten, you are;
If you think you dare not, you don't.
If you like to win but you think you can't
It's almost a cinch you won't.
If you think you'll lose, you're lost;
For out of the world we find
Success begins with a fellow's will.
It's all in the state of mind.
If you think you're outclassed, you are;
You've got to think high to rise,
You've got to be sure of yourself before
You can ever win a prize.
Life's battles don't always go
To the stronger or faster man;
But soon or late the man who wins
Is the one who thinks he can.

Geologist the Real Water Witch

By RICHARD HAMILTON BYRD

Thousands of people are firm believers in the potency of the apple twig or the peach, or witch hazel fork in the hands of certain people for locating wells or water veins. Yet the Geological Survey would seem to dispose of the question with the summing up popularly expressed, that "there's nothing to it." There are other water witches who are entirely honest and who instinctively know where water ought to be, but who are of such an intense psychic temperament that when they walk across a place they have subconsciously selected, the forked twig in their hands turns and twists irresistibly. But the geologist feels positive that the water twig in itself is a fraud, because he can, without it, by a study of the rock outcrops, the "lay of the land," etc., himself tell where the drill will strike water, and he even makes under ground maps covering whole regions showing the depth at which water will be found.

Use of divining rod in metal prospecting. Old print of year 1580.

The water-witch prophet usually confines his guess to a few score of feet beneath the surface, possibly 100 feet, but the geologist takes a look of a thousand feet down through the solid earth and rock or even more. Geologic "guesses" have been made to a depth of 3000 feet and with no well nearer than 50 miles, and upon drilling they have proven within 1 per cent correct. If you have dug a well 30 feet deep and quit because you failed to get water, you haven't 'ost a fortune; but if you are ready to go 200 feet before quitting, write the geological survey by all means. Many a well has been drilled 100 or 150 or 250 feet by some town or institution through hard rock at big expense with an entirely dry result, and then the geological survey has been appealed to. Too late, except to receive the advice perhaps that the rock is dry for another 1000 feet, but that a few rods to the east or the west plenty of water will be struck at 60 feet.

Rough Lawns

Easy to Make Smooth in Spring

By R. W. ALLEN

Superintendent Umatilla Experiment Farm.

It is not difficult at any time during the growing season to smooth a rough lawn. The most desirable time, however, is in the spring, about when the grass begins to grow. At the time all the slight irregularities in the surface of the ground can be seen readily, which is not always possible later on.

By filling all the depressions with loose, fine soil, the grass readily comes up through it, binds it down and renders the work immediately permanent. Where severe winds tend to remove soil placed on the lawn in this way, the low places can be filled after the grass has grown to two or three inches in height, so that it will stand above the loose soil and protect it from the wind. Deep holes can be filled in one season by filling in part at a time.

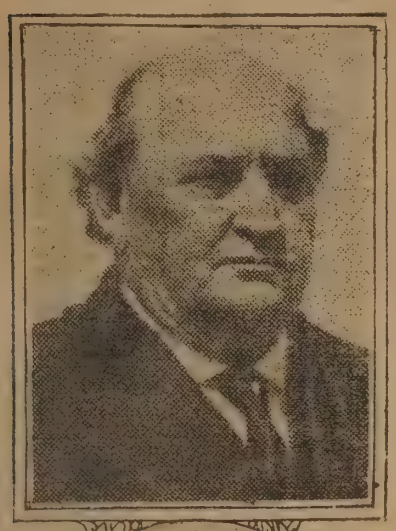
Raised, or high places, can best be removed by taking up the grass sod and removing sufficient soil to cause the surface of the land to be flat when the sod is replaced and firmly tamped down. This operation can be done quickly with a sharp spade or with an ax to cut the sod and a shovel to take it up and remove the necessary amount of soil to make the place level.

New War Munitions.

Going to the grocery where she deals, a woman of Irish nativity recently purchased a dozen of eggs for 30 cents. Going back a week or so later, she again bought a dozen of eggs, and to her amazement the grocer charged her 45 cents.

"Why, my dear woman," explained the grocer, "eggs have gone up on account of the war."

"Don't be tellin' me that," was the rejoinder. "Ye can't make me believe they're fightin' with eggs over there."—Chicago Journal.



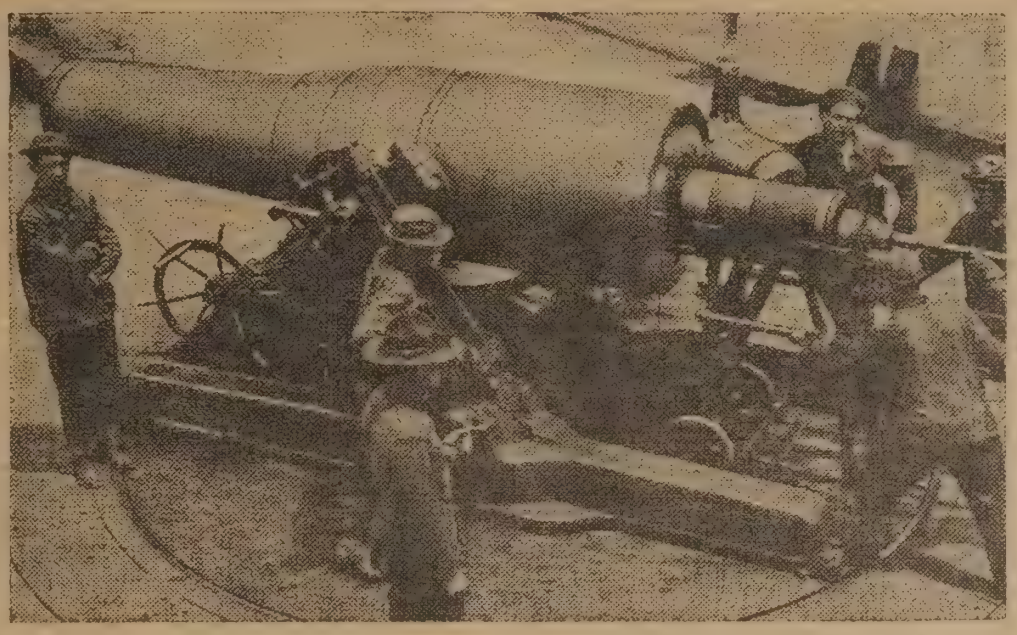
Expert at That.

"Some of those foreign potentates would starve to death if they had to earn their living at a trade."

"Oh, I don't know. The kaiser, for example, has had a lot of experience as a decorator."—Boston Transcript.

All the World's a Stage, and All the Men and Women Merely Players

Father and Son in Congress.



Alabama is pleased with Senator John H. Bankhead's 33-year-record in congress. That is why, for the first time, a father and son are sitting in the same congress. Representative William B. Bankhead is the sequel in this case. Alabama is "mighty proud" of its father-and-son combination.

Secretary to Premier.

Miss F. L. Stevenson, secretary to Premier Lloyd George of Great Britain, has the distinction of being the only woman secretary to a premier in the world today. Miss Stevenson is entrusted with many of the cares of state that rest upon the shoulders of Premier Lloyd George.

Steel Bodyguard of Uncle Sam

Copyrighted by International Film Service.

The above picture shows soldiers loading the big projectile into one of the 12-inch mortars at Fort Andrews, one of the protecting forts that surround the entrance of Boston harbor.

The general public is little aware of the preparations for coast defense that have been made, not only since the beginning of the war, but during past years.

Sunday's Son to Enlist.

George Sunday, a son of the famous evangelist, says that he will give up his job as his father's campaign manager and offer his services to his country.

Hurry Naval Commissions

Copyrighted by International Film Service.

The critical state of our relations with Germany has caused the naval authorities to advance the date of the graduation of Annapolis naval cadets by several months. The picture shows Secretary of the Navy Daniels handing a diploma to Ensign Clarence O. Ward.

Give War Hospital to Nation

A completely equipped hospital base unit, which will have 500 beds, 20-odd physicians, 50 nurses and a total working personnel of about 125 persons, has been presented to the government of the United States by Charles H. Mackay and his mother, Mrs. John W. Mackay. The equipment, which cost about $40,000, is now ready and in a few days the hospital will be prepared for action in case of necessity arising out of war with Germany. Most of the staff physicians and nurses have been selected from the Roosevelt hospital. The hospital will be known officially as the "Red Cross Base hospital No. 15." It will be operated under the direction of the Red Cross society.

Throughout the war the work of the hospital and Red Cross corps on all the battlefields has been the one bright spot, the one redeeming feature, the one unquestionable evidence that out of the titanic struggle will emerge a more humane humanity.

WHEN KNIGHTHOOD WAS IN FLOWER

or, the Love Story of Charles Brandon and Mary Tudor, the King's Sister, and Happening in the Reign of His August Majesty, King Henry the Eighth.

By EDWIN CASKODEN (Charles Major).

Copyright, 1898, The Bobbs-Merril Co.

CHAPTER XVI.—(Continued).

The fact that I had been out the entire night before, together with the small repute in which I was held for deeds of arms, excused me from taking part in this bootless errand, so again I profited by the small esteem in which I was held. I say profited, for I stayed at the castle with Jane, hoping to find my opportunity in the absence of everybody else. All the ladies but Jane had ridden out, and the knights who had been with me scouring the forest were sleeping, since they had not my incentive to remain awake. They had no message to deliver; no duty to perform for an absent friend. A thousand! Only think of it! I wished it had been a million, and so faithful was I to my trust that I swore in my soul I would deliver them, every one.

And Jane loved me! No more walking on the hard, prosaic earth now; from this time forth I would fly; that was the only sensible method of locomotion. Mary had said: "She told me so." Could it really be true? You will at once see what an advantage this bit of information was to me.

I hoped that Jane would wish to see me to talk over Mary's escape—so I sent word to her that I was waiting, and she quickly enough recovered her health and came down. I suggested that we walk out to a secluded little summer-house by the river, and Jane was willing. Ah! my opportunity was here at last.

She found her bonnet, and out we went. What an enchanting walk was that, and how rich is a man who has laid up such treasures of memory to grow the sweeter as he feeds upon them. A rich memory is better than hope, for it lasts after fruition, and serves us at a time when hope has failed and fruition is but—a memory. Ah! how we cherish it in our hearts, and how it comes at our beck and call to thrill us through and through and make us thank God that we have lived, and wonder in our hearts why he has given poor underserving us so much.

After we arrived at the summer-house Jane listened, half the time in tears, while I told her all about Mary's flight.

Shall I ever forget that summer day? A sweet briar entwined our enchanted bower, and, when I catch its scent even now, time-vaulting memory carries me back, making years seem as days, and I see all as I saw the light of noon that moment—and all was Jane. The softly lapping river, as it gently sought the sea, sang in soothing cadence of naught but Jane; the south wind from the flowery home breathed zephyr-voiced her name again, and, as it stirred the rustling leaves on bush and tree, they wispered back the same sweet strain; and every fairy voice found its echo in my soul; for there it was as 'twas with me, "Jane! Jane! Jane!" I have heard men say they would not live their lives over and take its meager grains of happiness, in such infinite disproportion to its grief and pain, but, as for me, thanks to one woman, I almost have the minutes numbered all along the way, and know them one from the other; and when I sit alone to dream, and live again some portion of the happy past, I hardly know what time to choose or incident to dwell upon, my life is so much crowded with them all. Would I live again my life? Aye, every moment except perhaps when Jane was ill—and therein even was happiness, for what a joy there was at her recovery. I do not even regret that it is closing; it would be ungrateful; I have had so much more than my share that I simply fall upon my knees and thank God for what He has given.

Jane's whole attitude toward me was unchanged, and she seemed to cling to me in a shy, unconscious manner, that was sweet beyond the naming, as the one solace for all her grief.

After I had answered all her questions, and had told her over and over again every detail of Mary's flight, and had assured her that the princess was, at that hour, breasting the waves with Brandon, on their high road to paradise, I thought it time to start myself in the same direction and to say a word in my own behalf. So I spoke very freely and told Jane what I felt and what I wanted.

"Oh! Sir Edwin," she responded, "let us not think of anything but my mistress. Think of the trouble she is in."

"No! no! Jane: Lady Mary is out of her trouble by now, and is as happy as a lark, you may be sure. Has she not won everything her heart longed for? Then let us make our own paradise, since we have helped them make theirs. You have it, Jane, just within your lips; speak the word and it will change everything—if you love me, and I know you do."

Jane's head was bowed and she remained silent.

Then I told her of Lady Mary's message, and begged, if she would not speak in words what I so longed to hear, she would at least tell it by allowing me to deliver only one little thousandth part of the message Mary had sent: but she drew away and said she would return to the castle if I continued to behave in that manner. I begged hard, and tried to argue the point, but logic seems to lose its force in such a situation, and all I said availed nothing. Jane was ob-

"I delivered the rest of Mary's message."

durate, and was for going back at once. Her persistency was beginning to look like obstinacy, and I soon grew so angry that I asked no permission, but delivered Mary's message, or a good part of it, at least, whether she would or no, and then sat back and asked her what she was going to do about it.

Poor little Jane thought she was undone for life. She sat there half pouting, half weeping, and said she could do nothing about it; that she was alone now and if I, her only friend, would treat her that way, she did not know where to look.

"Where to look?" I demanded. "Look here, Jane, here; you might as well understand, first as last, that I will not be trifled with longer, and that I intend to continue treating you that way as long as we both live. I have determined not to permit you to behave as you have for so long; for I know you love me. You have half told me so a dozen times, and even your half words are whole truths; there is not a fraction of a lie in you. Besides, Mary told me that you told her so."

"She did not tell you that?"

"Yes; upon my knightly honor." Of course there was but one answer to this—tears. I then brought the battle to close quarters at once, and, with my arm uninterrupted at my lady's waist, asked:

"Did you not tell her so? I know you will speak nothing but the truth. Did you not tell her? Answer me, Jane." The fair head nodded as she whispered between the hands that covered her face:

"Yes; I—I—d-did;" and I—well, I delivered the rest of Mary's message, and that, too, without a protest from Jane.

Truthfulness is a pretty good thing after all.

So Jane was conquered at last, and I heaved a sigh as the battle ended, for it had been a long, hard struggle.

I asked Jane when we should be married, but she said she could not think of that now—not until she knew that Mary was safe; but she would promise to be my wife some time. I told her that her word was as good as gold to me; and so it was and always has been; as good as fine gold thrice refined. I then told her I would bother her no more about it, now that I was sure of her, but when she was ready she should tell me of her own accord and make my happiness complete. She said she would, and I told her I believed her and was satisfied. I did, however, suggest that the intervening time would be worse than wasted—happiness thrown right in the face of Providence, as it were—and begged her not to waste any more than necessary; to which she seriously and honestly answered that she would not.

We went back to the castle, and as we parted Jane said timidly: "I am glad it is over."

She had evidently dreaded it; but I was glad, too; right glad. Then I went to bed.

CHAPTER XVII.

Whatever the king might think, I knew Lord Wolsey would quickly enough guess the truth when he heard that the princess was missing, and would have a party in pursuit. The runaways, however, would have at least 24 hours the start, and a ship leaves no tracks. When Mary left me she was perhaps two-thirds of a league from the rendezvous, and night was rapidly falling. As her road lay through a dense forest all the way, she would have a dark, lonely ride of a few minutes, and I was somewhat uneasy for that part of the journey. It had been agreed that if everything was all right at the dendezvous, Mary should turn loose her horse, which had always been stabled at Berkeley Castle and would quickly trot home. To further emphasize her safety a thread would be tied in his forelock. The horse took his time in returning, and did not arrive until the second morning after the flight, but when he came I found the thread, and, unobserved, removed it. I quickly took it to Jane, who has it yet, and cherishes it for the mute message of comfort it brought her. In case the horse should not return I was to find a token in a hollow tree near the place of meeting: but the thread in the forelock told us our friends had found each other.

When we left the castle, Mary wore under her riding habit a suit of man's attire, and, as we rode along, she would shrug her shoulders and laugh as if it were a huge joke; and by the

Concrete walks keep a lot of mud from being tracked into this home.

A Simple Concrete Job

Women like a concrete walk from house to barn. It keeps mud out of the house. Concrete steps and a concrete slab around the pump are also simple, inexpensive and permanent improvements.

You can easily build these yourself. The only materials necessary are portland cement, sand, and pebbles or broken stone. Your local dealer has the cement. You can probably dig the sand and pebbles on your farm or nearby.

Concrete is the material used for city sidewalks because it lasts. You want your walks to last, too.

Our free illustrated Bulletin No. 137 will tell you how to build concrete walks, concrete feeding floors and barnyard pavements. Write for your copy.

CONCRETE FOR PERMANENCE

most comical little pantomime, call my attention to her unusual bulk. So, when she found Brandon, the only change necessary to make a man of her was to throw off the riding habit and pull on the jack boots and slouch hat, both of which Brandon had with him.

They wasted no time you may be sure, and were soon under way. In a few minutes they picked up the two Bristol men who were to accompany them, and, when night had fairly fallen, left the bypaths and took to the main road leading from London to Bath and Bristol. The road was a fair one; that is, it was well defined and there was no danger of losing it; in fact, there was more danger of losing one's self in its fathomless mud holes and quagmires. Brandon had recently passed over it twice, and had made mental note of the worst places, so he hoped to avoid them.

Soon the rain began to fall in a soaking drizzle; then the lamps of twilight went out, and even the shadows of the night were lost among themselves in blinding darkness. It was one of those black nights fit for witch traveling; and, no doubt, every witch in England was out brewing mischief. The horses' hoofs sucked and splashed in the mud with a sound that Mary thought might be heard at Land's End; and the hoot of an owl, now and then disturbed by a witch, would strike upon her ear with a volume of sound infinitely disproportionate to the size of any owl she had ever seen or dreamed of before.

Brandon wore our cushion, the great cloak, and had provided a like one of suitable proportions for the pricess. This came in good play, as her fine gentleman's attire would be but poor stuff to turn the water. The wind, which had risen with just enough force to set up a dismal wail, gave the rain a horizontal slant and drove it in at every opening. The flaps of the comfortable great cloak blew back from Mary's knees, and she felt many a

It was one of those black nights fit for witch traveling.

chilling drop through her fine new silk trunks that made her wish for buckram in their place. Soon the water began to trickle down her legs and find lodgment in the jack-boots, and as the rain and wind came in tremulous little whirrs, she felt wretched enough—she who had always been so well sheltered from every blast. Now and then mud and water would fly up into her face—striking usually in the eyes or mouth—and then again her horse would stumble and almost throw her over his head, as he sunk, knee deep, into some unexpected hole. All of this, with the thousand and one noises that broke the still worse silence of the inky night soon began to work upon her nerves and make her fearful. The road was full of dangers aside from stumbling horses and broken necks, for many were the stories of murder and robbery committed along the route they were traveling. It is true they had two stout men, and all were armed, yet they might easily came upon a party too strong for them; and no one could tell what might happen, thought the princess. There was that pitchy darkness through which she could hardly see her horse's head—a thing of itself that seemed to have infinite powers for mischief, and which no amount of argument ever induced any normally constituted woman to believe was the mere negative absence of light, and not a terrible entity potent for all sorts of mischief. Then that wailing howl that rose and fell hotimes; no wind ever made such a noise, she felt sure. There were those shining white gleams which came from the little pools of water on the road, looking like dead men's faces upturned and pale; perhaps they were water and perhaps they were not. Mary had all confidence in Brandon, but that very fact operated against her. Having that confidence and trust in him, she felt no need to waste her own energy in being brave; so she relaxed completely, and had the feminine satisfaction of allowing herself to be thoroughly frightened.

Is it any wonder Mary's gallant but womanly spirit sunk low in the face of all those terrors? She held out bravely, however, and an occasional clasp from Brandon's hand under cover of the darkness comforted her. When all those terrors would not suggest even a thought of turning back, you may judge of the character of this girl and her motive.

They traveled on, galloping when they could, trotting when they could not gallop, and walking when they must.

At one time they thought they heard the sound of following horses, and hastened on as fast as they dare go, until, stopping to listen and hearing nothing, they concluded they were wrong. About 11 o'clock, however; right out of the black bank of night in front of them they heard, in earnest, the sucking splash of horses' hoofs. In an instant the sound ceased and the silence was worse than the noise. The cry "Hollo!" brought them all to a stand, and Mary thought her time had come.

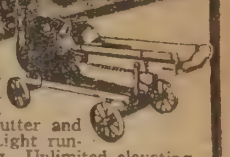
Both sides shouted, "Who Comes there?" to which there was simultaneous and eager answer, "A friend," and each party passed its own way, only too glad to be rid of the other. Mary's sigh of relief could be heard above even the wind and the owls, and her heart beat as if it had a task to finish within a certain time.

After this they rode as rapidly as they dared, and about midnight arrived at the inn where the relay of horses was awaiting them.

The inn was a rambling old thatched-roofed structure, half mud, half ood and all filth. There are many inns in England that are tidy enough, but this one was a little off the main road—selected for that reason—and the uncleanness was not the least of Mary's trials that hard night. She had not tasted food since noon, and felt the keen hunger natural to youth and health such as hers, after 12 hours of fasting and eight hours of riding. Her appetite soon overcame her repugnance, and she ate, with a zest that was new to her, the humblest fare that had ever passed her lips. One often misses the zest of life's joys by having too much of them, and must want a thing before it can be appreciated.

A hard ride of five hours brought our travelers to Bath, which place they rode around just as the sun began to gild the tile roofs and steeples, and another hour brought them to Bristol.

The ship was to sail at sunrise, but as the wind had died out with the night there was no danger of its sailing without them. Soon the gates opened, and the party rode to the Bow and String, where Brandon had left their chests. The men were then paid off; quick sale was made of the horses, breakfast was served, and they started for the wharf, with their chests following in the hands of four porters.



A boat soon took them aboard the Royal Hind, and now it looked as if their darling scheme, so full of improbability as to seem impossible, had really come to a successful issue.

Dreams Fulfilled

Make the Most of Opportunities

By Alice W. Barland.

Dear Girls of the Family Circle: Let us imagine ourselves seated around a cheerful fireplace and telling some stories to each other. Your stories to me, some of them, would be about what you would like to do, places you would like to see, and what you hope to become some time. Mine to you, this time, will be about some things I used to dream about doing, often thinking how hopeless those dreams were likely to be. It has been quite a long time now, since I came to know by experience that a very great many things which years ago seemed hopeless of accomplishment and well-nigh impossible of fulfilment, do come my way.

I presume most of you have heard of Frances Willard, the great temperance worker and organizer of the Women's Christian Temperance union. It was my privilege to know her well. She was, like you and me, a country girl. Her parents were farmers in Illinois and lived quite a distance from any town. One day she was standing in the barn door. It was one of those rainy days when everything looks gloomy and people get the "blues." Frances was about 11 years old and had been playing in the barn with her brother and sister. Finally, she went to the open door and looking out into the drizzling rain, she said: "My but this is a lonesome old world. I just wonder if I shall ever do anything or go anywhere all my life." Her brother, a year or two older, said, "Oh, pshaw, Frank, cheer up. I bet you will do a lot of things and go a lot of places if you just behave yourself." Many were the things that Frances Willard did in her rather short life, a little longer than 50 years. She taught schools and colleges. She wrote books. She lectured to thousands and thousands of people both in this country and across the ocean and she organized women of all civilized countries of the world into a great temperance society and was president of that World's Temperance union at the time of her death. Frances was a little barefoot girl who used to go out to drive up the cows just as you do and as I did when a child. She did not have such good schools to attend in her childhood days as you girls of today have. She very early learned the lessons we spoke of in our little story about hunting the cows. Do you remember them? Obedience, that you know, comes first in the list and is most important. Obedience, perseverance, responsibility, patience, self-reliance and bravery.

If you dear girls will but keep your attention on the importance of cultivating these foundation stones of character there is almost nothing you can not do or become. Day by day, yes, hour by hour, you can be preparing your mind to measure up to some opportunity when it comes up before you. Youth is very apt to think all the good chances are passed, all the best things taken, but it is not so. It would be out of all reason to believe that each generation does not have an equal chance for development with any that are past or any to follow. A creator who can make such a world as we live in, surrounded by all the wondrous sun, moon and stars, is also great enough to control the march of events so that each one of his children may have his chance.

There are wonderful chances these days to learn to do things. There are such good schools and colleges, night schools for those employed by day and correspondence courses. There was never an age when the ambitious young person had so many opportunities for education and preparation for useful living. Don't for one moment think that because you are living in the country you have no chances. On the other hand there is no place equal to a farm for the beginner's course in all around usefulness.

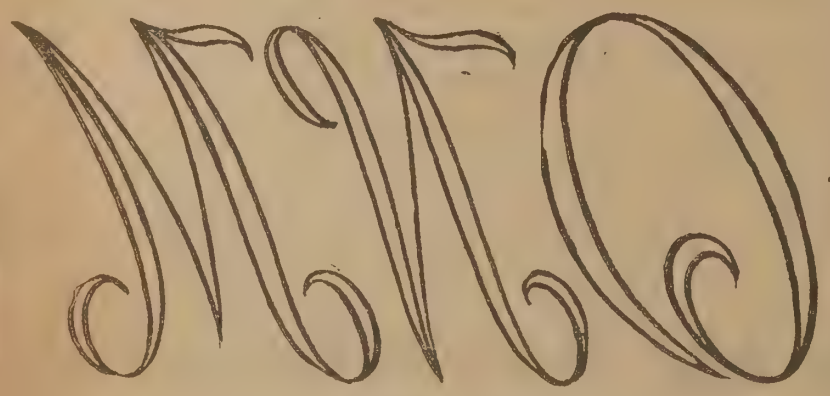
Make the most of everything at hand that will fill your mind with useful ideas. Learn by observing, by study, reading and listening. Young people these days are not always good listeners. Cultivate the art of listening. When you have a settled idea as to what you want to become keep steadily to the thought that you can accomplish it and you will "arrive," never fear.

It will doubtless require time, study and patient perseverance, but some of those qualities we country girls learn you know driving up the cows. And as the years lengthen out you may find, like Frances Willard, that you will be able to do a lot of things and see many places. I would not be so presumptuous as to compare myself with so great a woman as Miss Willard for she was one in thousands, but in my humble experience I have learned that to use the gifts of a much less richly endowed mind, to strive to make the most of every opportunity, to have a purpose, and an aim in life, has brought to pass many girlhood dreams of the barefoot girl who listened for the tinkling of the cow bell and drove up the cows.

Not Tragedies

Mistakes Are Merely Sign Posts

What is the quotation or what are the words which have helped you in the journey of life?
Send it to the editor of The Farmer and let it help another.



To the Editor: "Mistakes are not always tragedies. The foolish bury them with tears, but the wise use them as sign posts to warn themselves and others of the danger in the path of life."

Another is: "Good nature, like a bee, collects honey from every herb. Ill nature, like the spider, sucks poison from the sweetest flowers."

M. H. PORTER.

Sequim, Wash.

Script Initials for Embroidery

By WINNIFRED WORTH.

To transfer this design, put some soap in a pint of hot water, stir and remove excess moisture by partially drying design. Place material on a hard, flat surface and lay the design, face down, upon the material, cover with two folds of newspaper and, with a tablespoon, rub, pressing hard, until the design is entirely transferred.

White embroidery floss of a linen quality, or the mercerized, is the best for making letters. Always soap the fabric with white soap under an initial before embroidering. It aids one in washing the color from the finished design.

Ah, when shall all men's good
Be each man's rule, and universal peace
Lie like a shaft of light across the land,
And like a lane of beams athwart the sea,
Thro' all the circle of the golden year?

—Tennyson.

The Baby

A Few Hints As to the Clothing

Improper clothing may be harmful to babies in three ways, according to a bulletin on "The Care of the Baby," issued by the extension department of the University of Minnesota: First, by being so tight that it prevents normal movements; second, by keeping the baby too warm; and, third, by not keeping it warm enough. The first fault can be avoided by making all of the baby clothes loose and roomy. Do not put on so many clothes that the baby perspires. All clothing except the shirt, band and diaper may be removed in very hot weather. As the weather grows cooler, other clothing is added. The important thing for the mother to remember is that the baby is very sensitive to both heat and cold. She must be constantly on her guard to keep the baby cool enough in winter. The principal object of clothing is to insure a uniform body temperature. Loosely woven material should be used to allow proper ventilation for the skin. The use of a flannel belly-band is necessary until the cord drops off. After the first month it may be replaced by a knitted band with shoulder straps.

Clothes for Newly-Born Baby.

Three flannel binders (1-2 yard of 27-inch flannel).
Three shirts, wool and silk or wool and cotton.
Two flannel petticoats.
Two flannel or knitted sacques.
Two pairs of worsted socks.
Two dozen diapers, 22 by 44 inches.
One dozen diapers, 25 by 50 inches.
Four white muslin slips.
One cloak.
One warm cap.
One pair of mittens.
One veil.
Two blankets.
One box talcum powder.
Two dozen safety pins, large and small.
Two bath towels.

Later.

Three pairs of woolen stockings.
Three knitted bands with shoulder straps.
Additional diapers.

HELPS THROUGH LIFE

What is the most helpful thing you have learned during the last year in your experience with housekeeping? Let us pass it along to other housekeepers.

To the Editor: The most helpful thing I have learned during the last year in my experience with housekeeping—your question is too narrow. Let me put it as "the most helpful thing that has come to me as the experience of the years of life." I have learned in all things the need of:

1. To classify—for that makes for efficiency.
2. To simplify—for that makes for leisure, and the peace of mind where the soul may grow.
3. To jollify—for that adds the delicious flavor to life.
4. To glorify—for that means striving toward an ideal, and with high aims what may not be accomplished?

MRS. LEE R. GILLETTE.

BE SURE TO GIVE NUMBER AND SIZE.

Salt Pork and Cream Gravy.

This is just a plain country dish, but one which almost every one likes. Slice salt pork thin and put in a frying pan with water to cover. Cook until the slices of pork look pinkish and the water has evaporated. Roll each slice in a little flour, shaking off all that is superfluous, and return to the spider. Fry until crispy brown on both sides, watching closely, that they do not blacken. Take up the slices of pork onto a hot platter, then stir into the fat remaining a tablespoonful flour. Stir until well blended, then pour in a cup of milk. Stir again until smooth and thickened, add a half cup of cream or more milk, with pepper to season, and pour over the pork. This cream gravy is specially delicious with buckwheat cakes.

Ground Chocolate

Since 1852 D. GHIRARDELLI CO. San Francisco

Dear Nephews and Nieces: Now all nephews and nieces, too, please write your names and ages and addresses plainly on every letter you send me. Let me tell you what happened in one of our contests: I thought the name of one of the winners was that of a girl, and I sent a dainty little cup and saucer. Lo and behold! "she" was a boy! You can imagine how disgusted he was to get such a prize. Once a prize came back because there was no such postoffice as that on the letter. Twice, good letters that would have won prizes had no names or addresses at all. Careful writing and spelling of your name and address and your letter in general helps a great deal. There are so many letters that those which do not have names and addresses do not receive as much attention as others. Please bear all these things in mind, for I know that you realize our Corner is growing fast and we want to take care of you all. We are glad that the Corner is growing and that the letters are getting more interesting. Lovingly,

AUNT NELLIE.

Walk When the Roads Are Good.

Dear Aunt Nellie: I have never written to the Corner before, but I read all the letters the boys and girls write and enjoy them very much. I live on a farm about one and a half miles from town. I have two sisters and one brother—Ethel, who is 20 years old; Nettie, who is 7 years old, and Herbert, who is 9 years old. If it is nice weather and the road is good, we walk to school, but if the weather is bad, papa takes us. We have eight horses, three milch cows and four calves, about half a dozen cats and one dog. I like to ride horseback fine. I think it is great fun. I am 13 years old and in the sixth grade at school. I only weight 163 pounds, so you can imagine how small I am. My teacher's name is Miss Mary Mason. My birthday is January 20.—Irma B. Polson, Oakesdale, Wash.

Lots of Fun Fishing and Swimming.

Dear Aunt Nellie: I live on a 320-acre farm. It is on the Palouse river. I will be 14 years old July 10. I go to school, 10 miles away, and in winter it is pretty cold, so we don't go very much. My teacher's name is Miss Foote, and I like her very much. We have 16 head of cattle and eight head of horses. Their names are Peggy, Kate, Bill, Pete, Lucy, Jack and Maud. In summer we can go fishing and swimming and have lots of fun. I have a cat. Her name is Daisy. She is 12 years old. I have three brothers and one sister. In winter I go skating on the river when it freezes. It is just fine to skate or coast.—Anna Straube Pampa, Wash.

Can Get a Meal All by Herself.

Dear Aunt Nellie: This is the first time I have written to the Corner. I hope it won't be the last. I am 13 years old and my birthday is January 5. My weight is 86 pounds. My hair is light brown. I was operated on for appendicitis at the Colfax hospital and can't do any kind of work just now. I like to help mama cook and I can get a meal all by myself. I would like for some of the girls to write to me. We drive four miles to school in the buggy. We live 14 miles from Pullman.—Beulah May Wilson, Pullman, Wash.

Live on a Big Farm Near Pomeroy.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. We live on a farm of 1000 acres. I have two brothers. Their names are Clifford and Wilbur. I am 9 years old. One of my brothers is 2 years old and the other is 7 years old. We have 100 head of cattle. I have a dog. Its name is Max.—Olive Long, Pomeroy, Wash.

"Snowflakes" Is Ora's Poem.

Dear Aunt Nellie: I wrote to the Corner about two years ago, but I have not written since. I live on a 15-acre farm, four miles from Kent and three aand one-half miles from Auburn. We have two horses, one cow, one dog and 10 chickens. The horses' names are Lady aand Laddie. The cow's name is Cherry and the dog's name is Jack. I have four brothers and three sisters. We go to Auburn to school. My oldest brother goes to Walla Walla college. I am 14 years old and in the seventh grade. I composed a poem called "Snowflakes." I have composed several, but that one is the best.—Ora McDonald, Kent, Wash.

All the Boys Are Trapping Now.

Dear Aunt Nellie: I saw three letters in the Corner that I knew the children who wrote them. One of them said that he would like to see me because I used to live there. We have three calves. I have been trapping and caught five moles and expect to catch more before the trapping is over. I get from 5 to 25 cents for moleskins. I passed in spelling at school. I am in the fourth grade. There are 17 of us in the fourth grade. I have three traps for muskrats. I have one for a cat and two for moles. The holes are all filled up that the moles run in. All the kids are trapping around here.—Clayton Beeson, Globe, Wash

Ethel's Another New Member.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 10 years old and in the fourth grade. My birtnday is May 11. I like to go to school. I like my teacher very much. Her name is Miss Miller. I ride four and a half miles to school. I go to South Side school. I have four brothers and no sister. The brothers' names are Robert, Lloyd, Walter and Richard. We have 30 chickens and two pigs, three horses, their names are Molly, Buster and Prince. We have three cows, two heifers and two calves.—Ethel Gladson, Oroville, Wash.

Mama Reads the Letters to Her.

We're Glad You Joined, Margaret.

Dear Aunt Nellie: I have never written to the Corner before. I am 8 years old. I would like to correspond with any girl my age. I live on a 200-acre farm. We have five cows and I can milk. We have a team of horses. Their names are Doll and Fan. I have two sisters. Their names are Alice and Edith. Alice is 4 years old. Edith is 7 months old. I have one brother. His name is William. He is 6 years old. I have a cat. He is black and white. My brother and I go to school. My teacher's name is Mrs. Tope. I like her very much.—Margoret Helen Jolly, Olympia, Wash., R. F. D. 1, Box 120.

The Dog Barks at Every One.

Dear Aunt Nellie: I like to read the Corner. I have one sister and two brothers. My sister's name is Pauline. I have a horse and her name is Lil. We have seven mules and six horses. I have a calf and his name is Jiny. We have a little calf and his name is Daisy. I live on a farm of 480 acres. I am in the second grade. We have a dog that barks at everybody that comes in our yard. I am 7 years old and my big brother goes to school and he is 8 years old. He is in the third grade.—Irene Martha Slaughter, Mansfield, Wash.

Dog Will Sit Up on a Chair.

Dear Aunt Nellie: I live on a 91-acre farm and have lots of fun. I go to school and I am in the fourth grade. I am 11 years old. My birthday is the 12th of October. I am about 5 feet high and weigh about 100 pounds. For a pet I have a canary bird. We have five horses and nine cows. We have about three dozen chickens. We have a dog which can stand up and sit on a chair. We also have a cat that can jump through my hands. I have a pet calf which I call Jersey. I like my pets very much.—Helen Guenther, R. F. D. 1, Box 114, Winlock, Wash.

Taught Her Dog to Pull Her.

Dear Aunt Nellie: I have been reading the Children's Corner. I like it very much. I go to school. I am in the third grade. I am 12 years old. My birthday is January 23. My teacher's name is Miss Payne and I like her fine. I have a little pony and I ride to school. My pony's name is Prince. I have to go two miles and a half. We live on a 480-acre wheat farm. We have 17 horses and we have 10 cattle. We have two cats and one dog. My dog's name is Jip and I taught him to pull me.—Josephine Wagner, Tekoa, Wash.

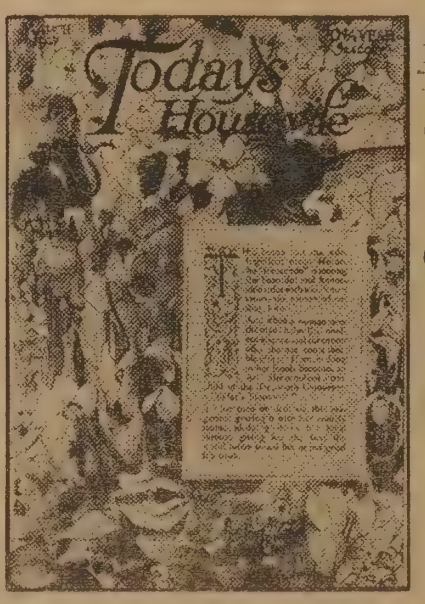
A Rabbit, a Cow and a Calf for Pets.

Dear Aunt Nellie: I am 7 years old and in the second grade. For pets I have one rabbit, a cow and a calf. The cow and the calf are not mine. The cow's name is Pet and the calf's name is Valentine. She was born on Valentine's day. I have one sister and one brother. My sister's name is Beatrice. My brother's name is Edward. My sister was 11 the 22d of January. My grandpa takes The Farmer. My brother will be 4 the 15th of March. My birthday is the 2d of May.—Irene May Hett, Kelso, Wash.

Vera Lives Four Miles From School.

Dear Aunt Nellie: I enjoy the Corner very much. This is the first time I have written. We have five horses and five cows. I have one pony that I can ride. I like to ride. I will be 10 years old June 7. We live four miles from school. We have 36 pupils in our room. I am in the third grade.—Vera Maude Lyons, Kennewick, Wash.

Pretty Lake in Front of the Farm.



Dear Aunt Nellie: I have wanted to write to the Corner ever since we took the Washington Farmer. I look for the Children's Corner every time the paper comes. I am 9 years old and my birthday is the 21st of May. I am

in the fourth grade. I have one sister, 17 years old, and her name is Ethyl, and my brother is 14 years and his name is Clifford. I have brown eyes and light brown hair and my sister has plue eyes and dark brown hair. My brother has dark blue eyes and real light hair and he keeps tormenting me all the time. We have only lived up here about four or five months. We lived in Olympia before we moved up here. We live on an 80-acre place and there is a pretty lake in front of our place and so we call it the Lillie Lake Place. I will be glad when summer comes so we can go swimming. My brother is a dandy swimmer. I have three little bantie hens and a rooster and I have two little puppies. I like school very much. My teacher's name is Mr. Grass. I have about one mile to walk to school. —Maud Shincke, Yelm, Wash.

Eight Pupils Go to Marie's Sschool.

Dear Aunt Nellie: I have been reading the letters in the Corner and have enjoyed them very much. We have 13 canary birds and 110 head of cattle. I have four sisters and five brothers. My oldest sister is married and has two little boys. We have three and a half miles to go to school. There are only eight pupils in our school. Our teacher's name is Miss Ella McKellar. We live in the country. We have two places, one in Garfield county and the other in Asotin. We have 480 acres on the ranch in Asotin county, but I don't know how many there are on the one in Garfield county. We live on the one in Asotin county. My sister, Bertha, plays the piano; my brother, Christopher, plays the violin, and my brother, Frank, plays the banjo. I will be 14 years old August the 14th. I am in the sixth grade. My youngest sister will be 11 years old April 29th. She is in the fourth grade. My youngest brother was 8 years old November the 28th—Marie Cecilia Wolf, Peola, Wash.

Kitty Is Black, White and Yellow.

Dear Aunt Nellie: I am a little girl 10 years old. I have not written to the Corner before, but I have read the paper almost every time it comes. I live with my grandma and grandpa. I have two brothers and one sister. My sister is younger than I am. Grandpa has a little half-breed Shetland pony that he calls Mary. She is not big enough for us to ride yet. We have two milch cows. Their names are Pansy and Bluebell. I have a pet kitten. I call her Spot. She is black, white, gray and yellow. She looks very queer. Daniel, Lacrosse, Wash.

Is Glad That Spring Has Come.

Dear Aunt Nellie: This is the second time I have written and I hope it won't be the last. I am in the seventh grade at school. I will be 14 years old the 13th of April. There are nine pupils in our school. We had a nice program down at our schoolhouse. We had ice cream and cake. I walk a mile to school. We have an automobile. I am glad that spring has come. I live on a large ranch of 1000 acres. We have 12 horses, 40 head of cattle, 10 hogs and two dozen chickens.—George Venneberg, Manson, Wash.

A Basket Supper at the School.

Dear Aunt Nellie: We live on a 480-acre farm. We have 20 horses and three cows and one calf, which is just five days old. We have a dog and his name is Don. The cows' names are Blossie, Rose, Dovie. We have not named the calf yet. I walk a mile from town. We had a basket supper at our school the 23d of January. I was in a dialogue. I took a basket. I have three brothers and two sisters. Their names are Wade, Dewey, Ina, Edith and Burl. Burl is my youngest brother. He is 5 years old. I am 11 years old. My birthday is the 27th of October. We take the Youth's Companion and I read the children's page in it. There are lots of good stories in it. Our teacher's name is Miss Hattie Hendicks. I like to go to school. I am in the fourth grade. I would like for some of the girls of my age to write to me.—Ruth Crabb, Marengo, Wash.

Have a New Organ at School.

Dear Aunt Nellie: I read my first letter in The Farmer and was glad to see it. I go to school every day. There are 11 pupils in our school. I have not very far to go to school. I am starting to crochet and I do some tatting and I like it fine. I crocheted around two handkerchiefs. My aunt taught me how to crochet. I had my teacher show me how to tat. We have two cars, one is an Overland and one is a Ford. We live eight and one-half miles from Odessa. The sun is shining today. My subjects at school are history, geography, arithmetic and spelling and language. I like them all. We have a new organ at our school. Our teacher can play it. Our schoolhouse is painted white. My height is 5 feet 6 inches.—Irene M. M. Gissler, box 357, Odessa, Wash.

Pick Berries All This Summer.

Dear Aunt Nellie: I enjoy reading the Children's Corner every week, although I have never written before. I am 10 years old and my birthday is the 24th of July. I have one sister and one brother. My sister's name is Bertha and my brother's name is George. Bertha is 12 years old and George is 7 years old. I have to pick berries all this summer. I have a pet dog. His name is Ned. I go to school. My sister and I are in the fifth grade. My brother is in the second grade. There are 80 pupils in our school. My teacher's name is Mr. Gwin.—Mamie Jennings, Elma, Wash.

Dear Aunt Nellie: I have not written to the Children's Corner yet, so I thought I would write. I like to have mama read the letters to me. I am 8 years old and in the third grade. I have four brothers and no sister. My brothers' names are Ronald, Chester, Kenneth and Roy. We have two calves and two cows. I live on a five-acre farm. I have one mile to walk to school. I am making four patchwork quilts. Papa takes The Washington Farmer.—Lucile Owen, route 1, box 38, Burlington, Wash.

They Are Building a New House.

Dear Aunt Nellie: I wrote to the Corner once before, but I never posted the letter and then I wrote once about the cows and horses. We have two horses and seven cows and three calves and some hens. We have two hens setting. We are building a new house. We will have 10 rooms downstairs and two rooms upstairs. We have a telephone. They are plenty of dogs here to keep the rabbits away from the haystacks. — Esther Mildred Erickson, Bend, Ore.

Playhouse in the Shade of the Trees.

Dear Aunt Nellie: I am writing to the Corner again. I am in the second grade. I am 8 years old. I have five sisters. We have had a very hard winter up here. The snow is three feet deep. I have two brothers and they go on the hill coasting and have a lot of fun. I will be very glad when spring comes so we can play on the bare ground. I always make a playhouse in the shade of the trees in the summer time.—Luzon Bates, Bates, Idaho.

Stella Was the Best in Language.

Dear Aunt Nellie: I am going to tell you how I earned my first money. One day at school my teacher said the one that was the best in language would get a prize. We all worked very hard and at the end of the school, my teacher gave me 50 cents. My teacher's name was Miss Matlock. I would like to correspond with Mary Lehman, Harrison, Idaho. — Stella Bates, Bates, Idaho.

Earned Four Dollars a Month.

Dear Aunt Nellie: I have never written to the Corner before. My subject is "How I Earned My First Money." I earned my first money when I was 7 years of age. We then lived one and one-half miles from the schoolhouse; the directors wanted one of the school boys to be janitor, and as no one else would do it I took the work and got $4 a month. I am 10 years old now.—K. B. Johnson, Camas, Idaho.

Room in the Corner for Mary.

Dear Aunt Nellie: I would like to join the Corner this year. I am going to school and am in the third grade. My teacher's name is Miss Hammar. We have had a great deal of snow here. I wish summer was here today.—Mary Burton, Virginia, Idaho

Aunt Nellie is glad to announce the receipt of letters for the "Children's Corner" from the following during the last week: Vega Danielson, Naomi Hansen, Ella McLean, May Rosenlof, Ellen Louma, Wieno Louma, Edna Pagan, Margaret Easton, Imogene May, Alice Crandell, Grace Sardam, Mamia Sardam, Bertha Lehr, Nellie Reid, Laurence Patrick, Eva Patrick, Fay Paulson, Harold Paulson, Verna Kanne, Mildred Guptill.

If you wish paper sent elsewhere, fill in name and address.

Address,
Farm Information Editor,
THE WASHINGTON FARMER
Review Bldg., Spokane, Wash.

Mistakes Gladly Corrected.

Every effort is being put forth by the Farmer to see to it that all the advertisements contained in its pages are trustworthy and reliable and that whenever a mistake occurs it shall be corrected.

Nothing will please the Farmer better than to have the cooperation of all its readers and advertisers in this constant work of making a farm paper correct in statements of facts and practicable in the method advocated.

Write to the editor whenever you see a mistake and be sure to give your own experiences when you have a better method of doing anything on the farm or in the farm home.

In this connection the Farmer is glad to make a correction in one of the advertisements appearing in a recent issue in which a farm machine was described as the Aultman Bean and Pea Puller, when it should have been given as the Aultman Bean and Pea Huller.

New School at Thomas.

At the bond election held in school district No. 25, Thomas, Wash., recently, to decide whether $7500 should be spent in securing additional grounds and erecting a new schoolhouse, the bonds won out by a big majority, and we are informed that within a very short time bids will be called for the erection of as neat and convenient a school building as is to be found anywhere about here.

FARM LANDS—FOR SALE 651

MONTANA LAND.

Are you looking for a farm home or a land investment in grain or grazing lands in the great grain and stock country of Montana? If so, it will pay you well to see our Montana Land List, telling of improved and unimproved lands in several of the best districts of Montana — Judith Basin, where prices range from $36 to $60 per acre—Eastern Montana, where we can show you several fine tracts at $8 to $20 per acre—Shields River Valley, that famous grain and stock district, where good grain lands, partly improved, sell at $40 to $50 per acre, and sure to increase in value while producing a good income on your investment — Conrad and Great Falls districts, where good grain lands can be bought at $20 to $30 per acre. Lest you forget, we say again, if you are interested in Montana land in practically any good district in the state, don't fail to call or write for Montana Land List—it's free, and will probably save you time and money. We have made a careful study of the land situation in Montana the past few years, and believe we can be of service to you. Hege & Watkins Co., 715-17 Paulsen bldg., Spokane, Wash.

Grain and Produce Markets

Chicago Grain.

CHICAGO, April 14.—Abnormally active demand for flour did a good deal today to make wheat prices soar to a new high point, $2.25 3-4 May delivery. The market closed strong at 1 1-8c to 4c net advance, with May at $2.24 1-2 to $2.25, and July at $1.91 1-2 to $1.92. Corn gained 1c to 1 7-8c, and oats 3-8c to 7-8c. In provisions the outcome varied from 2 1-2c decline to a rise of 35c.

Reports of free buying on the part of milling interests counted from the outset as powerful factors on the bull side of the wheat market. It was explained that such purchases were to provide for greatly enlarged flour business, but this information served to increase anxiety among wheat shorts. Attempts to cover disclosed that the market was virtually bare of offerings. Rapid lifting of bids ensued, but realizing sales on the bulge led to only comparatively moderate reactions in the May option.

Eager payment of big premiums for cash wheat tended to keep the bears anxious regarding nearby settlements.

Somewhat improved crop advices from the southwest, especially Kansas, eased off July and September wheat in the last half of the session. The better field outlook was ascribed to rains, and there were prospects of further moisture before Monday throughout the greater part of the winter wheat belt. Week-end adjustment of trades, however, brought about fresh advances as the market came to a finish.

Corn, as well as wheat, reached a new high level of prices. Strength of wheat was the chief bullish influence, but toward the end of the day appeared to be more or less offset by predictions of an increased movement soon from farms. Trade was of fair proportions and was well divided.

Provisions rose with grain. Packers sold on the advance.

Pacific Northwest Grain.

PORTLAND, Ore., April 14.—April delivery: Wheat, bluestem, $2.06; fortyfold, $2; club, $1.99; Russian, $1.97. Oats, No. 1 white feed, $47. Barley, No. 1 feed, $46.50.

Futures: Bluestem, May, $2.07½; fortyfold, $2.02; club, $1.99; Russian, $1.98. Oats, May, $47.75. Barley, May, $47.

TACCMA, April 14.—Wheat—Bluestem, $1.98; fortyfold, $1.94; club and fife, $1.87; red Russian, $1.82.

SEATTLE, April 14.—Wheat—Bluestem, $2.06; Turkey red, $2.07; fortyfold, $2; club, $1.99; fife, $1.99; red Russian, $1.97.

Barley, $46 per ton.

WALLA WALLA, Wash., April 14.—Club wheat $1.80, bluestem $1.88, barley $44.

San Francisco Grain.

SAN FRANCISCO, April 14.—Barley—May, $2.70 bid, $2.75 asked; December, $1.95 bid.

Portland Market.

PORTLAND, Ore., April 14.—Potato buyers are now offering $4 to farmers for the best stock. Only 50 cars are known to be left in first hands, not enough to see this market through the remainder of the season.

Eggs have advanced again, and at the close of the week storage operators were putting away stock on the 32-cent basis, which is 60 per cent more than storage pack cost them last year.

Butter production is gaining slightly, but the supply is still under the demand, and as the eastern markets are going up, prices here may be advanced.

In the following list of quotations the grain, hay, millfeed, hop, wool and hide prices are those paid to producers. The other quotations are prices from jobbers to retailers:

Oats—No. 1, $47.75 per ton.

Corn—Whole, $61; cracked, $62 per ton.

Millstuffs—Bran, $37 per ton; shorts, $40.

Barley—No. 1 feed, $47; brewing, nominal; rolled, $50.

Hay—Buying prices: Timothy, eastern Oregon, $22@25; alfalfa, $17@20; grain, $13@15.

Eggs—Oregon ranch, case count, 32c per dozen; candled, 33c.

Poultry—Hens, 21@22c; ducks, 22@23c; turkeys, live, 20@22c; dressed, 23@28c; geese, 12@14c.

Butter—City creamery, prints, 44@45c per pound; cubes, 41c.

Cheese—Oregon triplets, 24c; young Americas, 26c.

Dressed meats — Veal, 14@14 1-2c; pork, 18@18 1-2c.

Hops—1916 crop, 3@7c per pound.

Potatoes—Oregon, jobbing price, $4.25.

Onions—Jobbing prices: No. 1, $12.50.

Wool—Eastern Oregon, fine, 30@35c; coarse, 40c; valley, 40c.

Beans—Oregon small white, 11c; California small white, 13c; large white, 12½c per pound.

Hides—Salted hides (25 lbs. and up), 18c; salted stags (50 lbs. and up), 14c; green and salted kip (15 lbs. to 25 lbs.), 18c; green and salted calfskins (up to 15 lbs.), 27@28c; green hides (25 lbs. and up), 17c; green stags (50 lbs. and up), 13c; dry hides, 30c; dry salt hides, 25c; dry horse hides, $1@2; salt horse hides, $3@5.

Seattle Market.

SEATTLE, Wash., April 14.—To operators there is nothing strange in the fact that spuds have ascended to $90 for Yakima gems and $80@85 for locals, but to search out the possible high point, while at the same time conducting an investigation of the visible supply and how long it can hold out against the present brisk demand is of more importance.

Any dealer who cared to wager that the market would not touch $100 per ton, Seattle basis, could get all the opposition he desired. In fact, predictions were made on Western avenue today that holders would be compelled to get that figure before the end of next week.

Very little Yakima stock remains here.

The egg market is strong. Jobbers will begin Monday to quote 31@32c to producers and will sell at 34c. Conditions of demand and supply today are similar to those of midwinter, when there is barely enough stock coming to meet the current requirements. Storage has been practically out of the question. Alaska has bought heavily, including business for the railway construction crews, and the receipts have been insufficient to leave any surplus for storage after the supply has been drained from so many consuming sources.

Cheese is scarce almost to the vanishing point. Jobbers reluctantly admit that here at least is one commodity which consumers can do without when the market is abnormally high, and full advantage is being taken of the fact. Oregon manufacturers report a heavy drain upon a limited production, and are constantly in a battle, together with manufacturers of Puget sound, for milk against stiff bidding. The difficulties of the Washington cheese manufacturer are being intensified by competition from condensaries.

Poultry will remain steady next week, according to quotations by jobbers. The storage stock of frozen ducks has been cleaned up. Belgian hares are in good demand because of the high prices of other meats.

BUYING PRICES.

Unless otherwise stated, the following prices are fixed upon a jobbing basis and are average prices obtained in reports of transactions by jobbers.

The following prices are offered to the producer by the local dealers for delivery in round lots f. o. b. Seattle:

Eggs—Local, 31@32c per dozen.

Poultry—Live hens, fat, over 4 lbs., 21@22c per lb.; do 3 lbs. and under, 20@21c; old roosters, 12c per lb.; springs, 21@22c; ducks, 22c per lb.; squabs, large, $3.50 per dozen; geese, fat, 18c per lb.

Butter fat, 47c per lb.; dairy butter, 27c per lb.

Beef—Buying price: Prime beef steers, 7@8c per lb.; cows, fat, 7@8c per lb.

Hogs—Light, 15@16c per lb.; do heavy, 10@12c per lb.

Veal—Fancy light, 13@14c per lb.; do heavy, 10@12c per lb.

Hides—Salted, 20c per lb.; salt kip, 22c per lb.; salted calf, 32c per lb.; green hides, 16c per lb.; salted bulls, 15c per lb.; dry hides (short trim), 36c per lb.; dry calf (under 6 lbs.), 40c per lb.; bull and dry salts, 4c per lb. less; green bulls, 12c per lb.; dry butcher full wool sheep pelts, 25@28c per lb.

Live Stock Quotations.

At Omaha.

OMAHA, Neb., April 14.—Hogs—Receipts, 7600; steady. Heavy, $15.70@16; light, $15.25@15.85; pigs, $13@15; bulk of sales, $15.60@15.90.

Cattle—Receipts, 100; steady. Native steers, $9.50@13; cows and heifers, $8@10.85; western steers, $9@11.50; stockers and feeders, $6.50@10.25.

Sheep—Receipts, 200; steady. Yearlings, $12@13.75; wethers, $11.50@12.75; lambs, $14.75@15.70.

At Chicago.

CHICAGO, April 14.—Hogs—Receipts, 7000; steady at yesterday's average. Bulk, $15.80@16.20; light, $15.40@16.15; mixed, $15.65@16.35; heavy, $15.65@16.35; rough, $15.65@15.80; pigs, $11.50@14.50.

Cattle—Receipts, 500; weak. Native beef cattle, $9.30@13.25; stockers and feeders, $7.30@10; cows and heifers, $5.75@11; calves, $9@13.25.

Sheep—Receipts, 2000; steady. Wethers, $10.70@13.10; lambs, $12.15@16.

At Portland.

PORTLAND, Ore., April 14.—Hogs—Firm; receipts, 936. Bulk of packing grades, $14.60@14.75; heavy packing, $14.75@14.85; light packing, $14.50@14.70; rough heavy, $13.60@14.25; pigs and skips, $13.25@13.75; stock hogs, $11.50@13.

Cattle—Steady; receipts, 76. Steers, prime light, $9.85@10; prime heavy, $9.50@9.75; good, $9.25@9.75; cows, choice, $8.25@8.75; medium to good, $7.75@8.25; ordinary to fair, $6.75@7.50; heifers, $8.25@9; bulls, $6@8; calves, $7@10.

Sheep—Firm; receipts, 13. Lambs, east of mountains, $13@13.50; lambs, valley, $12.75@13.25; lambs, shorn, $11@11.50; prime wethers, $11.50@12; choice ewes, $10@10.75; heavy ewes, $9@10.

At Seattle.

SEATTLE, April 14.—Receipts, 105 hogs; market, strong.

Hogs—Prime light, $14.90@15; medium to choice, $14.50@14.60; smooth heavies, $14@14.25; rough heavies, $13.50@14.75; pigs, under 150 pounds, $10@13.75.

Cattle—Prime steers, $9.90@10; medium to choice steers, $9.25@9.50; common to good steers, $6.50@9; best cows and heifers, $8.50@8.75; medium to choice, $8@8.25; common to good, $4@4.75; best bulls, $6.50@7; common to good bulls, $3.50@6; calves, $6.50@10.

Sheep—Prime lambs, $12.50@13.75; good lambs, $12.25@12.50; wethers, $10.25@10.50; ewes, $9.10.

Spokane Stockyards Saturday.

Hogs — Receipts, none; market, strong. Prime light, $14.50@14.60; prime heavy, $14.60@14.75; pigs, $12.60@13.35; stockers, $10@12.

Cattle—Receipts, 11; market, strong. Prime heavy steers, $9.50@9.75; prime light steers, $9.25@9.40; good steers, $8.50@9; prime cows, $8@8.50; good cows, $7.25@7.75; common cows, $6.25@7; best heifers, $8.25@8.75; bulls, $4@7; calves, $7@10; stockers and feeders, $6@7.50.

Sheep — Receipts, none; market, strong. Prime lambs, $12@12.50; common lambs, $11@11.50; choice yearlings, $10.50@11; good yearlings, $9.50@10; best mutton ewes, $10@11.

Portland Wheat.

PORTLAND, Ore., April 14.—The wheat market held an 11-cent advance at the close of the week, when 30,000 bushels of bluestem were sold at $2.08. Everything was higher, with a strong demand. Forty-fold was quoted at $2, club at $1.99 and red Russian at $1.98. The demand was from California and also for northern milling account.

Flour was raised another 50 cents, to $10.20 for patents, and mill feeds advanced sharply.

Many Quails in Egypt.

Quails, part of the food of the children of Israel when in the wilderness, are still numerous in Egypt; and during their yearly migrations descend in swarms.

Need Not Fear Federal Price Control

No recent topic has been of greater interest to the farmers of the Pacific northwest than the agitation that is developing in many cities for government control of food.

Our informants who have come in from attending farmers' meetings say it is the absorbing question everywhere discussed. Deep alarm is reported and in a few instances farmers have announced a purpose not to respond to the appeal of the president, the governors and other officials for enlarged planting this year. Facing high prices for seed and the difficulty of finding farm labor, they fear that government control might force them to market their products at a loss.

Reflection, however, will convince the farmer that no producer should hold back from that fear.

Conditions may make it expedient for the government to take vigorous action to stop speculation in food. It is even possible that it may adopt the European plan of fixing maximum prices which the growers can claim.

That, however, is "in the air," and growers who hold back till congress has threshed out the problem will later have reason to regret their mistake.

For in point of fact there never was a time in our history when the farmer could go forward with his spring activities in greater ease of mind—with the assurance he now has that his labor will bring generous reward.

Even though the government might later commandeer his crops, the prices he would be paid would be sufficient to insure him a generous return.

In ordinary times the farmer must take what the market will give, and it has frequently come about that the market price was less than the cost of producing a commodity. Always the farmer labored under the element of risk. Potatoes sometimes were ruinously low. Wheat we have seen sold at a price that hardly offset the cost of seed, sacks and threshing. Apples have been marketed at prices that put the growers in debt.

But under government control, in times like these, when the whole world is short of food, the United States government can be trusted to deal fairly and liberally with the farmer. He can better take a chance with Uncle Sam than with the speculating middleman.

Seattle Wheat.

SEATTLE, April 13.—Just how much more Washington wheat will stand without breaking into the nebulae of over strain is the problem of all traders this week. For the first time in the history of the grain growing industry in the state, $2.10 per bushel appeared in the transactions on change as asking prices for bluestem for prompt April and May delivery.

Generally the market responded only slightly to the violent fluctuations in the east. Opening at $1.90 bid for milling bluestem, prices moved guardedly in a radius of 10c to 16c. While the feeling was speculative, traders here were inclined to waive the strength put up by war conditions and to work from the basis of a short crop for 1917 as forecasted in the federal report. It would be difficult to convince grain operators here that the gloomy forecast of the '17 yield was not the most vital bull factor in the market.

Wheat traders enjoyed the spectacle of export wheats such as club and fife selling at $1.25 to $1.29 per bushel over the normal five-year average up to the outbreak of the war. In those days it was recalled that club and fife cargoes were worked overseas at 69c to 70c, occasionally 75c per bushel, and the prices was concededly healthy and profitable.

Wool.

BOSTON, April 13.—Accountants employed by the Boston Wool Trade association reported today that there were 59,734,812 pounds of wool on hand or in transit to this city, the largest wool market in the world. This entire stock was offered the government at prices quoted the day President Wilson asked congress to declare a state of war, but was declined yesterday because the government found it impossible to make use of it at this time.

The Commercial Bulletin will say tomorrow:

"The wool market this week was stronger, but without the wave of speculative trading that many doubtless awaited. However, asking prices were generally about 2 cents a pound higher in the grease, except for very low wools. There was doubtless a proportional advance in many scoured wools. Manufacturers are awaiting with interest modifications in army specifications, likely to be made by the government. Some buying in the west is reported at fully recent rates."

Scoured basis:

California, northern, $1.20@1.25; middle county, $1.10; southern, 85@87c.

Oregon, eastern No. 1 staple, $1.30; eastern clothing, $1.15@1.20; valley No. 1, $1@1.05.

Territory, fine staple, $1.35@1.40; half blood combing, $1.20@1.25; three-eighths blood combing, $1.10@1.12; fine clothing, $1.10@1.25; fine medium clothing, $1.10@1.15.

Pulled: Extra $1.30@1.35; AA, $1.20@1.25; A supers, $1.10@1.15.

Spokane Market.

The wholesale prices quoted in the list below are not the prices paid to producers or shippers; they are those charged by the Spokane commission houses to the retail trade for standard produce. The prices quoted for live stock, however, are the prices given to the producer:

Potatoes — Potatoes, $3.50 cwt; new potatoes, 12½c lb.

Seed Potatoes — Early Ohios, 4c lb; Early Rose, 4c lb; white potatoes, 4c lb; Early Six Weeks, 5c lb.

Apples—Washington apples, cooking, 75c@$1; eating, $1@1.25; Wageners, $1 box; Rome Beauties, $1@1.40 box; Winesaps, $1.75@2 box; Y. N. Pippins, $1.75@2 box.

Butter—Blanchard cartons, 47c lb; Medo-Maid, 47c lb; Cascade, 47c lb; Gold Leaf, 47c lb; Attalia, 47c lb; Diadem, 47c lb.

Cheese—Wisconsin full cream, twins, 28c; triplets, 25c; Hazelwood full cream, triplets, 25c lb; Hazelwood Young America, 25c lb; Wisconsin limburger, 29@30c lb; brick cheese, 28c lb; domestic Swiss, 33c lb; Young Americas, 26c lb.

Eggs — Fresh local ranch eggs, $10 case.

Live Poultry—Hens, 18@19c lb; old roosters, 10c lb; ducks, 13c lb; turkeys, 20@25c lb; geese, 11c lb.

Dress Poultry—Hens, 22c lb; springers, 21c; old roosters, 13c; ducks, 16c; geese, 14c; turkeys, 28c.

Hide Quotations.

Green cows and steers—25 lbs and up, 17½c; salted cured, 20c; green bulls and stags, 13c; salted cured, 16c; kip, 15 lbs. to 25 lbs., 23c; calf skins up to 15 lbs; 31c; dry flint hides, 34c; dry salted, 27c; dry calf skins, under seven lbs., 42c; dry sheep pelts, full wooled, 22@26c; dry shearlings, 10 to 75c each; green horse hides, $3 to $5 each; dry horse hides, $1 to $2.50 each.

Butter and Eggs.

ELGIN, Ill., April 19.—Butter, 25 tubs at 46c. This is a record price for April.

CHICAGO, April 14.—Butter—Easier; creamery, 41@41½c.

Eggs—Higher; receipts, 21,450 cases; firsts, 32½@33½c; ordinary firsts, 31@32c; at mark, cases included, 30@33c.

Non-Skids Were Needed.

Thelma, 3, was trying to explain that her little friend needed rubber heels on her shoes, and said: "Mama, she needs a flat tire on her shoe."—Cleveland Plain-Dealer.

Cattle and Horse Raisers' Association

The following official call for the fourth annual meeting of the Cattle and Horse Raisers' association of Oregan, at LaGrande, has been issued by William Pollman, president, and S. O. Correll, secretary:

Call is hereby made for the fourth annual meeting of the Cattle and Horse Raisers' association of Oregon, to be held in LaGrande, Ore., on April 24-25, 1917, opening at 10 o'clock a. m., on Tuesday, April 24.

All railroads operating in Oregon, Washington and Idaho have published for this convention one and one-third fare for the round trip on the certificate plan, dates of sale from April 20 to 25 inclusive, with return limits of April 24 to 27 inclusive. Purchase your ticket to LaGrande at regular rates and take a certified receipt, and upon presentation of said receipt a return ticket will be sold at one-third the regular fare.

Many subjects of interest to live stock growers will be considered. Among the speakers who will be present are W. B. Webster of Kansas City, Mo.; T. W. Tomlinson of Denver, Col.; Governor James Withycombe of Salem, Ore.; George C. McMullen of Kansas City, Mo.; Professor E. L. Potter of Corvallis, Ore.; Ephriam Barnes of the United States national forest service; A. D. Dunn of Wapato, Wash.; Dr. W. H. Lytle of Salem, Ore., and J. F. Blanchard of Prineville, Ore.

The LaGrande Commercial club, and the stockmen of Union county are in charge of the arrangements for this convention and the entertainment of the members, delegates and visitors. Special entertainment has been provided for the ladies, and every one is assured a good time.

One feature of the entertainment will be a free exhibition of pure bred live stock which promises to be both interesting and instructive.

Reservations for rooms can be made by writing the LaGrande Commercial club. Ample accommodations have been made for all who come.

Our executive committee urges all stockmen to attend this convention, and the citizens of La Grande enclose you an invitation.

The term of office of all county brand inspectors expires June 1, 1917. Please have the cattle and horse growers of your county recommend to our association an experienced stockman suitable for this position.

Our Flag!

In this solemn hour of American history every reader of The WASHINGTON FARMER will want to fly the Stars and Stripes.

We have secured a limited number of American flags, 3x5 feet, muslin, fast colors; and while the supply lasts will send one with a new or renewal subscription to The Washington Farmer, both for only $2, which is the regular 3-year subscription rate. If you are paid ahead your subscription will be extended 3 years.

We suggest that you act at once, as our supply of flags will be quickly exhausted.

In ordering kindly use this coupon if convenient.

The Washington Farmer,
Review Bldg., Spokane.

Enclosed find $2 (your personal check, stamps or money order), for which send me American flag, as advertised, and The Washington Farmer ... years.

News for Breeders

Prices received at six Shorthorn sales in Illinois and one in Iowa the first week in March averaged $374 per animal.

At the Harris & Sons Hereford sale at Harris, Mo., February 28 and March 1 the average price received was $1281, a new high record for Hereford sales. The bulls averaged $1545.

Several sales of Shorthorns have been held in the southern states since the first of the year and in every case rather high prices were received. Beef cattle men are gratified at the increase of interest in pure bred cattle in the south, especially Shorthorns.

The Evergreen Cooperative Cheese factory, a few miles southwest of Silverton, Ore., was opened March 5. Plenty of milk is being received and the farmers who own it expect the business to increase as soon as they can take care of it. L. B. Haberle is president; H. H. Kuenzi, secretary, and John Eahler, cheese maker.

At the Honks & Bishop Duroc Jersey sale in Iowa January 17 36 catalogued sows sold for an average of $253 and five boars at $278. At the Ira Jackson sale at Tippecanoe City, Ind., February 21, 45 sows of the same breed averaged $305, the top sow going at $570. It looks as if prices out here are not as high as they are yet sure to go.

The Guernsey Breeders' association of Tillamook county is arranging to send for a carload of high class Guernseys. They can not be found in the Pacific northwest and while they might possibly be secured in California the opportunity for selection there is small and the cattle will probably be purchased in Wisconsin. County Agriculturist Jones and some member of the association will make the selections.

N. C. Culy of Grants Pass, Ore., recently purchased from F. E. Lynn of Perrydale, Ore., six head of registered Jerseys, three cows and three heifers, paying $1500 for them. Included among the heifers was a full sister to Nashville Susie, Mr. Lynn's grand champion cow at the Panama-Pacific exposition. She promises to equal her famous sister, and the entire lot are desirable Jerseys. Mr. Cully has been dairying for years, and these are his first registered animals. He plans building up a Jersey herd.

U. G. Smith of Newburg, Ore., who owns a son of the great show bull, Peter Pan, has recently purchased nine registered Ayrshire heifers. Five are sired by a half brother of Lily of Willowmoor, that holds the world's long distance butter record, one of them from a heifer that produced 15,000 pounds of milk with her first calf. There is some Comet and some Netherat Brownie blood in the herd. The heifers were purchased from Shannon Bros. of Cloverdale, B. C., and H. W. Vanderhoof of Huntington, B. C.

On Wednesday, March 21, a number of cattle breeders of Yamhill county, Ore., met at McMinnville to plan ways and means of placing more registered bulls in the county. The meeting was called by County Agriculturist Shrock, who outlined the objects of the meeting. He spoke of the small number of purebred bulls used, of the high prices received by stallion dealers, who take notes for the entire amount, cashing them at local banks. While no positive agreement has been made by the banks, he had some assurance of local banks handling notes given for bulls. He asked the question of how best to get more interest in purebred sires, suggesting bull associations, and also spoke of the value of cow testing associations.

A general discussion followed, the following taking part: Thomas Carmichael, Gaston; T. A. Shelton, L. H. Baker and L. Horner, Carlton; J. U. Smith, Newburg; J. O. Boger, Amity; George Sully, W. A. Forrest, James Cruickshank, G. B. Lawson, E. J. Handley and I. B. Shirley, McMinnville.

It was decided to organize a Yamhill County Pure Breeders' association, and another meeting will be held at an early date at the call of Mr. Shrock.

W. L. Sheard, the Duroc breeder of Dayton, Ore., recently purchased a son of the great sire Pathfinder from Hanks & Bishop of Iowa. The young boar has the bone, good feet and strong back of his sire and promises to develop into a great hog. Mr. Sheard has several very nice litters of spring pigs and will probably exhibit at the state fair again this fall.

J. R. Cole of Molalla, Ore., owns in addition to his Big Type Poland Chinas and Jerseys, a little flock of 15 registered Cotswold ewes that have this spring made a record of slightly less than 200 per cent lamb production. Two yearlings had single lambs. All the older ewes had twins except one and she bore triplets, all of which lived. For a week after the last lamb was born only three had been lost and the others all seemed in the best of health. Mr. Cole would like to know of other flocks that may have lambed 200 per cent.

H. J. McInnes near Albany, Ore., recently purchased from J. C. Brown & Sons of Shedd, Ore., their Jersey herd bull Londseer Tormentor Boy, a very strongly bred Tormentor bull, with great producing blood lines in his pedigree. Mr. McInnes has only a grade herd of Jerseys, but they are good cows and he deserves much credit for securing so good a bull. It is understood that Mr. Brown has retained the privilege of buying him back in two years. The Messrs. Brown have also recently sold a young bull and two heifers to A. Foss of Terrebonne, Ore. The heifers were by their young bull, St. Mawes' Noble and the bull by the old herd sire. They report sales fairly good.

The meeting of the Oregon Cattle and Horse Raisers' association at La Grande, Ore., April 25 and 26, promises to be a great meeting, in attendance, in interest and in quality of program as well as from the fact that a large number of the best pure bred live stock of the Grande Ronde valley will be on display. Speakers of national prominence from the east, as well as some of the best known stock men in Oregon and Washington have been secured. A "cowboy breakfast" and a banquet and entertainment for the ladies as well as the men are included in the good things promised those who attend. H. A.

Canada Offers 160 Acres Land Free to Farm Hands

Bonus of Western Canada Land to Men who Assist in Maintaining Needed Grain Production

The demand for farm labor in Canada is so great that as an inducement to secure at once the necessary help required, Canada will **give one hundred and sixty acres of land free as a homestead** and allow the farm laborer, who files on land, to apply the time he is working for other farmers as residence duties the same as if he had lived on the land he had applied for. This offer made only to men working on Canadian farms for at least 6 months during 1917, thus reducing the necessity of actual residence to 2 years instead of 3 years, as under usual conditions. This appeal for farm help is in no way connected with enlistment for military service, but solely to secure farm laborers to increase agricultural output. A wonderful opportunity to earn good wages while securing a farm. Canadian government will pay all fare over one cent per mile from Spokane to Canadian destination. Information as to low railway rates, etc., may be had on application to

J. N. GRIEVE.
Canadian Government Agent.
Cor. 1st and Post St., Spokane, Wash.

THE WASHINGTON FARMER

SUCCESSOR TO
THE RANCH PACIFIC DAIRYMAN HORN AND HOOF

VOL. XL. APRIL 26, 1917. ** NO. 17.

Railroad Managers Plan a Big Killing

Farmers Must Help to Pay the $375,000,000 Exacted by Increased Freight Rates

Unless the people vigorously protest, the interstate commerce commission will make permanent its temporary order granting the railroads an advance in freight rates of 15 per cent all around. This will mean an additional income of $375,000,000 for the railroads and every dollar of it will have to come out of the producers and consumers—the farmers, the stockmen, the orchardists, the miners, the lumbermen, the fishermen and others who toil in the great productive industries of the land.

When the Adamson law was before congress last summer The Washington Farmer said that if the government forced the railroads to pay the higher wages demanded by the trainmen, the railroad managers would ask the government to authorize higher freight rates, and in the end the people would be made to "pay the freight."

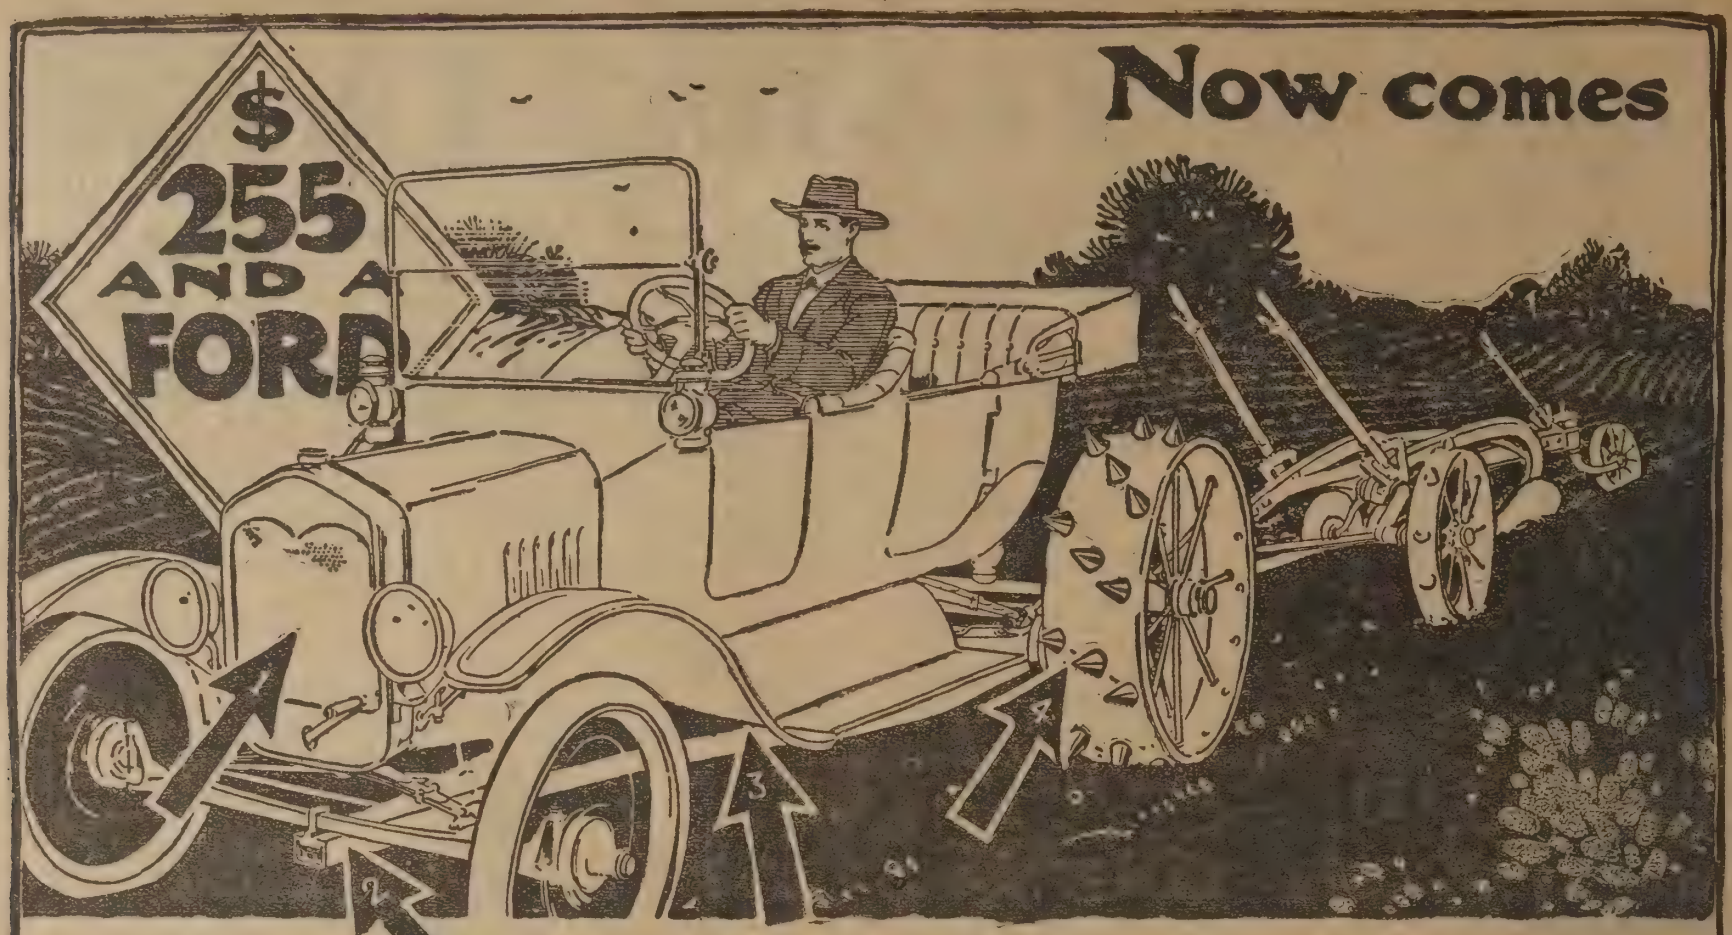
The expected has happened, only it is worse than the expectation. The roads have asked the interstate commerce commission for an advance of 15 per cent all round, and the commission has granted it in a temporary way. That is, the commission says the roads may start the higher rates on June 1, provided the commission is not convinced before that date that the advance is too high.

In this manner the commission brings the issue squarely before the railroads and the shippers in a definite way, and hearings are now in progress at the national capital.

Protesting shippers say a 15 per cent advance is unwarranted by the earnings of the roads.

The railway managers point to the Adamson law and higher prices for supplies, equipment and fuel, and say they can not operate profitably on less.

When the Adamson law was under discussion last summer The Farmer warned its readers that if it passed the roads would come back with a plea for a rate increase that would more than compensate them for the $50,000,000 to $100,000,000 increase in wages to their men. The managers claimed at first that the wage increase would cost them $100,000,000 a year, but subsequently scaled down that estimate. The trainmen said it would not exceed $25,000,000. Fifty millions is not far from the real mark.



But the roads are now demanding nearly eight times $50,000,000, as a moment's calculation will show. They earned in the fiscal year ended June 30, 1915, in freight charges, exclusive of passenger earnings, $2,037,000,000. But their earnings have increased largely since then. The latest figures are not at hand, but their present freight earnings are known to be close to $2,500,000,000.

A 15 per cent increase on these earnings would give then $375,000,000 and that vast sum, if finally granted by the commission, will come out of the producers and the consumers of the United States.

As the farmer is both a producer and a consumer, he will pay both ways. It will come out of his wheat and other grain, his live stock, his fruit. And he will pay higher freight rates on all he buys at the store, because the middlemen will shove it along.

What can be done? Protest! Every grange, every farmers' union, every producers' organization should pass protesting resolutions and send them immediately to their senators and representatives at Washington.

Unless the people protest, the interstate commerce commission will make its temporary order permanent and the railroads will get that $375,000,000.

Now comes

1 This special radiator—ten times more efficient than the radiator of the Ford—guarantees perfect cooling—without this installation no automobile motor can work satisfactorily as a tractor.

2 Front end of Smith Form-a-Tractor frame fastens to front axle of Ford—a feature of strength and convenience not duplicated in any other construction.

3 Smith Form-a-Tractor frame extends full length of Ford frame, reinforcing it and leaving no part of the tractor attached to the Ford when used as a pleasure car.

4 Three rows of conical lugs—twenty-seven to each wheel—give unusual efficiency in soft soil—distinctive Smith Form-a-Tractor construction.

Smith Form-a-Tractor

Guaranteed To Do the Work of Four Big Horses

COMBINES with any Ford touring car or roadster to make a fully guaranteed tractor, duplicating, in amount of work it will do, the highest priced, biggest tractors you can buy, and giving you the most efficient tractor construction that you can get.

Fifteen minutes will change your Ford to tractor, and it takes only fifteen minutes to make the change back again. The tractor construction is complete and leaves nothing attached to the Ford with the exception of the new special Smith Form-a-Tractor Radiator and the patented Force Feed Oiling System.

Back your Ford over the Smith Form-a-Tractor frame—jack up the rear axle—pull off the Ford rear wheels—replace them with the Smith Form-a-Tractor roller driving pinions—connect up the Smith Form-a-Tractor axle to the Ford axle with special clamps—clamp the front end of the Smith Form-a-Tractor frame to the front axle of the Ford frame, and the conversion is complete. All the work is done by the Smith Form-a-Tractor attachment. The tractor wheels push the Ford ahead and pull the farm implements from the rear. You do not deface your Ford in any way. You do not injure its wonderful ability, but merely utilize its low cost of operation to give the cheapest form of doing farm work.

Use Smith Form-a-Tractor now for

and any other farm work that you have been doing with horses.

Smith Form-a-Tractor drilling—four horse work.

50,000 This Year

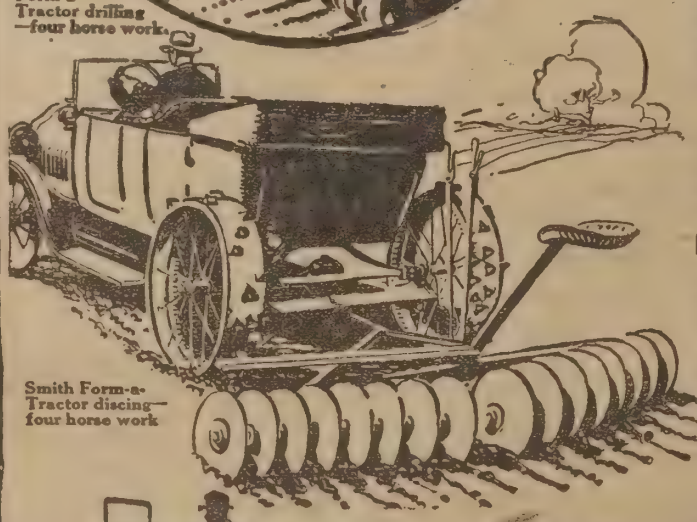
20,000 Smith Form-a-Tractors are now being built, even before this announcement.

50,000 will be sold this year.

Smith Form-a-Tractors will cut the cost of doing farm work from 40% to 70% on any farm in the country, large or small.

Use Smith Form-a-Tractor for your farm work—Smith Form-a-Truck for your farm hauling, and all the wasteful expense of horses is eliminated.

Wonderful Design



In quality—workmanship—design—materials—Smith Form-a-Tractor gives you tremendous value.

The special cellular type radiator, ten times as efficient as the regular Ford radiator, guarantees perfect cooling in all kinds of work, under all weather conditions. Even on the hottest days you can plow at the rate of seven acres a day with absolute certainty, where horses can only plow 4 acres, with the constant fear that they will drop dead in the harness from excessive heat.

The patented Force Feed Oiling System guarantees perfect lubrication—freedom from burned out bearings, scored pistons. These two features are absolutely essential to proper tractor operation.

The tractor wheels are exceptionally wide, equipped with strong, durable lugs for service in soft soil, the roller pinions meshing with the bull ring gear of the tractor wheels, are made of nickel steel, heat treated.

The tractor axle is back of the Ford axle. The driving power of the pinions is exerted downward, keeping strain away from the Ford and giving utmost efficiency.

Smith Form-a-Tractor discing—four horse work

Remarkable Power

Eleven-to-one gear reduction through the use of the Smith Form-a-Tractor roller driving pinion gives wonderful working power. Two and one-half miles an hour in plowing, binding, drilling and all other farm work—eleven times the pulling power of the Ford.

Smith Form-a-Tractor will start and work continuously, hauling a 28-inch gang plow or doing any other four-horse work, and do it all on high gear. We absolutely guarantee this amazing feature of performance.

Deliveries Now

You need your Smith Form-a-Tractor now, when you are busiest in the field, doing your hardest work. We can take care of your demands. Our big, complete dealer organization covering every section of the farming territory is ready to supply your demands immediately.

You can order from our dealer in the morning and have your Smith Form-a-Tractor at work, radiator installed, oiling system in, and the tractor itself ready for work in the afternoon of the same day. The first 12 hours you work Smith Form-a-Tractor will show you just what a tremendous saving it will make for you in your farm work.

If you cannot get in touch with a dealer quickly enough, send us the coupon. Accompany it with a deposit of $10 and we will ship your Smith Form-a-Tractor immediately, subject to payment of sight draft attached to bill of lading. Whatever you do, get Smith Form-a-Tractor working in your fields just as quickly as possible.

FOR GOOD FARMING, ATTRACTIVE COUNTRY HOMES AND HAPPY COUNTRY PEOPLE

THE WASHINGTON FARMER

SUCCESSOR TO

Vol. 40. No. 17 THE RANCH PACIFIC DAIRYMAN HORN AND HOOF April 26, 1917

We Are For Cooperation

Will Not Boost Bogus "Cooperative" Schemes

It is the purpose of The Washington Farmer to print a series of portraits of representative farmers, and in furtherance of that plan it wrote recently to Fred W. Lewis, Tumwater, Wash., secretary of the Washington state grange. It has the following strange reply from Mr. Lewis:

"I thought at first I would not reply in any way, but after a second thought I decided that it was nothing more than fair to you to tell you why I do not accede to your request.

"In reply I wish to say that few farmers, indeed, would thank us for sending their photo and sketch without consulting them, and I assure you that very few if any of the farmers of Thurston county would be proud to have their portraits in your paper as long as it is devoting so much of its energy in fighting their organizations. * * *

"Of course, there are a few who will be hoodwinked into serving your purposes, but they will not be the really alive, wide-awake, up-to-date reading farmer, who recognizes the value to the farmer of organization.

"Of course, I realize, judging from your late editorial in which you suggested the names of several nonmembers of the organization as fit candidates for the office of master of the Washington state grange, that your idea and mine of who are influential farmers might seriously differ. Knowing this, I would recommend that you make your offer only to those who, like you, include only anti-organization farmers among those who may be termed influential. You should certainly realize that such an offer would not meet with the approbation of a true friend of the farmer."

That, of course, is an unfriendly letter, from one who is unfriendly to The Washington Farmer. Secretary Lewis is unfriendly because the Farmer gave its readers full and accurate reports of the recent trial and conviction, by a jury in the United States court at Spokane, of a coterie of dishonest officials of the Northwestern General Trading company who swindled farmers of the Pacific northwest out of hundreds of thousands of dollars by selling them worthless stock on fraudulent representations.

If the Farmer had glossed over the amazing revelations of that trial and had tried to conceal Mr. Kegley's indefensible boosting of the swindling schemes of the Northwestern General Trading company, his subordinate officer in the grange would not have written the foregoing unfair, untruthful and petulent letter to the Farmer.

The Farmer is for cooperation, "every jump in the road," and will be found working for every honest cooperative movement that will benefit the farmers and better the great agricultural interests of the Pacific northwest.

It is not going to boost bogus and swindling "cooperative" schemes like the Northwestern General Trading company. It is not going to excuse and palliate a criminal conspiracy simply because the master of the state grange has given it his indorsement as the official head of the Washington grange.

If Mr. Kegley had been "really alive, wide-awake and up-to-date"; if he had had sufficiently at heart the welfare of the farmers who were swindled outrageously through their misplaced confidence in a scheme that he had indorsed, he would not have misled his executive committee and through them the membership of the grange. For a careful investigation of the books, the methods and the manipulations of the Northwestern General Trading company would have shown him that it was something that the farmers should not touch with a 10-foot pole.

We wish to assure our readers that we shall not be driven from our course by menacing letters like the foregoing and others of similar intent that three or four hard and fast partizans of Mr. Kegley have sent in.

The Farmer has a mission and will hold to it. It will give its readers all the information at its command about swindling schemes. It will not swallow anything without investigation simply because some cunning promoter, seeking to clean the farmers out of hundreds of thousands of dollars, labels it "cooperative" and gets the unwise indorsement of Mr. Kegley or any one else.

Washington Portraits No. 12.

Arthur R. Brown.

Arthur R. Brown, who represents a type of a western hustler, was brought up on a farm in New York, had his early training under the watchful eye of a father who was reputed to be the best farmer in that section of the country, came west with the determination of making a home for himself, and took up land in eastern Oregon. Because of a rabbit invasion he left Oregon and settled in Klickitat county, Wash. He now has a well-improved farm between Goldendale and Centerville in one of the best wheat sections in the state.

The next in the series of Washington protraits will be that of H. W. Sparks of Fisher, and will be given in next week's issue of the Washington Farmer.

Twenty-Four Hours Plowing Test.

Between 12:30 one day and 12:30 the following day, a Bull tractor plowed 19 1-2 acres of heavy loam, frozen two inches deep during the night, on the farm of Chris Elliot, Wapato, Wash. The entire run was made without a stop, and no water was put into the radiator during the tryout.

The demonstration was in charge of Sam Robinson and John F. Rogers. Light was furnished by a Presto-Lite on the front of the tractor, as well as by the unclouded moon.

Thirty-eight gallons of gasoline were required to complete the job—less than two gallons to the acre. The total expense of operating, figuring oil at 60 cents a gallon and gasoline at 23 cents, was about 61 cents an acre. It would have taken six horses and three days to do the same work.

Must Join Association

To Borrow Money From Federal Land Bank

By N. W. DURHAM, Chairman Spokane Committee on Land Banks.

Records of the Spokane Federal Land bank show that 392 farm loan associations are now organized or in process of organization in the four states of this district. Washington leads with 139; Oregon comes next with 98; Montant is third with 78 and Oregon has 76.

Farm owners who have already joined these associations have received, or will soon receive, official directions telling them just what they must do in order to take advantage of the new law and borrow money at the low rate of 5 per cent. But thousands of other farmers not yet identified with a local association still lack a full understanding of the system. Inquiries come to the Farmer which show that some land owners do not yet understand that loans will be made only to farmers who are members of these local associations. To clear up this uncertainty we now print a number of questions and answers, taken from the "Farm Loan Primer," issued by the federal farm loan board.

"How do farmers go about it to borrow from the federal land banks?"

"By applying for membership in the nearest national farm loan association?"

If you do not know the location of the nearest association, write to the postmaster at your county seat. If he has not the desired information write to the secretary of the federal land bank at Spokane.

"What is a farmer to do if there is no national farm loan association within easy reach?"

"He should find 10 or more farmers or prospective farmers in his community who wish to borrow, and with them form a national farm loan association."

The term "community" as here used is indefinite. The law does not lay down exact geographical boundaries for a farm loan association. It may cover a county, if the farmers in that county all want to come into one strong association. Or one may be formed in a township, or even in an election precinct, provided at least 10 farmers who want to borrow in the aggregate not less than $20,000, want to organize it. On the other hand, there is no limit to the number of farmers who may join a single association.

"How may a national farm loan association be formed?"

"These 10 or more farmers should make application in writing to the federal land bank (in Spokane, for the states of Montana, Idaho, Washington and Oregon) for a charter to do business. The 10 or more farmers must sign articles of association, swear to them and forward them to the federal land bank (at Spokane). The federal land bank will then send its appraiser to inspect the securitiy, and if satisfactory the loans will be authorized when the charter is granted to the association. The bank then advances the money through the secretary-treasurer of the local association, who is a bonded officer. In the application signed by borrowers each must indicate how much money he desires and must list the value of the land to be used as security."

(Continued on page sixteen.)

The Foundation of Sheep Raising

Grade Ewes and Purebred Sires Should Make Farm Flock

By E. J. IDDINGS.

Those who have never handled sheep or have had but limited experience should use grades for the foundation flock. Ewes suitable for starting a flock may be had from other farmers in some sections. In other parts of the state good grade ewes can ordinarily be bought from range flocks at a reasonable price. Our range flocks as a rule show the predominance of either fine or long wool blood. In either case a good, purebred ram of one of the breeds that combines a well developed mutton form with heavy fleece should be selected to head the flock. The ewe lambs may be saved to increase the flock or replace those sold because of age or unsatisfactory performance. The continued discriminating use of good rams of the same breed, and flock rebuilding by retention of ewe lambs, results in rapid improvement, flock uniformity and a group of animals entirely suitable to the farm.

Care should be used in selecting ewes for foundation. Many that can be obtained very cheaply are later found to be useless for a breeding flock. Common defects are broken mouths, infertility, spoiled bags and undesirable and inferior confirmation. Ewes are at their best from 3 to 5 years of age, although many retain their teeth and breeding powers until 9 to 12 years of age. From year to year ewes with broken mouths, of inferior confirmation or unsatisfactory as breeders should go to the butcher and be replaced with ewes from the lamb crop or with drafts from other flocks. Unless ewe lambs are dropped in early spring and are unusually growthy they are not bred until yearlings. Ewes for a breeding flock should have deep, low-set bodies, wide, level, straight backs, fine fleeces of considerable length covering the body evenly, strong legs and neat heads of breedy appearance and should be vigorous and good milkers.

The purebred flock appeals to many farmers and offers an attractive field for those of some experience. Range sheep men call for a large number of purebred rams each year and as the advantages of sheep on the farm are more widely understood and thoroughly appreciated there will be calls for purebred rams and ewes for use in building up farm flocks. As compared with grades, greater experience is called for in establishing and managing the purebred flock. For the best success with purebreds the flock master should be well informed on the problems of animal breeding and have some knowledge of salesmanship of purebred live stock.

Use Purebred Ram.

The sire, as in building other live stock herds, is more than "one-half the flock." He should be a purebred and an excellent individual. One can effect flock improvement by purchasing and paying well for carefully selected ewes. To secure marked excellence through the ewes the entire flock must be chosen with that end in view and the ram must at least measure up to the ewe average of excellence. The quicker and cheaper method of improvement, however, is through an unusually good sire, even though he costs three of four times ordinary ram prices. With reasonably good ewes and an outstanding

(Continued on page twenty-six.)

Nice Dairying on a Palouse Farm

Sweet, Rich, Pure Milk From a Hundred Slick and Shapely Jersey Cows

By RALPH E. DYAR

A. G. Woodward conducts the Shady Lawn dairy farm at Fairbanks, Wash., on the Spokane & Inland Empire railway. It impresses the visitor as being a big business—a factory if you please; a factory designed and operated to turn out one product only—sweet, rich, pure milk. It does not sell cream or butter. The plant consists of up-to-date, well appointed buildings and a herd of more than 100 sleek and shapely Jersey cows. The product of this "factory" is marketed in Spokane, where the Broadview Dairy company holds somewhat the same relation to Mr. Woodward's plant as the wholesaler or jobber of hardware occupies with relation to the manufacturer of stoves, tools or building paper. After all, the dairy farm has exactly the same object as any other business, and that is to make money.

Hugh Chalmers, head of one of the largest automobile factories in the United States, thinks of the five big problems of business as consisting of materials, machines, methods, markets and men. It is not surprising that Mr. Woodward in producing milk encounters the same big Ms as Mr. Chalmers faces in making motor cars.

For the most part, Mr. Woodward's 190-acre farm of good black Palouse soil takes care of his raw materials. The main crops are alfalfa, and for silage peas and oats, which are found more satisfactory than corn. Some of the peas are also cured for hay. Mr. Woodward does not have a pasture for his cattle, and the ration of May day is, therefore, not radically different from that of Thanksgiving or New Year's. As a result the volume of milk produced does not vary as much from month to month as it does from some dairies.

Most of the cows have been bred to freshen in September.

If we take up machines as the second consideration of our dairy factory we shall have to modify the term to include the plant and the cows, as well as the incidentals of equipment. The general character of buildings at Shady Lawn, in fact, the whole lay of the land, brings with it the same thrill of approval that one feels in visiting a rightly built lumbering establishment or up-to-date flour mill. The Shady Lawn plant is strategically located within a stone's throw of the shipping point, Fairbanks station, toward which the ground slopes. Thus the output of the dairy, from 120 to 130 gallons of milk daily from the 60 cows now in milk, is transferred to the point of shipment with a minimum amount of effort and expense, and the finished product is dispatched to the point of distribution, Spokane, at a freight charge of only 2 cents per gallon, the milk bringing 25 cents per gallon delivered in Spokane.

Water for all purposes—flooding floors, watering stock, cooling milk—is pumped from a well by electric power to a reservoir which delivers it under pressure to all parts of the dairy. The entire plant is electric lighted, with globes and switches at points where just the right amount of illumination can be secured without waste of current. This is one of the many little niceties of arrangement for which Mr. Woodward is responsible and in which he takes just pride. The milk house is the building nearest the railway. The immense hay and horse barn and the great dairy barn are within convenient reach of this smaller building, where the milk is cooled with the chill well water, ice not being necessary, and strained through cloth directly into the cans. The dairy barn is built with the one purpose of keeping a large number of cattle in the best of condition with the smallest possible effort. There is a great roomy space in the center where grain is handled and ground and hauled in carts direct to the long troughs, where it is lapped up by the cattle. The silos are at the ends of the barn. There is a 20-horsepower motor in the central part to furnish power for grinding grain and filling the silos. One of these is still full, the mixture being oats and peas in both. The two units of the barn in which the cows are kept are fitted with windows on both sides, extending the full length of the building back of the cattle. These windows are easily opened and supply the ventilation. The stables are flooded daily with air and sunlight—better disinfectants than any that man has invented. Besides this, the cattle are given regular exercise in the open while the stables are being cleaned and a thick bedding of straw is being thrown in the stalls. In cleaning a carrier system is used and the animals are frequently carded. One understands why there has never been a reaction for tuberculosis in Mr. Woodward's herd. All of the manure is returned to the land and Mr. Woodward figures that this has increased the value of his land $10 per acre over adjoining farms, where this system has not been adopted. Swinging stanchions and deep gutters aid in keeping the cows clean. The name of each registered animal is printed above her stall. They stand according to age, the oldest at one end of the row, the youngest at the other.

One feels that the Shady Lawn Jerseys are deserving of their clean, commodious, comfortable, well aired and sunny quarters. Type and breeding have been dominant considerations in building up the herd. The manager of this dairy business has shrewdly taken our northern winters into account in arriving at his ideal of a Jersey cow. He has been breeding animals of a vigorous, sturdy, broad-backed type, and although they have the beauty and grace of the entire channel island extraction, they are unmistakably robust and hardy. Moreover, they have the lines which spell success in the show ring, as two handfuls of ribbons and several loving cups attest. For example, at the fifth Northwest Live Stock show in Lewiston, Shady Lawn won The Spokesman-Review cup for the best herd of Jerseys, and Sultan of Rockland, who heads the herd and was secured from the Waikiki ranch, was senior and grand champion at the Spokane Interstate fair in 1916. There have been other important awards, all of which give evidence that Mr. Woodward has not underestimated the need for the right sort of animals and that he has been fully equal to the exacting task of building up such a herd.

When we turn our attention to the matter of methods, there is new justification in viewing the Shady Lawn Dairy strictly as a business institution. The modern ideals of efficiency control each step in the dairy routine. Illustrations of these ideals have already been given. For further illustrations we might take the feeding system. The cows are fed three times daily. If a cow is fed too much at a time she will not eat as much, Mr. Woodward says, her breathing on the hay or silage seemingly spoiling its flavor. He likes to go from stanchion to stanchion giving each animal only a handful of hay at a time. A cupful of oil meal is added to the grain to provide a laxative and help balance the ration. We all know the modern business man's insistence upon exact records, revealing what machine or what worker is showing a profit or a loss, and it is in keeping with the way things are done at Shady Lawn that the record of every cow is entered in such a way that her total yield, cost and profit for any month or year can be readily ascertained down to a cent. The cost of feed is put down at its market value. For example, a cow consuming a ton of alfalfa hay has a charge for $10 set against her record. Each stands a share of the labor cost and general upkeep, and is credited with what she produces. A page for the year ending March 1, 1917, shows that when the manifold problems of the dairy industry are solved, it is possible to show a record of profits. For the period covered the whole Shady Lawn herd, including grades as well as pure breds, averaged over 300 pounds of butter fat per cow. Mr. Woodward uses a record book which is distributed free by the dairy division of the United States department of agriculture; and is a member of the Whitman County Cow Testing association.

One Year's Record.

Name of Cow.	Pounds. Butter Fat.	Profit.
Mandy	473.9	$137.95
Topsy	462.4	138.59
Pink	451.6	146.32
Goldie	403.7	99.54
Ruby	391.	138.64
Judy	387.	84.46
Redwing	384.8	86.86
Nelly	382.7	102.46
Nancy	376.9	123.67
Shorty	358.3	88.19

Carrie	314.2	98.72
Daisy	311.9	63.63
Laura	310.	68.63
Bell	308.7	63.61
Lily	308.4	80.51
Darkey	304.1	73.77
Java	301.5	55.87

In February the butter fat record of some of the cows was as follows: Kit, 50.3; Bobby, 41.5; Redwing, 40.6; Topsy, 51.5; Fido, 55.1; Nancy, 51.3; Brownie, 53.9; Effie, 46.6; Spot, 63.3; Lois, 52.2.

The matter of market has been touched upon. We come to the last of our five Ms, the need which must be dealt with by Major General Wood, Colonel George Goethals, Henry Ford, and, in fact, by any one and every one who attempts to put through a piece of work that requires something more than his own two fists. It is the need for men. Mr. Woodward is the kind of man who realizes the requirements of his business and grapples with them. He has grit and determination, a knack for doing things thoroughly. This matter of help has received his earnest consideration. He has a plastered, electric lighted bunkhouse for his men, and a single bed for each man. He pays the highest going wage. His helpers, although they start work around 2 o'clock in the morning, do not put in more than nine hours' work per day. Surely their tasks are not so grinding or confining as those which must be performed by the hordes which every morning answer the shrill whistles of the factories throughout the land. Yet it is extremely difficult to get and keep competent milkers.

The difficulty has become more marked on account of the recent efforts of the Canadian government to secure farm laborers from the United States.

This is a problem which isn't Mr. Woodward's alone; it affects the present and future of the entire Pacific northwest; and we respectfully pass it along to the Spokane Chamber of Commerce and other public-spirited organizations as a perplexity worthy of their attention.

This, then, is the situation: Shady Lawn dairy farm is a well arranged, conveniently equipped, efficiently managed plant for the production of milk, and it can turn out this product at a profit over the cost of raw materials and manufacture. It is advantageously located with respect to transportation. In February the dairy's bacteria count was only 3250, which is a tribute to right methods; its record for butter fat showed an even 5 per cent.

Mr. Woodward has a business—a growing business—in which difficulty after difficulty has been met and conquered, yet there remains the one problem which has not yet been completely solved even at Shady Lawn farm—that of labor. Who can provide an answer?

The top picture shows Big Monmouth chief of Shady Lawn farm. His first three dams averaged over 824 pounds of butterfat. Below is a picture of the dairy barns at Shady Lawn farm. At the lower left corner is A. G. Woodward and one of his Jersey calves. At the right is Sultan of Rockland, head of Shady Lawn herd, senior and grand champion at the Spokane Interstate fair in 1916.

The A B C of Road Construction

Should Provide All the Ditches With a Sufficient Pitch

By FRANK W. GUILBERT, Chairman Executive Committee, Washington Good Roads Association.

We referred in our preceding article to the need of getting the water off the road quickly. We told you the purpose of "crowning" a road was to force the watter to run to the sides of the road so that it will not stand on the road or run down the course of the road itself, thus seriously damaging the surface.

Everybody knows that a ditch is a water course provided to carry waste water to some place like a lake or stream where it can do no particular damage. I refer now to road drainage ditches, not those provided for carrying water for irrigation or any other purposes.

Frequently we see water drain from the road quickly enough, but when this has happened stand in pools at the sides of the road. This is very bad for the road, because the water will find its way under the road and soften the foundation material, and the road will surely suffer. All ditches should be provided with a sufficient pitch to make the water run away to an outlet to a lake, a stream or some low place where it will do no damage and finally evaporate. This is one of the most necessary items to be taken into consideration in constructing roads. The keeping open these channels for water to run away in is the most important consideration in keeping up our roads. If the outlets are not kept open much damage will follow.

Elochoman Grange.

Elochoman grange of Cathlamet, Wash., has installed: Master, W. W. Head; overseer, Elmer Thomas; chaplain, Mrs. Laura Thomas; lecturer, Mrs. W. Morfit; treasurer, Mrs. Fred Olson; secretary, Mrs. James R. Stott.

State Grange Meets June 5

Wenatchee Will Entertain Annual Convention

The 29th annual meeting of the Washington State grange will begin its four-day session at Wenatchee June 5. Fred W. Lewis, the secretary of the state grange, urges every member of the order going by rail, stage or boat to take a receipt for the amount of fare paid. In case of boat or stage a return trip should be paid for and receipt taken for full amount, as that will be the amount allowed by the mileage per diem committee. In case of rail buy only one way, and one-third is reckoned for return. Buy your tickets clear through to Wenatchee, no matter which road you start on. Going tickets may be purchased any time from May 31 to June 6, and return tickets may be purchased from June 4 to 12, inclusive. Delegates going by auto are entitled to 4 cents per mile for one way as shown by nearest practicable route. Those going by automobile from the east side of the state are advised to go to Waterville, thence to Wenatchee over the beautiful Pine Canyon road; those from the south by way of Ellensburg over the Blewett pass, nad those from the west side to Cle Elum and thence over the Blewett pass. The Blewett Pass road has received much attention during the past year, the roadway has been widened and the grades reduced, and it is reported the roads will be in fine shape by the first of June.

Governor Lister has accepted an invitation to meet with the grange at Wenatchee and will speak at the reception Tuesday evening. President E. O. Holland of the state college has sent word that he will be present and make an address.

The following are the chairmen of the committees of the coming state grange as announced by Master C. B. Kegley:

Finance, L. L. Snow, Olympia.
Credentials, Pomona Masters.
Order of business, John E. Taylor, Marble Mount.
Agriculture, S. B. Ellison, Sauk.
Cooperation, W. J. Langdon, Sumner.
Club work, C. E. Flint, Blaine.
Claims and grievances, J. S. Stout, Mossy Rock.
State college, E. E. Faville, Portland, Ore.
Mileage and per diem, E. A. Wall, Anacortes.
Transportation, B. F. Pratt, Wauna.
Division of labor and master's address, U. S. Case, Prosser.
Subordinate granges, William Bouck, Sedro-Woolley.
Good of the order, F. P. Waters, Rice.
Pomona granges, Fred Nelsen, Seattle, R. 5.
Publication, Fred W. Lewis, Tumwater.
Resolutions, Jacob Vercler, Opportunity.
Legislation, Henry A. McCormick, North Yakima.
Peace, Knute Hill, Prosser.
Temperance, W. E. Powell, Ferndale.
Education, Lura S. Bouck, Sedro-Woolley.
Woman's work, Jennie F. Snow, Olympia.
Farmers' institutes, W. S. Thornber, Pullman.
Horticulture, G. T. Files, Touchet.
Poultry, Grant Dunbar, Seattle, R. 3.
Dairy, Ed J. Stevens, Sultan.
Home Economics, Louise Bruehlman, Greenacres.
Memorial, Lura S. Bouck, Sedro-Woolley.
Political duties, Fred A. Hodges, Pullman.
Health, sanitation and pure food, Willis Chambers, Port Angeles.
Postal improvement, Fred J. Chamberlain, Puyallup.
Forestry and conservation, Charles F. Keiser, Wenatchee.
Good roads, C. A. Ferrin, Wenatchee.
Rural and personal credits, J. E. McGoran, Valleyford.
State and national marketing, J. F. Gates, Malaga.
Taxation, Alson W. Steers, Nooksack.
Trials and appeals, F. W. Thurber, Buckeye.
Irrigation, Joseph A. Slavin, North Yakima.
Entertainments, W. E. Powell, Ferndale.
Constitution and by-laws, J. T. Compton, Wenatchee.
National grange recommendation, O. C. Musgroce, Elma.
Program, C. F. Keiser, Wenatchee.
Fifth degree, C. F. Keiser, Wenatchee.
Sixth degree, Henry A. McCormick, North Yakima.

Stockmen Convene

To Solve Problems in Okanogan

Live stock men over a territory more than 100 miles in width convened at Okanogan last week and threshed out problems confronting the live stock industry in the Okanogan district. The meeting was that of the Okanogan County Live Stock association. Three hundred men were present, including leading breeders, shippers and bankers from all parts of the state.

Resolutions were adopted asking the railroads to grant reduced rates on shipments of purebred live stock as a means of assisting in improving the herds of the district; asking that all brands and marks be recorded with the county auditor; and asking for county assistance in eradicating coyotes.

It was declared at the meeting that the members of the association would go in together this spring to ship into the county at least 20 purebred sires, and a movement is strong to eliminate the use of grade sires altogether.

President P. D. Smith of the association was reelected, as were the other officers. Among prominent men from outside who were present were the following:

E. F. Averill, Pendleton, superintendent of biological survey; Elmer Williams, government trapper; E. E. Flood, Spokane; O. M. Plummer, Portland; J. N. Price, specialist at the state college, Pullman; Thomas P. MacKenzie, assistant district forester, Portland; J. H. Roberts, Spokane; F. M. Rothrock, Spokane; A. Morrison, president of the Stevens County Stock association, Valley; A. V. Overman, Spokane; Walter A. Holt, county agriculturist, Okanogan.

Holsteins Average $238

Fifty Are Sold at Snohomish Consignment

By PAUL E. TRIEM.

The Western Washington Holstein Breeders' association's fifth semi-annual consignment sale, which was held at Snohomish, April 11, reflected in bidding and sales something of the uncertainty of the present ecenomic situation. Bidding was brisk and it is probable that most of the consignors were satisfied, but it was, nevertheless, a bargain sale in respect to many of its entries. One farmer was heard to remark, as he left the grounds, "If I hadn't been on the point of leaving the farm, I'd have spent every cent I had available this afternoon. There were some grand animals in the ring, the prices were certainly fair to the buyers, and we all know that these pure-breds and high producers are the only ones that can return a profit on present feed prices."

Some of the buyers realized the state of affairs in time to profit by the condition. Ed Hoem, of Snohomish, bought nine head, and J. L. Smith profited by his trip up from Coquille, Ore., to purchase five animals which he evidently considered bargain counter offerings.

Fifty individuals were sold during the morning and afternoon, bringing an average price of $238.80. A. E. Smith's Tobe De Kol 5th, topped the sale, bringing $600, while Charles Eldridge's Netherland Baker Mercedes came in a close second, with a price of $560. Both of these cows belong in the one hundred pound milk production class, the Chimacum animal in particular being a veritable four-legged milk factory, with the sturdy constitution, size and milk formation typical of the black and white breed at its best. The young bull Sir Netherland Selah Johanna, also consigned by Mr. Eldridge, brought $430 and was generally admitted to be a bargain at any price under $500.

Auctioneers George Gue and Harry Cranke were ably assisted by William Bishop, whose presence in the show ring added both to the humor and the success of the occasion. Mr. Bishop is a walking encyclopedia of dairy and breeding lore, and often he was able to enlighten the buyers on the history and blood lines of an animal up for sale.

The sales follow:

THE SALES.

(Continued on page twenty-four.)

Food Preparedness by Special Train

Intense interest in the food preparedness campaign of the O.-W. R. & N. company, in connection with the Washington State college, was manifested at rousing meetings throughout eastern and central Washington last week. Delegations of citizens met the train; and audiences, under the leadership of Frank W. Robinson of Portland, traffic manager of the O.-W. R. & N., who joined the party, lustily sang "The Star-Spangled Banner." Copies of this song, with flags and buttons were distributed by Mr. Robinson and William McMurray, general passenger agent.

At Colfax, for the afternoon meeting, Judge McCroskey gave up his courtroom, the meeting being attended by fully 350 high school and eighth grade pupils and parents. The third meeting was in the courthouse, at night, and all available space was taken. Food values were dealt with at length by Miss Mary E. Sutherland of the state college, who advised high school girls that carrots, peas, asparagus and tomatoes were far superior to mercolized wax for the complexion and health. She advised canning asparagus, peas, corn and using sterilized caps, rubbers and jars to prevent loss. Miss Sutherland said: "Have system. Make out lists a week ahead for the home kitchen. When a woman tells me she hates the kitchen I know she does not know much about it. It is a wonderful study to know all about vegetables, meats and other food products and their preparation."

Professor Hegnauer declared that the next 25 years will be the most tremendous we have ever lived in. "We must produce enough to support ourselves and help support others, including the dependents of those called to defend the honor of our nation," he said. "Surplus wheat is about all gone. We must meet the food situation and produce to full capacity, practice economy and cut out waste.

Professor Barnett said: "Potatoes at $2 a bushel or more is a crop deserving a great deal of attention. We can to a material extent increase tuber production this year without overstocking the market. The selection of your seed potatoes should have care. Early Ohios are good early potatoes. Burbank or Carman No. 3 are desirable late varieties. Potatoes with dry rot, scab or fungus growth should not be used."

At Tekoa Mrs. Helen Dow Whitaker of the state college said: "Down at the college we are running an egg-laying contest to continue for a year, ending in October. It might interest you to know that a Single Comb White Leghorn hen entered in the contest by Paul B. Towne of Tekoa, had the record to April 1. She has been known as No. 501, and will henceforth be known as Lady Tekoa. She laid 103 eggs to April 1. It cost 86 cents to feed her, and her eggs sold for $3.37. If you have any more layers like that here send them to me to help pay for feeding a lot of poor layers that have been sent to us."

Try a patch of navy beans or field peas this year.

The train visited Pullman, Colfax, Garfield, Farmington, Tekoa, Latah, Fairfield, Rockford, Winona, Endicott, LaCrosse, Bolles and Dayton last week. This week the train is at Waitsburg, Walla Walla, Touchet, Kennewick, Grandview, Sunnyside, Zillah, North Yakima and Wallula.

THE PATRIOTIC LEGION OF WASHINGTON

Membership Open to Men, Women and Children.

I am a loyal and patriotic American. I most earnestly desire to do my share in helping to defend the honor of my country in time of war. I therefore request enrolment as a member of THE PATRIOTIC LEGION OF WASHINGTON and pledge myself to the work of increasing our nation's food supply during the war into which our country has been plunged.

Signed.....

Date of Enrolment ..... Address .....

When signed forward this blank to the Editor of The Washington Farmer, Spokane, Wash.

The following are enrolled as members of the Patriotic Legion of Washington:

E. N. Routh, Mayview.
J. F. Koreski, North Yakima.
J. Henry Endsley, Harwood.
Miss Elsie Meays, Yelm.
J. W. Elliott, Leavenworth.
H. G. Maxwell, Bellingham.
S. B. Nelson, Pullman.
Mr. and Mrs. Willis E. Lamb, E1024 Ermina, Spokane.
Henry Stevenson, Rosalia.
Otis T. Wilson, Granger.
Orlie Wiley, Republic.
Mr. and Mrs. W. A. Miller, 4 sons, 3 daughters, Mayview.
Mr. and Mrs. Ross, Cogswell, Sharon.
C. A. Dietz, Park Rapids.

An additional list of members as received and enrolled will be given next week.

POTATO DISEASES

How to Use Corrosive Sublimate.

To the Editor: Will you please give me directions as to how to use corrosive sublimate for the diseases of potatoes. G. K.
North Yakima, Wash.

The following quotation from "Potato Growing in Washington" by Dr. F. D. Heald, will answer this question.

The following is the standard strength for this fungicide and it should be used unless special directions are given for deviation from it under the control of specified diseases:

Corrosive sublimate, 4 ounces.
Water, 30 gallons.

The corrosive sublimate should be dissolved in hot water and diluted to the requisite volume. The seed tubers should be dipped in this solution for an hour and a half to two hours. In carrying out the treatment the following points should be kept in mind:

Use wooden vessels as the solution will corrode metal.

Use a new solution after treating five or six lots of seed since the fungicidal value is rapidly weakened. The solution does not lost strength by standing.

Corrosive sublimate is a deadly internal poison. It is not injurious to the skin and hence may be handled without danger.

Potatoes treated with the poison should never be eaten nor fed to animals.

Subscription price: $1.00 a year—special 3-year rate $1.50. Canada and foreign, 1 year $1.50.

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unusued portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction, and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

Farms Should Produce Maximum, but Soil Must Be Conserved

Never before, perhaps, in the history of the country was there such need for the farms to produce their greatest possible yields of foodstuffs. No better indication of this is needed than the prices that are being quoted, and these prices and the prospects for their continuation are of themselves sufficient inducement to the farmers to produce large crops this year.

But there is a danger that must be guarded against. Lands must not be depleted. Too long already has it been common practice for crops to be taken from the soil year after year without adequate return to the soil of elements that replenish it with plant food.

The campaign for increased production must embody also a campaign for conservation of soil fertility. Fertilizers must be applied in some form. Vegetable matter must be put into the soil. Cultivation must be made scientific and intensive with a view to upbuilding the land at the same time that it is producing its crop. Rotations should be practiced with a view to adding to the soil the elements that have been, or are threatened to be, exhausted by the one crop methods. Live stock should be made as great a part of the production as possible, for they return to the soil much of the plant food that they take away.

The farmers of this northwest must realize this situation. They must not look only upon high prices for their products this year. They must look forward to a time when the war is over and their lands will emerge from their share in it. These lands are truly battlefields, but they must not be devastated.

Agricultural Schools Needed

One of the most urgent needs of many communities of the northwest at this particular time is something in the nature of intensive farming schools. The nationwide—in fact, the worldwide—demand for increased food production has placed upon large numbers of producers a special responsibility, and this responsibility requires practical knowledge which many do not possess because of lack of previous experience in intensive methods of crop production. Especially is this true in towns and cities where thousands of persons are anxious to do their small part by cultivating small tracts or vacant lots. It is needed also in rural communities.

Community meetings under the leadership of practical farmers or experts from some of the agricultural experiment stations could do much to protect large numbers of persons against failures, or to insure them greater success than they could attain otherwise. There is no doubt that such leaders would be glad to render this service. The people of the communities should get together and organize such meetings.

The Push and the Pull From the Country

The drift from the country to the town which has occurred since the close of the civil war has been brought about by both a push and a pull. The push came because of the fierce competition in farm products, the low standard of living which was possible under the conditions, and the hard grind of rural conditions. The farmer came to think of the day of rest from the overburden of toil as a sort of heaven to which he might look forward.

The "pull" came from the higher pay, the better houses and clothes, the lighter physical burden and the sights and sounds and activities of the town.

The economic push and the economic pull exerted more force than the physical or social.

Increasing population, the demands of a more complex social organization, the profits of manufacture, partly artificial, partly natural, the demand for builders and operators of railways and the building trades, made a place for the rapidly augmented urban population, and a commerce created by all of them made a demand which the hard pushed country was able to supply and ready to supply. It was not the love of the lights and music of the city, nor the bare condition of country life that caused the boy to leave the farm half so much as it was the price he was paid in hard cash to go. True, he did not then, nor does he now, properly or truly measure the respective reward offered for his labor by city and country. He did not and does not properly distinguish between real wages and money wages, measured over a period of any considerable length. But when, as a people, we felt that our activities must be more complex—that we must manufacture and mine and transport and buy and sell, as well as farm—then it was certain that we would pay the price to get the men to do this. And we did pay the price. And we got the men. And when all the allurements of the city had come to have their full force and effect upon its new inhabitants, new tastes were created which now hold them in the city. It was inevitable that we should go in this direction, but we have gone too far. What will check the tide? Profits in farming, and that alone. E. A. BRYAN.

The Workingman's Patriotic Duty

Three things are conspiring in the northwest this spring to place before the farm workingman a combined patriotic duty and opportunity. The spring is late, and as a result farm work must be rushed. There is nationwide urging that an unusually heavy crop be raised this season. Canada, short of help because of the large number of men who have gone to Europe to participate in the war, is offering inducements to American labor to cross the line and till the soil of the dominion. These are the three factors.

What is the patriotic duty of the American workingman? The answer comes very naturally: Remain in the United States and join wholeheartedly the great army of men who, as producers of foodstuffs, will play as effective part in the world war as will the men of the army or the navy. The appeal is not only a patriotic one, however, for wages promise to be considerably higher than usual. There is an unusual demand for workmen, and farm products are commanding prices that enable the farmers to pay good wages. Farm hands are therefore not required to make sacrifice as are the men who are called into the fighting ranks.

Already predictions are being heard of labor shortage at harvest time, and suggestions have been made even that it might be necessary to mobilize workingmen under military regulations to save the large crops that it is hoped will be produced. Such mobilization should not be necessary. Good wages and a sense of duty to the country should induce every man who lives by the wages he earns to accept work offered on the farms, and remain there faithfully and loyally until the United States emerges victorious from the war into which she has been dragged.

Washington Gleanings.

Farmers of Whitman county plan building six grain elevators.

A state fish hatchery will be built on Jim creek, near Granite Falls.

A $13,974 road contract has been let east of Cle Elum on Ellensburg road.

The next fair of the Western Washington Fair association at Puyallup will be held October 2 to 7.

It has been decided to hold the annual Palouse Harvest Fair and Live Stock show October 4, 5 and 6.

The contract has been awarded for the construction of the cold storage concrete and brick plant for the Selah Fruit and Cold Storage company to cost $45,000. The plant will have a capacity of 250 carloads.

A contract has been let at St. John for the erection immediately of probably the most capacious elevator in the northwest, outside of terminal points. The building will cost $25,000 complete and will carry 152,000 bushels.

Ten thousand dollars has been subscribed toward the completion of Sunset highway between Waterville and Coulee City. It is expected that $5000 more will be raised among farmers along the route and Coulee City residents.

The Willapa valley cheese factory has been totally destroyed by fire. The loss is $7000 with $3500 insurance. The factory was owned by Willapa valley farmers and provided a market at high prices for dairymen in the valley. It probably will be rebuilt.

The third cheese factory in Yakima county will be erected in Harwood. The organization of a cooperative association was perfected with E. M. Alexander of Harwood as president. The company will have the product of 200 cows at the outset and hopes to increase this number rapidly.

The fourth annual Doty school and community fair and exhibit will be held at the Doty high school on May 24, 25 and 26. The fair this year will include exhibits in home economics, manual training, academic subjects and an exhibit by the Doty Parent-Teacher association.

A. R. Hahner, assigned by the Washington State college at Pullman as horticulturist of Stevens county, has taken up his duties. His salary will be $1920, $1020 of which will be paid by Stevens county and the balance will be contributed equally by the state of Washington and the United States. His duties will be purely agricultural.

Gust Pearson and August Magnuson recently negotiated the purchase of Judge James Powers' hop farm east of La Conner. The consideration was $12,000. Instead of raising hops, they will engage quite extensively in cabbage seed raising. They will put in about 15 acres in cabbage seed, the remainder of the 40 acres being utilized for oats and pasturage.

A local stock association to cooperate with the forest officers in making better use of the mountain stock ranges has been formed in Pomeroy under the direction of J. M. Schnitiz, supervisor of the Wenaha forest reserve, and Forest Ranger Kendall. L. A. McNaught was elected president of the new association, Al Dick vice president and E. J. Wolf secretary. William Howard and William Jones were elected members of the advisory board.

What Others Say

Iowa Homestead: Wealth by no means spells independence.

St. Paul Farmer: The cooperative stock shipping idea, so far as we know, is original with the northwest.

Farm and Home: Prejudice causes a great many of the troubles that come to the individual and to government.

Farm and Fireside: Healthy, full-fed, lusty farm boys are easier led than driven. Well-earned, tactfully delivered words of appreciation provide a potent leading string.

Farmer's Review: The marketing problem is not simple, and needs some attention, but as yet a whole raft of us haven't mastered the problem of greatest production at least cost.

British Leader Here

Hold International War Conference

The arrival in this country of Arthur J. Balfour and other representatives of the British government Sunday was one of the most significant single events of the entrance of the United States into the world war. The object of the British government in sending its commission here headed by Mr. Balfour, who is British foreign minister, is to "make cooperation easy and effective between those who are striving with all their power to bring about a lasting peace by the only means that can secure it—namely, a successful war," to quote the words of Minister Balfour.

Evades Submarines.

While it has been known ever since the declaration of a state of war by the United States that England would send a commission to confer with President Wilson and other government officials, complete secrecy was kept as to the movements of the party so that they might evade the German submarine menace. From what port they sailed, the date of sailing, the route taken, and even the point of landing on American soil were veiled from the world, and no danger was known to have been near at any time during the trip.

American Viewpoint.

Foreign Minister Balfour will attempt to learn this country's point of view on all phases of the warfare, so that the ideas and war activities of his own country and those of the other allies may harmonize as fully as possible. His arrival at this particular time was appropriate from this standpoint in view of the fact that congress was in the midst of its struggle over the problem of how to raise an army.

Military System.

One of the most vital problems of the war for this country is that which congress has been struggling with for several days, but which may be settled before this is read. That is the problem of how to raise an army, whether by draft or by the volunteer system. President Wilson and his cabinet have been throughout fully convinced that the draft system must be relied upon, though a volunteer army of half a million men to fill up the regular army and the national guard is agreed to be necessary.

President Wilson's plan provides for the drafting into compulsory service of all able-bodied men in divisions according to age, beginning with the class from 18 or 19 years to 23 or 24 years. Exemptions would be made for other reasons than inability to pass rigid examinations, such as employment in necessary occupations or support of dependents.

"Slacker" Marriages.

While it is the intent of the war department to excuse from military service married men unless the developments of the war make it vitally essential that they be enlisted, the department has made it clear that no such exemption can be expected by young men who have married since the declaration of war. Charges were being made from all over the country that "slackers" were rushing to the marriage license bureaus to escape service in the army in case of the adoption of the draft system.

John L. Smith Honored.

The Minnesota State Fair association has engaged John L. Smith of Spokane as judge of Holsteins at their exhibition this fall. The Minnesota State fair has the reputation of being the greatest state fair in the country.

New Farm Loan Club.

The farmers of the Bay-Island country have organized a farm loan association with 14 members. The officers are: B. P. Green, president; C. E. Ludden, vice president and A. A. Miller, secretary-treasurer. The following are the directors: C. E. Ludden, R. T. Crosswell, B. P. Green, A. E. Strand and H. L. Flemings, and the appraisers are John Dulin, John Fredericks and A. E. Strand. The association will be known as the Bay Island farm loan association with headquarters at Tacoma.

Fruit Evaporator.

Yakima valley hears that the $100,000 beet pulp drier, to be erected at the sugar factory, can be converted into a fruit evaporator and its capacity for handling 700 tons daily utilized part of the year, at least. Of course the pulp drier is in use during the time most seasonable for fruit evaporation. Still some plan may be worked out and the drier utilized after the beet season closes or before the beet season begins.

DON'T BE A RENTER

You can buy fertile raw lands in Stevens county, Washington, on 10-year terms and receive free lumber and free use of stump puller. Ideal for stock raising and dairying. You can make good and be independent on your own land in Stevens county. Ask for particulars.

7-Passenger—48 Horsepower
127-inch Wheelbase

The Only Car

Built by John W. Bate—31 Extras in It

John W. Bate, the famous efficiency expert, built and equipped this whole great Mitchell plant.

It is all designed to build this one type of car at the lowest factory cost. On this year's output his methods save us at least $4,000,000.

All of this saving goes into extras. They make the Mitchell, in many ways, the finest car in its class. They give it many rare attractions which you ought to see.

His 19th Model

The latest Mitchell is the 19th model designed under Mr. Bate. It shows the result of 700 improvements which he has worked out in this car.

It represents the utmost in strength, beauty and equipment. It is his idea of what a lifetime car should be. Go see the result of his efforts.

All Extras Free

All these extras cost you nothing. They are paid for by factory economies — by saving waste. They include

31 extra features—
24 per cent added luxury—
100 per cent over-strength.

The 31 extras—like a power tire pump—are costly features which most cars omit. You will want them all.

The added luxury—24 per cent—is a 1917 extra. It is paid for by savings in our new body plant.

The vast over-strength is also a new extra. In the past three years, part by part, we have doubled our margins of safety. Every important part is given twice the strength it needs.

Over 440 parts are made of toughened steel. All safety parts are oversize. Driving and steering parts are built of Chrome-Vanadium. Gears are tested for 50,000 pounds per tooth. Not one Bate cantilever spring has broken in two years.

The object is a lifetime car, safe and economical. Cars of lesser strength cannot last like Mitchells.

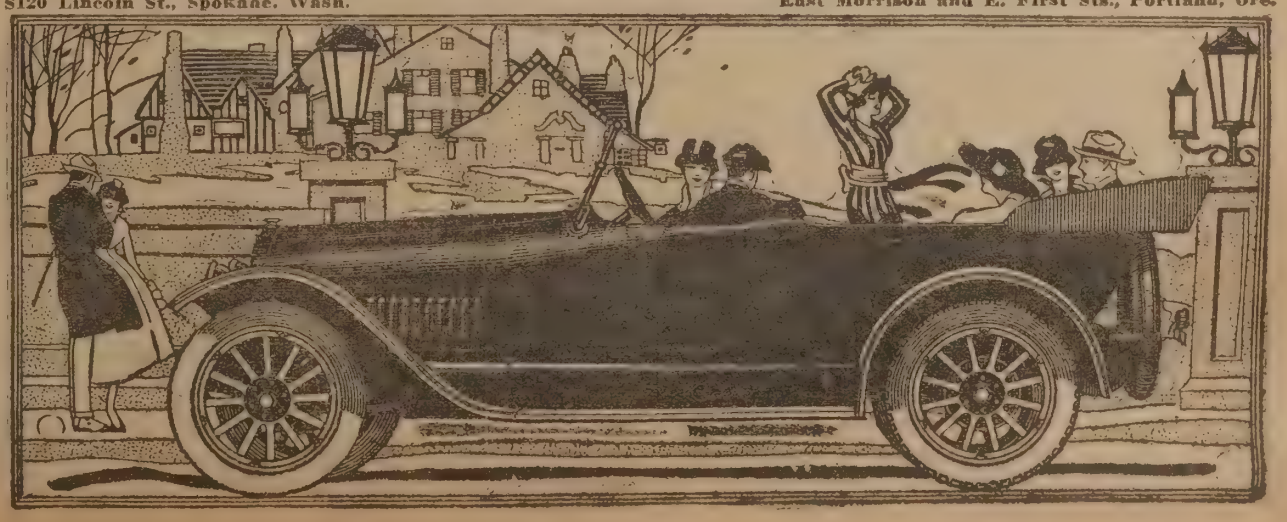
A New $1150 Size

Beside the Mitchell, we now make the Mitchell Junior—a somewhat smaller size. Yet it has a 40 horsepower motor and a 120-inch wheelbase.

See the two sizes and the various styles of bodies. See the extras which come with them. If you don't know the nearest Mitchell dealer, ask us for his name.

MITCHELL MOTORS COMPANY, Inc.
Racine, Wis., U. S. A.

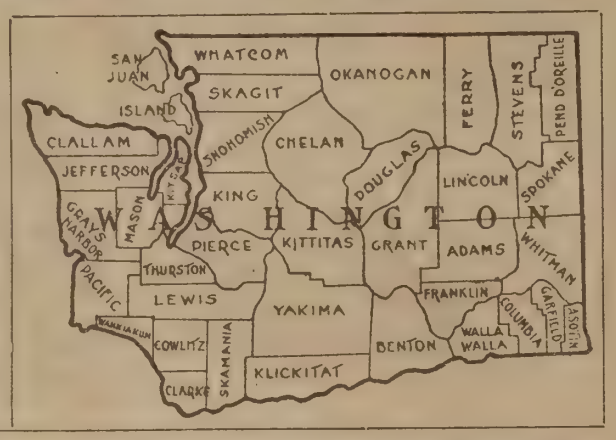
TWO SIZES



Mitchell—a roomy, 7-passenger Six, with 127-inch wheelbase and a highly-developed 48-horsepower motor.
Price $1460, f. o. b. Racine.

Mitchell Junior—a 5-passenger Six on similar lines, with 120-inch wheelbase and a 40-horsepower motor—½-inch smaller bore.
Price $1150, f. o. b. Racine.

Also six styles of enclosed and convertible bodies. Also new Club Roadster.



Mitchell, Lewis & Staver Co., Pacific Northwest Distributors

$120 Lincoln St., Spokane, Wash. East Morrison and E. First Sts., Portland, Ore.

Should Can Garden Vegetables

Winter Needs May Well Be Cared For by Canning Fruit and Vegetable Surplus; Many Varieties of Garden Truck Can Be Grown

FERNDALE, Whatcom County, Wash., April 16.—Pioneers claim that this spring has been the most backward one they have seen for 30 years. It has been cold and raining most of the time, which has hindered farming operations. There has not been any planting except on sandy soils. There is a scarcity of small pigs in the country. Farmers intend to plant larger gardens than they have ever done before, as the high prices of beans and other garden products which they were accustomed to buy before scared them out last winter. Every farmer should grow as many varieties of vegetables as will grow in his locality. By canning the surplus of the perishable varieties a continuous supply may be had through the winter months.

CARL J. MENZE.

Plowing Will Be Late.

VADER, Lewis County, Wash., April 16.—As soon as the soil is not too wet plowing begins, this condition usually coming in February and March. The farmers here are one month behind with their spring work. Little plowing has been done this winter and spring, and the outlook is that it will be delayed until April and that a great deal of the wet land will not be plowed until May. Very little planting has been done. In many cases grain that was planted last fall has resulted in a total failure. The hay crop is ready to cut here about the first of July. The oat crop is usually harvested in August and potatoes are dug in October.

S. S. WILSON.

Seeding Nearly Completed.

OTHELLO, Adams County, Wash., April 16.—The help question has not as yet been a serious one, as there seems to be plenty of men to be had. The wages are about the same as previous years, only occasionally a man getting a raise of $5 per month, the usual wage is $40 per month, including board. Most of our men are of the steady, industrious class and receive good treatment, so there is very little dissatisfaction. To keep a man here by the year one would need to farm at least two sections and then raise some hogs and cattle to keep a man busy in winter. We have had two inches of rain since January and more wind than usual for the last of March and first of April. Seeding is nearly done and the ground is in ideal condition. Some fields are green. Wheat, after all the farmers have sold, is now $1.85 and the profit goes to the man that doesn't labor to produce it.

A. O. LEE.

Wanderlust Claims Men.

MEAD, Spokane county, Wash., April 16.—There is sufficient farm help to be had, though at a somewhat higher price than heretofore. There are more efficient men than in the last few years of the "wet" period. Very few are content to work long at any one place. The wanderlust seems to have them in its grip. It will pay to keep the right sort of man the year round on a diversified farm of 80 acres. It does not pay to keep any other kind, no matter how large the farm. Weather conditions will not permit much farm work yet, though plowing has commenced. Early sown fall wheat looks well; much late sown land must be reseeded. Live stock has come through the winter well, but feed is now getting scarce.

GEORGE HINGSTON.

Prohibition Helps.

EPHRATA, Grant county, Wash., April 12.—Labor is very scarce in Grant county and in many cases the farmers are working short handed with their seeding. Owing to the scarcity of labor wages are higher this year than heretofore. Wages run from $40 to $45 per month, which is about $5 more than has usually been paid. The laborers are considered more efficient than a few years ago, one of the most important factors being that the state is dry and they do not run away as soon as they get a small amount of money earned. The most of the laborers seem to be contented and satisfied with their work. The wheat farmers do not usually keep a man the year round, but only from the beginning of spring work until the fall work closes in the fall. The dairy and stock farms usually keep men the year round.

Live stock is in much better shape this spring than last year. Owing to the small amount of snow on the ground this year and not such a cold winter the losses this year will not compare in any way with the losses last year.

H. W. REAUGH.

Are Getting Tractors.

GREYCLIFF, Sweet Grass County, Mont., April 13.—Farm labor is very scarce this spring and wages are higher than usual. The home laborers are usually best, but the traveling laborers are restless. As soon as they have a few dollars coming in they hike out again. Wages range from $40 to $50 per month with board. A man with a 160-acre farm can not afford to keep a man the year round unless every acre is good tillable land. Many dry farmers are getting tractors for plowing this spring in this community. The month of March has been quite wet and we have had lots of wet snow, even up to this date, with snow and rain two or three times a week. Spring is from two to three weeks later this year. The stock wintered fairly well. Alfalfa hay is from $20 to $25 per ton loose; timothy $30 loose and hard to get at that.

JOHN FORSTER.

Spring Seeding Done.

NEPPEL, Grant County, Wash., April 14.—Farm labor is scarce and wages are high, so high in fact that farm development is at a standstill, only the urgent work being performed. There is no remedy, but more and reasonable wages. Wages are 20 per cent higher than in previous years and the efficiency of labor in this line of business has to be installed at our own expense, and it is an endless chain. It does not pay to keep a hired man the year round on the average 160-acre farm unless in orchard and alfalfa farms. The weather for the latter part of March has been severe, but the present weather conditions are very favorable, with plenty of rain to germinate seed, the farmers wearing a smile accordingly. All the spring seeding is done with the exception of garden truck.

MARTIN PENHALLECK.

Live Stock Does Well.

PORT ANGELES, Clallam County, Wash., March 31.—The farming in Clallam county is principally dairying and in some cases a 10-acre farm will justify to keep a man hired the biggest portion of the year. Owing to the isolation of the county from the farming centers it is plainly evident that farm labor is a troublesome question at times. Just at present the reports come in from Sequim and Dungeness that farm labor is scarce and that wages range from 10 to 15 per cent higher than the previous year. The season is most backward, and from the western part of the county reports came March 31 that three inches of snow fell at Tyee prairie.

J. P. CHRISTENSEN.

No Plowing or Seeding Yet.

SHELTON, Mason county, Wash., April 2.—The farm labor question is of very little moment with soil cultivators in this county. Most of our farmers run their farms within the ability of their own families, not feeling able to pay the wages prevailing in the logging camps, hence hired help is resorted to only in cases of emergency. In such cases the usual hire is from $2 to $2.50 per day. The remedy is larger families of boys and girls to clear away these forests, subdue the soil and open larger farms. I know such a farmer. He is doing well and all like their home, which was lately equipped with electric lights. The farm laborer who has come here for a job has not been a farm hand, but a makeshift. A farm which can raise provender for 30 cows will justify hired help at $40 per month and board the year round. Weather conditions remain bad. In the vicinity of Shelton about an inch of snow fell last night. Such a thing has not been known before. Many are buying hay. No plowing has been done and no seeding this spring.

SCOTT HAYES.

Soil Remains Wet.

RAINIER, Thurston county, Wash., April 2.—I think farm labor will be rather scarce this season, as here the sawmills get most of the help and small farmers can not afford to hire very much. Wages are high and many are not efficient. The weather is the principal topic and the results therefrom. Our stormy weather commenced about March 18 and no signs of a let-up yet, with snow, rain, sleet and wind. There are no fruit blossoms yet and the soil remains very wet. No farming has been done since the middle of March and hay is running short. There is a big demand for hay, with no pasture. Winter grain is looking pretty well. With feed prices going up the egg crop is likely to be reduced. Wheat now is $4.10 per sack of 125 pounds, fat hens are 22 cents a pound and eggs 25 cents a dozen. Two weeks ago I sold 16 Plymouth Rock hens, weighing 108 pounds, at 20 cents per pound, which netted me $20.22 in Seattle.

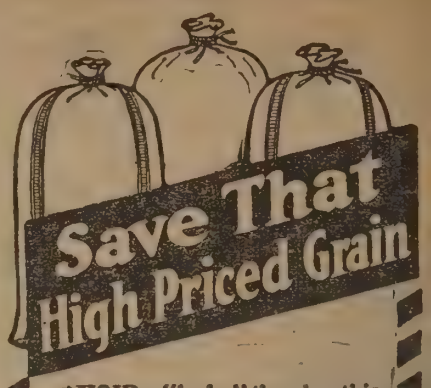
L. F. DAVIS.

Stock in Good Condition.

LEAHY, Douglas County, Wash., March 24.—Spring wheat is generally sown the latter part of March and April, but it will be at least two or three weeks later this spring as there is a foot of snow on the fields yet and it is not thawing much. The spring plowing is begun as soon as the snow is gone and summer fallowing is done in May and June. There was not much fall seeding done here as it was too dry in the fall and there is not much moisture in the ground this spring. Harvesting generally begins about the first of September. The leading crops are wheat, oats, rye, barley and some corn and potatoes. Stock has stood the winter in fine shape with plenty of feed.

W. A. GRAY.

Work About Normal.



OMAK, Okanogan County, Wash., March 26.—Cultivation usually commences about March 10, but up to this time the ground is still frozen and the snow is not all gone yet, though the weather is generally pleasant. There is not much land summer fallowed in this county. Farm work will be about normal. It was too early to know what condition fall sown crops are in. Stock is coming through in good shape.

J. O. WOODS.

Work Well Under Way.

GRANDVIEW, Yakima County, Wash., March 26.—For a few years plowing has been done the last of March and the first of April. Seeding is done the last of April. Alfalfa is cut about the last of May or first of June. Spring is about normal, but a little colder with more wind than usual. Pruning has been completed. Quite a lot of potatoes have been planted and some gardens made.

E. H. FAULKNER.

AVOID a "leaky" thresher this year. Hire or buy a thresher that will save your grain. A Red River Special will do it. It *beats* out all of the grain. Many owners have threshed out big sacks of grain from straw stacks left by other machines. Hire the man who owns a

Red River Special

or write us and learn about our "Junior" machine. Built in a size that makes home threshing pay. Run it with a gasoline engine, tractor, or light steam engine.

Not to be compared with usual small threshing machines. Has every feature of the Red River Special—famous "Man Behind the Gun"—same arrangement of shakers, adjustable chaffer, and large sieves. **Write for Circulars.**

PIGS ON SMALL FARM

Amount of Waste Decides Number.

By E. L. POTTER.

The chief profit in pigs on a farm of any size lies in the consumption of products that would otherwise be wasted. The number of pigs on the farm must therefore be adjusted to the amount of waste products available, supplemented in all cases, however, with a liberal amount of grain. One good brood sow and her pigs are all that the average 10-acre farm will support unless there is an unusually large number of dairy cows. We usually figure on raising one pig to marketable age for each dairy cow and possibly one or two in addition for the house slops. With exceptional good cows the number of pigs may be somewhat increased. This is, of course, where the cream is sold, but the skim milk kept on the farm. The small farm without skim milk is no place for the pig. On the high priced lands of our small farms one can not raise pigs without some waste to feed. The proper use of pastures will lower the cost, but not the point where there is any profit. There are times when pigs may be profitably fed on grain alone or on grain and pasture, but in the long run it is a loosing game and especially on the small farm, where the grain must be purchased.

Veterinary

Dr. S. B. Nelson

Pig in Pain—What can I do for a pig that can not stand up or walk and seems to be sore and in pain.—E. A. G., Rockford, Wash.

Answer—Try giving your pigs form half an ounce to two ounces of castor oil, depending upon their age and size. The next day follow with 10 to 15 grains of potassium iodide in the feed the same way. Be sure that you have a place for them to sleep where there is no draft to get to them.

Contagious abortion—I have had some trouble this winter with what I think is contagious abortion. Have sold three cows to the butcher. Would you advise me to buy more cattle, as I have just one cow left?—C. G. P., Olympia.

Answer—If you will write to Dr. S. B. Nelson, Pullman, Wash., a letter will be sent you which will give you fairly complete treatment in the handling of contagious abortion. To stamp this disease out depends fully as much upon the careful detailed work of the owner every day as it does on the advice of the veterinarian.

Ailing Cows—I have a cow that has had a bloody discharge and an offensive odor since her calf was born. She has a poor appetite and only gives about half the usual amount of milk. Have a second one fresh now that acts the same way, only she has a fever, too, and is stiff when she walks. I also have a heifer that freshened a week ago that is starting the same way.—P. A. N., Lake Bay, Wash.

Answer—The fact that your cow had a bloody discharge after calving would indicate that there was some internal trouble with the genitive organs. I think that they should be washed out with a 2 per cent solution of lysol. This should be done daily for some time, say a week or such a matter. I am of the opinion that the other two have the same trouble and should receive the same treatment. After the first time, I think it will be well also to wash them out with a very weak solution of potassium permanganate. Take a pinch between the first finger and the thumb and drop that into a bucket of warm water. Stir it until it is dissolved and wash the genitive organs, womb and all, very carefully. If the bowels are not working correctly give from one-half pound to one pound of epsom salts in two to three quarts of water. Take away about half of the feed that you are giving.

Sweenied—I have a mare that was kicked in the stifle about a month ago by another horse that was rough shod. The wound is healed up, but she does not seem to want to use her leg, so it has also caused hip sweeny.—E. M. W., Fruitland, Wash.

Answer—The chances are that the bone was severely injured and soreness in bone takes a very long time to heal and for the soreness to go out of it. Sometimes it takes six months or even a year. When the mare gets so that she can walk, a slight rubbing of the muscles of the hip with gentle exercise will help fill them. Until she does walk, no treatment will cause the muscles to grow in the sweenied parts.

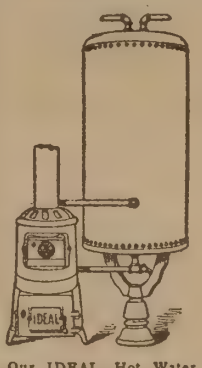
The LAWRENCE-WILLIAMS COMPANY, Cleveland, O.

Make the farm loan include Ideal Heating

The banker knows that radiator heating is an asset



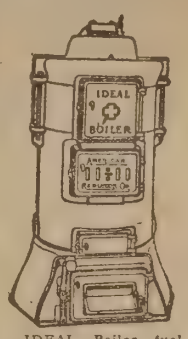
A loan made for improvements which includes radiator heating is much easier to make because the investment in an IDEAL Boiler and AMERICAN Radiators makes the property so much more valuable and adds immensely to the happiness and permanency of the family on the farm. Young and old benefit by it. It is a large dividend-paying investment and soon repays the first cost in a few years. Radiator heating makes any old property modern, healthful, economical and in the "A" class for selling or renting.

Farm success depends upon home comfort

AMERICAN RADIATORS & IDEAL BOILERS

The women folks ought to have a portion of the improvement money spent for their comfort. The success of the farm depends upon the health of your wife and the comfort and convenience of your home. You and your family must be comfortable during the long winter season and the raw, chilly Fall and Spring.

Basement or water pressure not necessary—don't wait!

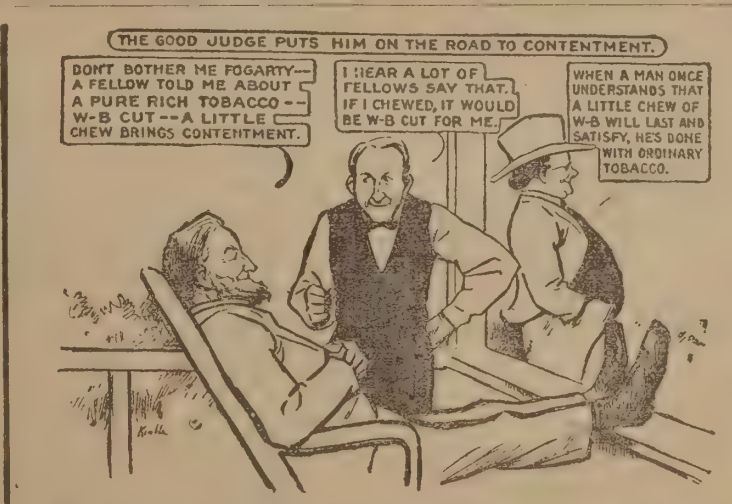


Our IDEAL Hot Water Supply Boilers will supply plenty of warm water for home and stock at small cost of few dollars for fuel for season.

IDEAL Boiler is set in cellar, side-room or "lean-to;" and same water is used for years. Put an IDEAL Boiler and AMERICAN Radiators in your house this year. Call up the nearest heating contractor and ask him to give you an estimate. Spend part of the Bank loan for this permanent, economical, dividend-paying heating outfit. Thousands of farmers say it's the "best in the world."

A No. 4-22-W IDEAL Boiler and 420 ft. of 38-in AMERICAN Radiators, costing the owner $280, were used to heat this farm house. At this price the goods can be bought of any reputable, competent Fitter. This did not include cost of labor, pipe, valves, freight, etc., which vary according to climatic and other conditions.

IDEAL Boiler fuel pots mix the air and coal gases as in a modern gas mantle, extracting ALL the heat from the fuel.



Send today for this valuable book (free)

Our large 48 page book "Ideal Heating" is full of illustrations—will give you much valuable information on the subject of farm house heating. Read it through before buying any kind of a heating outfit.

Sold by all dealers. N. exclusive agents.

A. B. NYSTROM, Editorial Contributor

Dairy Questions

Are Answered by A. B. Nystrom

Incomplete Churning.

We have a cow that has been fresh about eight months and with calf two months. On churning her cream we set the buttermilk back and there gathered on it a thick cream. The buttermilk frequently does this, but not nearly so much. Can you tell me what causes this and how it can be remedied? J. S. R., Elk, Wash.

I believe that the cause of your incomplete churning is due to not having the cream in the proper condition. Your cream should be well ripened and should be churned at a fairly low temperature if you are to have an exhaustive churning. You can regulate the temperature with the ripening so that it takes you about 30 minutes to churn. To ripen cream for churning mix all the cream in one vessel the day before you wish to churn and let it stand at a temperature of 70 to 75 degrees Fahr. to ripen for from six to eight hours. The sweeter the cream and the lower the temperature the longer it will need to stand before the ripening is complete. When the ripening is complete it should be cooled to churning temperature and held at that temperature until ready to churn. If the cream is of an unknown quality or if it has not been kept in good condition it often becomes necessary to ripen the cream artificially by the addition of a starter. This is simply a well ripened sour milk.

Leaky Teats.

Can you tell me what to do for a cow that can't hold her milk? Her udder is small and she does not give a large amount of milk. About an hour before milking time the milk begins to drip and then runs a small stream. She is milked regularly every 12 hours. A. C. B., Kettle Falls, Wash.

Leaky teats are usually very hard to cure and a veterinarian should be judge of the possibilities of curing them. Nothing satisfactory can be done for them while the cow is giving milk, but when the cow dries up it is possible that the veterinarian can sear the end of the teats in such a way that when they heal they will be closed or nearly so. Collodion will close them up from one milking to another, but such a treatment is not very satisfactory.

Cows Producing Over 50 Pounds of Butterfat

Following are the names and records of cows in the Stillaquamish Cow Testing association which have produced more than 50 pounds of butterfat during the period of 30 days ending March 31 of this year, according to the report of W. H. Henry, the official tester:

MILAN FARMS DEVELOPMENT CO.

1322 Old Nat'l Bank Bldg., Spokane.

Canada Offers 160 Acres Land Free to Farm Hands

Bonus of Western Canada Land to Men who Assist in Maintaining Needed Grain Production

The demand for farm labor in Canada is so great that as an inducement to secure at once the necessary help required, Canada will **give one hundred and sixty acres of land free as a homestead** and allow the farm laborer, who files on land, to apply the time he is working for other farmers as residence duties the same as if he had lived on the land he had applied for. This offer made only to men working on Canadian farms for at least 6 months during 1917, thus reducing the necessity of actual residence to 2 years instead of 3 years, as under usual conditions. This appeal for farm help is in no way connected with enlistment for military service, but solely to secure farm laborers to increase agricultural output. A wonderful opportunity to earn good wages while securing a farm. Canadian government will pay all fare over one cent per mile from Spokane to Canadian destination. Information as to low railway rates, etc., may be had on application to

J. N. GRIEVE.
Canadian Government Agent.
Cor. 1st and Post St., Spokane, Wash.

Contagious Abortion

Isolation of Cow Most Important

By HORACE ADDIS.

There is no more insidious disease with which dairymen and cattle breeders generally have to contend than contagious abortion; none that lays a heavier toll, once it gets into a herd, and none that seems less understood. Furthermore, I have heard several representatives of the United States department of animal husbandry lecture on the subject lately without imparting scarcely any information that could be of value in combating the disease. They frankly admit that none of the remedies used have yet proved to be effective and that several are proven useless. Carbolic acid and similar disinfectants, but neither methylene blue nor anything else is a specific nor even of any proven remedial value. Sanitation, isolation and caution against allowing it to get a start are about as far as the governmental representatives or any reputable veterinarians will go.

There is one fact in the treatment of the disease in a herd that seems very little known and which seems to me of the greatest importance. That is, that a cow bred immediately or soon after she aborts will abort again and then is likely to become barren, while if she is not bred for 90 days she will not abort and is free from the disease forever or at least until again contaminated from outside sources. One dairyman in the Willamette valley, who had a very trying siege of contagious abortion, and whose herd has been absolutely free from the disease for several years, learned this by his own experience. He found that the cow quickly bred was practically sure to abort again, while 90 days insured the disease having run its course and apparently set up a complete immunity. The cows so treated calved normally and did not carry the disease to other cows.

I have asked several government veterinarians their opinion on this question and all agree that 90 days—and probably 60 days—is a safe period if a cow's afterbirth is taken away properly and she is well disinfected. As to whether a range cow, with no disinfection, would reach the same immunity opigions differ. Unless there was a decaying substance left in her I believe she would. But it seems strange that veterinarians and dairy papers do not emphasize more strongly the need of delaying the breeding of an aborting cow, when it has been so

well proven that it brings immunity and early breeding is disastrous.

Let me urge then that any dairyman or breeder who finds his herd a victim of the disease should not resort to the unworthy practice of selling his cattle and thus infecting other herds, nor of sacrificing his cows to a butcher. He should isolate suspicious cases until after calving, if possible. And every cow that aborts should be kept isolated until she is thoroughly disinfected and has ceased to discharge. Then breed her in three months and she is a "clean" cow, one that will be safe against a recurrence of the disease and safe against giving it to others. The dairyman who thus acts has lost one calf and possibly all or part of a season's milk from each aborting cow. But he is then safe and has not visited his affliction on some one else.

Commenting on the above Dr. S. B. Nelson, veterinarian at the Washington State college, says:

"Veterinarians, whether United States department of animal industry representatives or experiment station veterinarians, or those in private practice, practically agree that sanitation or rather sanitary hygienic measures are of very great value in stopping an outbreak of contagious abortion. There is a difference of opinion as to the value of the internal administration of carbolic acid and methylene blue. Some reputable veterinarians believe that there is value in this treatment, while others are just as sincere in their belief that there is no value. However, the fact remains that many veterinarians are demonstrating that the disease is overcome more readily if treatment, that is, internal treatment, is given along with external or sanitary treatment. The latter treatment is principally preventive in character. Nearly every lecturer who has spoken before audiences of dairy people or farmers and stockmen emphasize the important point that an animal must be well, that is, as far as external evidence of the disease is concerned, which is manifested by the lack of discharge from the genitive organs before the animal should be bred again, and that after there is no more sign of discharge. Whether this healthy, or apparently healthy condition, is hastened by treatment or not they advise allowing her to go over one or two periods of heat before she is bred. I can not see that the question of time enters into this; it is entirely a question of whether the animal is well or not and whether there is a discharge. If at the end of 60 or 90 days there still is a vaginal discharge the cow should not be bred. There are many cases on record where the cow was bred 60 and 90 days after losing her calf, where she again lost her calf, but this was not because of the time of breeding, but because of the condition which the cow was in, that is, she was still physically diseased when she was bred. I think the above is really a very good article and should receive the careful attention of the readers of this paper."

COOPERATIVE WORK
Of the Lower Columbia Farmers.

By H. H. BUSHNELL

The Lower Columbia Farmers' Creamery company began operations in January, 1913, at Astoria, but for months before, John Onkka, the manager, was interesting dairymen in the proposition. Mr. Onkka came from Minnesota where he was familiar with cooperative creamery work.

The capital was placed at $10,000. They paid $5500 for a lot and erected a building for $6500. They had to borrow some money from the bank to buy machinery, cans, etc. The creamery has proved a success so far. Mr. Onkka says they have 238 stockholders, every one of them farmers, and there are over 600 cream shippers. They are able to market practically all the output in Astoria. The largest output was last June and amounted to 72,139 pounds of butter. The system is strictly cooperative. The butter is sold, the expenses are paid and the balance all goes to the stockholders. The price for butterfat is determined at the close of the month.

Mr. Onkka furnished the following prices for fat paid by them under this system. Beginning with November, 1915, they paid 34 cents for November, December, January, February, March and April; 29 cents for May, June and July; 31 cents for August; 34 cents for September; 39 cents for October; 40 cents for November and December; 41 cents for January, and 43 cents for February of this year. The company makes two brands of butter, Shamrock and Suomi.

RECENTLY SURVEYED HOMESTEADS NOW OPEN.

Every reader of this paper should write at once for a free copy of "The Home Seekers' and Settlers' Guide." It tells all about the rich 160-acre free farms, excellent for growing grain and mixed farming, also what others are doing. Address Canadian Northern Railway. A. A. Brostedt, D. F. & P. A., 605 Hastings St., Vancouver, B. C., Canada. —Adv.

"This is for you, girls!

It's the most wonderful separator I ever saw. I just brought it from Johnson's Hardware Store where they were demonstrating it. You can't guess what it will do."

"I think I know, father. You told me last week about the loss of cream in our old separator when I turned it too slow. You timed me and pretty near scolded me when you found I was turning 37 revolutions instead of 50. This is the separator that "skims clean at any speed". It's a

SHARPLES
SUCTION-FEED CREAM SEPARATOR

"Mary is a smart girl, mother—she guessed it. We all helped to test it and it skimmed *to a trace* when turned as slow as 36 and equally clean when turned as fast as 55 turns. It simply skimmed *faster* when we turned it faster. And the cream remained at 35% thruout the varying speeds."

"Why, father—then we will know exactly what the cream check will be each week, wont we?"

"Indeed we will, mother. Now look at the bowl. It's a plain straight *tube* with a small ring like a napkin ring in it.

"Goody!—I'll get thru washing up in a jiffy, no discs!"

"Yes, girls, and note the knee-low supply tank, and the automatic once-a-month oiling—it has any other separator I ever tried, beat a mile. But then—it's made by the oldest and largest Separator Works in America."

POTATO SEED DIP
For Fight Against Diseases.

As a general treatment for seed potatoes to destroy diseases that might greatly injure the crop, the following is considered effective:

Use corrosive sublimate at the rate of one pound to 120 gallons of water, or four ounces to 30 gallons, or one ounce to 7 1-2 gallons and soak the tubers, in a burlap sack, for an hour and a half to two hours. Remove and place them on a draining board and if necessary dump or pour the potatoes out so that they can be thoroughly dried. They can then be resacked or cut.

After each dipping add one ounce of corrosive sublimate (this is on the basis of one pound to 120 gallons of water) and add enough water to get the original volume. In this way you can keep the material up to the proper strength.

Use Is Limited.

By following this procedure the solution can be used about 12 times after which it should be discarded and an entirely new solution made up. If there is any trouble in dissolving the corrosive sublimate pour hot water over it. Potatoes after having been dipped in this solution are no longer fit for human consumption, or as feed for stock, as there would be danger of poisoning. Corrosive sublimate solution should be made up in either a wooden or earthen container and should not come in contact with metal.

G. L.

URGE SEED GROWING
In Localities Suited to It.

A movement has been started in Douglas county, Oregon, looking toward increased seed production in that section. The growing of spinach seed was urged by F. W. Nelson of Portland at a recent meeting of farmers. Mr. Nelson said that the locality was well suited to seed production and that farmers could make profit on the industry. Heretofore spinach seed has been imported largely from Holland.

USE TOBACCO SPRAY
Instead of Lime and Sulphur.

According to reports the Congdon orchards, the largest in the Yakima valley, will not be sprayed this year with lime-sulphur for scale. The experiments made last year with the tobacco spray leads them to conclude that if applied at the time of the codling moth spray it will kill the scale, the aphis, the red spider and the codling moth all at the same time, and this is cheaper than the extra sprays.

THE FARM GARDEN
ARTICLE 9.

Bean Growing

Beans are more than a garden vegetable, especially this season, when there is unusual requirement for production of food. There are few vegetables so well adapted to many conditions as beans, and in many localities of the northwest they should this year be made a real part of the farm products. If it is not desirable to grow them for market, it is certainly desirable to grow them for home use in sufficient quantities to last throughout the year. String beans make one of the most palatable and nutritious dishes, and by canning they can be had the entire year. Bean canning is practicable in the home. Any careful person can put them up with perfect assurance they will keep. Also, dry beans can be harvested, affording a second food article for the entire year, and seed for next season.

HOW TO GROW BEANS.

Beans can not be grown successfully where they will be subjected to even light frosts at any time prior to maturity. They are easily killed. Hence, in many localities, they must be grown on comparatively high ground.

It is inadvisable to plant them until the ground begins to grow warm, for, even though the seed should not decay before coming up, the plant is practically certain to be stunted if sprouting and early growth are slow.

Beans do not require as rich a soil as many other vegetables. They are of the leguminous family, having a peculiar root faculty for acquiring nitrogen from the air. If the soil is too rich in plant food, such as that from manure or decayed vegetation, the vines have a tendency to stay green until late in the fall, holding back the maturity of the beans until danger from early frosts appears. They will do well on almost any reasonably good soil, though the heaviest clay soils are not so satisfactory as a soil with some sandy loam characteristics.

They often do well when planted with corn, especially if they are of varieties that produce twining vines and need some support.

Ordinarily they should be planted in rows from 20 to 36 inches apart, depending on the character of the soil and the moisture that is available. They should stand in the rows from three to six inches apart, depending on soil and moisture condition and the variety. The more bushy or twining varieties require more space, of course.

Under no circumstances should their cultivation be neglected. The soil should be stirred to a depth of from one to two inches frequently, but deep cultivation is not advisable. Beans should be planted not more than two inches deep, and even shallower than this if moisture can be maintained near enough the surface to insure sprouting.

The soil should be prepared so that a root bed six or more inches deep will be ready, as many varieties of beans develop sturdy root systems which penetrate to considerable depth.

Pole beans are those that produce long, twining vines, and require posts or poles or cords to climb. They are in many cases popular and justly so, especially for string bean purposes. The pole bean is a fine vegetable to make use of the fence row or fence corner this year.

Lessons of Experience.

Life's little ills annoyed me,
When the little ills were few;
And the one fly in the ointment
Put me in a dreadful stew.
But experience has taught me
The infrequent good to prize,
Now I'm glad to find some ointment
In my little pot of flies.

—Dakota Farmer.

SPRAY NOW

Aphids, Red Bug and similar insects are a serious menace to orchards in spring. Do thousands of dollars' damage annually. Black Leaf 40 (nicotine sulphate) kills these pests. Recommended by Experiment Stations.

Save money on your stump blasting

The explosives that get stumps out cleanest and cheapest are those that have a heaving and lifting effect, shattering the stumps just enough to break them up. Then you can handle them easily.

"The farmer," says an Experiment Station, "should use an explosive prepared especially for his work; one that stands all ordinary shocks of handling and transportation and does not easily freeze. He does not need and should not use the expensive nitroglycerine explosives." Thousands of farmers have taken this advice and have found that

GIANT FARM POWDERS
STUMPING — AGRICULTURAL

always save them money because they go further than any other stumping powders. Also, because they are made especially to suit *western* farm conditions and because they are always uniform in composition and action.

Giant Farm Powders—the product of the oldest manufacturer of high explosives in the United States—are the only genuine "giant powders" for agricultural use. They are made in two brands—Giant Stumping Powder and Eureka Stumping Powder.

Giant Stumping Powder is the ideal explosive for blasting stumps in wet ground. It keeps perfectly for months, resists water and chilling, and gets the stumps out economically.

Eureka Stumping Powder is the money-saving, low-freezing explosive for blasting stumps in dry soil. It costs less than Giant Stumping Powder and careful blasters save many dollars by using it for wet work also.

EVIDENCE

I bought five boxes of your Stumping Powder and now I want to sell a lot of other powder that I have.
RUDOLPH STADELI, Silverton, Ore.

Your Stumping Powder has a wide breaking power and less fumes to contend with after being exploded than any other on the market.
G. L. METZGER, Hilladale, Ore.

In using a thousand pounds of your Stumping Powder neither I nor any of my men had the least bit of trouble in getting the very best results. I have used practically every powder on the market and find there is more strength in yours. J. L. EIDSON, Silverton, Ore.

Your Stumping Powder shoots the roots and spreads wide in the ground instead of going down. It is the best powder we have used.
G. S. McCARTNEY, Russellville, Ore.

I find your Stumping Powder all you claim for it. ELI CLINKER, Camas, Wash.

I am a large user of powder in stump blasting as well as in grading roads, breaking boulders and making ditches. I get good results from the Giant brands all the time.
MICHAEL HARVEY, Charleston, Wash.

Giant Stumping Powder gives good results when all other means of removing stumps have failed.
ROBERT CHABOT, Moclips, Wash.

Make This Test

You want to clear your land as cheaply as you can. If you are not using Giant Farm Powders, try them *now*. Mark and mail the coupon at the right. We will have our nearest distributor supply you—at the lowest market price—with a 25-pound or 50-pound case of Giant Stumping Powder or Eureka Stumping Powder. Compare this with any other and *prove* for yourself that Giant Farm Powders will save you money, time and work.

We Issue Five Valuable Books for the Farmer

They tell and show how to remove stumps and boulders, how to increase the fertility of the farm by blasting the subsoil, how to have earlier-bearing, thriftier orchards by blasting holes for trees, and how to drain your land by using Giant Farm Powders. These books are written especially to cover Pacific Coast conditions, and will be helpful to every farmer. Choose the books that you prefer and *mark and mail the coupon.*

JAMES DRYDEN
Editorial Contributor

Nobody knows, of course what the price of eggs and the price of feed will be in the next 12 months, but the chances are that the price of eggs will be high enough to make a good profit on the feed fed to a good laying hen. Eggs never were so high in this country in the month of April. When speculators are paying over 30 cents a dozen for the eggs to put in cold storage it indicates a very high market next fall and winter from the storage man's point of view. Keep the good laying hens. They will make a profit and help win the war.

It is too late now to be setting eggs for hatching early fall and winter layers. The only excuse for hatching later is to get a start of some good breeding stock.

The chances are that there will be an unprecedented demand for eggs and poultry for the next two or three years. If the poultryman has not made the right start this year he should be planning his operations for another year. J. D.

Gravel and Digestion.

To the Editor: Can you tell me what dissolves glass, small particles of stone and coarse gravel in a chicken? Is it the process of digestion or what? Are all of these things dissolved before they leave the stomach of the hen?
Steel, Idaho. S. T. R.

You have raised a question that has never been very thoroughly investigated. I may say this, however, that the gravel or particles of stone or glass are acted upon in some way in the gizzard to dissolve them, but they are not always completely dissolved. I have often found pieces of grit in the droppings, passed by the fowl. The gizzard is a very strong muscular organ and the grinding of the food or reduction of the particles of grit is no doubt largely dne to the muscular contraction of the gizzard. To what extent acids in the stomtch act upon the grit and gravel I do not know, but undoubtedly they are an important factor in dissolving these hard substances as well as of the grain.

It is a live question whether the grit the fowl eats is used for grinding the grain in the gizzard or to serve some purpose of nutrition. So far as I know, that is an open question. The grit no doubt aids digestion by assisting in the grinding of the grain, but to what extent, if any, the dissolved mineral is a factor in nutrition of the fowl is another question. J. D.

Caused by Mites

Individual Treatment Necessary

To the Editor: Can you tell me what is the matter with my chickens and what to do for them. They are in good condition and lay just as well as if they were all right. Great knots are on the feet and legs. The chickens that had yellow legs, after they get it, are a dirty gray color. We killed one hen and its legs were three times their normal size. The knots could be broken off as easily as if it were mud. Where broken, the legs were deep pink color. Some of the chickens lose the feathers off their heads and necks. Some of them haven't any feathers from their beak to where the neck joins onto the body. The bare flesh is a bright red color and in some places looks a trifle swollen. I have looked for lice and mites but could never find any and I have dusted them with lice killing powders. There is not one chicken with a bare neck that has knotty legs. It may be the same disease and affect some differently than others, but I think not. If nothing can be done for them, can I prevent the others from taking it? E. J.
Rigby, Idaho.

This correspondent describes two different diseases, both of them caused by mites. The first is what is known as scaley leg. The specific name of the mite is Sarcoptes mutans. This mite burrows underneath the scales of the leg causing an irritation. White grayish crusts are formed, which enlarge and raise the scales.

Individual treatment is of course necessary to cure, but the cure is not difficult. The cure consists of killing the mite under the scales. One of the quickest and surest ways of doing this is to apply kerosene, and the best way to do this is to dip the leg in a can of the kerosene and hold them there about half a minute. An ordinary tomato can is about the right size. Care should be taken not to let the oil come in contact with the part of the leg covered with feathers; only the scaley part of the leg should be treated. Another treatment is to thoroughly soak the scales in warm water until they can be removed, and then to apply an ointment or vaseline. It may be necessary to give a second treatment. As the disease is contagious, it is well to disinfect the houses, especially the roost perches and nests.

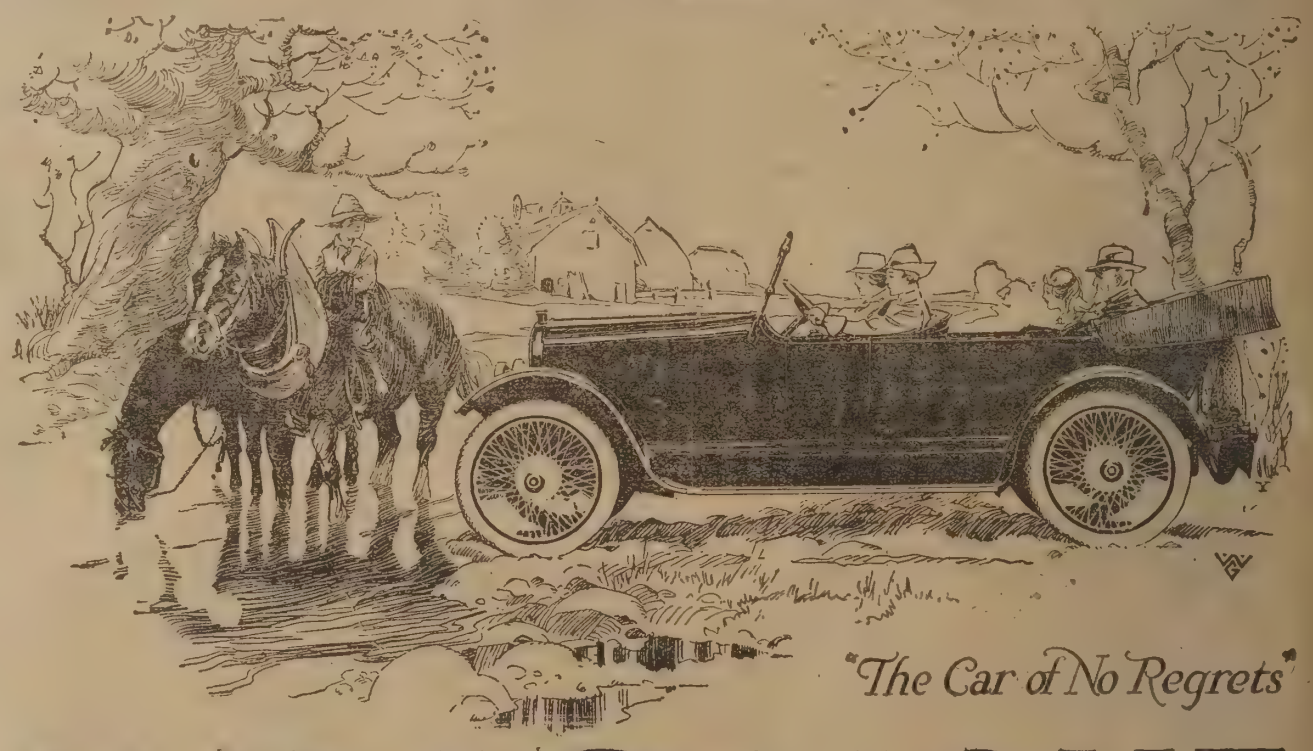
The loss of feathers on the head is usually caused by a depluming mite. The head or parts affected should be treated with an ointment. Oil of caraway ointment, 1 to 5, is recommended. Creolin, 1 to 10, is also recommended. It may be necessary to give several applications. Carbolated vaseline may also be used. J. D.

Tells why chicks die

E. J. Reefer, the poultry expert, 466 Reefer Bldg., Kansas City, Mo., is giving away free a valuable book entitled, "White Diarrhoea and How to Cure it." This book contains scientific facts on white diarrhoea and tells how to prepare a simple home solution that cures this terrible disease over night and actually raises 98 per cent of every hatch. All poultry raisers should certainly write Mr. Reefer for one of these valuable FREE books.

ALFALFA

A great deal of importance is being attached to the growing of alfalfa and much is being said about special strains by interested parties.



The United States Department of Agriculture has issued a very instructive bulletin on the different strains of alfalfa. This bulletin is known as **Farmers' Bulletin No. 757** and should be in the hands of every farmer interested in the growing of alfalfa.

It plainly shows that what is known as the **Common Alfalfa** is best suited to all this Inland Empire section.

We have just purchased another car of this alfalfa and the first test we have received is 99.71 pure and no noxious weeds.

Sample and prices on application.

The Inland Seed Company
Spokane, Wash.

"The Car of No Regrets"

KING EIGHT
60 HORSE POWER

UNFAILING SERVICE *on* FARM *or* BATTLEFIELD

Four luxurious body models mounted on the famous King chassis adopted for light armored cars by the U. S. Army and U. S. Marine Corps

FOURSOME—$1585—(*Shown above*)—Designed for those who desire the sport type of car, with long, low, rakish lines yet in perfect taste. Narrow and "racy," this car seats four in comfort, has lengthy leg-room and is provided with four doors. A locked compartment just behind the rear seat gives generous and convenient storage space. The two front seats are of the "bucket" type. At their back is a combination tonneau and handy lamp which may be removed from its socket and carried about the car. Color: deep maroon.

TOURING—$1585—With all the advantages of a 120-inch wheel-base, this car has the roominess of a Six of 126 to 128 inches due to compactness of King V-type motor. Has many novel conveniences, and upholstery and finish are of the highest grade. The ideal large-family car. Seats seven. Color: dark green.

SEDAN—$2150—A year 'round car of the most luxurious type, upholstered in highest grade cloth and equipped with divided front seats. Sides completely removable in a few minutes without leaving car, and as easily replaced. A special compartment behind rear seat is provided for storage of side sections. With sides in place this seven-passenger model becomes a perfect closed car, all sections fitting without possibility of rattle and with no appearance of being improvised. Three colors: beaver brown, deep maroon or suburban blue.

ROADSTER—$1585—A very popular model with farmers, physicians and salesmen, because of large storage space. Has two roomy compartments; one behind front seat and the other under rear deck. Comfortable for three. Color: French gray.

Ups and Downs of a Bunch Grass Boy

By JOE L. ASHLOCK

(Copyright, 1917, Joe L. Ashlock.)

CHAPTER VIII.

Dave Reavis, His Four Horses and Dusty Covered Wagon, His Cracking Whip, His Stories and His Songs.

As we drove northward through the seemingly limitless expanse of bunchgrass prairie in quest of our "home" other white covered wagons joined us; for many beside us were hunting for homes. Dave Reavis fell in with us one day soon after the Snake river crossing, driving four horses to a dusty covered wagon with the canvas torn and sagging between the bows, and "nosebags" from which his horses ate grain swinging from the rear of his wagon. Dave could crack a four-horse whip in a wonderful way; and when he cracked the whip he swore at his horses in a kindly but audible way.

He really was a good companion, and a skilful traveler through the bunchgrass country. He talked jovially to the Indians whom he met, singing out merrily, "Hello Six," to each one he met. Frequently he was vouchsafed the grunted reply, "Hello Seven." "Six" was the name the bunchgrass plainsmen used for all friendly Indians. "Hello Seven" from an Indian indicated that he was in a friendly frame of mind; and, also, that he had been educated in numbers from at least one to seven.

No difficulty which beset our trail disturbed Dave Reavis. We camped one noon with no water for the horses, and no wood for our campfire. Dave said it was cool, and the horses would not suffer till we got to the night camp and water 12 miles further on. As to wood—he'd get plenty in a minute.

He fished a burlap bag from his wagon and departed. Out in the bunchgrass a hundred yards from the camp he began picking up certain objects which he put in the sack; and presently returned with the sack full, and announced that he would have a fire right off.

He did. He had gone out in the grass and picked up sunbaked and perfectly dry pieces of cattle dung, with which he had filled his sack. With a little grass and some bits of sagebrush he kindled a tiny blaze, over which he broke pieces of the dried dung. In a few minutes he had larger pieces burning; and very soon he had a red-hot mass of dung burning slowly with a small flame but intense heat between three properly shaped stones on which a frying pan or camp kettle could sit. He fried potatoes, made coffee, warmed up the beans, and threw two double handfuls of dried prunes into a blackened tin can with a bent wire handle; dinner soon was simmering cherrily, its appetizing odor floating about camp. All the while, Dave sang softly to himself:

O, beat the drum slowly and play the fife
fife lowly
And play the dead march as you carry me
along,
Take me to the graveyard and lay the sod
o'er me,
For I'm a brave cowboy, although I've done
wrong.

The last line came out with a doleful and not wholly unmusical wail as he deftly turned the potatoes and slapped the lid back on. This changed the tune and song to:

A coyote sat down and howled at the moon
Because he was sad and f-o-l-o-r-n,
My sweetheart is gone and I'm all out of
tune,
And I'm going to howl till m-o-r-n-n.

So far and wide o'er the big prai-r-e-e
He howled for all to hear
My sweet heart d-e-a-r is false to me,
So I say to you be-w-a-r-e.
Chorus—
Beware of sweethearts, beware, I say
They'll throw you over some day,
Sweethearts are dear, but don't let 'em
near,
Beware, beware, I pray."

This song which he sang over and over again had a tune somewhat like the "Lone Prair-ee" song, except that it was a bit faster; though, as a matter of fact, Dave sang his songs to any one of half a dozen tunes; and if the music in his singing carried out beyond the end of the line, he pieced out the words with a "hum doodle dum doo," or something of that kind.

The most emphatic part of his singing, however, was its final ending—a loud, ringing shout of "grub for everybody and the cook!"

In spite of his rough ways, all but tuneless singing, and incessant swearing, Dave Reavis was a fine fellow, and in his heart there was a great love for small children. Nothing pleased him better than to have me climb in the seat beside him and ride there while he sang his odd songs and expertly cracked his whip. Often he would tell me about his home in Delaware by the seaside—the boats he used to sail, the apples he used to steal, and the sharks that swam in the deeper waters of the bay. Verily, he could tell shark stories that made one's hair stand on end, mine in particular.

He had odd names for the things stored in his "grub" or camp box. Bacon he called overland trout, or Cincinnati chicken. Beans he termed strawberries. He had an old squeaky violin—which he called a fiddle—and on it could play many tunes by ear. He proudly announced some of the tunes as of his own composing. At night when his and our horses were staked out on the grass and we were sitting about the campfire talking about the "home" we were looking for, Dave often would get out his fiddle and play and play. One night he played so long and loud that some coyotes sneaking about in the tall grass set up a vorciferous howling—wild, wailing cries terminating in rapid, explosve yapping which seemed to come from a hundred mouths and from many directions, though a couple of coyotes might be doing it all. Dave seemed a bit embarrassed at this competition, and put away his fiddle.

On and on into the sea of gray-green bunchgrass we drove, farther and farther from settlements and railways. The days were bright and sunny, with fleecy masses of clouds floating like mammoth ships and castles and mountains in the clear, blue sky. The air was clear and pure, and when you saw a hill that seemed a couple of miles distant it might be five. The bunchgrass teemed with wild animals of a small kind—small, lithe squirrels that whistled at us from screening

(Continued on following page.)

Need "Rotation" in School

Will Sustain Interest and Prevent Skimming

The teaching of agriculture in rural schools never will be a success so long as we teach the same thing over and over again, year after year, or allow the teacher to skim all the branches and leave a subject barren and uninteresting for the teacher who follows the next year, says Professor P. G. Holden of the agricultural extension department of the International Harvester company.

In one-room schools all children in the lower grades become as familiar with subjects taught in the seventh and eighth grades as do their older brothers and sisters. By rotating the subjects a new field is opened to the pupils each year.

Rotation of subjects means the teaching of but one class of subjects each year, such as:

First year. Farm crops.—Corn, alfalfa, weeds, seeds, gardens, and for girls, sewing, etc.

Second year. The making of things.—Tying and splicing rope, cement work, making fly traps, screens, canning, etc.

Third year. Animals.—Live stock, feeding, testing milk, diseases and remedies, cooking, etc.

Fourth year. Soil and home.—Saving moisture, rotation of crops, soil fertility, sanitation, flowers, pictures, etc.

Rotating of subjects:

Enables us to teach more agriculture.

Eliminates repetition.

Gives us a new subject each year.

Keeps interest alive and keen.

Does not kill the subject by skimming or teaching the same thing over and over again.

Makes the directing of the work much easier for the county superintendent, who always has more than he can do. Instead of having several lines of instruction to prepare each year he will have but one.

Agriculture will ultimately be taught in all rural schools. In Oklahoma it is required by the state constitution, in other states by law. Some states have tried it, but in a hit-and-miss fashion. They have skimmed through books; taught words, not things; repeated the same subjects every year; killed interest; made agriculture a dead letter.

If we would teach agriculture in a way to bring the best results we must keep it alive—must develop interest—must rotate the subjects.

Agriculture can not be successfully introduced in all the rural schools in any state or any county at the same time. It must grow into the schools. That is the basis of the plan adopted in Oklahoma.

Rise in Prices of Farm Products

A bulletin just isued by the United States department of agriculture gives a striking summary of the rise in the prices of farm products.

On March 1, 1917, the average price of wheat in this country was 62 cents per bushel more than on the same date in 1916. Rye is up 41 cents, corn 32 cents, and oats 14 cents. In the year potatoes have risen $1.46 a bushel, and cabbage shows an increase of $4.44 per hundred pounds.

Hogs have advanced $3.26 a hundred, beef cattle $1.37, and sheep $2.27. The detailed figures follow:

	March 1—		
Product.	1917.	1916.	1915.

The average potato crop of the world is estimated to be some 5,200,000,000 bushels. Of this amount the undermentioned countries produce on an average of 2,925,000,000 bushels. Complete statistics for the world's crop of 1916 are not available, but from those received it is estimated that the countries named below produced in 1916 only 1,753,500,000 bushels, or 34 per cent of the world's average crop:

	Bushels—	
	1916.	1915.
United Kingdom ..	204,148,000	281,502,000
Canada	61,128,000	62,604,000
Germany	771,610,000	1,984,140,000
France	335,507,000	345,351,000
Netherlands	73,685,000	87,756,000
Switzerland	22,046,000	39,683,000
United States	285,437,000	359,721,000
Totals	1,753,561,000	3,160,757,000

The firewood used on farms of the United States in one year is valued at $225,000,000. Only six crops exceed this amount in value; namely, corn, wheat, oats, potatoes, hay and cotton. The quantity of firewood used per farm is estimated to average 12.5 solid cords, valued, last December, at $2.75 per cord on the farm. The total farm consumption is estimated to be about 81,785,000 cords.

The farmers of the four states of the Pacific northwest consumed a total of 2,019,000 cords, valued at $8,768,000, distributed by states as follows:

	Cords.	Value.
Idaho	324,000	$1,490,000
Washington	780,000	3,510,000
Oregon	600,000	2,340,000
Montana	315,000	1,418,000

Ye Have Heard That It Was Said by Them of Old Time

OTHER GODS.

"Thou shalt have no other gods before me."—Exodus xx, 3.

Out of the vagrant memory of the writer comes fragments of the shorter catechism, learned in childhood, particularly the very first, which says that "man's chief end is to glorify God and enjoy Him forever."

How often do we think of God? What is our God? Why, we suppose it is that which is the mainspring of life, which controls us and by which we govern our lives. What is it that makes us do what we do, say what we say and be what we are?

Is this being infinite, eternal, knowing all things, all powerful and all good? Is this being one of compassion and love and understanding? If this being one of dark and dreadful mien, which must be flattered and propitiated for fear of our lives? Is it merely some desire, some longing that dominates us?

Nobody can know what another may hold as God, but each may know for himself or herself. Let us understand for ourselves.

H. H. B.

Plant Trees Along Highway.

The beautiful Norway maples ordered by the ladies of the St. Helens club of Chehalis, Wash., for planting on the Pacific highway between the north city limits and the fair grounds have arrived, and work of setting them out will begin soon.

Sidelights

And That's All.

Customer—"What is the use of that article?"

Clerk—"I really don't know; I think it is intended for a Christmas present."—Providence Journal.

A Saving Scheme.

"I want portraits painted of the twins, hubby. They will cost $200 each."

"What's the use of having two pictures exactly alike? Get one portrait with two labels."—Louisville Courier-Journal.

Nervous.

"They are not going to cut me up if I go to the hospital, are they?"

"Of course not, when you're going for a rest. What makes you think they are?"

'Because, when I called up the hospital, a voice said, 'Operator'."—Baltimore American.

Desperation.

A small boy, after examining the contents of the window of a Glasgow sweet shop, went inside and inquired:

"How many o' the big sugar balls dae ye gie for a ha'penny?"

On being told that they were a penny each, he appeared very disconsolate, and was turning to the door, when suddenly an idea struck him, and, returning to the counter, he asked this time:

"How lang will yet le me keep ane in my mouth for a ha'penny?"—Tit-Bits.

Plant an extra acre of potatoes this season.

Ups and Downs of a Bunch Grass Boy

(Continued from preceding page.)

bunches of grass with only their heads showing as we drove by; badgers, the unfriendly hermits of the prairie, viewing us from a distance with small, suspicious eyes and upright, pointed ears; coyotes loping gracefully a safe distance away, and long-legged jackrabbits that hopped along the road in front of us, or paused to one side, partly erect, with ears alert and a forefoot reaching for the ground, ready to spring. The badgers were quite interesting; if you moved toward them they would scoot; tail-end first, into their burrows; or, lacking a burrow, would begin throwing dirt with mighty sweeps of their forepaws. Dave Reavis said a badger could dig itself out of sight before you could walk a hundred yards toward it.

We saw flocks of plump sage hens quite frequently. From a distance you might mistake a sage hen for a barred rock hen or guinea fowl. Dave stopped his team one day, took a .22 caliber rifle and followed a hundred feet behind a flock of sage hens, dropping them over one at a time till he had killed six. Desiring to shoot no more, he picked up his game, and the rest of the stupid hens waddled away through the bunchgrass with one occasionally showing its white throat as it looked back at us.

Cooking dinner one day, Dave looked up and asked us to listen. We did so, and there came out of the sky, as if from miles away, a slow, languid croaking.

Dave scanned the sky and so did we. Presently he tried to show us what he said was a flock of sandhill cranes drifting south. Their dismal, solemn croaking came at regular intervals from the great heights of the sky, first clearly, then faintly. We saw them soon—a triangle of slowly moving black specks moving across the face of a snow-white cloud and out into the pure blue, where we lost them. Dave said a sandhill crane flew a mile high, and that their coming presaged the coming of hot, dry weather.

One day while I was riding with Dave Reavis, with mother and father bringing up in the rear, he pointed out to me what seemed like a small range of smoky blue mountains rising out of the gray-green prairie many miles away. What we saw was the west wall of the Grand coulee, Dave said, visible to us because we were approaching it on the low side.

I wanted to know what the Grand coulee was, and he told me in his untutored way, and, as a matter of fact, in what he said he likely struck somewhere near the geological truth.

A long time ago, he explained, a devil of a long time ago, maybe a millions years, or maybe ten million, something had dammed up the Columbia river and turned it across this prairie country. It had flowed across a deuce of a long time, ten thousand years, maybe; or maybe ten million, for all he knew; and had cut out a river bed two to four miles wide with walls straight up and down for three or four hundred feet. Somehow, the Columbia got back into its old bed, finally, and was there now, leaving the Grand coulee of today high and dry, with its flat bottom covered with sagebrush, greasewood, bunchgrass and rocks, with some good salt grass meadows and creeks and springs—and no end of rattlebugs, that is, rattlesnakes. We were going to camp on the coulee bottom tonight, said he. It was steep as thunder going down and still steeper getting out on the west side; when we got to camp I should watch where I put my bare feet, or a rattlebug would get me.

What should I do if bitten? Holler for help, said he, and be darned quick about it. A good way of treating a bite was to take a sharp knife and cut in on each side of the bite, just as though you were going to cut out a notch, only not cutting quite deep enough to make a notch. Suck the thing dry then, or have some one else do it, being sure you didn't have gumboils or anything like that; for if you did it might be just the same as if the rattlebug had bitten you in the mouth. After sucking the wound dry, tie a bandage between the wound and your heart, and make it tight as the very devil. Twist it on with a stick, and then put soda on the wound.

Yes, whisky was good, said Dave; but he had never made any success in carrying whisky to cure snake bites. He always got thirsty before a snake bit him.

Dave Reavis with his cracking whip, his cheerful laugh and equally cheerful swearing left us at our camp in the coulee bottom near Lewises. He was impelled forward by a sort of rangeman's wanderlust, I suppose. Hitching up his four in readiness to "move on," Dave always sang this song:

I'm Captain Jinks of the horse marines.
I feed my horse on corn and beans,
I court young ladies in their teens,
An' I'm a captain in the army.

Thus he sang, the same verse over and over again, sometimes humming it and again shouting it; when he mounted his seat and took the lines he was usually singing loudly, merrily; and ended his singing by swinging his whip over his leaders with the crack of a pistol and a joyful shout of, "Roll out!" And he rolled.

Maybe he is rolling yet.

NEXT WEEK THE BUNCH GRASS BOY TELLS OF HIS SECOND WINTER ON THE FARM IN THE BIG BEND, WHEN THE SNOW CAME EARLY, BEFORE THE SETTLERS WERE READY FOR IT, AND STAYED LATE IN MARCH, LONG AFTER THEY WERE READY FOR IT TO GO; WHILE THE FAMILY HAD FLOUR AND POTATOES AND DRIED FRUIT BROUGHT FROM THE WALLA WALLA COUNTRY, THEY HAD NEITHER MEAT NOR BUTTER NOR MILK, AND HE TELLS HOW THE BUNCH GRASS BOY COVERED UP HIS MEAT HUNGER UNDER THE PHASE OF "LONESOMENESS" AND HOW ONE DAY HIS MOTHER DETECTED THE CAUSE OF THAT LONESOMENESS, AND THE CONSEQUENT JOURNEY THAT THE FATHER MADE ON SNOW SHOES.

Silo Committee Appointed.

The 34 new members of the Mount Angel (Ore.) Silo association have appointed their committee of five to investigate the various advantages of silage. In a month or so officers will be elected.

Must Join Association

To Borrow Money From Farm Bank

(Continued from page three.)

"Who passes on the value of the security?"

"The local national farm loan association has a loan committee of three members, who must agree unanimously upon the valuations. Then after they have made their written report it must be confirmed by the appraiser of the federal land bank."

"What is the maximum and minimum amount of loans?"

"No one farmer may borrow more than $10,000 nor less than $100. No association may start with less than $20,000 in loans."

"What percentage of the value of the security may be borrowed?"

"Up to 50 per cent of the value of the land and 20 per cent of the value of the permanent insured improvements."

"Will it cost anything to have titles examined?"

"No."

"Will the borrower pay for abstract of title?"

"Yes."

"Could the local association employ a man to provide abstracts and thus perhaps save expenses?"

"Yes, that is one of the advantages of cooperation."

Farm loan associations are being formed in the following commiunities of the state of Washington:

Arlington, Addy, Alderdale.
Bridgeport, Burton, Burlington, Bothwell, Barry, Bellingham, Bayview, Boyds, Brewster, Benton City.
Chelan, Colville, Conconully, Ceres, Cowiche, Curlew, Corfer, Colbert, Custer, Chehalis, Cashmere, Castle Rock Columbia River, Chewelah, Chesaw, Cathlamet, Clayton, Centralia.

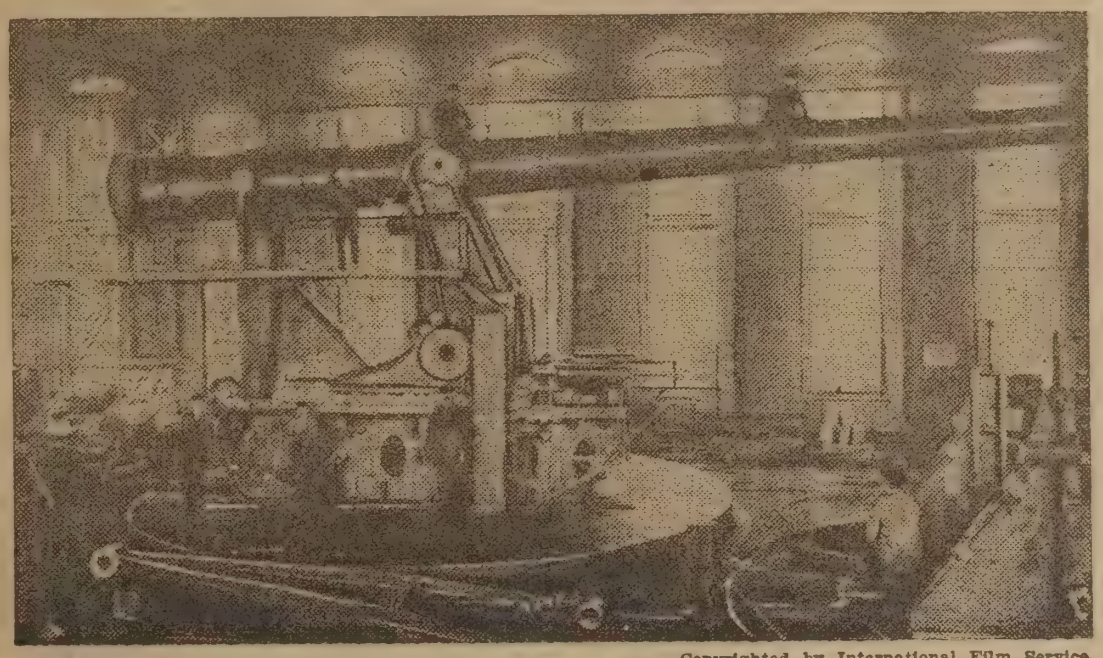
Colfax Students Hear Food Preparedness Talks

High school and grade pupils in front of the courthouse at Colfax, Wash., listening to talks on food preparedness by state college instructors traveling with the O.-W. R. & N. State college train in the campaign for increased crop production. A short morning meeting was held at the high school and the students of all the schools were dismissed to attend the afternoon meeting and to visit the demonstration cars being used in the campaign to urge greater productiveness and conservation of food products.

Oil King on the Links.



Although nearly 78 years years of age, John D. Rockefeller is still an ardent golf enthusiast and often indulges in his favorite sport. The picture above was made just as Mr. Rockefeller had made a particularly fine shot on the links at Daytona, Fla. Latest reports have it that the Rockefeller estate at Pocantico Hills, which consists of 6000 acres, will be transformed into a vegetable garden for the benefit of the residents of Tarrytown, N. Y. The tillable land of the estate will be divided into small farms and apportioned among those who volunteer to till them. In 1913 Rockefeller established the Rockefeller Foundation, which donated over $1,000,000 for war relief in Europe.

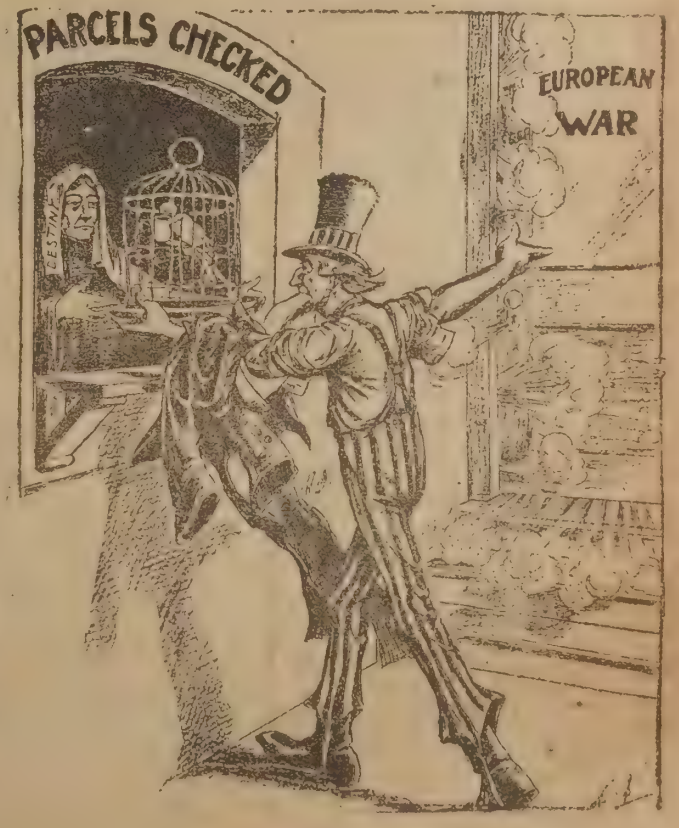
Consuelo's Son in War.

The younger peerage of Great Britain is well represented on the fighting front in northern France. The picture shows John Albert Edward William, the marquis de Blandford, son of former Consuelo Vanderbilt, of New York, who will become the tenth duke of Marlborough. Although not yet 20 years of age, he has been in active service for some time.

Uncle Sam's Powerful Bodyguards

Copyrighted by International Film Service.

Putting the finishing touches on one of the giant coast defense guns at the Watertown, New York, arsenal. An order indicating defense sea areas on coasts of the United States and its insular possessions, including Port Orchard and the Columbia river in the northwest, has recently been made public. According to the executive order it is expressly prohibited for any vessel to enter the limits of a defensive area otherwise than at a designated entrance and after authorization by the harbor patrol.



British Armies in the Holy Land

Copyrighted by International Film Service.

The above photograph shows a street scene in the holy city of Jerusalem at Easter time. The British armies in the Holy Land are rapidly approaching the ancient city, and for the first time since the days of the Crusades the birthplace of Christianity promises to fall into the hands of Christians. The photograph shows the arrival of the Catholic patriarch for a visit to the Holy city.

Excess Baggage.

—San Francisco Chronicle.

WHEN KNIGHTHOOD WAS IN FLOWER

or, the Love Story of Charles Brandon and Mary Tudor, the King's Sister, and Happening in the Reign of His August Majesty, King Henry the Eighth.

By EDWIN CASKODEN (Charles Major).

Copyright, 1898, The Bobbs-Merril Co.

CHAPTER XVII—(Continued).

From the beginning, I think, it had never occurred to Mary to doubt the result. There had never been with her even a suggestion of possible failure, unless it was that evening in our room, when, prompted by her startled modesty, she had said she could not bear for us to see her in the trunk hose. Now that fruition seemed about to crown her hopes she was happy to her heart's core; and when once to herself wept for sheer joy. It is little wonder she was happy. She was leaving behind no one whom she loved excepting Jane and perhaps me. No father or mother; only a sister whom she barely knew, and a brother whose treatment of her had turned her heart against him. She was also fleeing with the one man in the world for her, and from a mariage that was literally worse than death.

Brandon, on the other hand, had always had more desire than hope. The many chances against success had forced upon him a haunting sense of certain failure, which, one would think, should have left him now. It did not, however, and even when on shipboard, with a score of men at the windlass ready to heave anchor at the first breath of wind, it was as strong

Those fellows gathered around my Mary to inspect her personally.

as when Mary first proposed their flight, sitting in the window on his great cloak. Such were their opposite positions. Both were without doubt, but with this difference; Mary had never doubted success; Brandon never doubted failure. He had a keen analytical faculty that gave him truthfully the chances for and against, and, in this case, they were overwhelmingly unfavorable. Such hope as he had been able to distill out of his desire was sadly dampened by an ever-present premonition of failure, which he could not entirely throw off. Too keen an insight for the truth often stands in a man's way, and too clear a view of an overwhelming obstacle is apt to paralyze effort. Hope must always be behind a hearty endeavor.

Our travelers were, of course, greatly in need of rest; so Mary went to her room, and Brandon took a berth in the cabin set apart for the gentlemen.

They had both paid for their passage, although they had enlisted and were part of the ship's company. They were not expected to do sailor's work, but would be called upon in case of fighting to do their part at that. Mary was probably as good a fighter, in her own line, as one could find in a long journey, but how she was to do her part with sword and buckler Brandon did not know. That, however, was a bridge to be crossed when they should come to it.

They had gone aboard about 7 o'clock, and Brandon hoped the ship would be well down Bristol channel before he should leave his berth. But the wind that had filled Mary's jackboots with rain and had howled so dismally all night long would not stir, now that it was wanted. Noon came, yet no wind, and the sun shone as placidly as if Captain Charles Brandon were not fuming with impatience on the poop of the Royal Hind. Three o'clock and no wind. The captain said it would come with night, but sundown was almost at hand and no wind yet. Brandon knew this meant failure if it held a little longer, for he was certain the king, with Wolsey's help, would long since have guessed the truth.

Brandon had not seen the princess since morning, and the delicacy he felt about going to her cabin made the situation somewhat difficult. After putting it off from hour to hour in hope that she would appear of her own accord, he at last knocked at her door, and, of course, found the lady in trouble.

The thought of the princess going on deck caused a sinking at his heart every time it came, as he felt that it was almost impossible to conceal her identity. He had not seen her in her new male attire, for when she threw off her riding habit on meeting him the night before, he had intentionally busied himself about the horses, and saw her only after the great cloak covered her as a gown. He felt that however well her garments might conceal her form, no man on earth ever had such beauty in his face as her transcendent eyes, rose-tinted cheeks, and coral lips, with their cluster of dimples; and his heart sunk at the prospect. She might hold out for a while with a straight face, but when the smiles should come—it were just as well to hang a placard about her neck: "This is a woman." The tell-tale dimples would be worse than Jane for outspoken, untimely truthfulness and trouble-provoking candor.

Upon entering, Brandon found Mary wrestling with the problem of her complicated male attire; the most beautiful picture of puzzled distress imaginable. The port was open and showed her rosy as the morn when she looked up at him. The jack-boots were in a corner, and her little feet seemed to put up a protest all their own, against going into them, that ought to have softened every peg. She looked up at Brandon with a half-hearted smile, and then threw her arms about his neck and sobbed like the child that she was.

"Do you regret coming, Lady Mary?" asked Brandon, who, now that she was alone with him, felt that he must take no advantage of the fact to be familiar.

"No! no! not for one moment; I am glad—only too glad. But why do you call me 'Lady?' You used to call me 'Mary.'"

"I don't know; perhaps because you are alone."

"Ah! that is good of you; but you need not be quite so respectful."

The matter was settled by mute but satisfactory arbitration, and Brandon continued: "You must make yourself ready to go on deck. It will be hard, but it must be done."

He helped her with the heavy jack-boots and handed her the rain-stained slouch hat which she put on, and stood a complete man ready for the deck—that is, as complete as could be evolved from her utter femininity.

When Brandon looked her over, all hope went out of him. It seemed that every change of dress only added to her bewitching beauty by showing it in a new phase.

"It will never do; there is no disguising you. What is it that despite everything shows so unmistakably faminine? What shall we do? I have it; you shall remain here under the pretense of illness until we are well at sea, and then I will tell the captain all. It is too bad; and yet I would not have you one whit less a woman for all the world. A man loves a woman who is so thoroughly womanly that nothing can hide it."

Mary was pleased at his flattery, but disappointed at the failure in herself. She had thought that surely these garments would make a man of her in which the keenest eye could not detect a flaw.

They were discussing the matter when a knock came at the door with the cry, "All hands on deck for inspection." Inspection! Jesu! Mary would not safely endure it a minute. Brandon left her at once and went to the captain.

"My lord is ill, and begs to be excused from deck inspection," he said.

Brandhurst, a surely old half pirate of the saltiest pattern, answered: "Ill? Then he had better go ashore as soon as possible. I will refund his money. We can not make a hospital out of the ship. If his lordship is too ill to stand inspection, see that he goes ashore at once."

This last wa saddressed to one of the ship's officers, who answered with the usual "Aye, aye, sir," 'and started for Mary's cabin.

That was worse than ever; and Brandon quickly said he would have his lordship up at once. He then returned to Mary, and after buckling on her sword and belt they went on deck and climbed up the poop ladder to take their places with those entitled to stand aft.

Brandon has often told me since that it was as much as he could do to keep back the tears when he saw Mary's wonderful effort to appear manly. It was both comical and pathetic. She was a princess to whom all the world bowed down, yet that did not help her here. After all she was only a girl, timid and fearful, following at Brandon's heels; frightened lest she should get out of arm's reach of him among those rough men, and longing with all her heart to take his hand for moral as well as physical support. Lt must have been both laughable and pathetic in the extreme. That miserable sword persisted in tripping her, and the jack-boots, so much too large, evinced an alarming tendency to slip off with every step. How insane we all were not to have foreseen this from the very beginning. It must have been a

The price remains the same!

The nation over!

The same price the nation over—never more, never less! $17! And the same Guarantee, the same perfect Fit, the same careful Workmanship, the same splendid Wear! Styleplus are more than ever a great hit. Don't buy clothes you haven't seen and tried on. unique figure she presented climbing up the steps at Brandon's heels, jack-boots and all. So unique was it that the sailors working in the ship's waist stopped their tasks to stare in wonderment, and the gentlemen on the poop made no effort to hide their amusement. Old Bradhurst stepped up to her.

"I hope your lordship is feeling better;" and then, surveying her from head to foot, with a broad grin on his features, "I declare, you look the picture of health, if I ever saw it. How old are you?"

Mary quickly responded, "Fourteen years."

"Fourteen," returned Bradhurst; "well, I don't think you will shed much blood. You look more like a deuced handsome girl than any man I ever saw." At this the men all laughed, and were very impertinent in the free and easy manner of such gentry, most of whom were professional adventurers, with every finer sense dulled and debased by years of vice.

These fellows, half of them tipsy, now gathered about Mary to inspect her personally, each on his own account. Their looks and conduct were very disconcerting, but they did nothing insulting until one fellow gave her a slap on the back, accompanying it by an indecent remark. Brandon tried to pay no attention to them, but this was too much, so he lifted his arm and knocked the fellow off the poop into the waist. The man was back in a moment, and swords were soon drawn and clicking away at a great rate. The contest was brief, however, as the fellow was no sort of a match for Brandon, who, with his old trick, quickly twisted his adversary's sword out of his grasp, and with a flash of his own blade flung it into the sea. The other men were now talking together at a little distance in whispers, and in a moment one drunken brute shouted, "It is no man; it is a woman; let us see more of her."

Before Brandon could interfere, the fellow had unbuckled Mary's doublet at the throat, and with a jerk, had torn it half off, carrying away the sleeve and exposing Mary's shoulder, almost throwing her to the deck.

He waved his trophy on high, but his triumph was short-lived, for almost instantly it fell to the deck, and with it the offending hand severed at the wrist by Brandon's sword. Three or four friends of the wounded man rushed upon Brandon; whereupon Mary screamed and began to weep, which of course told the whole story.

A great laugh went up, and instantly a general fight began. Several of the gentlemen, seing Brandon attacked by such odds, took up his defense, and within 20 seconds all were on one side or the other, every mother's son of them fighting away like mad.

You see how quickly and completely one woman without the slightest act on her part, except a modest effort to be let alone, had set the whole company by the ears, cutting and slashing away at each other like very devils. The sex must generate mischief in some unknown manner, and throw it off, as the sun throws off its heat. However, Jane is an exception to that rule—if it is a rule.

The officers soon put a stop to this lively little fight, and took Brandon and Mary, who was weeping as any right minded woman would, down into the cabin for consultation.

With a great oath Bradhurst exclaimed: "It is plain enough that you have brought a girl on board under false colors, and you may as well make ready to put her ashore. You see what she has already done—a hand lost to one man and wounds for 20 others—and she was on deck less than five minutes. Heart of God! At that rate she would have the ship at the bottom of Davy Jones' locker before we could sail half way down the channel."

"It was not my fault," sobbed Mary, her eyes flashing fire; "I did nothing; all I wanted was to be left alone; but those brutes of men—you shall pay for this; remember what I say. Did you expect Captain Brandon to stand back and not defend me, when that wretch was tearing my garments off?"

"Captain Brandon, did you say?" asked Bradhurst, with his hat off instantly. "Yes," answered that individual. "I shipped under an assumed name, for various reasons, and desire not to be known. You shall do well to keep my secret."

"Do I understand that you are Master Charles Brandon, the king's friend?" asked Bradhurst.

"I am," was the answer.

"Then, sir, I must ask your pardon for the way you have been treated. We, of course, could not know it, but a man must expect trouble when he attaches himself to a woman." It is a wonder the flashes from Mary's eyes did not strike the old sea-dog dead. He, however, did not see them, and went on: "We are more than anxious that so valiant knight as Sir Charles Brandon should go with us, and hope your reception will not drive you back, but as to the lady—you see already the result of her presence, and much as we want you, we can not take her. Aside from the general trouble which a woman takes with her everywhere"—Mary would not even look at the creature—"on shipboard there is another and greater objection. It is said, you know, among sailors, that a woman on board draws bad luck to certain sorts of ships, and every sailor would desert, before we could weigh anchcor, if it were known this lady was to go with us. Should they find it out in midocean a mutiny would be sure to follow, and God only knows what would happen. For her sake, if no other reason, take her ashore at once."

Brandon saw only too plainly the truth that he had really seen all the time, but to which he had shut his eyes, and throwing Mary's cloak over her shoulders, prepared to go ashore. As they went over the side and pulled off, a great shout went up from the ship far more derisive than cheering, and the men at the oars looked at each other askance and smiled. What a predicament for a princess! Brandon cursed himself for having been such a knave and fool as to allow this to happen. He had known the danger all the time, and his act could not be chargeable to ignorance or a failure to see the probable consequences. Temptation, and selfish desire, had given him temerity in place of judgment. He had attempted what none but an insane man would have tried, without even the pitiable excuse of insanity. He had seen it all only too clearly from the very beginning, and he had deliberately and with open eyes brought disgrace, ruin, and death—unless he could escape—upon himsesif, and utter humiliation to her whom his love should have prompted him to save at all cost. If Mary could only have disguised herself to look like a man they might have succeeded, but thta little "if" was larger than Paul's church, and blocked the road as completely as if it had been a word of 20 syllables.

When the princess stepped ashore it seemed to her as if the heart in her breast was a different and separate organ from the one she had carried aboard.

As the boat put off again for the ship its crew gave a cheer coupled with some vile advice, for which Brandon would gladly have run them through, each and every one. He had to swallow his chagrin and anger, and really blamed no one but himself, though it was torture to him that this girl should be subjected to such insults, and he powerless to avenge them. The news had spread from the wharf like wildfire, and on their way back to the Bow and String, there came from small boys and hidden voices such exclamations as: "Lock at the woma nin man's clothing"; "Isn't he a beautiful man?" "Look at him blush"; and others too coarse to be repeated. Imagine the humiliating situation, from which there was no escape.

At last they reached the inn, whither their chests soon followed them, sent by Bradhurst, together with their passage money, which he very honestly refunded.

Mary soon donned her woman's attire, of which she had a supply in her chest, and at least felt more comfortable without the jack-boots. She had made her toilet alone for the first time in her life, having no maid to help her, and wept as she dressed, for this disappointment was like plucking the very heart out of her. Her hope had been so high that the fall was all the harder. Nay, even more; hope had become fruition to her when they were once a-shipboard, and failure right at the door of success made it doubly hard to bear. It crushed her, and, where before had been hope and confidence, was nothing now but despair. Like all people with a great capacity for elation, when she sunk she touched the bottom. Alas! Mary, the unconquerable, was down at last.

(To be continued in next issue.)

What Did Teacher Mean?

The school teacher needed a few plums to assist her in giving an object lesson, and requested Willie to purchase them at the market. "Before you pay the man," she cautioned, "pinch one or two to see if they are ripe."

Willie returned with a smiling face, and proudly deposited a bag of plums on the teacher's desk.

"Thank you, dear," said the teacher. "Did you pinch them to make sure they were ripe?"

"Did I!" was the gleeful answer. "I pinched the whole bagful, and here is the sixpence!"

School Days

The Old Methods a Big Joke Now

By ALICE W. BARLAND.

Dear Girls of the Family Circle: I visited a schoolroom this week, a real up-to-date schoolroom. There were pictures on the walls, lots of them, and there were fine maps. There was a globe and every convenience imaginable for teaching. The room was arranged just as it should be as to windows, so the light would be good for the pupils. The seats and desks were comfortable to use and the whole room delightful to look at.

Let me give you a pen picture of the schoolroom where I spent the first 10 years of my school days.

It had seating capacity for 24 people with desks and six more seats where there were none. The building was put up as cheaply as possible. Everything was of pine boards, entirely without paint inside and out. There were windows on every side, with no sort of shade, not even a newspaper pinned up. The sun poured in from one side or the other all day till I wonder we did not all become blind. The building was so cheaply constructed and the outside walls so thin it was impossible in winter to keep warm a few feet away from the great stove. It was set up in the center of the room, with the long pipe running across the building, making great heat over the heads of those whose seats were under it. On cold days some one of the large boys kept the big long stove red hot and there was generally a row of half frozen scholars thawing out on the seats next to the stove.

There was an old wooden pail, with a rusty dipper, always standing in one corner of the room, where we poor youngsters were allowed to refresh ourselves with a drink of stale water. There was not a map or picture on the bleak, white walls. A long procession of teachers came and went during that 10 years, nine all together. The first one taught me my "A, B, Cs," holding me on her lap during the process. Each of those nine teachers during those 10 years set copies for the pupils to follow and each wrote differently. After we had followed the special turns and twists of one teacher for a year another one came and gave us an entirely new set to follow. After we had practiced a different style of writing every year for 10 years it isn't any wonder that some of us turned out pretty poor writers.

There were about as many classes as there were scholars and quite frequently there would be but 10 or 15 minutes for a class to recite. I often wonder how any of us ever learned anything, but we did. I am sure much was learned by the younger ones in listening to the older classes recite. At any rate, after 10 years of country school, when changed to the city schools, I was able to take my place with young people my age and in several branches I was more advanced. I remember well one of those nine teachers used to allow us to dance during the noon hour. There was one big fellow she was quite interested in and they used to dance together the old-fashioned square dance called a quadrille. Sometimes she became so interested in dancing that she let the time slip by and the school work had to be rushed through.

Plan to can some garden stuff for winter use.

We used to "spell down" on Fridays and we used to sing the multiplication table for an opening exercise mornings preceded by a chapter from the Bible.

Cleaning Day was a Big Day.

Once a year we used to clean house. Oh, but that surely was one great day! It was always in the spring when the days were warm. All the books were carried to the "entry" and pure white sand was brought from the creek which I used to dread to cross when hunting the cows. Different scholars brought pails and mops and scrubbing brushes and "soft soap." I usually took the soap for I lived very close to the school house and my father made two and some times three barrels of the slippery, slimy stuff every year. It was warranted to take most of the skin off the hand every wash day. How we used to scour those soft pine desks, floors, teacher's table, doors, window casing! Every inch of wood inside was scoured with that soap and sand till it was almost as white as snow. Then the pails and pails of water we had to carry to rinse off all the soap and sand! When all was done under the supervision of the teacher we were a sloppy and bedraggled group of youngsters, but very happy and satisfied with our finished work. One other great day was when the county superintendent of schools came to visit. We were all about scared to death, including the teacher.

The same teacher who used to dance had a system of showing off my class in arithmetic to the best advantage. It did not matter where we were studying,

(Continued on page twenty-two.)

The Baby

As to Required Sleep and the Bath

Every baby needs 20 hours of sleep a day in its first month and not less than 16 up to the twelfth month of its first year, says a bulletin of the University of Minnesota.

It should sleep alone, not in a cradle, but in a crib. If no crib is available, a clothes basket or a box of sufficient size is a good substitute. An expensive mattress is not necessary. A simple mattress made of excelsior and covered with a heavy blanket will answer very well. A sufficient quantity of clean bed clothing should be provided.

The room should be darkened and well ventilated; the windows should always be open at the top at least 6 inches, except in the coldest weather. If the baby cries when it should be asleep, it is probably sick, overfed, or hungry.

All children should take a nap of from one to two hours in the middle of the day until they are 6 years old.

The Bath.

Every baby should be bathed at least once a day; during the hot weather two or three sponge baths may be given in 24 hours. The temperature of the bath should be from 90 to 95 degrees F. in the early months. By the end of the first year the temperature may be lowered to from 80 to 85 degrees F. If you have no thermometer, a practical test for the correct temperature is to use water that feels warm to the elbow.

When bathing the baby in a tub let it rest upon your left arm, which is slipped under its back from the baby's right side. By grasping the baby under the armpit with the left hand a good hold is secured, which prevents slipping. The right hand is left free for washing the baby. A special wash cloth, preferably of cheesecloth, should be provided for washing the baby's face and head.

After the baby is taken out of the tub it should be dried in a large soft bath towel.

Do not wash a healthy baby's mouth; it will do no good and may do harm. As soon as the baby has teeth, clean them carefully with a soft clean cloth or gauze, and later with a soft toothbrush and cooled, boiled water.

After the baby is dressed it is wise to keep it indoors for at least an hour after bathing and to protect it from drafts.

The best time for bathing the baby is just before its morning feeding, between 8 and 10 o'clock. After its bath the baby will be ready to take its food and go to sleep.

The year's at the spring,
The day's at the morn;
Morning's at seven,
The hillside's dew-pearled;
The lark's on the wing,
The snail's on the thorn—
God's in his heaven,
All right with the world.
—Browning.

Unable to Sleep

Often Something to Eat a Cure

By Mariella Kidwell, Garfield, Wash.

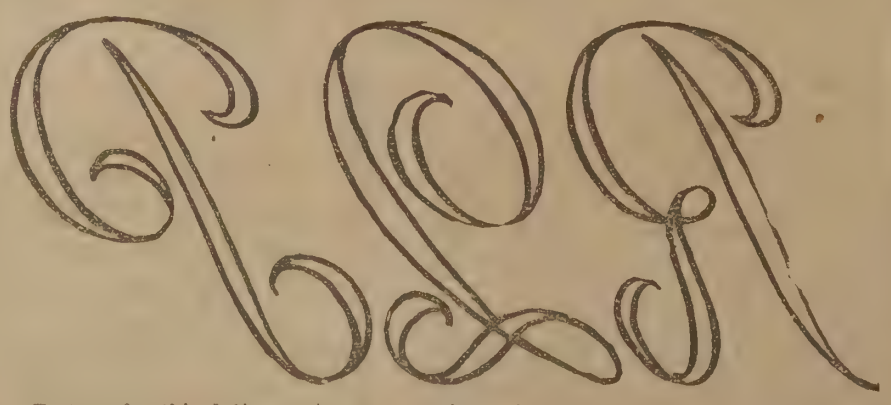
When a child cries in the night for no apparent reason try giving it something to eat.

Our little girl is just recovering from the measles. She was too sick to cry while at the worst, then one night she cried for an hour. I told stories. I tried everything. She insisted she wasn't hungry, but in desperation I had a cup of cocoa prepared. She drank some and went right to sleep. After a week's fast I knew that must be the trouble. Last night when she started to cry daddy hurried to get a fire and some cocoa made, not for her, she "wasn't hungry," she wanted the kitty cat in bed," but she did drink a whole cupful and slept like a top for six hours. Grown people also often lie awake from hunger, although unconsciously. I have often, after trying in vain till 1 or 2 o'clock to go to sleep, got up and built a fire and made cocoa and toast and then slept fine until morning. Often hot water will answer the same purpose.

Do You Know

That every bit of uneaten cereal can be used to thicken soups, stews, or gravies?

That stale bread can be used as the basis for many attractive meat dishes, hot breads, and desserts?



That every ounce of skimmed milk or whole milk contains valuable nourishment? Use every drop of milk to drink or to add nourishment to cereals, soups, sauces, and other foods. If you do not want milk to sour, keep it cool, clean, and covered continually. Remember, too, that sour milk, buttermilk, and sour cream are valuable in cookery, so do not waste any. Sour milk and buttermilk can be used with soda in making hot breads, or sour milk can be turned easily into cottage cheese, cream cheese, or clabber. Sour cream is a good shortening in making cakes and cookies and useful for salad dressings and gravies for meat.

Peg Tops and Barrels Defined.

Pegtop skirts and barrels are often confused. The pegtop is full at the top, often gathered at the waist line or draped in folds or loops over the hips and tapering to a very narrow skirt at the bottom. The barrel skirt has no fullness at the waist line and is not draped, but is merely round, like a barrel, bulging at the knees.

Script Initials for Embroidery

By WINNIFRED WORTH.

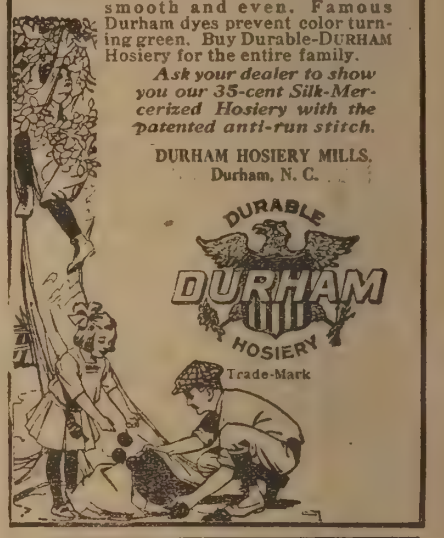
To transfer this design, put some soap in a pint of hot water, stir and remove excess moisture by partially drying design. Place material on a hard, flat surface and lay the design, face down, upon the material, cover with two folds of newspaper and, with a tablespoon, rub, pressing hard, until the design is entirely transferred.

White embroidery floss of a linen quality, or the mercerized, is the best for making letters. Always soap the fabric with white soap under an initial before embroidering. It aids one in washing the color from the finished design.

Hosiery That Stands for Children's Romping

Here's the *right* hosiery for your children because it is strongly reinforced where the wear comes hardest—in the heels, knees, soles and toes.

Durable
DURHAM
Hosiery
FOR MEN, WOMEN AND CHILDREN



Made Strongest Where the Wear is Hardest

gives everybody in the family longer wear and sells for 15, 19, 25 and 35 cents. The heels, soles and toes are strongly reinforced. The deep, stretchy, garter-pull-proof tops with the anti-run stitch are knit on *to stay*.

The quality is uniform throughout—the sizes are correctly marked. Toes are smooth and even. Famous Durham dyes prevent color turning green. Buy Durable-DURHAM Hosiery for the entire family.

Ask your dealer to show you our 35-cent Silk-Mercerized Hosiery with the patented anti-run stitch.

BE SURE TO GIVE NUMBER AND SIZE.

The Mark We Make on Others.

What sort of impression do you make on acquaintances?

Think of all the different impressions you get yourself in a day, and how important it is that you should appear favorably to others.

You may be sure every man or woman leaves some sort of mark on the mind and memory of those with whom he or she comes in contact.

Figure it out. What are your strong points—or weak ones?

Talkative? Very well. But is it only chatter, or do you really say something which is worth listening to?

Do you constantly talk of your aches and pains?

Do you tell things about other people which you would dislike to have said of yourself?

How do you think your conversation impresses those who hear it daily?—Pittsburg Dispatch.

You Can Make It at Home.

A very cheap, serviceable clothes hamper may be made in this way. Procure from your grocer an ordinary coffee drum and cover. With a nail and a hammer make a few holes in the sides of the drum to allow for ventilation. Fasten a knob or handle on the cover. Stain and varnish or paint any desired color. If stained or painted to match the surrounding woodwork and placed at the end of the hall or in the bathroom, this hamper will prove very serviceable and inconspicuous.—New York Tribune.

One on the Doctor.

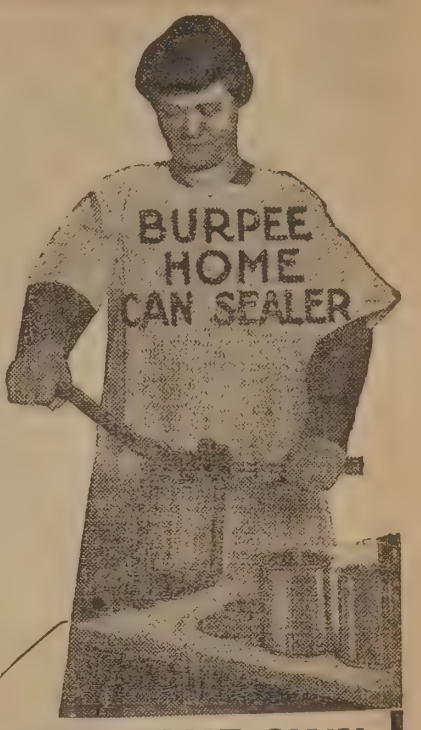
The proprietor of a new restaurant, with a view of attracting cutomers, hung out a sign which read:

"When you wish to dine, you can not do better than to patronize me."

Two students, returning home in the small hours of the morning, saw this announcement and determined to have some fun. One stood on the other's shoulders and detached the sign. They next proceeded to touch up the lettering and conveyed it to the other end of the road, where a ruby lamp indicated the residence of a doctor. To the lamp they attached their burden, and departed on their way rejoicing.

When the doctor came downstairs in the morning he was astonished to find a grinning crowd gathered around the gateway. Angrily looking for the cause, his eye fell upon the sign:

"When you wish to die, you can not do better than patronize me."—Chicago News.



Curried Eggs.

Slice two onions and fry in butter, add a tablespoonful of curry powder and one pint of good broth or stock, stew until onions are quite tender, add a cup of cream thickened with a little flour, simmer a few minutes, then add eight hard-boiled eggs, cut in slices, and heat them well, but do not boil.

An Optimist.

"What's an optimist?"

"An optimist is a person who'll go into a restaurant without a cent in his pocket and figure on paying for the meal with the pearl he hopes to find in the oysters."—Illinois Siren.

CAN YOUR OWN PRODUCTS

Don't throw your surplus fruits and vegetables to the hogs. Turn them into profit. Can them with a BURPEE HOME CAN SEALER. Then sell them at top prices, or keep them for your own use.

No Solder Needed!

No solder nor acid are required with the BURPEE HOME CAN SEALER. Seals sanitary cans absolutely airtight. So simple a child can use it. So cheap that no home can afford to be without it. It's the greatest canning device of the age. Clamps to any kitchen table. Satisfaction absolutely guaranteed or money back.

Complete—Only $10

Our $10 machine seals the popular pint-size cans. Small, inexpensive attachments for other sizes. Write for free book telling how to start a profitable business with this machine. Free book of complete recipes goes with each sealer. Write us today.

Many Have Died for Our Country.

Dear Aunt Nellie: For my subject I have chosen "My Country." There is a broad, fair land stretching many miles east and west, north and south, which all Americans call their country. This country is divided into 48 states, each state represented by a star in that great emblem which floats daily over that beloved country. The great country is loved by all and many a brave man died that this country might be born and later that it might not fall into the hands of its enemies. Of course, we all agree with Longfellow in his poem, "Paul Revere's Ride," that: "In the hour of darkness and peril and need, the people will awaken to listen and hear the hurrying hoof-beats of that steed and the midnight message of Paul Revere."—Berthold Conrad, R. F. D. 1, box 44, Renton, Wash.

Write Again Soon, Won't You, Mabel?

Dear Aunt Nellie: I am 8 years old and in the third grade at school. I have three brothers and one sister. My brothers' names are James and George and Robert. Robert is the baby. My sister's name is Lydia. Our school is one-half mile away. Our teacher's name is Miss Fink. I like her very much. My birthday was June 11. We live on a farm. We have four horses and six cows, two yearlings and two calves and two hogs, two dogs and two cats and about 60 chickens. The horses' names are Bess, Black Babe, Gray Babe and Maude. The cows' names are Rosy, Molly, Dolly, Brownie, Daisy and Bessie. The yearlings' names are Nellie and Nigger. The calves' names are Star and Dick. Shep and Prince are the names of the dogs. —Mabel Ervin, Valley, Wash.

Likes Stories About Girls Best.

Dear Aunt Nellie: I am a girl 12 years old and am in the seventh grade. My birthday is the 24th of March. I have been watching for a twin for about two years, but have not found one. The subject I am going to write about is "My Favorite Book." I love to read. My favorite books are stories about girls. Some of the books that I've read and like are: "The Wide, Wide World," "The Girl of the Limberlost," "Michael O'Halloran," "Little Women," "Peg o' My Heart,' "Under the Lilacs,' "Grace Lawlowe Series,' "Little Nell" and "Grandpa's Little Girls," I think I like "Grandpa's Little Girls" best of them all. There is a series of them, but I have only read two. The ones I have read are the first book, when they first went to live with their grandparents, and "Grandpa's Little Girls and Their Friends."—Margaret Collaer, R. 2, Box 171, Vancouver, Wash.

The Glad Game's a Good Game for All.

Dear Aunt Nellie: I am going to tell you about my favorite book. It is "Pollyanna." You, who have read it, will understand why I like it so well. It is the story of a little girl whose mother was dead and whose father was a minister. She got most of her things from missionary barrels. One time she wanted a doll very badly. When the missionary barrel came there was a pair of crutches instead of a doll. Right there she began the Glad Game by being glad she need not use the crutches. And so she played the Glad Game all her life, finding something to be glad about in everything. She made many friends and was loved by all. Don't you think the Glad Game would be a nice one for all of us to play?—Grace Wills, Mayview, Wash.

Wishes All Animals Had a Good Home.

Dear Aunt Nellie: I will write about my favorite book, "Beautiful Joe." I like it because it is about a dog. He had a very cruel master at first, but one day his master, whose name was Mr. Jenkins, killed this dog's sisters and brothers, and after a while, his mother, who was half starved. Then the dog bit Jenkins on the leg and Jenkins cut the dog's ears and tail off. A man who was passing by heard the dog crying and came to see what was the matter. He gave Jenkins a whipping and took the dog home. He had a very good home there. His mistress, Miss Laura Morris, was very kind to him and had the cruel man Jenkins punished for his cruelty. When the poor dog went away in the corner to die, Miss Laura took him in the house and took care of him and made him well again. She named him Beautiful Joe. This dog was very faithful. He saved Miss Laura from death, which came near occurring when the dog's old master tried to burn up the house where his dear mistress slept. He barked until help came, then chased him and caught the cruel man by the leg. He held him until the policeman came and took him to jail. I wish all dumb animals had a home like Beautiful Joe. I hope all other children are kind to dumb animals.—Laverne Virginia Nunn, Meyers Falls, Wash.

Seemed Quite a Task at That Time.

Dear Aunt Nellie: One evening when I was 6 years old a gentleman came to our home on a business trip. After supper was over he wished to get me to talk to him, but I was very timid and did not want to do so. The next morning he asked me if I could write my name. I was nearly afraid to speak to him, but I said I could. I had never learned to write, but I meant I could print it. He gave me his note book and a pencil and said that if I would write my name he would give me a penny or the smallest piece of money he had. I took his book and thought I had written my name, but it was only in large print. When I gave it to him he said it was very good and looked in his purse to find a penny to give me, but he did not have a penny or a nickel, a dime or a quarter. The smallest piece of money he had was a half dollar so he gave it to me. I was very happy and ran to show mother. Then I put it in a little tin bank and kept it for a long time. This was my first money and I think I earned it quite easily, though at the time I thought it quite a task to write my name for a stranger. Then I was only a little girl of six, and now I am 18 and in the sixth grade in school.—Alice Clinesmith, Lantz, Wash.

Is a Happy Little Country Girl.

Dear Aunt Nellie: For my subject I have chosen "How I Earned My First Money." It was one bright June morning when I walked down the trail to the strawberry patch. The sun was just peeping above the trees. I heard the larks in the meadow singing their morning song. The swallow was flying overhead with bits of grass and mud to build nests for their young. I picked berries for my uncle and I earned 75 cents the first day, 90 cents the second and 75 cents the third. Every Friday at school we have an assembly. We have dialogues, recitations and singing. I live in the country and I wouldn't live in the city for all the money any one could give me. I am 12 years old and in the sixth grade. I have blue eyes, brown hair and dark complexion. I am four feet and nine inches tall and weigh somewhere in the 90s. I would like to correspond with Elsie Wiseman and Clara Olson if they would write to me.—Esther Carslin, Olalla, Wash. R. F. D. 1, Box 21.

Daisy Calls the Cat "Kitty Gray."

Dear Aunt Nellie: I live on a 220-acre farm. We have about 50 chickens and 11 ducks and two turkeys. I have one old hen and one young pullet. The old one's name is Yellow-Neck and the young one is Goldie. I have a kitten and her name is Kitty Gray. My subject is "How I Earned My First Money." Papa gave my two sisters and me a pig and we pulled weeds for it and gave it water and the rest, too, till it got big enough to sell, and we sold it and got $7.50 for it. I was 10 years old February 26, and I am in the fourth grade in everything. I have three brothers and two sisters. My brothers' names are Loren, Alfred and Judson and my sisters' names are Lizzie and Ada. We have nine horses and one baby colt. She's nine days old today. We have eight head of cattle and one baby calf.—Daisy Alberta Laird, Macall, Wash.

Very Proud of Her First Money.

Dear Aunt Nellie: My subject is "How I Earned My First Money." After vacation I wanted to help my mother, so I decided to work in the road camp washing dishes and helping around the cookhouse. I made $25 a month and I was very proud of my first money. I helped buy my winter clothes, for my father is dead and I am next to the oldest one at home. It helps a great deal to buy my own clothes. I walked a mile and one-quarter to work each morning. I got up at 5 o'clock and got up to camp in time to set the table and wait upon the men. We have one cow and calf, 10 chickens, two dogs, one kitten. We live on a ranch containing three acres of land. My oldest brother, who is 16, is working in camp, helping my mother as much as possible. I think our corner is growing nicely—Florence Stephens, Menlo, Wash.

Going to Write a Story Soon.

Dear Aunt Nellie: I like to read the letters very much. I am going to write a story soon. I am 12 years old. My birthday is the 15th of October. I have a twin at school. He is my classmate. I have one brother, Elton, he is 5 years old. His birthday is the 23d of December. We live on a farm seven and one-half miles west of Spokane. I go to Normandy school and am in the sixth grade. I have to walk one and a half miles. We have five horses, five colts, five cows and seven calves. We also have two dogs, Laddie and Sport. Our cats are Buster and Nice Kitty. We have about six dozen chickens and 10 pigs. One of the dogs, Laddie, is just a pup. He quarrels with Buster. He also tries to bother Nice Kitty, but she scratches him.—Selena Deno, R. F. D. No. 1, Spokane, Wash.

A Birthday Lunch on the Beach.

Dear Aunt Nellie: I am going to write and tell you about my birthday party last summer. The children of our neighborhood gave me a surprise party. I was out playing when they came. They gave me two handkerchiefs, a nice string of beads, a little looking glass, some clothes pins, a little wash boiler, a clothes basket, a pepper and salt shaker and toothpick holder, a flower vase and a cup. We went to the beach and ate our lunch.—Eleanor Dobers, Anacortes, Wash.

Earned His Money Picking Cherries.

Dear Aunt Nellie: I was 8 years old September 20th. I earned my first money, which was 50 cents, for picking cherries for my father. We have four cows and two horses. I have three brothers and two sisters.—Kenneth Duncan, Chewelah, Wash.

Boat Riding in the Back Yard.

Dear Aunt Nellie: I saw three subjects in the Farmer and thought I would write on "How I Earned My First Money." My papa planted some onions and I weeded and cared for three rows. When it was time for green onions and my onions were ready to sell I would pull and clean them at night and in the morning I would take them to town and sell them. This year we have no green onions as the high water killed most of them. The rest my 13-year-old brother sacked and sold. My aunt has some and we children sell them for her and she gives us half the money. This year the high water lacked six inches to coming into the house. Papa took the cows up on the hill but mama and we children stayed at home. We waded in water to feed the chickens. We could bring a boat right up to our door. We couldn't go all the way to the chicken yard because the water wasn't deep enough in one place. I want to thank Leona Waldron for the pretty card she sent me. I was very glad to see my letter in the last Farmer.—Lydia Guild, Woodland, Wash.

Aunt Nellie is glad to announce the receipt of letters for the Children's Corner from the following during the last week: Retta Gray, Eunice Martin, Gladys May Plemon, Nettie Ruark, Graham Potter, Edna Webb, Harry Wegele, Edith Peterson, Leona Machlied, Helen Blanchard, Hattie Hayden, Neta Gallaher, Wilber Davis, Esther Dale.

School Days

Old Methods a Great Joke Now

(Continued from page twenty.)

even though it might be in the back of the book, she always sent us to the board to do examples in long division when the superintendent came because we could do those with speed and accuracy.

The Old Wooden Water Pail.

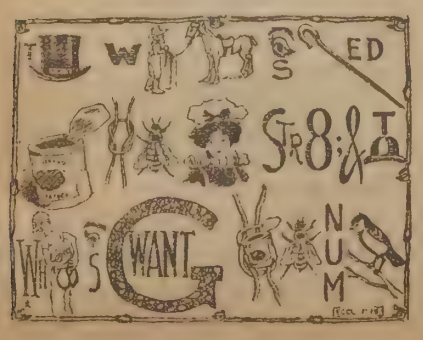
Those were surely great old school days. That old wooden pail that held the drinking water came in for a scrubbing in the annual cleanup and the rest of the year it was left in place with all the "germs" it might accumulate. Happy the youngster whose turn it was to go up and down the aisles "passing the water" and many a time I have seen boy or girl all ready to drink from the old rusty dipper when some one behind would jog the arm holding the dipper and the water would splash all over the would-be drinker and his clothes and books. Those were the days of slates and when I think of the noise we used to make getting them out and back into our desks I wonder all the country teachers of those days did not die of nervous prostration.

Our recesses in summer were spent in playing "crack the whip," "pom pom pull away" and "ante kiely over." I believe I could enjoy playing some of those old games yet—for perhaps five minutes.

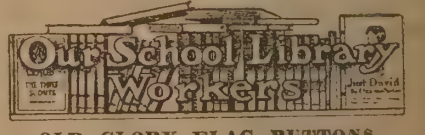
I am sure the methods of teaching in those days in the country schools would seem a big joke to you young folks today. The mysterious thing about it all is how we ever learned anything, but we did learn, as I said before. Nearly all the scholars came long distances, some as far as three miles, and through all kinds of snow. When the roads were deep with snow farmers would hitch up their teams to bobsleds and gather up all the children along their road.

Novel Mode of Punishment.

I must tell you how one teacher punished a couple of big boys who continued to laugh and play after being warned to stop. The teacher set a common wooden-bottom chair in the middle of the floor and required those boys sit on the floor and put their feet up onto the seat of the chair. One tried to rest himself by holding onto his boot straps, but was not permitted to do it. The teacher kept them in that position till they both shed tears, big fellows though, they were of 16 years.



If you think it an easy position to take for an hour or more just try it. I could tell you many amusing things that happened during those years, but I must not make my story so long. I will tell you just one.



Funny Roasted Pig's Tail.

There was a big overgrown boy of 12 years who was his mother's pet. One day this boy's father had been killing hogs in the morning, and along about 2 o'clock in the afternoon the "hired girl" came knocking at the schoolhouse door, and when the teacher opened the door she handed in a pig's tail very nicely roasted, and said it was for Byron, which was the boy's name, and that he should eat it at once while it was warm. I can still see, in my mind, that funny, curly roasted pig's Can't you imagine the envy with which the rest of us watched that boy chew away at that bit of roast pork?

I can not imagine a boy living through the teasing he would get these days if his mother should send him a roasted pig's tail to school with instructions to eat it immediately. He would be called "pig's tail" the rest of his school days, if not for the rest of his natural life.

The Bible Says:

OLD GLORY FLAG BUTTONS.

We know every boy and girl who are members of a Red or Blue library team would like to have an Old Glory flag button to wear wherever they go. So an opportunity will be given to all to secure one. We have obtained for their benefit a number of metal flag buttons, indestructible, in bright flag colors, and will send one of these to each boy or girl who secures one subscription through their own efforts for the school library within the next two weeks.

The subscription may be either new or renewal. This subscription counts just the same on library contests, but the boy or girl who gets the subscription will get the button as a Special Flag Honor Prize. The flag buttons will be mailed either to your own address, if noted on the subscription card, or will be sent to the teacher to be distributed to the pupils who are entitled to them just as soon as the subscription cards come in at the end of each week.

Library Day Prize.

Miss Erma V. Bowman, Turner, Washington, is the winner of the book as the teacher of the school securing the largest number of subscriptions on library day. We are unable to tell you the title of the book she desires, since Miss Bowman has not yet informed us.

Banner Schools.

Cowiche school, district No. 10, S. S. Busch, principal, holds the record in total number of subscriptions turned in to date, having 33 subscriptions to their credit. Other schools, however, are pushing this school closely for first place. Upper Hunters Creek, Ruth E. Collins, teacher, 28; Selah school, A. C. Kellogg, superintendent, North Yakima, 25; White Swan school, C. A. Payne, superintendent, White Swan, 25.

Books have been forwarded this week to the following schools:

Deer Lake school, Loon Lake, Wash.
River school, Almira, Wash.
Denison school, Denison, Wash.
Onion Creek school, Northport, Wash.
Fairview school, Plaza, Wash.
Parker school, Parker, Wash.
Deep Creek school, Espanola, Wash.
Wiley City school, North Yakima, Wash.
Turner school, Turner, Wash.
Highland school, Sundale, Wash.
Wolf Lodge school, Coeur d'Alene, Idaho.

Individual Prize Contest.

There is little change in the standing of the contestants this week. The three leaders have subscriptions as follows:

Dorothy Rauch, Chewelah, Wash., 28.
Bessie Webb, Ford, Wash., 14.
Loyel C. R. Snyder, White Swan, Wash., 12.

Honor List.

Dorothy Rauch, Chewelah school, Chewelah, Wash.; Bennie Shelton, Lyons school, Ellensburg, Wash.; Richard Chamberlain, Don Chamberlain, Louise Counts, James H. Meyer, Agnes Wain (2), Ellen Krekola, Highland school, Sundale, Wash.

Acknowledgment.

EVERSON, Wash., April 10, 1917.

Dear Sirs: I received the books in good condition yesterday. We are quite pleased with them and wish to thank you again for the opportunity of obtaining them.

Yours truly,
MRS. CLARA G. PETERSON,
Teacher.

There's Profit in HOME CANNING

Turn you surplus products and time into money this year and have a business of your own—home canning. There is good money to be made in home and community canning every year, but there never was a better year than this to start.

START RIGHT.

Don't experiment with makeshifts, do your canning by steam pressure; "the safe and only thorough way to sterilize." By our new selling plan you get all your supplies from one source. We furnish retorts, cans, modern can-sealing machine, instructions—everything for canning work in home, orchard or community, showing how to market your product to best advantage. Outfits include 60-page book of recipes on goods you can put up.

Simply send a postal for free literature on how to can for profit.

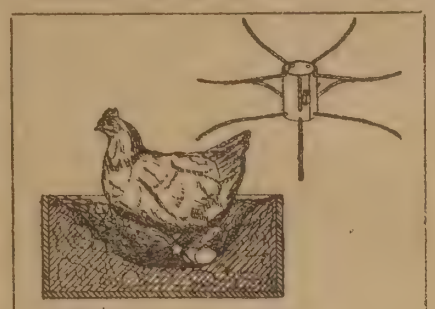
Inventions

By C. J. LYNDE, Macdonald College, Quebec.

Fertilizer Attachment for Seed Planters.



The object of this invention is to provide a fertilizer spout which will not clog. The spout is so arranged

Fertilizer Attachment

that when the seed valves are opened it moves back and strikes a lug which stops it suddenly; this shakes the fertilizer out of the spout and prevents clogging.

Anti-Set for Hens.

This device is a leg band with long, sharp spikes. It is free to rotate on the leg and therefore does not prevent

Antiset for Hens

the hen from walking, but it does prevent her from setting, because the spikes prick her body when she attempts it.

The Motor Car
On the Farm

Census of Automobiles.

There is one automobile in the United States for every group of 29 persons, according to a comprehensive article by Donald McLeod Lay in the Automobile Magazine.

Following is the statistical table quoted to show the population and automobile registration of the respective states:

State—	Population July 1, 1916 Census	Cars and Trucks	Pop. Per Car
Iowa	2,220,321	172,791	13
Nebraska	1,271,375	101,201	13
California	2,938,654	212,918	14

Corn Show at Spokane.

So successful was the last year's corn show in Spokane, held under the auspices of the Exchange National bank, that more elaborate preparations will be made for this year's show, to be held November 19-24.

"Prizes will be doubled this year," said E. E. Flood, assistant to the president of the bank, "and there will be the same number of districts as last year with 40 premiums in all to go to the most successful growers of corn. These premiums will be 20 cultivators, each worth $65, and 20 cornmeal mills, each worth $54.

"We are encouraging the growth of corn by giving away enough seed corn to each of 500 persons to seed one acre."

Officials of the bank estimate that this show will cost about $5000.

Will Raise Strawberries.

Lee M. Lampson, county agriculturist of Benton county, has sold his reservation holdings to E. A. Matting of North Yakima. Mr. Matting will make a specialty of strawberries and asparagus on the land.

FARM LANDS—FOR SALE 651

MONTANA LAND.

Are you looking for a farm home or a land investment in grain or grazing lands in the great grain and stock country of Montana? If so, it will pay you well to see our Montana Land List, telling of improved and unimproved lands in several of the best districts of Montana—Judith Basin, where prices range from $36 to $60 per acre—Eastern Montana, where we can show you several fine tracts at $8 to $20 per acre—Shields River Valley, that famous grain and stock district, where good grain lands, partly improved, sell at $40 to $50 per acre, and sure to increase in value while producing a good income on your investment—Conrad and Great Falls districts, where good grain lands can be bought at $20 to $30 per acre. Lest you forget, we say again, if you are interested in Montana land in practically any good district in the state, don't fail to call or write for Montana Land List—it's free and will probably save you time and money. We have made a careful study of the land situation in Montana the past few years, and believe we can be of service to you. Hege & Watkins Co., 715-17 Paulsen bldg., Spokane, Wash.

MONTANA LAND—WE HAVE SEVERAL Montana farms, on which the owners will take clear real estate as part payment. Call or write for Montana Land Exchange List. Hege & Watkins Co., 717 Paulsen bldg., Spokane, Wash.

Grain and Produce Markets

Chicago Grain.

CHICAGO, April 21.—Wheat prices underwent sharp setbacks today, influenced to a considerable extent by news of serious disturbances in Germany and by unconfirmed rumors of revolutionary outbreaks in Hungary and Bulgaria. After fluctuations which covered a range of 10½c the market closed unsettled 1⅛c to 5½c net lower, with May at $2.31 and July at $1.98¼ to $1.98⅞. Corn lost 2¼c to 4¾c and oats ½c to 1½c. Provisions finished unchanged to 7½c down.

Indications of great unrest in Germany gave evident emphasis to bearish sentiment at the outset in the wheat trade and inclined dealers to attach more credence than otherwise would be the case to rumors regarding Hungary and Bulgaria.

Decreased buying interest and a disposition of numerous holders to sell out was ascribed also to federal diligence toward gaining control of the food situation. Efforts of board of trade officials to curb undue speculation tended further to prevent new upturns in values. It was said, however, that action of the directors of the board in setting official marginal prices of $1.85 for July and $1.65 for September was not to be construed as determining intrinsic values.

Weakness was most acute in the May delivery, and in this connection a leading authority said hysteria as to laying in household supplies of flour was materially abating. Week-end adjustment of trades rallied the wheat market somewhat at the last, and also, too, did prospects of a fairly large decrease in the United States visible supply total on Monday.

Corn was governed chiefly by the bearish action of wheat. There were some signs of a loosening of the car scarcity and rural offerings of corn for 10 to 15 days shipments were said to be larger.

Oats showed relative steadiness as a result of the purchase of 1,000,000 bushels said to be for the British commission.

Provisions weakened with corn. It was said, too, that cash demand had dropped off.

Pacific Northwest Grain.

TACOMA, Wash., April 21.—Wheat—Bluestem, $2.42; fortyfold, club and tife, $2.27; red Russian, $2.25.

SEATTLE, Wash., April 21.—Wheat—Bluestem, $2.36; Turkey red, $2.33; fortyfold, $2.27; club, $2.27; fife, $2.27, red Russian, $2 24.

Barley, $50.50 per ton.

PORTLAND, Ore., April 21.—April delivery: Wheat—Bluestem, $2.32; fortyfold, $2.26; club, $2.25; red Russian, $2.25.

SAN FRANCISCO, April 21.—Barley—May, $3; December, $1.97.

WALLA WALLA, April 21.—Club wheat, $2.05; bluestem, $2.12. Barley, $48@50.

Seattle Market.

SEATTLE, Wash., April 21.—The blow may be said to have fallen with the highest price ever known on this market for potatoes. Wholesalers here began quoting $100 per ton today for No. 1 Yakima gems, and when the scanty supply now on hand gives out prices will go still higher, as farmers in the Yakima valley today began asking $100 at shipping point. Brokers here report sales of gems, grade unknown, at $82.50 within the last two days, but the same authorities declare that all stock now on hand, estimated at less than 50 carloads, will cost buyers $100 f. o. b.

Published quotations on fresh ranch eggs today are only figurative, wholesalers secretly outbidding each other in the country by raises of half a cent at a time. The bulk of stock is now being bought at 35c, the new price to producers for Monday. Selling will be at 37@38c, with the bulk probably at 38c.

Despite the lack of sunshine the supply of cream arriving on this market is increasing. Jobbers are endeavoring to meet the demand for secondary butter, but they can not turn out the product fast enough and California markets are too high to use butter from there. City creamery extras at 44c are plentiful, with occasional streaks of weakness.

Cheese quotations have been advanced steadily to 27c for Oregon and Washington triplets. The old differential between Oregon and Washington cheese based on quality and pack has long since disappeared.

BUYING PRICES.

Unless otherwise stated, the following prices are fixed upon a jobbing basis and are average prices obtained in reports of transactions by jobbers.

The following prices are offered to the producer by the local dealers for delivery in round lots f. o. b. Seattle:

Eggs—Local, 34@35c per dozen.

The Washington Farmer Will Continue Market Reports

The Washington Farmer will continue the publication of market reports. This is in response to the return of many coupons from all parts of the state, insisting upon the continuance of the publication of these quotations. The Washington Farmer will, moreover, try in every way to add to the value of this market page to its readers, and will be glad to receive letters from its subscribers as to any additional quotations which may be desired, or any other suggestion which the market page may better meet their demands. The following are among the letters received on this subject:

L. O. Libby, Charleston, Wash.—I say, by all odds, keep them (market reports) going. Farmers like to know what the prices are on the stuff they buy and sell.

O. W. Blanchard, Rainier, Wash.—A farm paper should contain all subjects pertaining to farming, and the markets are one of the important ones.

B. T. Bouslog, Keystone, Wash.—Please do not omit the markets from The Washington Farmer. We all like The Washington Farmer as it is, and the markets are about the first thing I look at.

Charles Hartnett, Colville, Wash.—I have been taking The Washington Farmer and consider it one of the best farm papers I have ever read, but it would not seem complete without the market quotations.

J. S. Fisher, Spokane, R. 2—I sure hope you will continue the market reports and wish we might add to the Spokane market the prices charged by milling companies and jobbers for millstuffs and grains to consumers in ton lots or by the hundredweight.

Hurley A. Kanoase, Elma, Wash.—I want the market reports in the paper.

H. E. Yeager, Monroe, Wash.—I appreciate the market reports.

Albert J. Kratz, Goshen, Wash, R. 1—I would not like to see you stop publishing the markets, and that page is the first page that I turn to on Friday noon, when I get my Washington Farmer. That page, like all other pages of The Washington Farmer, is most interesting and helpful to me. I am now receiving three farm papers, but believe me, The Washington Farmer is first, last and all the time.

J. Henry Endsley, Harwood, Wash.—There is no other feature of any paper the farmer takes so important as accurate market reports.

J. H. Watson and wife, Gig Harbor, Wash.—To omit the markets would be to deduct one of the paper's best items.

Grade Your Seed

It is a matter of common knowledge now-a-days that grading seed of any kind, whether it be wheat, oats, peas or beans, can not help but increase and improve the crop to be harvested.

WAR is bound, as is now also a matter of common knowledge, to increase the price of foodstuffs.

THE NATION, in order to avoid the great calamity which has practically overtaken the whole of Europe and which is called starvation, begs its FARMERS to use every means at their disposal to produce a record crop for 1917.

THE SUCCESS SEED GRADER COMPANY guarantees that the Success Grader will clean and grade peas so thoroughly and so perfectly that samples of its work are frequently claimed by those not familiar with this machine to have been hand-picked samples.

For seed nothing but the large, perfect kernel is reserved; for market all good grain which is not fit for seed is sacked simultaneously and separately from the seed; all split and broken grain is removed entirely from both market and seed.

Wire, write or telephone your order. Will make immediate shipment. Send for catalog.

Foundation of Flock

For Farms Outlined by Expert

(Continued from page three.)

ram the sire exerts a distinct improving influence on all the offspring.

The farmer should look to heavy fleeces of quality, improvement in size, unless fortunate in selecting foundation stock, desirable confirmation and early maturity and good feeding qualities. Mutton is now the more important side of the sheep industry and one must look toward lambs that get size and condition early for the butcher. Spring or early summer marketing not only enables one to turn invested money more cheaply, but secures in addition a price much more satisfactory as a rule than can be obtained late in summer or fall. In looking thus well to the mutton side, wool must not be neglected, since ewe lambs are kept to supply losses or sales from the flock and since the wool crop on farms where a great deal of feed is available and good management prevails, meets the cost of a year's keep of a ewe and leaves the lamb for net profit.

The desirable ram selected, with the view of meeting the above suggestions, should be of medium length, deep, thick, low-set, with a straight, strong back, should be well developed in all details of mutton confirmation and have an excellent fleece. In addition he should have style, vigor, masculine bearing and should conform as closely as possible to the standard set for his particular breed.

SHEEP BEST SUITED TO FARMS.

Merinos, more especially adapted for wool production, form one of the two main divisions of sheep. Another class, comprising the Downs, or medium wools and the long wools, has been bred especially for mutton or for a combination of large mutton frame and for a heavy-weighing fleece of long wool.

The Merinos in general are rather long-legged, lack in depth of body, are flat in the rib, sharp at the shoulder, narrow of back, have comparatively long necks, lack in loin and leg of mutton, and in entire body conformation fall short of the ideals of the mutton type. Body deficiencies, however, are compensated for by weight and quality of wool. The fleece is very dense and compact, of extremely fine fiber; is from two to four inches in length, and, for many commercial purposes, the finest and best wool that can be obtained. The grease or yolk exuded by the skin of these sheep preserves the luster and quality of the wool fiber and assists in keeping rain and snow from the skin. Merinos are hardy, flock well together, make wonderfully good use of scanty feed and are, as a rule, good mothers.

The common Merino breeds are the Spanish, the American, the Delaine and the Rambouillet. In purebred flocks and as rams for flock headers, the Rambouillet is of much importance.

The Rambouillet.

The Rambouillet take their name from the royal farm at Rambouillet, France, where this strain started in 1783, from old Spanish Merino stock. They have been bred for size and mutton form and for weight of fleece and length and fineness of wool fiber. Grade ewes, and in many cases purebreds not registered, are popular on ranges because of size and of grazing and flocking qualities. Purebred Rambouillet rams are bred to grade ewes in order to retain in the offspring of the flocks the ability to do well in large bands on ordinary range pasture. This flocking instinct and ability to rustle is characteristic of all Merino strains. Purebred Rambouillets do well on the farm, and the male offspring find a rather steady demand from the range flockmaster. The Idaho university experiment station flock management studies indicate the Rambouillet to be one of the cheapest maintained of our well-known breeds.

The popular Rambouillet of today is smooth-bodied, with the exception of a few folds on the neck, and has an excellent mutton conformation. The frame is large, bone heavy, body deep, the back, loin and leg-of-mutton well developed. The legs are a bit long, and the mutton form hardly to be compared with some of the special mutton breeds. Rambouillet ewes are prolific and good mothers. Rams weigh 185 to 200 pounds. More growthy ones sometimes reach 75 to 100 pounds more. Ewes average 150 to 160 pounds. The ewes are polled. The rams have large horns with spiral curves. The wool of the breed is of medium length and fineness. The rams shear 15 to 20 pounds and the ewes 10 to 14.

The Corriedale.

It is only recently that America has heard of the Corriedale. This is a new type, so well established in New Zealand that it is designated as a distinct breed, produced by continuous selection from the cross of the Lincoln and Merino. The Romney-Marsh-Merino and the Leicester-Merino crosses have also been used successfully.

Despite the intricate problems of heredity which are involved, the type has become well established and is transmitted reasonably faithfully from generation to generation. In conformation the Corriedale is quite thick and deep and well fleshed. The wool partakes of the fineness and density of fleece and gets a considerably increased length of staple from its long wool inheritance. The range men are taking much interest in this new breed, and it may, in time, find a place on the farm.

Forest Supervisor Resigns.

H. M. Hale, supervisor of the Okanogan National Forest during the past seven years, has resigned and will go into the automobile business. During his seven years work as supervisor of the forest Mr. Hale has made a record for efficiency and square dealing that has brought the service into closer and better relations with settlers on and near the government domain than ever before existed in that part of the state. No announcement has been made as to who will succeed Mr. Hale as supervisor of the Okanogan forest.

NEWS FOR BREEDERS

Judge Dimick of Oregon City, Ore., who believed hog prices would stay high during the winter, has sold $5000 worth of hogs since the first of last November, a good part of them bought while pigs and fattened.

Thomas Carmichael of Gaston, Ore., recently sold a young Holstein bull to the Gaston Gardens company. This corporation is headed by ex-Governor Moore of Walla Walla, Wash., and most of the stock is held by his family. T. E. Armstrong is manager. The corporation owns Wapato lake, consisting of 1000 acres of rich bottom land covered by water and making a great duck-hunting field for Portland sportsmen. A small dairy of grade cows is owned, which will be increased. Louis Herring of Gaston is another purchaser of a bull. Both are new converts to the

What Grain Does This Represent?

Any person sending the correct answer to the above question before May 4, together with $1.75, in the form of money order, 2-cent stamps or personal check, will receive THE WASHINGTON FARMER for three years and choice of any 30 of the packets of seeds listed below. The retail value of these is 5c per package, or $1.50 for the thirty packages.

Holstein ranks, and Messrs. Carmichael and Newell are hopeful of yet making the Holstein cow a community proposition in the vicinity of Gaston.

Fifteen hundred sheep in Morrow county, Ore., scab-infected or exposed to the disease, were all twice dipped, beginning the latter part of January. This is the first outbreak to amount to anything in Oregon in 10 years. The work was done under joint supervision of Dr. Lytle, state veterinarian; Deputy E. B. Osborne, representing the state, and W. B. Henneberger, representing the U. S. bureau of animal industry. It is believed that this put the scabbies under complete control, as the ranges have been cleared up by freezing weather.

A. E. Westcott of Banks, Ore., who owns a small but select herd of Jerseys, recently added to it by the purchase from William Schulmerick of Hillsboro, Ore., of five registered cows. Four of the five have Register of Merit records and two of them, by Mr. Schulmerick's bull (Monmouth Noble), qualified as 2-year-olds. Mr. Schulmerick says there is a better demand for Jerseys now than for years, right in Washington county, as well as other parts of the state. Mr. Schulmerick's cow, Melissa of Farmington, qualified for the Register of Merit when over 12 years old, with 10,397 pounds of milk and 507 pounds of butter. She is one of seven in the United States to produce over 10,000 pounds of milk on official test when past 12 years old and one of the 58 in the Register of Merit past that age. H. A.

Field Notes.

J. W. Fruit, the Duroc Jersey breeder of Brooks, Ore., has recently purchased from the Economy stock farm of Iowa the young boar Fruits Good Enuff by Burk's Good Enuff, a boar that was grand champion at the Illinois state fair and is sire of many blue ribbon winners. The young boar's dam is Chief's Maid by the grand Chief's Col. He is growthy, has great bone, good length, a deep body and promises to make a show boar. Mr Fruit will probably show a young herd at the Oregon state fair this fall, but has not the stock on hand to show a full herd.

A profit of $500 was made from the sale of Holstein cattle by the Tillamook County Dairy association last winter. County Agriculturist Jones and Charles Kurze went to Wisconsin and selected a carload of cattle and they were sold at auction. The prices received at Tillamook gave the profit referred to, over the purchase price and cost of the trip. The association will devote the money to special premiums at the county fair this fall. The Tillamook County Holstein association, which has quite a membership, 22 of whom now have purebred females, is showing a commendable spirit of enterprise and the giving of this money for prizes—part of which should be for milk production—is one of the best methods of promoting interest in the breed. A sale of Tillamook bred Holsteins may be held this fall.

The Oregon Jersey Cattle club, at its session at Salem, Ore., April 7, recommended Ed Cary of Carlton, Ore., as director of the American Jersey Cattle club, to represent the Pacific coast. The club also recommended Harry Jenkins of Chicago as judge at the state fair and A. P. Walker of Rushville, Ind., as judge at the new dairy show at Portland this winter. A committee, consisting of J. M. Dickson, Robert Burkhart and Harry West, were appointed to draft resolutions on the death of Captain Apperson, one of the oldest members of the club, lately deceased.

Not content with the already high reputation of Tillamook cheese the dairymen of that county have devised a new plan for advertising their product. They succeeded in having a bill passed by the last legislature providing for a veterinarian to test all the cows in the county for tuberculosis, the money for his salary to be appropriated by the county court. The plan is to have placards furnished retail dealers and attached to every piece of cheese sold, announcing that Tillamook cheese is from tuberculosis tested cows. Long since the Tillamook cheese factories employed their own inspector to assure all the cheese branded being up to standard, and now they plan to assure the world of the healthfulness of this product in every respect.

One of the well-known and most successful swine breeders of the Willamette valley recently ordered a boar from a well-known and supposedly reputable eastern breeding point. When the young boar arrived he was under size, of very ordinary type and disappointing in every way. His appearance was so different from other pigs of the same blood lines as to raise a doubt as to the genuineness of his pedigree. The gentleman who bought the boar has a reputation as a breeder and paid a long price. He was entitled to an animal of extra quality, but did not get it. The pig may only be stunted and grow out of it. But this gentleman's experience once more calls attention to the risk in ordering breeding stock from the east where they still think anything will do for the west. We have in the northwest as good breeders of registered hogs, dairy and beef cattle and sheep as there are in the United States. A few of them make trips east and personally select breeding stock and, as they are able to judge of both breeding and individuality, this is a safe practice. But the man who is commencing as a breeder or who can not afford to make a mistake is far safer to buy his breeding stock from some reputable breeder in one of the northwestern states, as near a neighbor as he can, where any mistakes or misunderstanding can be made good. The gentleman referred to is in a position where he can no doubt force satisfaction. But the small or new breeder would do better to be on the safe side by buying near home. H. A.

Perforated Irrigation Pipes.

An Australian has invented a process for irrigating, aerating and fertilizing soil by perforated pipes laid in it, thereby avoiding waste.

Dispersal Sale of High Producing Jerseys

45 Registered Jerseys
55 High-Grade Jerseys

They will be sold at Farm, FAIRBANKS, WASH., ON MAY 10, 1917. (Fairbanks is 35 miles south of Spokane on the electric line.)

Herd rich in the blood of Stoke Pogis, Gertie of Glynllyn, Golden Glow and other famous animals of American breeding. 22 of the grade cows offered have completed a year's record in the Whitman cow testing association, the yearly average for the 22 being 7328.7 pounds of milk and 367.6 pounds of butter fat. THE WASHINGTON FARMER

SUCCESSOR TO
THE RANCH PACIFIC DAIRYMAN HORN AND HOOF

VOL. XL. MAY 3, 1917. NO. 18.

A Hundred Thousand for Agriculture

State College Gives Up Building Plans to Give Money and Time to Farms

The State College of Washington has abandoned its building plans for this and next year and will spend about $114,000 doing "its bit" in the nation-wide agricultural preparedness campaign that would otherwise have been expended in completing two new buildings on the campus at Pullman. This amount of money will go to increase the efficiency of the work of the experiment stations at Pullman, Puyallup and other places about the state, the boys' and girls' clubs, the farm extension division and other agricultural and live stock activities of the institution.

Dr. E. O. Holland

"The state college is awake to the fact that the winning armies in this titanic war of nations will be the armies that have back of them, at home, the most perfectly mobilized productive industries, and that the foundation of all productive industry is agriculture," says President E. O. Holland in a statement to The Washington Farmer. "In mobilizing and perfecting the agriculture of Washington, the college desires to do its part and seeks the cooperation of the citizens of Washington. Even if the war clouds were to disappear tomorrow, the work of agricultural preparedness must continue.

"The war emergency and the general need for agricultural development in Washington which obtains in peace as well as in war led the regents of the state college at their April meeting to make increases in the agricultural budget of from 50 to 100 per cent."

In outlining the program of the college, President Holland continues:

"In planning the work of the next two years the board of regents had, at the outset, hoped to put $120,000 into the completion of new buildings. Upon a close examination of the college finances, and of acute needs pressing in from many directions, the board reduced the building program from $120,000 to $6000; and decided to use the $6000 to complete additional space in the new agricultural building, James Wilson Hall, in order to have increased facilities for the rapidly growing enrollment in agriculture. There are now over 300 students specializing in agriculture, and if the institution is allowed to develop in the normal way, the enrollment next year will not be far below 500.

"In working out the details of the agricultural budget, the regents proceeded upon the theory that agricultural extension, which takes the results of agricultural investigation to the people, is quite often as important as the agricultural investigations. Obviously this is true, since so long as agricultural knowledge is confined to the laboratories it is not doing the public any good.

"From the millage income of the college, an expenditure of $65,000 was approved for the western Washington experiment station at Puyallup, for the two-year period beginning April 1, 1917. This is an increase of approximately 12 1-2 per cent over the expenditure at Puyallup during the two years ending March 31, 1917.

"The funds derived from the United States under the Hatch and Adams acts for the two years following July 1, 1917, amount to $60,000. This money is for state-wide investigation, and does not include teaching.

"From the millage income of the state college, the board authorized an increase for experiment station work during the next two years, the amount being $50,000 for two years and three months follow-

Is the Farmer Going to Get Rich?

To the Editor of The Washington Farmer: It is a mistaken idea that the farmer is going to get rich at the expense of the city dweller because of the war prices, when he has to pay correspondingly high prices for flour, sugar, shoes, etc.

FRED ROSMOND.

Elma, Wash.

Scores of other replies received from farmers on government control of prices of wheat, potatoes, butter, eggs, wool, cotton and other staple farm products during the war will be given in next week's issue of The Washington Farmer.

Recruit Farm Help From Cities

Many People in the Cities Need the Work and There Is Great Demand on the Farms for Workingmen at Good Wages.

BICKLETON, Klickitat County, Wash., April 22.—Spring work is now in full swing after a very backward season, cold and stormy. We need warm weather to bring up the spring grain. Many farmers are reseeding their fall acreage. I think about 40 per cent of the fall wheat was winter killed or rotted in the ground. Farm labor is more scarce than usual, and wages about double the usual price. In the cities people are clamoring for food and can not get work, while in the country the farmers are paying $2 and $3 per day and board, and can not get enough hands to put in or harvest our crop. Now isn't there some way in which our county agriculturist can get in touch with these people and get them out where the farmers can get hold of them? I don't believe a man can afford to keep a laborer the year round with less than 500 acres of land in cultivation, and over half the farms are below that amount around here.

BERT H. FAULKNER.

Prospects Are Good.

BOSSBURG, Stevens County, Wash., April 23.—This is the most backward spring we have had for several years. The weather is fine now and spring seeding has started. Farm labor is scarce, and wages will be a little higher than usual this spring. Most of the working men go to the mines and smelters where wages are high, rather than work on the farms. There are but few farms here that can afford to keep men all the year. All kinds of stock came through the long winter in good shape, but there is little feed left, as no one has been able to turn stock out on the open range until the last few days. Every one will plant all the land they have this spring to some of the staple crops. There will be a large acreage put into potatoes, some will plant beans and peas, but the main crop will be wheat. The prospect for fruit was never better. The cold, late spring has held the trees back and no blooms are showing as yet. We have had some fine rains the last few days, and now it is warm so the fall grain and grass has started to grow. Prospects for the farmer in this part of the county are good.

W. W. PALMER.

Cottages for Workingmen.

SPOKANE, Spokane County, Wash., April 26.—There is quite a scarcity of farm labor this season on account of the acreage of peas in Spokane county, and there is quite a demand for competent farm help. This diversifying of our cropping system here will mean a chance for men to get good wages the year around. Some of our farmers who have been diversifying for several years are employing steady labor 12 months out of the year to handle the work properly. Ample provision must be made for housing and boarding these men in a satisfactory way. Several of the men have small cottages in which the farm hands live with their families, and this I think will be the solution, in a large way, for the labor problems for this country. Where the farmers have provided the laborers with a cottage, garden and a cow, there is no difficulty, whatsoever, in keeping the men contented. This is a very similar system to what has been employed for several years in the middle western states, and I believe it will gradually become the custom here. Farms on which the men are employed the year around, and where diversified farming is practiced range in size from 240 to 600 or 700 acres. There is no doubt but that a farm which is planted entirely each season to 200 acres of crop can readily furnish labor the year around for the landlord and one hired man. Usually the price during the heavy work season is more than during these slacker times in winter.

J. R. SHINN.

Keep Stock Off Wet Meadows.

FERNDALE, Whatcom County, Wash., April 14.—The recent heavy rains here have made it necessary for most of the farmers to buy hay, for, while the grass is green, the meadows are too soft to put cattle on. This is one of the largest dairy centers of the state. Holstein cows furnish milk for the large branch of the Mount Vernon condensery that was built here a few years ago while Jerseys and Guernseys supply cream for a creamery that, though small, does a rushing business and makes what is considered the best creamery butter in the state. Some fine registered stock have made their appearance here in the last few years, Holsteins being the most numerous, with Guernseys as a close second. In the Nooksack valley the spring is very late. Plowing is now being done for the large crops of potatoes and oats that will be planted soon. Eighty acres is considered a large farm, while 20 acres, if well stocked and free from debt, makes a comfortable living for a small family. Very few farms are without silos and those few will not be by fall. Land sells at from $250 to $350 per acre and taxes are correspondingly high.

MRS. JACK PLASTER.

Stock in Good Condition.

OKANOGAN, Okanogan County, Wash., April 13.—The diversity of soils and climates of this county makes it possible to produce nearly any crop that is grown any place in the state. The weather has been unusually cold for the spring season and crops are greatly retarded. Live stock in general is in good shape and the hay problem does not appear to be a bad one here.

WALTER A. HOLT.

Help Problem to Be Adjusted.

LA CONNER, Skagit County, Wash., April 13.—With the coming on of spring the question of farm labor seems to be getting a little perplexing. Every day we hear the call for farm help and the calls are getting more frequent. It seems as though the farmer will have to put in longer hours in order to see that the planting of the crop in accomplished. It will be hard to suggest a remedy at this time, as the nation has plunged into the war and a great deal of the surplus men, if not all of them, will be needed by the government. There is no question but that the help problem will be adjusted, as we must keep up with the food production. As yet we have had no gardening weather. The ground is cold and wet and there is little or no advantage in putting most seeds in the ground.

I. W. ALEXANDER.

Need Trained Farm Help.

COLVILLE, Stevens County, Wash., April 15.—I believe that there is no scarcity of laboringmen, but many farmers complain of the lack of laboringmen trained along farming lines. Most of them desire to work at only one type of work and not do general diversified farm labor. Wages as a whole are higher than in previous years. Much of the farm labor is seasonal. In order to keep labor the year round it will be necessary to keep more live stock and even then there will be some farm labor of short duration. The number of live stock is largely the determining factor in keeping labor the year round.

A. R. HAHNER.

Your Credit Is Good

HOMEFURNISHERS TO THE PEOPLE OF THE NORTHWEST!

Out-of-Town Folks--We Trust You!

Save Money by Opening an Account With Us!

If you happen to live hundreds of miles away, we will extend you as much credit and on just as easy payments as if you lived right here in our city. Get acquainted with our wonderful and easy out-of-town credit-giving service. Our mail order catalog brings this store—the finest, largest, most complete exclusive home-furnishing store in America—right to your home. If you have not one of our new 140-page catalogs send for one by filling in the coupon in this ad—it will be mailed to you free.

95c With Order

Send only 95c and we will ship you this practical and serviceable kitchen cabinet. Only 95c down and then 75c a month until you have paid $11.80.

30 DAYS FREE TRIAL

Our guarantee protects you absolutely. We ship on 30 days' trial. If you are not perfectly satisfied, ship the article back at our expense and we will refund your payment, also any freight you paid. Can any offer be better?

A wonderful value and positively one of the biggest bargains ever offered. A splendid kitchen cabinet with an ideal arrangement; it has a place for practically everything needed in the kitchen.

Made entirely of thoroughly seasoned and kiln dried spruce, assuring splendid service. The finish is natural, which is the most practical kind, giving the cabinet a clean and inviting appearance. Entire height 65 inches. Base has 26x42-inch top. Two large drawers under the top are for cutlery and linen. Two dustproof flour bins, each having the capacity of holding 45 pounds of flour or meal. Two removable kneading and chopping boards; these can be taken out and placed on top of cabinet base or on any table. This feature makes cleaning easy and convenient. Top section of this cabinet has a roomy china cupboard with glass panel door. On each side of cupboard are three small drawers to be used for spices, etc. Under cupboard is a broad shelf for cans, jars, packages and utensils. All drawers, also bins, and door are fitted with good quality brass finished pulls or wood knobs of selected materials and will give years of good service.

The cabinet is just like the picture. The dishes, glassware, jars, etc., shown on shelves are not included in this price. Order by number: No. 2042. Price $11.80. Order one today. First payment 95c, balance $5c a month until paid for.

Vol. 40. No. 18 THE RANCH PACIFIC DAIRYMAN HORN AND HOOF May 3, 1917

Fruit Growers First to Protest

Would Cost Pacific Northwest Apple Industry $750,000 Annually

Fruit growers of the Pacific northwest are "mobilizing" to fight the proposed advance in freight rates.

As Farmer readers were informed last week, the railroads of the United States are asking authority of the interstate commerce commission to make a blanket advance of 15 per cent on all commodities. They say that the Adamson law wage increase and the advance in all kinds of materials and supplies justify that much increase, and on their petition the interstate commerce commission has made a temporary order granting the request unless an adverse showing can be made by the shippers, producers and consumers by June 1.

That seems to throw the burden of proof on the public.

The fruit growing industry is first to protest, probably because it has been of late years the least profitable of the agricultural industries of the northwest. Boxed apples now pay $1 per hundred pounds to all points east of the Mississippi river. Seventeen thousand carloads were shipped last year, on which more than $5,000,000 freight was paid. A 15 per cent increase would take $750,000 yearly out of the pockets of the apple growers.

An increase of 15 cents per hundred would mean 7 1-2 cents per box. Some authorities say that this added burden, following higher prices for labor, spraying materials, wrapping paper, boxes and other necessaries would strike an almost fatal blow to the orchard industry.

If there exists a disposition among the prosperous wheat farmers and well-to-do growers of live stock to let the rates be advanced without protest, on the theory that they can stand them, we warn them that that fallacy is dangerous. A few years ago, when apple growers were making handsome profits, a matter of 7 1-2 cents on a box of apples did not seem vital. A time may come when the margin of profit in growing wheat and other farm products would be materially cut into by a 15 per cent advance in the freight rate.

A general advance of 15 per cent would increase the yearly earnings of the railroad nearly $400,000,000. Their present gross freight earnings are about $2,500,000,000—probably more rather than less that gigantic sum. A special report by the interstate commerce commission last September gave the earnings of 137 important steam railroads for the year ending June 30, 1916. These 127 roads had freight earnings of $2,409,393,699, and that was exclusive of roads having revenues of less than $1,000,000 a year.

A 15 per cent advance on present freight earnings of $2,500,000,000 would take $375,000,000 yearly from the producers and consumers of this country for the benefit of the railroads. That is about eight times as much as it is costing the roads to comply with the Adamson law advancing the wages of their trainmen.

It is plain that if the interstate commerce commission should make its recent order permanent, a large part of that $375,000,000 will come out of the pockets of the farmers. It will mean something taken from every bushel of wheat, every box of apples, every sack of potatoes, every ton of hay and every animal sent to marekt.

Now is the time to remonstrate. Unless the commission shall rescind its order, the higher rates will take effect June 1, and it will then be too late.

Every farmers' organization should adopt protesting resolutions and send them to its members of congress. Granges, farmers' unions, farm loan associations should act without delay.

If you have not already sent a protest against the proposed advance of 15 per cent in railorad freight rates, which means that you must pay your share of the additional $375,000,000 annually exacted by the railroads, then do so at once. At least fill out the coupon herewith published and mail it at once to either Senator Miles Poindexter or Senator Wesley L. Jones, or if you prefer to Representative John F. Miller, Representative Lindley H. Hadley, Representative William L. LaFollette or Representative C. C. Dill, at Washington, D. C.

To ....., Washington, D. C.

As a Washington farmer, who pays the freight, both as a producer and as a consumer, I hereby most earnestly protest against the proposed advance of 15 per cent in railroad freight rates, which I believe is unwarranted by present railroad earnings.

Northwest Wheat

Above Average, Says U. S. Report

The United States government's crop report for April shows that the condition of winter wheat in the four states of the Pacific northwest is far above the general average for the United States.

While the general condition on April 1 was down to 63.4 per cent of normal, winter wheat in Washington was rated at 70 per cent; in Oregon, 84 per cent; in Idaho 90 per cent, and in Montana 93 per cent.

Montana is up to its 10-year average, but Washington is 24 per cent below its 10-year average. Oregon is down 12 per cent and Idaho 6 per cent. The government's comparisons for these four states are as follows:

	Condition April 1,			Price April 1,	
	1917.	1916.	10-Yr. Av.	1917.	1916.
Washington	70	85	94	$1.55	$0.84
Oregon	84	95	96	1.54	.84
Idaho	90	94	96	1.55	.78
Montana	93	85	93	1.68	.89

The big damage to winter wheat is in Illinois, Iowa, Missouri, Nebraska and Kansas. On April 1, 1917, Illinois' condition was 60 per cent of normal, Iowa's 57 per cent, Missouri 62 per cent, Nebraska 35 per cent and Kansas 45 per cent.

Five Mutton Breeds for Farms

Farmer Can Hardly Go Wrong in Trying the Shropshire

ARTICLE 2. By E. J. IDDINGS.

The term "mutton sheep" is a common designation for what we call the Down or Medium Wool breeds and the Long Wools. The Downs are dark faced and take their name from chalk hills called Downs, over which they graze in Kent, Hampshire, and other counties in England.

The medium wooled breeds are low-set, deep, thick, compact sheep, with broad heads, short faces, short necks, deep shoulders, wide sprung ribs, thick loins, full rumps, full legs and deep twists. The vigorous thick-meated sheep with little evidence of roughness and waste, adapted to yielding the highest percentage of high priced cuts is one sought for in the mutton breeds both for the market and for the show ring.

Five popular mutton breeds are the Shropshire, the Hampshire and the Oxford, Medium Wools or Downs, and the Cotswold and Lincoln, belonging to the long wool type. Other breeds found in some sections are the South Down and the Dorset Horn.

The South Down.

The South Down has hardly sufficient ruggedness, prolificacy and ability to thrive under rather severe conditions, quite often demanded of western range and farm sheep, to give it a place on the average western farm. It has a place, however, where special attention can be given it and a fancy mutton product is desired. In mutton form this breed averages the lowest set, thickest, and most compact of all of our well known breeds. The ewes have been found at the Idaho university station to be easy keepers. The lambs mature early and yield fine carcasses.

The Shropshire.

The Shropshire comes from the midland counties of England, and is descended from an old very hardy type known as the Morfe Common. The breed is widely distributed over the world and does well under such variety of conditions as to have been designated as the "cosmopolitan breed." Next to the Southdown the Shropshire nearest meets the ideals of the mutton type. Sheep of this breed are medium in size, the rams averaging 225 and the ewes 150 to 160 pounds. The body should be long and deep and squarely set on short legs. The head is wide, the ears small, and the face refined in the ewes. The neck is short, blending smoothly into the shoulders. The back and loins are wide and well covered and the leg of mutton thick and plump. Well-bred specimens are well wooled over the legs and face and the fleece is compact and of considerable length. Rams shear 12 to 15 pounds and the ewes 8 to 12 pounds. The face and legs are brown and the fleece clear white.

The Shropshire has a wide reputation as a farmer's sheep. This is due to the excellent combination of mutton form, fleece, prolificacy (the ewes average at least one and one-half lambs) and to early maturity. Gains are not so great as with some breeds, but both frame and flesh grow together, bringing the lambs to marketable size and condition at an early age. The farmer can hardly go wrong in selecting Shropshire sheep.

The Hampshire.

The sheep of this breed are descended from an old type of the same name that existed in Hampshire, England, and have been improved by feeding and selection and by the infusion of Southdown blood. The Hampshire is larger

(Continued on page nineteen.)

SUFFOCATES SQUIRRELS

Carbon Bisulphide Is Effective.

Carbon bisulphide, when properly applied, is one of the most humane, economical and effective agencies in ground squirrel extermination, says a bulletin of the Washington experiment station.

It is a liquid, which, when put into the burrows on some cotton or waste, very rapidly forms a heavy gas which sinks down into the burrows and suffocates the squirrel. It should be applied in doses of about two tablespoonful, one dose to each hole of a den. As treated, each hole should be closed with a shoveful of earth, and when the holes have been filled, two or three of the holes should be opened and exploded by throwing a lighted match down into them. The holes should be closed immediately and the work is done. Great care should be taken to keep the fire away from the carbon bisulphide your are using. Carbon bisulphide may be used at any time of the year, but is more effective in spring and early summer when the ground is moist.

A den can be told by the fact that all of the burrows belonging to it run toward its center. It may cover a radius of 50 to 70 feet.

It is humane in that its action is similar to that of chloroform, and there is none of the terrible suffering as in the trapping method and unlike trapping or poisoning, there are no young left behind in the dens to starve to death. It kills no beneficial game or song birds.

Tests on a large scale are showing that it is not as expensive as trapping, for when thoroughly done you need go over the territory but once.

SLUGS OR SNAILS

Much Trouble With These Pests.

To the Editor: We are bothered very much in our garden by slugs or snails (they do not carry a shell on their back). These pests are from half an inch to one inch in length. Everything that we try to plant in the garden is destroyed. We have tried to plant beans, and peas, and if they succeed in coming up the first thing we know the leaves are eaten off and possibly the next morning the stalks are completely gone. We can not raise cabbage, as the snails burrow into the head from the bottom part next to the ground. It is the same with lettuce. They do not seem to bother radishes or turnips so much.

Our garden spot is on the north side of the house, and is quite sheltered. The spot is only about 50 by 50 feet. At the southehrly side we have a few raspberry bushes. Could they have anything to do with the slugs?

Our soil is a black soil made very rich by stable manure. The soil is inclined to be wet and hold the moisture nearly all summer without watering. We have had splendid gardens up to two years ago, when we began to be bothered by these slugs.

P. BENTZEN.

Ferndale, Wash.

In answer to this question O. M. Morris of the department of horticulture of the state college of Washington says:

One of the best ways in which to protect your young plants from slugs is the use of a little poisoned bran. Use a quart of bran and about a teaspoonful of lead arsenate or Paris green; dampen this with water in which has been dissolved enough sugar to make a very thin syrup. A little lime juice added also serves as a flavoring extract that makes the bait more attractive. Scatter this material along the rows or around the plants that are on the outside of the garden. The snails usually come in from the litter along the edges of the plant beds. They will take the first eatable material they find and are especially fond of a bait prepared as just directed. This material will have to be used several times during the spring to keep the slugs away. It is unlikely that your berry bushes have any relation to the slug trouble. Any kind of foliage or litter, old grass or anything of that kind along the edge of the garden bed is apt to harbor the slugs during the daytime. The careful cleaning up of all such litter and material is especially helpful in getting rid of this trouble.

High School Boys to Farm.

The mobilization of 5000 high school boys to work on farms in Massachusetts from May 1 to harvest time has been provided for at a conference just held in Boston. The boys will be paid $7 a week, with quarters and clothes provided. Only boys between 16 and 18 years of age will be engaged.

Two Cooperative Stores Have Done This

From One Car of Hay to a Business of $326,000 in Four Years, With $30,000 in Profits

Here is a farmer's cooperative organiaztion that helps to point the way to many similar ones, and here is a statement for a month's business that makes a remarkable showing.

If the reader will consult any business man, he will ascertain that the statement submitted herewith is an unusual one. The average mercantile house that has a "turn-over" or what might be better understood by the average reader of The Farmer, if the merchant sells each year seven times as much stock as he carries, he is usually doing a successful business. This statement shows that in the month of March with a merchandise stock of $45,000 the association did $39,000 of business. If this ratio is kept up during the entire year, it means 10 to 11 times the amount of stock carried.

The net profit of practically 8 per cent on the gross business is a wonderful showing.

Another item that should attract attention of the reader is the low cost of conducting the business—practically 7 per cent. An ordinary grocery store pays more than 7 per cent to cover the expense of their delivery system alone.

By W. H. PAULHAMUS

The extremely bad failure of the Spokane-Seattle-Portland - Wenatchee - Chehalis cooperative farmers' stores—the Northwestern General Trading company and its allied branches—may have an unfortunate tendency to give a black eye to the establishing of stores conducted upon a cooperative basis. But it should be remembered that the collapse of the Northwestern Trading Company was the result of bad and dishonest management and is in no wise attributable to the cooperative principle.

Cooperative stores are exactly like banks, sawmills, blacksmith shops or any other business enterprise. No difference what the industry is or what opportunities for success, if reasonable business principles are not adopted the result will be bad. The greatest trouble with large enterprises is that the management too often is not capable of handling the money end of the transactions.

Most of us are not sufficiently conservative to realize that the sun does not shine all of the time with the result that the rainy days arrive and we find that we have not arranged for an umbrella and overshoes.

The above mentioned cooperative stores had an excellent opportunity to do a successful business. Every condition was right except lack of proper management. The question that would naturally arise in the minds of the stockholders of the defunct Northwestern General Trading company would be, is it possible to conduct cooperative stores successfully so that the stores will be an asset to the community as well as a profit to the stockholders?

Some years ago, the Puyallup and Sumner Fruit Growers 'association located in the Puyallup valley nine miles from Tacoma, 30 miles from Seattle on the main line of the Northern Pacific and Great Northern railways, decided to purchase their alfalfa hay in carloads so as to obtain reasonable prices for their members. Some of the local merchants found fault with the management of the Fruit Growers' association for meddling in hay trade, with a result that the friction aroused resulted in the Fruit Growers' association not only purchasing their hay requirements, but at the present time are purchasing and distributing to their members through their two stores, practically all their groceries, hay, grain, flour and feed.

The industry has grown in four years from one car of alfalfa to a total volume of business for the year 1916 of $326,000. The business has been conducted on a large scale as the management believes in volume of business at a low profit rather than a small line of business at the ordinary profit and as most of the members of the association are farmers having their own wagons and automobiles, it was decided that no deliveries should be made or no credits extended. It doesn't make any difference how much fruit a member has with the association, it doesn't grant him any credit at the stores.

With no expensive delivery system and with no credits extended to the members, two sources of serious difficulty were eliminated; in fact, these two items are the serious stumbling blocks in merchandising.

Most farmers' organizations are conducted as cheaply as possible; in other words, the directors usually employ a manager who will offer his services at the cheapest possible price with a result that they usually obtain a "cheap man" rather than a capable man. The merchandise department of the Puyallup and Sumner Fruit Growers' association is conducted on a different plan. They believe in paying the employe what his services are worth and instead of conducting the business in a haphazard way, they keep a competent set of bookkeepers under the leadership of a gentleman who thoroughly understands the difference between debit and credit, so that at the end of each month the directors of the association know definitely not only how much business has been done during the month, but whether it has been conducted at a profit or at a loss.

The statement of the two stores of the association for the month of March, 1917, is herewith submitted. It will be noted that the association makes a deduction not only for rent and taxes, but also interest on the investment at the rate of 10 per cent per annum.

By establishing the store department, the growers were able to cut down the overhead operating expenses of their fresh shipping and canning department. The president of the association for several years has been paid a salary of $3600 per annum, but since the establishing of the stores, one-third of this sum is carried by the store department.

Of course, it must be borne in mind that these are unusual times and that greater profit is derived in merchandising today than under ordinary times for the reason that what you purchased yesterday is of greater value tomorrow, but during the four years that the cooperative stores of the association have been operated in the Puyallup valley, they have paid to the growers' association in the neighborhood of $30,000 profit.

Instead of distributing profits to the buyers of the merchandise, they adopted a policy of adding 10 per cent to the cost of their merchandise to cover the cost of doing business, and placing this as the selling price except in case where this would make the product sell for much less than its intrinsic value. Under such conditions, the price is increased so that the large customers will not buy up all of the commodity and deprive the smaller customers of their fair share.

For example—one year ago the association purchased 2000 barrels of hard wheat flour at a cost of $5 per barrel. Before this flour was disposed of, it was worth $6.50 per barrel, wholesale. Had the association priced it all at 10 per cent above the wholesale price when purchased, making a selling price of $5.50 per barrel, other storekeepers and those who had money to spare would have purchased all of the flour resulting in the association being compelled to go into the market and purchase an additional supply at $6.50 per barrel, but the association management adopted a policy of keeping from 25 to 50 cents per barrel under the wholesale price, therefore protecting all of their customers.

The English method of operating cooperative stores is to sell at the same price as other stores and then declare a dividend at the end of the year to the customer. This results in taking from the customer each day of the year a surplus of money for the food products and keeping the money for the customer until the end of the year and then returning it to the customer. Very frequently the customers at cooperative stores have a serious time in aequiring sufficient funds to make their purchases. If this is true, what can be gained by charging them more for their purchases than is intended and refunding it to them at the end of the year?

It is in the nature of deception and really doing something that you "do not mean."

The net earning of the stores are turned into the association to be distributed pro rata upon the number of pounds of fruit that each grower delivers to the association.

What has been done in the Puyallup valley can be done in every other community of the Pacific Northwest providing the board of directors manage the business as it should be managed.

PUYALLUP AND SUMNER FRUIT GROWERS' ASSOCIATION

Statement covering business done by its two stores during March, 1917:

Merchandise on hand March 1	$45,113.12
Merchandise purchases during month	31,168.92
Transportation paid on same	1,176.63
Making total cost of	77,458.67
Actual cost of goods sold during the month	33,930.48
Stock on hand March 31 at actual cost	43,528.19
Total sales of month at selling price	39,799.67
Sales same month, 1916	28,102.17
Sales increase over same month one year ago, 41.6%	11,697.50
Gross profit on sales made during month, 14.75%	5,869.46
Expenses for the month, 6.8%	*2,706.13
Net profit for the month, 7.95%	3,163.33
Expenses for the month are divided up as follows:	
Salaries	$ 1,612.91
Insurance	74.19
Taxes	33.82
Rent	170.00
Heat	30.00
Light and power	51.30
Interest on Investment	470.00
	*$ 2,706.13
General and incidental expenses	263.91

"Our Own Store" at Puyallup

Owned and operated by the Puyallup & Sumner Fruit Growers' association. The building is of interlocking tile reenforced with steel and is 60x120. It is fireproof.

Hundred Thousand For Agriculture Is College Plan

(Continued from page one.)

ing April 1, 1917, or $22,222 each year for the next biennium. The amount for the preceding biennium was $33,000.

"In forage crop investigations there will be a net increase of $16,000 over the expenditure during the last two years, $8000 of which is from the state and $8000 from the United States.

"Ahe federal appropriation in behalf of dry-land investigation will continue at the rate of $2500 a year, making $5000 for the two years, and to this the board expects to add funds from the millage income of the college which will raise the total expenditure above the expenditure for dry land work in the last two years.

"The expenditure authorized for agricultural extension and extension work supplementary to agriculture include, for the two-year period after July 1, 1917, $60,224. From the legislature the college has an appropriation in behalf of extension amounting to $29,352 for the two-year period following April 1, 1917. At its meeting of April 4 the regents authorized from the millage income of the college an additonal appropriation of $30,000, to which further increases are anticipated.

"The present college farm, which is a highly important adjunct to agricultural teaching and investigational work of all kinds, was increased by a purchase of 150 acres of land for approximately $15,000. The farm of the experiment station at Puyallup was increased by a purchase of 30 acres of land for $5000.

"The appropriation for the department of agriculture, exclusive of salaries, was set at $25,000 for the one-year period beginning April 1, 1917, to which will be added the total departmental income. This appropriation does not include, of course, the appropriations for the departments of horticulture, forestry and the science departments such as botany, zoology, geology and chemistry, whose work is fundamental to all well-organized agricultural teaching, extension and investigation.

"Summarized, the expenditures authorized for the next two years for the various lines of agricultural work conducted by the state college, stand as follows:

Puyallup station, millage income	$ 65,000
U. S. funds (Hatch and Adams) for experiment station work	60,000
Regents' appropriation from millage for experiment station	44,444
Forage crop investigation	16,000
Dry-land investigations (U. S. funds)	5,000
For extension work, federal funds	60,224
From federal department of agriculture for cooperative work in approved extension projects	30,000
State appropriation for extension work	29,352
Regents' appropriation from millage for extension	22,222
Completion of floor in James Wilson hall	6,000
Addition to college farm	15,000
Appropriation for department of agriculture at state college (exclusive of horticulture, forestry and all sciences)	45,000
	$393,242

Field to Manage Quincy Creamery.

W. D. Field has been appointed manager and Arnold Omlin butter maker of the creamery at Quincy, Wash.

Spokane Milk Prices Raised

Consumers Resent Action of the Distributors

Spokane milk distributors have raised milk prices and considerable resentment is voiced by consumers.

Quarts, which had been selling all winter at 10 for $1 are now 9 for $1, and pints sell at 16 instead of 18 for $1.

Milk prices in Portland are 10 cents a quart and 5 cents a pint. Deliveries of a quart a day are charged for at the rate of $2.75 a month if paid in advance.

Tacoma dairies quote 10 quarts for $1, although some of them sell as many as 13 quarts for that sum.

Seattle dairies sell milk at 8 cents a quart.

"Our legislative committee considered the milk increase today, and we have resolved to fight it to a finish," said F. C. Campbell, corresponding secretary of the associated committees of fraternal, benevolent and labor organizations. "The large distributors who have made this advance of 1 cent a quart, or 4 cents a gallon, to the consumer say it is to reimburse the producer. Yet we are informed that the producer will get only 1 to 2 cents more on the gallon, while the distributor gobbles up the rest."

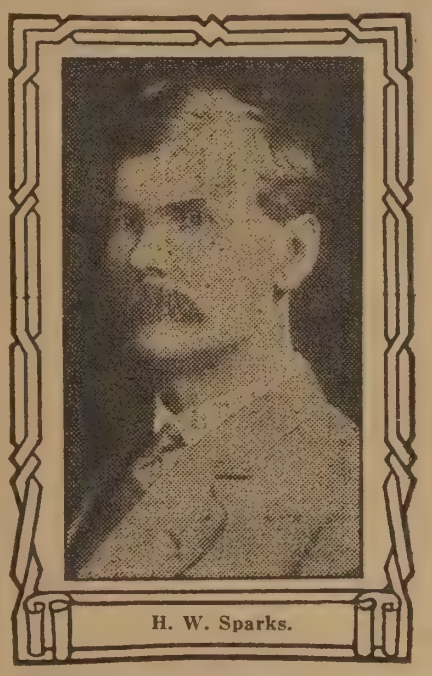
Mrs. J. M. Simpson, president of the city federation of women's clubs, said: "This seems a poor time to raise the price of milk, with fresh pastures coming on. I have purchased 11 quarts of the very best milk all winter long from the Hiawatha-Holstein dairy for $1. I understand this company will now ask 10 cents a quart. Why any distributor should ask more is not plain to me."

That tells one side of the story—the consumer's point of view. Here is the other side, as stated by David Brown, president of the Hazelwood company, the largest distributors in the Spokane district:

"Twenty-five years ago I personally delivered 24 quarts of milk for $1. Nearly every one at that time could not afford to take over a pint of milk a day and therefore it required 48 deliveries before I received a dollar, and most of them asked me to wait until the next time, which made 96 deliveries for a dollar.

"At that time wheat was selling at 15 cents per bushel and hogs between 2 and 3 cents per pound. We sold a number of fat beeves at from $12 to $15 a head that would today bring $150 a head.

"The producer is being paid 25 per cent, or 5 cents per gallon, more than at this period a year ago; 2 cents of this advance being paid them at the present time.



"I believe that every dairy with an average score above 95 points, and there are a lot of good ones, both large and small, can not make any money with the present price of feed and milk.

"We have confronting us today a crisis in the food market such as the world has never known. If we refuse to recognize this and attempt to buy milk at anywhere near the prices of the past it would simply bring about one result. The farmers would dispose of their cows and discontinue the business and go into the wheat and meat production, which is more profitable.

"Practically any cow that is in meat condition will bring from $100 upward.

"The season has been abnormally late, preventing the dairymen from getting their cows on grass, and it has forced them to buy feed at unheard-of prices, and this has caused us to decide at the present time to pay them 25 per cent more than we have in the past for their product. We feel that if we do not do this that there will be but one result; there will not be enough milk of the high grade that is now demanded for this city to supply the business. In fact, I understand that in the last winter some milk was shipped in to different distributors from the Coast, owing to the short supply of the right quality of milk here."

Washington Portraits No. 13.

H. W. Sparks.

H. W. Sparks of Fisher was born in Clinton county, Iowa, May 23, 1856. During his boyhood and youth Mr. Sparks went through the routine so common on Iowa farms a generation or so ago of working on the home farm, working for other farmers, attending school when he could be spared, and finally of renting a farm for himself. He attended Cornell college one year, and left with the intention of returning to complete his course. That which occurred to frustrate this plan is a matter of history, for it was during the famous "grasshopper years" of 1876-1878 that young Sparks farmed it for himself, intent on making enough to carry him through the remainder of his college course. Many an older farmer was put out of business by the brown hordes which descended on every growing thing, and after viewing the wreck of his fortune the youngster turned his back on Iowa and became a Kansas homesteader. And there, to quote his own words, "we sowed and planted, and the hot winds harvested." Those were the days when men left home in the morning with green fields waving on each side of the road and returned at night to find those same fields parched and brown.

After this came a succession of adventures. The young man followed the line of a new railroad into Montana in 1883, tarried there long enough to become superintendent of mine and mill; and thereafter, on the advice of his physician, sought the lower altitude of Kettle Falls, Wash. Here Mr. and Mrs. Sparks bought and cared for one of the first orchards in the upper Columbia valley. They read all the farm journals they could secure, and soon were taking a prominent part in the development of the community. A fruit association was formed with 22 members and a subscribed capital of $55. Within two years the membership had increased sixfold, a warehouse had been built and the association had money in the bank.

Again sickness intervened to break up the young family on the farm, but after various vicissitudes and misfortunes Mr. Sparks became connected with the extension department of the Washington State college, then commissioner for Stevens county at the Alaska-Yukon-Pacific exposition, and was finally made supervisor of demonstration farms for the state college. In this capacity he did a great work in advocating the growing of corn and alfalfa in western Washington, the use of lime on agricultural lands, charpitting as a method of clearing stump land and was one of the pioneers in boys' and girls' club work.

At the present time Mr. Sparks is farming in Clark county, where he is putting into practice the things he advocated during his connection with the Washington State college. His plant-breeding experiments have progressed to a point where he expects soon to have something of value to present to the public.

The next in the series of Washington portraits will be that of W. J. Blanchett of Quincy, and will be given in next week's issue of The Washington Farmer.

Bean Meetings.

County Agriculturist J. R. Shinn will hold a series of bean meetings throughout the Spokane valley in the irrigated districts, urging the owner to sign contracts with an eastern seed house offering to pay 5½ cents a pound for the beans and to furnish the seed to the growers.

Spokane Land Bank

Gets Capital Stock of $750,000

Having received $750,000 as capital stock, the federal farm land bank of Spokane will be able to make actual loans just as soon as the appraisals are completed. The appraisers already appointed are W. D. Graves and T. S. Hogan of Montana, C. B. Kegley of Palouse and A. L. Davison of Stevenson, Skamania county, and C. E. B. Roberts of Idaho.

Indications are that the first loans will be placed in Montana, where the first work of appraising probably will be finished.

George C. Jewett, secretary of the farm land bank reports that the total number of associations is over 500, with additional applications being filed daily.

While the minimum loans to one association must total $20,000, it is estimated that the average of those on file will run approximately $40,000. With 500 associations organized, the loans for which aplications have been made, on that basis, would aggregate about $20,000,000.

Funds will be placed at the disposal of the associations as soon as the appraisers have completed their work with the charter members of one association. Turner Oliver, attorney and fiscal agent of the bank, then passes on title. All mortgages will be in his custody and will be the security of the bond issues, which will begin as soon as $50,000 has been loaned.

Stockmen Convene

In Great Session at La Grande

The fifth annual session of the Oregon Cattle and Horse Raisers' association was held at La Grande, Ore., last week, with a large, enthusiastic attendance. Numerous matters of interest were considered and acted upon. A considerable number of the most prominent citizens and stockmen of the state, and some from other states of the northwest were in attendance and took part in the deliberations, among them being Governor Withycombe of Oregon.

One of the significant features of the resolutions was one taking the governor to task for having pardoned a man convicted through the efforts of the association of cattle stealing. The association urged that it be consulted in the future before such action be taken.

The resolutions indorse the work of the market committee of the National Live Stock association and appropriate $300 toward its maintenance;

Indorse the request of the Washington Pure Breeders' association for half rates on purebred animals when accompanied by the pedigrees.

Ask the secretary of the interior to continue suspension of the 640-acre homestead act until after the war, and that prefeence be given soldiers.

THE PATRIOTIC LEGION OF WASHINGTON

Membership Open to Men, Women and Children.

I am a loyal and patriotic American. I most earnestly desire to do my share in helping to defend the honor of my country in time of war. I therefore request enrolment as a member of THE PATRIOTIC LEGION OF WASHINGTON and pledge myself to the work of increasing our nation's food supply during the war into which our country has been plunged.

Signed.....

Date of Enrolment ..... Address .....

When signed forward this blank to the Editor of The Washington Farmer, Spokane, Wash.

The following are enrolled as members of the Patriotic Legion of Washington:

R. L. Thonney, Pullman; W. Thonney, Pullman; E. H. Ohles, Spangle; George W. Kimber, Deer Park; Alex. Morrison, Valley; Edwin Beeman, Sultan; C. A. Boberg, Mica; A. M. Bollinger, Tumwater; Forest Decker, Cashmere; H. L. Sanderson, Chewelah; L. H. Osborn, Burley; Hans Jensen, Port Blakeley; A. Erb, Port Stanley; Mrs. May Bradbury, Wenatchee; James I. Paul, Big Lake; J. A. Pennington, Yale; Harlan Nelson, Meyers Falls; R. L. Pierce, Cloverland; C. A. Casebolt, Waitsburg; Fred E. Fuller, Mansfield; F. R. Judd, Silverdale; I. F. Schmelzer, Pomeroy; George Turner, Port Blakeley; M. P. Lillard, Pasco; Mrs. M. P. Lillard, Pasco; Delia Lillard, Pasco; John Ramsey, Mead; Rudolph Johnson, Yelm; W. H. Harding, Chelan; Frank Wilcox, Reardan; D. D. Lamson, Camden; Arnold W. Rex, Shelton; W. G. Rex, Shelton; Ethel Allen, Colville; W. H. Philips, Waitsburg; F. V. Hanson, Chelan; John Klingele, North Yakima; Esther N. Taft, Lebam; Frank Griffin, Lebam; Alda Griffin, Lebam; O. H. Dixon, Lebam; Ruth Dixon, Lebam; Lenore Dixon, Lebam; Neta Dixon, Lebam; Guy Dixon, Lebam.

An additional list of members as received and enrolled will be given next week.

The A B C of Road Construction

Protect Culverts at Both Ends by Concrete Wings

By FRANK W. GUILBERT, chairman executive committee Washington State Good Roads association.

III.

Going a little further in drainage matters. We have taken into consideration the getting of the water off the road quickly by having the center of the road higher than the edges. We have also written about getting the water away from the road by having our ditches so built that the water will surely run to some lake, river or low spot away from where any damage can be done to the road bed or surface.

Often it is impossible to take the water to an outlet so it can be carried away from any possible damage to the road by keeping it to the ditches on one side of the road or the other. In this case it becomes necessary to employ some means of taking the water to the opposite side of the highway in order to get the result desired. To do this a means of getting under the road must be found. "Culverts" of wood, iron or concrete are employed for this purpose. This term is used for pipes or boxes made of the above named materials which must have a large enough opening to permit the water to flow through it under all conditions. This culvert must also have sufficient pitch to make the water flow through it easily. Sometimes it is difficult to get enough fall between the inlet of the culvert and the outlet, but enough pitch should be given the pipe, if possible, so that it will scour or wash clean as the water runs through it. Culverts should be protected at both ends by concrete wings, so the water will be sent into the pipe. Often if the ends are not protected the water will force its way through the foundation of the road outside of the culvert and finally wash the road out.

The selection of the location for culverts is very important. They should be placed at a point where they will serve the purpose they were placed for. Many times one will see culverts in place that haver been wet inside since they were laid. Others are placed and not covered with sufficient material to protect them from the shock of the traffic. Some are made to carry a greater weight of material than the type was intended for and they fail.

The methods of culvert placing are worth a lot of study. A great sum of money is wasted every year by thoughtless placing of culverts in our roads.

NEXT WEEK MR. GILBERT WILL SHOW HOW A TWO-HORSE TEAM CAN DO THE WORK OF FOUR HORSES IF YOUR HILL IS CUT FROM 10 PER CENT TO FIVE PER CENT GRADE.

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unusued portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction, and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

Why Kegley Is Unfit to Lead the State Grange

If you believe that C. B. Kegley was both clear-headed and sincere in indorsing the swindling Northwest General Trading company, and recommending granges as local organizations, as well as members of the grange individually, to patronize that fraudulent business institution after his "personal examination" of its business affairs—then The Washington Farmer does not expect your agreement in the proposition that the state grange deserves to be put into more capable hands.

If you believe that the Washington State grange is bigger than any man in it, that it is too big and too important and too valuable a farm organization to be dominated by the selfish and ambitious schemes of any one man, then you will uphold The Washington Farmer in its vigorous attacks against aligning the state grange with fraudulent concerns.

If you believe that The Washington Farmer is taking a long look ahead and sees clearly that the highest interests of the grange lie along the line of advocating true cooperative principles and fighting to the bitter end all concerns and institutions which misuse the name of cooperation to further their own swindling practices—then you will lend a hand in the determined effort to put at the head of the state grange a man of clear brain and rugged honesty.

Producer Must Receive More for Milk or Quit the Business

On another page we give the news facts about the advance in Spokane milk prices. Consumers are protesting, but so far their protests show a failure to understand or to consider the irresistible economic laws that are forcing the producers to ask more for their product.

The farmer must pay more for labor, more for feed and more for his cows. He must receive more for his product or get out of the business. People who can not comprehend that fact are either blind or unreasonable.

And a word can fairly be said in support of the distributor. Every cost item has advanced upon him. Labor, bottles, caps, ice, horseflesh and feed, if he delivers in the old way; gasoline if he uses automobile delivery—all these cost factors have shot up tremendously.

The real question in the Spokane controversy is not whether the consumers should pay more for milk. All facts weighed in a spirit of fair dealing, it must be seen that the advance is reasonable. The real question in this case is on the equitable division of the increase between the producers and the distributors.

Ups and Downs

The same people who shipped their brood sows to market with the early rise of the hog market are now tumbling over each other in a search for breeding stock. When hogs bring as much as $15 per hundred pounds it isn't surprising that there is a rush to enter the ranks of producers again.

Extremes work harm to a great industry. Hogs are profitable under ordinary conditions; some years, under extreme and unusual surroundings, the raisers have lost money on them; generally the next few years have restored the balance and evened things up.

As we reenter the hog raising business let us do it soberly, seeking a fair and legitimate profit rather than an extreme one. If we expect too much we will surely be disappointed in a series of years.

Prepare for Harvest Now

The opening of spring is reported to be finding many farmers unprepared for the unusual rush of work putting in the crops. Spring is late, and there is demand for extra large acreage of crops. Hence, everything should be in the best possible condition to rush the work to its earliest possible completion.

The difficulty now being experienced should prove a valuable lesson. Get ready for harvest now. Do not wait till the grain begins to ripen before overhauling the machinery or ordering new machinery where it is needed. Communities should see to it now that there will be enough binders or headers or threshers or combined harvesters in the districts to handle the crops in the time nature allots for harvesting. There is a possibility that out of the need something of a cooperative harvesting scheme might be evolved. A few farmers could own a harvesting outfit cooperatively and operate it cooperatively. The men in the average community, if they combined their efforts, could go a long way toward making up a cooperative harvest crew, though transient labor in large numbers will be required throughout the country.

But whatever be the plan, every harvest problem should be thought out now, and the first day crops are ready to harvest should find men and machinery and storage equipment ready.

Mobilize a Million Boys to Work

No more interesting wartime announcement has come from Washington than the statement that the United States department of labor has undertaken the mobilization of 1,000,000 boys as active farm workers.

If that plan is carried out with energy and intelligence it will go far toward solving the farm labor problem in the United States this year.

The department's mobilization plan contemplates the establishment of enrolling stations in every city in the country. Boys from 15 to 19 years of age, under proper supervision, would camp on farms wherever their services are needed.

For three reasons The Farmer hopes that the project will be put through.

First, the farms will need this labor.

Second, the experience will do the boys a world of good.

Third, it will lead to a better understanding between the boys in the towns and the boys out on the farms.

That it will be beneficial to the boys those of us who knew farm life when we were young have not a doubt. It will help them physically and morally as well. It will tone down their superficial "city smartness" and teach them that they can learn a lot of things that really count from their cousins who are closer to nature than they have been.

At the same time the country boys will also gain from this closer association with the youths from the towns. They will soon discover that while the strangers seem "green" about farm life, the planting and harvesting of crops and the care of live stock, they will be eager and quick to learn, and before long will be pressing the country boys pretty hard in a friendly rivalry to outshine.

It is good to note this closer drawing together of the people of the cities and the countryside. Town and country have been slowly drawing apart. The automobile and good roads have done much to correct that tendency; systematic utilization of city labor in helping to produce and harvest crops will do more. The relation between those who dwell in the cities and those who live out in God's beautiful open spaces should be broader than a mere exchange of products for wares. There should be a generous and constant exchange of spirit, of point of view, of friendly regard and genuine neighborliness.

Washington Gleanings.

Walla Walla is to build a 130,000-bushel grain elevator.

Spokane county commissioners have passed resolutions calling for $150,000 highway work this summer.

The farmers' organization at Plaza, formed recently, will build a $75,000 elevator at that place this summer.

Cowlitz farmers have formed a federal farm loan association. Subscriptions to the amount of about $27,000 were represented.

The Chehalis Valley Egg and Poultry association sold more than 1300 dozen eggs during March at an average price of over 25 cents a dozen.

New fruit warehouses at Toppenish under contract show an aggregate of more than 1000 cars of common storage and from 375 to 500 cars of cold storage.

Estimating on a basis of a minimum of $20,000 for each association, loan applications on file with the Spokane farm loan bank aggregate more than $8,000,000.

Broccoli, a hardy variety of cauliflower, can be raised in the Puyallup valley as a commercial product with the proper care in planting and cultivation, in the opinion of Henry Benthien, the well-known vegetable expert of Gardenville.

War has caused the Colfax Commercial club to abandon plans for holding a horse show in that city this spring. It was stated that it will require about $400 to put on a show and that the money may be needed more for some other upurpose.

Improvements to cost approximately $10,000 that will practically double the floor space and the efficiency of the plant are being made by the Olympia Canning company. The output of the plant will be increased from 55,000 cans of fruit and vegetables put on the market last year to 100,000 cans this year. More than 200 persons, mostly women, will be employed at the cannery during the coming season. The fruit and vegetables will be bought in Thurston county.

The Citizens' league of eastern Lewis county has decided definitely to build a warehouse at Morton. It will also build warehouses elsewhere in eastern Lewis county as the development of that section demands. The committee appointed to make plans for building the warehouse is composed of R. T. Siler of Randle, J. A. Ulsh of Glenoma, W. A. Davis of Randle, Zack Anderson of Randle, John Snyder of Lewis, A. R. Rutherford of Morton, E. D. Overstreet of Swofford, George H. Landes of Mossyrock and W. W. Morse of Morton.

What Others Say

The Farm Journal: The sharper the disks the easier the day's work.

Southern Agriculturist: There is always something which we can do better than anything we have yet done.

Farmer's Review: As a matter of fact, the man who keeps sheep well and stays by them, is always pleased, because they make money.

Kimball's Dairy Farmer: The day is not far distant when in all parts of the United States more of the gross farm income will have to be spent for feed and fertilizers.

Iowa Farmer: The first important consideration that ought to claim the attention of the milk producers is to provide for a more equal supply of milk. This can be done by having more cows freshen in the fall or early winter.

Will Draft Big Army

Selective Conscription Bill Passed

Both houses of congress last week passed by overwhelming majorities the bill asked by President Wilson providing for selective conscription of men to build up a big army for this country. There still remain to be decided many of the details of the bill, a prominent one being the ages between which men may be drafted into the service.

The measure passed by the senate places the maximum age at 27 years, while that passed by the house places it at 40 years, meaning that only men under these ages could be drafted into the proposed army. It is probable that a compromise will be reached.

Nothing definite is yet decided upon as to the immediate carrying out of the provisions of the bill when finally agreed upon as to details, but it is the intention of the administration leaders to begin at once the building up of an army as rapidly as the recruits can be trained. Already large numbers of the best young men of the nation are in training camps, to which they have volunteered, preparing for officers' positions preparatory to taking a part in the later training of the enlarged army. An army of half a million men within six months to a year after the final enactment of the draft bill, and possibly as high as 2,000,000 within two years, is a possibility suggested by men prominent in the movement for preparedness.

Allied Gains Continue.

Reports from Europe continue to indicate that the allied armies are making consistent gains against those of Germany. No German victory has been reported for several weeks. Whether this is a series of real victories over the Germans or whether the latter are deliberately retreating in a great, strategic move, is a question that many are asking, but none are capable of answering.

Want Troops in France.

General Joffre of France, who is in this country as a leading member of the international conference now at Washington, D. C., has given out a formal statement declaring that it is the ardent hope of the people of France that very early a detachment of American troops may be fighting side by side with the French in the trenches of Europe. This sentiment finds a warm appreciation with many citizens of this country, who believe that the United States should send soldiers to Europe, but with others who believe that this country's greatest service to the cause of humanity is the supplying of food and munitions to the allies the idea is not popular.

The Submarine Menace.

No longer are the allied nations making light of the submarine menace. Statements from the leading statesmen of England and France indicate that it is being keenly felt, and that as a result food conditions in those countries are grave. Whether the United States entered the war early enough to prevent much suffering from food shortage among the peoples and the armies of her allies, and a consequent weakening of resistance and agression against the forces of the Teutonic allies, is a question being seriously asked.

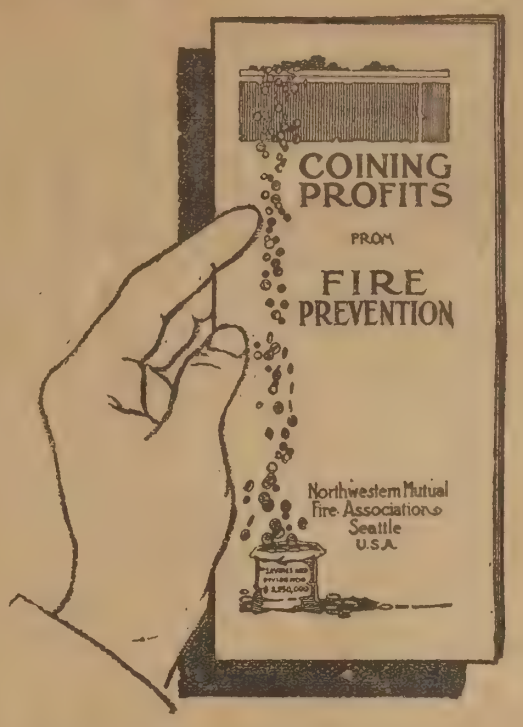
Much Food Needed.

The greatest need of England and France and their European allies, as well as of this country, is food and means of transportation. While the United States is moving rapidly toward the establishment of a great army, an even greater effort is being made to insure a large production of foodstuffs and means of conveying it to the stricken people of Europe who are fighting against the German-Austro allies.

Here Is One Solution

To the Problem of Competent and Contented Farm Help

The following is an extract from a letter received from a farmer living in Idaho, setting forth one method of solving a part of the problem not only of farm labor, but of country life as a whole:



"The man with one or more sons large enough to take the place of hired men is indeed fortunate, providing he can keep them contented on the farm, which seems to be getting more difficult all the time. I am giving my boys a small bunch of sheep for their own, purchasing a few purebreds this spring to head their little flock, and I am trying to make it as easy as possible for them, with plenty of good reading matter, a good home, and labor-saving machinery as fast as I can get it in order to take out as much of the drudgery as possible. The oldest son has a strong desire to become a blacksmith, so I have purchased a forge and a blacksmith outfit, and there is nothing he would rather do than tinker on a rainy day, and at the same time he is learning to sharpen plows and cultivator shovels and do all kinds of repairing. While our farm is less than a mile from town, my boys very seldom care to go to town, as they have about all they care for at home."

Can Raise Beans.

"Many farmers can raise beans on west and north slopes," says F. P. Hardin of Lincoln county, "and the farmers along Hawk creek, Indian creek and on Sand Flat have good bean ground. East and south slopes are not good for beans, as they almost invariably frost, the sun striking them early in the morning causes them to die after even the slightest frost. On the north and west slopes they are protected from the sun until the frost has a chance to melt, and then they will get more moisture also. So far as potatoes are concerned any of us can raise any amount on our summer fallow."

County Road Crews Start.

The Burlingame road crew has started the rock crusher at the Feider farm near Pomeroy, Washington, and will crush enough rock to improve about one-fourth mile of the McKelrnan grade. Contract has been let for crushing the rock for the street improvement in the east end of Pomeroy and construction work will probably begin within the week.

To Our Farm Policyholders:

THIS book may save your **home from fire**—your barn, your warehouse, and priceless **human lives.**

It points the way to Safety and to Profit by **Preparedness against fire,** the effective way—the Northwestern Mutual way.

This book has gone forward to you by mail.

READ IT CAREFULLY.

Study its lessons. Learn what fire dangers lie in wait to destroy your property—then "clean house"; prepare!

Every fire prevented is so much property saved; it's money in your pocket and in the pockets of thousands more Northwestern Mutual policyholders!

The fewer the fire losses the more money to return to YOU in dividends.

Already these savings exceed $2,250,000. MAKE YOUR OWN PROFITS GREATER!

After you have read the book, get it into the hands of some neighbor or friend.

Don't let the good work stop; let every one join this Fire-Fighting Army!

TO THE PUBLIC:

Send your name and address; we want YOU to have a copy of this book. Write today; by tomorrow you may not need it.

Questions
Are Answered by A. B. Nystrom

Please furnish me with a recipe for making whitewash for dairy barns.
E. W. M., Tekoa, Wash.

The best formula for whitewash that I know of is that which is recommended by the United States department of agriculture and is as follows:

Take a half bushel of unslaked lime, slack it with boiling water and cover it during the process to keep in the steam. Drain the liquor through a fine strainer and add it to a peck of salt previously dissolved in warm water. Three pints of ground rice, boiled to a thin paste, should be stirred in while hot. Add five gallons of hot water to the mixture, stir well and let stand a few days covered as nearly tight as possible. It should be applied hot.

The above formula makes a very durable whitewash. If you want one less durable I would suggest that you simply slack some lime in the ordinary way and add to it some disinfectant, such as zenoleum or other coal tar disinfectants, or a very small quantity of mercury. This must be applied with a brush.

Breeding Ability of Twins.

I have a pair of twin calves that I should like to keep. One is a heifer and the other a bull calf. I am told that the heifer calf will not breed unless the other twin is also a heifer. Kindly advise me on this point.—L. K., Lyman, Wash.

In case of twin calves, one being a heifer and the other a bull calf, there is doubt that the heifer will breed. In some cases she will, and in other cases not, and I would be inclined to think that it would be safe to dispose of the calf rather than take the chance on her being a breeder. In cases of pure bred calves, however, it usually is wise to raise them and try them out. So far as I know one can not tell whether they will breed except by a careful examination of the reproductive organs, which, of course, should be done by an experienced veterinarian, and even then it is a difficult matter to determine.

Do You Know That

You should never put off till tomorrow what you can do today?

Balanced Ration for the Dairy Cow

To the Editor: We have been well satisfied with your paper and think every farmer should have it. I would like to see printed in The Farmer a balanced ration for the dairy cow. Make up a ration showing the feed required, the digestive nutrients and the value at the present market prices. I believe it would be of great interest and much value to your subscribers. Please give the digestive value of corn silage in fat, protein and carbohydrates; also for oats, peas and vetch silage.
G. F. R.
Ellensburg, Wash.

On page 10 of the February 15 issue of this paper you will find a balanced ration worked out, together with the cost of our ration. If our correspondent has other feeds to select from we shall be pleased to make an exact calculation for him if the list of feeds is supplied.

The following table shows the comparative feeding value of different kinds of silage, taken from Henry & Morrison's "Feeds and Feeding":

Digestible Nutrients in 100 Lbs.

	Protein	C. H.	Fat.	Nutritive ratio.
Corn silage (well matured)	1.1	15.0	.7	1:15.1
Oat and pea silage	2.8	12.6	1.0	1:05.3
Vetch silage	2.0	15.2	.8	1:08.5

Obviously the condition under which the crop is grown and harvested will affect these figures, and in the case of silage mixtures the variation in relative amounts of each crop will make a difference in feeding value.

Best Fed Herds Make Double Profit

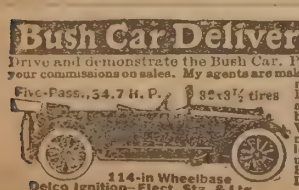
Three hundred and ninety individual cows were tested in 1916 in the Marion County (Oregon) Cow Testing association, 241 completing the year's work, including 50 2-year-olds. K. Hannerman is the tester.

The association averages per cow were as follows: 6343 pounds of milk, 309.3 pounds butterfat, .3346 average butterfat price received, $103.49 value of butterfat per cow, $58.46 feed cost, $45.03 profit per cow.

In answer to the question: Does it pay to feed? The average profit per cow in the four best fed herds was $58.70, while the average profit per cow in the four poorest fed herds was only $33.31. Considering the difference of value of the skimmilk, manure and calf of the two groups, the value of which products being left to offset the cost of labor, the profit of the first group would be fully twice that of the latter.

Only 33 cows finished the year with no ensilage. Their average net profit was $13.51 less than that of the cows receiving some ensilage during the year.

The high cow of the association is owned by W. T. and F. A. Garbe of Aumsville. She produced 12,935 pounds of milk and 652.5 pounds of butterfat in 12 months of milking at a net profit of $132.63. Her age is 14 years and she is a cross between registered Durham and Jersey stock. While she is a wonderful cow with the good qualities of both breeds, she has no profitable daughters in milk. Two other cows produced more than 600 pounds of butterfat. My Mowat, a registered Jersey cow, owned by Warren Gray, made 631.4 pounds of fat, with an average test of 6.48. Poanie I. is a grade Jersey owned by J. B. Bowne of Turner, Ore., produced 11,874 pounds of milk and 630.6 pounds of butter in 10 1-2 months. She was sired by Hazel's Fern Tormentor, a registered Jersey, all of whose daughters are exceptional cows.



The high 2-year-old is a grade Jersey owned by L. W. Potter of Salem. Her record is 415.9 pounds of butterfat in 10 1-2 months, with an average test of over 6.6 per cent. The high yearling heifer, Untwood Figgis, a registered Jersey, owned by F. A. Doerfler, made 391.1 pounds of butterfat in 10 months.

GOOD NEWS FOR RENTERS AND FARM OWNERS' SONS

You can get a rich 160-acre farm free this spring, excellent for growing grain and mixed farming. Write for copy of "The Home Seekers' and Settlers' Guide." It gives full facts and tells what others are doing. Address Canadian Northern Railway, A. A. Brostedt, D. F. & P. A., 605 Hastings St., Vancouver, B. C., Canada.—Adv.

Does the Work of Two Men and Six Horses

"ONE man with the Advance-Rumely "8-16" tractor can do as much or more work than two men and six horses", says an "8-16" owner who has proved it.

The "8-16" is strictly a one-man outfit. Tractor and plows are combined in a single machine and plowing is made a one-man job.

"It beats any tractor handling the plows that I've ever seen."

With the Advance-Rumely "8-16" you plow the same as you do with a horse-gang—the plows are right in front of you, the work always in sight.

You can back up with the plows, cut square corners and work close up to the fences.

"It has lots of power on the belt and at the draw-bar."

Besides handling your ground working equipment, the Advance-Rumely "8-16" will give you equal efficiency on the belt,—in fact at any power job, draw-bar or belt.

Successfully burning distillate and similar cheap fuels, the cost of operation is low.

The "8-16" has a powerful four cylinder motor, all working parts are well protected and the carburetor is equipped with a special air cleaner.

Ask our nearest branch for a catalog of this new one-man all purpose outfit.

FATTENING HOGS

How Much Wheat Is Required?

To the Editor: I wish you would tell me the amount of ground wheat it takes to fatten a hog, the hog having its full growth. How much more wheat would it take were the wheat not ground? How much wheat does it take to put on a pound of fat? At what age is it most profitable to fatten a hog, provided it had the full benefit of growing? H. J. K.

The above question was answered as follows by William Hislop, professor of animal husbandry at the Washington State college:

It will take approximately 500 pounds of whole wheat to make a hundred pounds of gain in a mature, fattening hog. It will take 472 pounds of ground wheat to make a hundred pounds of gain in a mature fattening hog; therefore, in the first case, five pounds of whole wheat are required to make a gain of one pound; and, in the latter, 4.72 pounds of ground wheat for a pound of gain.

If one assumes that at weaning time a pig will weigh 50 pounds, it will take 180 pounds of ground wheat to make the pig weigh 100 pounds and an additional 472 pounds of ground wheat to make the hog weigh 200 pounds. So far, the total amount of wheat would be 652 pounds of ground wheat. This amount could be materially reduced by using 10 per cent of digester tankage of the 60 per cent grade.

It is customary nowadays to fatten a hog while it is growing. It never pays to grow a hog first and then fatten him. The best practice is never to allow a little pig to lose the milk fat that it receives from its mother. Keep the pig growing continuously, and you will net the greatest profit by marketing him at a weight of 200 pounds. A well-bred hog should reach this weight at 6 1-2-7 1-2 months of age.

Purebred Registered HOLSTEIN CATTLE.

In terms of dollars and cents the Holsteins are talking most effectively for themselves. Purebred Holstein cattle are the choice of every public institution or organization which attempts to produce milk in a scientific manner. Just ask a man who owns Holsteins, if you want to hear a story of prosperity. Every angle of Holstein superiority is fully covered in the books and pamphlets which are sent free for the asking. There's big money in the big "Black and White" Holsteins

CUTTER'S

BLACKLEG PILLS

"California's Favorite" for nearly 20 years

For the Prevention of Blackleg in calves and young cattle

Their superiority is due to nearly 20 years of specializing in "Vaccines and Serums only."

Year in and Year Out they give better satisfaction than any other vaccine made, and the cost of a few cents per dose is cheap insurance against a disease that always takes the fattest and best.

Single Pills may be used for ordinary and range stock.

Double Pills should be used for pure bred and high grade stock.

Use any Injector, but Cutter's simplest and strongest.

Prices:

10 dose pkge. Single pills	$1.00
50 dose pkge. Single pills	4.00
10 dose pkge. Double Pills	1.50
50 dose pkge. Double Pills	6.00
Cutter's Pill Injector....	1.50

Insist on Cutter's. If unobtainable, order direct.

Write for new booklet, "The Control of Blackleg." It tells about **Anti-Blackleg Serum** which cures Blackleg and may be used simultaneously with vaccine to combat outbreaks and safely protect valuable stock.

The Cutter Laboratory, Berkeley, Calif.

The Cutter Laboratory of Illinois, Chicago Eastern Agent

To Raise Goats

How Best to Start, Feed, Etc.

To the Editor: I am thinking of raising goats. How would you advise me to buy them—old or young? What kind of food is best for them? Do creameries buy goats' milk? How soon would you wean a young goat? How much do you have to feed them? How uong?? How long should you keep the young goat before butchering?

A. F. S.

The above question was answered as follows by William Hislop, professor of animal husbandry at the Washington State college:

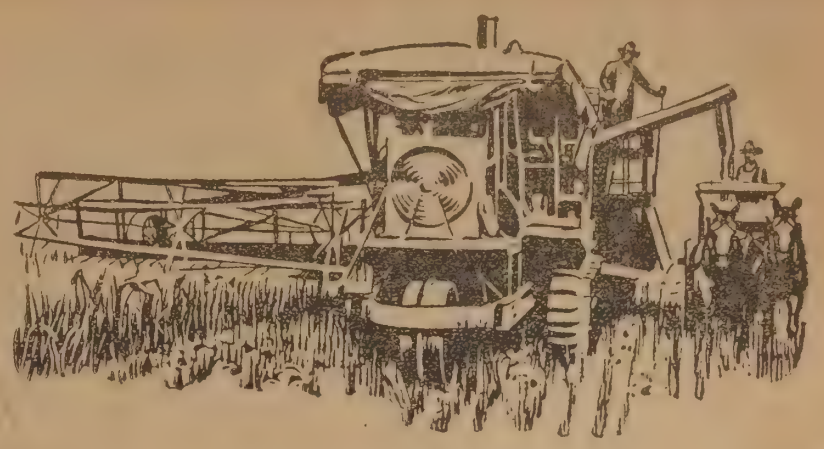
You should purchase yearling does that are carrying young, so that you will immediately begin to realize returns from your investment. To buy young kids means to lie out of your money for a year at least. To buy old does means that their period of usefulnuess will be short. At best the breeding season is about six years.

The best winter feed for goats is alfalfa hay, clover hay, oat hay or wheat hay. Silage is most excellent, if obtainable. Two to four pounds of silage is sufficient for a pregnant doe in winter, supplemented with 3-4 lb. of any of the above mentioned hays. In summer no hay, grain or silage is necessary, provided good browsing or grass is obtainable, either in the forest reserves or on your own farm.

Creameries are not in the habit of buying goat's milk, but many construction companies, particularly in western Washington, who employ foreigners would be glad to buy such material.

A young goat, or kid, is weaned at from four and one-half to five months of age. A kid will begin to nibble grain and hay or grass at the age of 14 to 21 days. They should be fed in a "creep," so that when the weaning time arrives they will never miss their mother's milk. At that time they will eat 1-10 to 1-4 pound of grain, sifted oats, per head per day, but it is not necessary to feed them any grain if pasturage is abundant. A kid may be butchered at any time after three or four weeks of age; but I advise you to market them at the same age as lambs and weighing from 55 to 65 pounds.

Veterinary



Dr. S. B. Nelson

Boils.—I have a horse that has small boils about the size of a pea which break out all over him. At times they disappear except where the collar rubs him. They swell until they are the size of a black walnut and then break.—R. C. S., Blaine, Wash.

Answer.—Your animal has what is known as summer boils, and there is no specific treatment that will absolutely cure it. You can help him materially by giving him an eight dram ball of aloes after he has missed one meal. When the purging has stopped, give him half an ounce of Fowler's solution of arsenic morning and evening for 10 days to two weeks. Rest him a week, and resume the treatment.

Cattle Die.—I had 20 head of young cattle in thrifty condition vaccinated on March 31, and on April 2 or 48 hours after vaccination, three head were dead. The veterinarian vaccinated them in the right hip, inserting the instrument straight down into the flesh. Have been told that proper place to vaccinate is in shoulder or neck and that it should be placed just under the skin. The animals became sick 24 hours after vaccination, their right hip was badly swollen and they were almost completely paralyzed in this leg. What was the cause of their death and who was the responsible party?—J. J. D., Uniontown, Wash.

Answer.—It does not make any particular difference where the vaccine is injected. In is generally more convenient to get the vaccine under the skin of the neck or behind the shoulders because the skin is thinner there than any where else. It is impossible for me to express any opinion as to the cause of their death and as to the responsibility in the matter of the vaccination, only the fact upon investigation of the animals would determine that. An outside party could not give any opinion of any value on that.

4 Cents a Bushel

PUTS your standing grain in bag or wagon with a Holt Gas Harvester. Makes one-third more acres with one-third less horses than a "ground drive." Moves evenly over hills and ashy soil; handles tangled down grain a binder can't reach. And it's **long lived.**

You can't stall the 4 cyl. Holt Harvester Motor—slow speed, big bearings, dust proof, high tension Magneto, impulse starter. (We mount them on old machines too.)

The 1917 HOLT JUNIOR Combined Harvester A popular size, 16 or 18 ft. cut; gas or ground drive; pulled with tractor or horses. The Junior is made light on the Holt Holley design. Wide rear—bulk grain attachment if desired. The Gas Junior also makes a complete stationary outfit. Sold f. o. b. Spokane.

Purchasers or their Sons entitled to free annual Motor School Course in Spokane.

From L. F. Anderson, Palouse, Wash.

"Last Wednesday the Harvester threshed 451 sacks of wheat in 4 hours. With only 320 acres to cut, I figure I saved $1500 on my harvest bill; 4 cents a bushel will cover my expenses."

IT'S natural that a gentlemanly feeling should prompt one man to tell another about W-B CUT Chewing, so he, too, may enjoy the contentment there is in rich, sappy tobacco—and also avoid so much chewing and spitting.

The common-sense of it appeals to people with brains. There's no getting 'round facts, W-B will save a man money—a little chew lasts and satisfies. A 10c. pouch goes twice as far as ten cents' worth of the old ordinary kind of chewing.

Made by WEYMAN-BRUTON COMPANY, 1107 Broadway, New York City

GRANVILLE LOWTHER
Editorial Contributor

The government reports show that the cold wave of January 29 to February 26 destroyed the entire fruit and bloom of strawberries in the states of Florida, Alabama, Mississippi, Louisiana and Texas. Little domage was done to plants, but the shipments were heavily reduced in sections from which the crops had started to move, pending the refruiting of the plants, which delayed the movements from four to five weeks.

It seems to me strange that the percentage of apple production in the United States is largest in those varieties which we consider in our northwest country the poorest. Of course, we understand that the Baldwin is a good apple for New York and New England, but that it is not well adapted to this country, yet it seems strange that the Ben Davis should be the second largest in the percentage of production in the United States. The percentages given for 1916 are as follows: Baldwin 17.3, Ben Davis 14.2, Winesap 6.1, York Imperial 5.0, Rome Beauty 4.4, Jonathan 4.2, Northern Spy 3.5, Greening (R. I. Gr.) 3.4, Grimes Golden 2.9, Wealthy 2.7, Oldenburg 2.5, Yellow Newtown 2.5, Staymen Winesap 2.4, Gano 1.9, Yellow Belleflower 1.5, Wagener 1.4, Tompkins King 1.2, McIntosh 1.1, Fameuse (Snow) 1.1, Gravenstein 1.0, Golden Russet 0.8, Limbertwig 0.7, other varieties 18.2. Total, 100.0. Plant only the best. G. L.

FRUIT GROWERS ELECT
Organization Passes Good Year.

Paul H. Weyrauch of Walla Walla, Wash., has been elected president of the Fruit Growers' agency, an organization of fruit growers and shippers of Washington, Oregon, Montana and Idaho at the first annual convention of the organization, recently held at Spokane. J. B. Adams of Leavenworth, Wash., was elected vice president and L. J. Blot of Spokane, secretary.

The following trustees were elected: J. B. Adams and J. F. Sugrue, Wenatchee; C. H. Swigart and W. N. Irish, North Yakima; W. M. Sackett, Montana; B. L. Ingard, Idaho; Paul H. Weyrauch, Walla Walla; L. J. Blot, Spokane; C. A. Malboeuf of Portland, western Oregon; W. T. Gwin, at large; the Hood River trustee to be named later.

The organization decided to retain its present name, there having been an agitation for a change; to organize a traffic bureau within the agency and to reduce the dues of the active members from $100 to $25.

THE FARM GARDEN

Article 10.

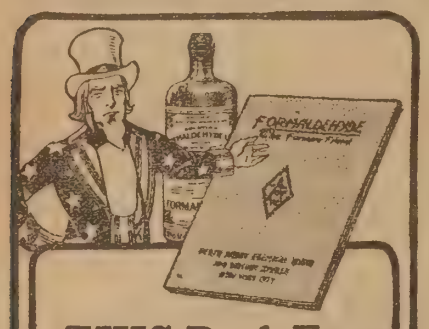
Onion Growing

The onion can be grown successfully on most good soils in the northwest. The better the soil the more successfully they can be grown, however. Onions are distinctly a surface vegetable, and, therefore, the plant food they require must be near the surface.

Onions should be planted with a drill or by hand in rows from 10 to 15 inches apart. The large varieties should be thinned to stand from two to four inches apart in the row, but the smaller varieties, such as pickling onions, can stand closer.

One ounce of seed ordinarily will sow a row of 200 feet in length and give a stand that will be satisfactory after a little thinning. It is not safe to plant them much more sparingly than this, though if the seed was distributed evenly and all came up an ounce would plant a considerably longer row. The seed should be planted only deep enough to insure moisture to bring them up. If this moisture can be had at half an inch deep, it is better than if it is necessary to cover the seed an inch.

Onions should be cultivated frequently during the growing season, but the cultivation should be shallow. It is not well to have the bulbs exposed too much to the light, but neither is it well to have any considerable amount of dirt over them. They must grow practically on the surface to do best.



Make practical use of waste land on the place.

In most localities the onion will mature readily without any artificial assistance, but where cool weather and much moisture retard ripening, it is well to break the tops over. This will hasten maturing. They should not be harvested while the tops are green. After breaking the tops down, several days should elapse before the onions are harvested. Then they should be dug and spread out in the air in a dry place to cure, after which they may be stored away for the winter in a cool place.

Onion Sets.

To produce green onions for early spring use, sets should be used. These may be purchased in the spring, or they may be grown. A good, commonly followed plan is to plant several feet of onion row in the spring, very thick. Let them live during the summer without thinning. Harvest them in the fall the same as large onions, and the small, dwarfed bulbs will be your sets for early green onions the next spring.

The "potato" onion, which is a common large onion with a number of hearts, is also used for sets. The multiplier, which grows a cluster of small bulblets at the top of the stalk, is also used frequently with good success.

Valley Farm, Boerne, Texas, W. Leghorns	266

The best individual record for the month was 27 eggs, made by a Rhode Island Red hen owned by Williams of St. Helens, Ore.

Raising Pullets

Experiments on Average Cost

By JAMES DRYDEN.

With good average results a Leghorn pullet should be raised for from 45 to 50 cents, this being reduced according to the income from the sale of cockerels, says A. G. Phillips in Bulletin 196 of the Indiana experiment station.

The extract given herewith is taken from a popular edition of the bulletin, which does not give the prices of the feed on which the figures are based. The full report will doubtless supply the omission. At present prices of grain the cost would be greater. There were 999 chicks used in the experiment, and the mortality was 17 per cent, or 170 chicks. The test ran for 24 weeks, up to about laying maturity of the pullets.

The data on the subject is not very extensive. The bulletin therefore fills a long-felt want. The following is a summary of the experiment:

1. Based on four seasons' work and several thousand chicks hatched it required 1.83 eggs set for every Leghorn chick hatched.

2. The cost of hatching these eggs was $.021 per chick, which when added to the cost of eggs increased the total cost of a chick when hatched to $.057.

3. Based on the first 12 weeks of life it took 5.69 pounds of grain and mash and 5.07 pounds of milk, costing $.1434 to feed a Leghorn chick.

4. During the same time it took 2.59 pounds of grain and mash and 3.41 pounds of milk, costing $.084, to produce one pound of gain.

5. When figuring cost of feed, fuel, labor and litter the whole cost of one pound of gain was $.154.

6. The average Leghorn pullet 24 weeks old and ready to lay weighed 2.75 pounds.

7. The feed was by far the most expensive item in the cost of rearing chicks.

8. On the basis of 100 chicks hatched and a 17 per cent mortality the per cent pullets and the per cent cockerels were 40.1 and 42.9, respectively.

9. The time of hatching greatly influenced the rate of growth of chicks, price of broilers, net cost of growing and weight of pullets at laying age. Early hatching paid best.

10. Early cockerels were sold at a profit. May-hatched broilers sold at a loss.

11. The gross average cost of a pullet was $.434. This, less profits in cockerels, made the net cost $.381.

12. Mortality varied and influenced the final cost. The average mortality of 999 chicks was 17 per cent.

OPEN-FRONT HOUSE

How Much Floor Space Is Needed?

To the Editor: Will you please define an "open-front" hen house? Do you mean a house with muslin front, or with absolutely no covering for opening? What is the proper height for roosts above dropping boards to prevent hens from walking in droppings when getting on and off the roosts? How much floor space should be allowed each hen when confined?

L. C. B., Belmont, Idaho.

An open-front poultry house is one that has its front one-half (more or less) entirely open, or covered with poultry netting. If the opening is covered with muslin or canvass I would call it a curtain-front house. It is not always understood this way. Some poultrymen look upon the open-front and curtain-front as synonymous. Some use the house as an open-front all the year except during very cold weather, when curtains are put on the windows. When I have spoken of open-front houses I have meant houses without any curtains at any time of the year, but I am aware that some writers do not make the distinction.

As to the question about roost perches they are usually placed about eight or 10 inches above the platform, or high enough to allow the use of a hoe in cleaning the boards. About the only way to keep the fowls from walking on the droppings is to use wire netting under the perches covering all the platform. This is sometimes done, though most poultrymen think it is hardly worth the trouble. The fowls do not usually walk on the droppings board very much if they have outside yards or free range. If they were confined in the house all the time it would be a good idea to use the wire netting.

If the fowls are confined in the house all the time they should have about five square feet floor space per fowl. With free range all the year they will do with about half that space.

J. D.

Over 800 Pullets Working.

The L. K. Cogswell poultry yards at Chehalis, Wash., have a flock of over 800 pullets, from which they get about 3000 eggs a week. The poultry stock is White Leghorns and Wyandottes. Mr. Cogswell sells eggs all over the country, as well as supplying a large local demand. He has 12 incubators at work

Many Farm Sales.

Many farms are changing hands these days at Burley, Idaho. Ed. Vieth sold his 160 to Simmons Bros., of Layton, Utah; A. B. Chapman sold 85 acres to Dave Jones of Ogden at $150 per acre; Melvin Walker sold an 80 south of Springdale to Joe Fife, and A. W. Anderson sold to Elmer Brothers.

Save the Thresh Bill From the Stack

"We easily saved our thresh bills by using the Red River Special," says E. L. Hall and 14 other farmers near Densmore, Kansas. Here's the thresher that's *different*. It *beats out* the grain—gets it by force. Built for *fast work* too. Saves the thresherman's time—crowds more bushels into the day's work and more pleased customers into the season's run. Write and learn why the big money makers use the

Red River Special

It Saves the Farmer's Thresh Bill

If you own a tractor, hook it to Junior Red River Special and clean up an extra income this fall. Thresh your own grain and your neighbors' too. Our "Junior" is the ideal thresher for working with a tractor or gasoline engine. It is a younger brother to the Red River Special. Small enough to make home threshing pay—big enough to make money in custom work.

Has every needed feature of the big Red River Special—famous "Man Behind the Gun"—shakers, large sieves, etc. Write for circulars.

FEDERAL TIRES

DOUBLE CABLE BASE

Driving over rocky, rutty and uneven country roads is the hardest test you can give your tires.

The constant grind, twist and shock will soon show what they are made of.

Federal Tires are built with tough treads to better withstaand this wear and tear and give best possible traction.

They are safe tires, too. For in the base, next to the rim, are four strong steel cables which hold the tire securely to the rim under severest strains. Yet it slips off easily when necessary.

Made in white Rugged and black Traffik non-skid treads. Sold by leading dealers everywhere.

The Federal Rubber Company of Illinois

Factories, Cudahy, Wis.

Manufacturers of Federal Automobile Tires, Tubes and Sundries; Motorcycle, Bicycle and Carriage Tires; Rubber Heels, Fibre Soles, Horse Shoe Pads, Rubber Matting and Mechanical Rubber Goods.

No hot boxes—no lost time—even with big loads, when you use Mica Axle Grease. The powdered mica forms a slippery, wear-resisting film, twice as effective as ordinary grease.

The Motor Car
On the Farm

Tractors in Use on Farms.

To secure data as to the number of gasoline and kerosene tractors in actual use on farms during the coming season, the office of farm management in cooperation with the bureau of crop estimates, addressed in February, 1917, inquiries to 32,000 selected correspondents. They were asked to report all tractors which were to be actually used in farm operations this season. Steam driven tractors, tractors purchased but not delivered, tractors out of commission or not to be used this season, and tractors employed for road or work other than farming wer to be excluded.

The figures given below indicate the number of tractors the actual ownership of which was clearly established and the intention to use which during the season, implied. The figures are offered not as an actual count of all tractors, but as indicating the relative employment of tractors in farming in the different sections.

One Tractor Demonstration.

The manufacturers of farm tractors have arranged to put on one national tractor demonstration for 1917. There is to be no restriction of any kind placed upon private demonstrations that may be either put on by manufacturers or dealers. Every entry in the national demonstration must be by a bona fide manufacturer of tractors, tractor plows or other tractor drawn implements and a member of the National Association of Tractor and Thresher Manufacturers or the National Implement and Vehicle association.

The manufacturers regard this class of machinery as the most important element of farm equipment; at the present time the scarcity of farm help and the shortage of horses make it necessary for the farmer to look to this new system of farming as a relief and an aid to increased production, which is so much required by the country under prevailing conditions, and will be, for the next few years.

Till the Sea and Reap a Harvest

Fisherman and Farmer Are Brothers in the Work of Food Production

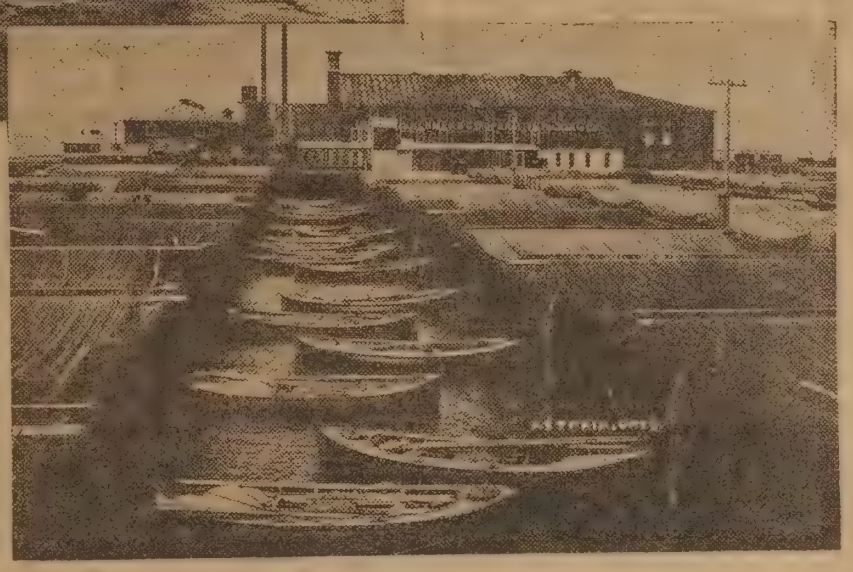
By H. H. BUSHNELL

The last week in March I spent a day in Astoria and another at Seaside and still another in between and along the road. I suppose somebody will wonder what connection I could find between farming and fishing and beaches. There is a close connection, nevertheless.

Tilling the Sea.

The fisherman tills the sea as surely as the farmer tills the land, and he reaps in toil and peril a harvest which he never sowed. The government is beginning to sow his seed for him, however. Think of the fisheries that are established over the country nowadays. Just as surely as the farmer, he produces food for the consumer. The farmer and the fisherman are brothers in work.

Look at this picture and see the wagons of the fisherfolk. See their tools spread out to dry. Their tasks are different, but both bring food to the hungry.



At Flavel the enthusiastic citizens are confident that a great industry will build up, and perhaps they are right. Here are to be the wharves and docks for the reception and loading of grain from the farms of the Inland Empire. Here, they feel confident, will be the last port for the wheat before it leaves its native land.

Has the ocean no nearer relationship than that of a workshop for a kindred class? Yes, for it is the source of salvation for our crops. I stood on the beach at Seaside and looked right into the rain factory and saw it manufactured before my eyes. The clouds stooped down and drank deep from the cup of the Pacific; they grew big with water, and when they rose with moisture dripping from their mouths and floated inland across the hills that sought to bar them out, their fog garments sifted and tore on the cedars and firs as they went.

Many a rich and fertile land far from the sea was once an ocean bed and an ocean beach. There, as here, waves patiently, endlessly toiled in from the great deeps, beating with their feet upon the sand, dragging shell and ocean ooze with them and leaving it a faint deposit upon the shelving shore. What dark designs are held by the surf at Seaside?

Each day it advances and retires, advances and retires, responding to the touch of another planet and working slowly to some great end. The treasure trove for which one looks along the beach is small, provided he looks for pieces of eight or Spanish doubloons or rare wonders floated in from foreign lands. Perhaps the task of the waves is infinitely more dignified and important than to bring some odd shell or queer memento to a curious stranger.

As I stood on the shore and looked westward across the miles of tumbling water it seemed to me that never had I felt the immensity of nature and the pettiness of man so much before. I saw the sun sink like a ball of fire, quenched in a waste of blazing water, and I heard the dull reiteration of the ocean—the boom of the great sea knocking at the door of a continent.

Wagons of the Fisherfolk.

Ups and Downs of a Bunch Grass Boy

By JOE L. ASHLOCK

(Copyright, 1917, Joe L. Ashlock.)

CHAPTER IX.

Red letter day of the cold winter when father returns "with some very fat and very salty bacon."

For the same reason that a stone rolling downhill gathers no moss, I doubt if Dave Reavis has ever gathered unto himself a bunchgrass farm. Around our Coulee camp was 60 to 100 miles of bunchgrass, riding in any direction you chose, with occasional springs and shading clumps of willow and "sarvice" bushes—ideal locations for stock farms. But Dave was "jest lookin' around." He liked to unhitch at night; but when morning came and the horses were full of grass, it "jest seemed a sin not to hitch up." So on our last morning together in the Coulee bottom he sang "Captain Jinks," hitched up, cracked his whip and departed. We saw him no more.

In spite of the monotony of our first winter on the claim which father selected the spring Dave left us, I remember a good deal about it. Our house was a double-boarded, one-room shanty, built with an ax, a saw and a hammer. It was rather flimsy, with walls two boards thick with no studding and air space between; so when the thermometer went to 20 below outside it was apt to be about 10 below inside. However, we had a good deal of woolen bedding, and a thick feather mattress, and we managed to get through the winter in fair comfort, though the loneliness and silence of the days and nights was a severe trial, and I know that it was only the hope of "a home of their own" which nerved my mother and father for the ordeal of the silent, lonely winter days.

My bed was a sort of trundle affair, with no wheels. At night I dragged it from under the larger bed, and in the morning it was my duty to make it up neatly, being sure to pack the covers down tightly so that the whole affair could be shoved under the larger bed and out of the way. During the coldest weather I would have gotten cold, I think, except for my two cats. One curled up under the covers by my feet, the other insisted in curling up on my pillow, often against my hair. Their bodily warmth really helped a good deal when the temperature in the room ranged sufficiently below zero to freeze a two-gallon pail of water solid during the night.

A good deal of joking went the rounds of our scattered pioneer neighborhood in reference to our various trials and tribulations, among which was the freezing in the houses at night. Dave Reeves, who kept a small store several miles from us, told his customers that one night he had a 50-gallon barrel of vinegar freeze and burst three feet from a stove which he kept red-hot all night.

The second winter on our prairie farm in the Big Bend was a hard one. The snow came early, before we were ready for it; it stayed late in March, long after we were ready for it to go. Before the big snow, which virtually bottled us in, father had gotten in a ton or so of oats to feed the horses. He hoped to supplement the oats with bunchgrass; but the snow was four feet on the level, with a crust on top over which you could drive a narrow-tired wagon without breaking through. In addition to the oats he managed to get a small load of straw from a settlement 20 miles away; but the straw gave out in midwinter.

I remember clearly how worried father was about his two horses, and how eagerly the hungry animals plunged their noses into the oats he gave them thrice daily; but they wanted hay, straw, any kind of roughage on which to "fill up." In desperation father chopped through the ice crust here and there, hunting for the tops of the taller clumps of prairie sage which he occasionally found. Often it took a whole day to find what he could carry under one arm. This he offered to the horses in lieu of hay, and they nibbled at it, but it was rough fare.

It was the bark and tules of our dugout stables which saved our team, I think. The stable had been dug into a side hill and roofed over with willow poles of good size, covered with large masses of tules overlaid with earth. The horses ate all the bark from the poles, thrust their noses between the poles and pulled out the tules, and even gnawed the wood itself.

It seemed that the four feet of snow never would melt. Toward spring the warm Chinook winds blew in from the southwest, and the snow began to melt. Squirrels, thin and weak, got tired of hibernating and burrowed up through the snow to nibble at the tops of sage and rye grass. At last the bunchgrass appeared. Then father turned the horses out and went out with a shovel to help them hunt a meal. He would dig out a bunch of grass, and the starving animals would crowd each other to be at it first. It was a thankful occasion.

That winter our own supplies were

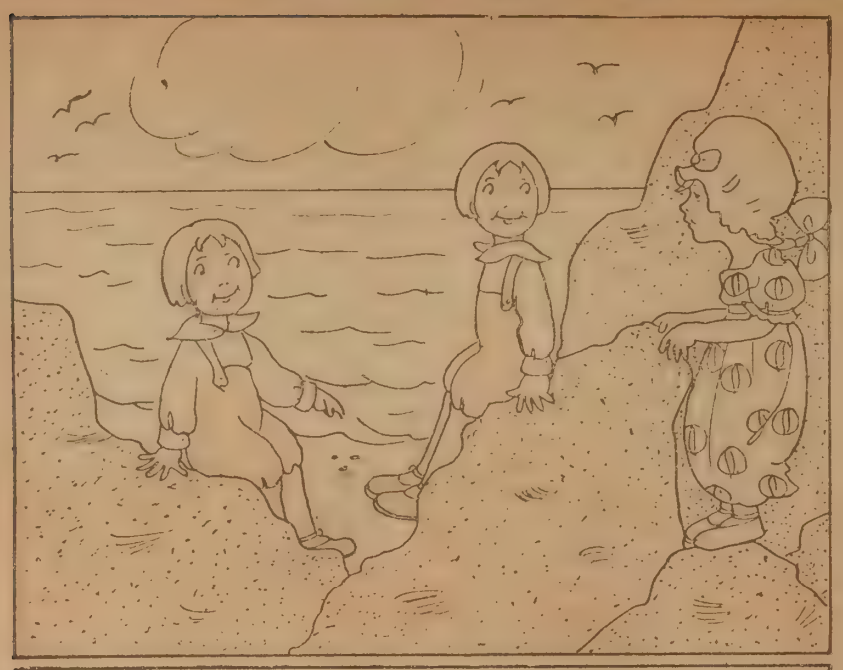
(Continued on page twenty-three.)

Ye Have Heard That It Was Said by Them of Old Time.

THE SECOND LAW.

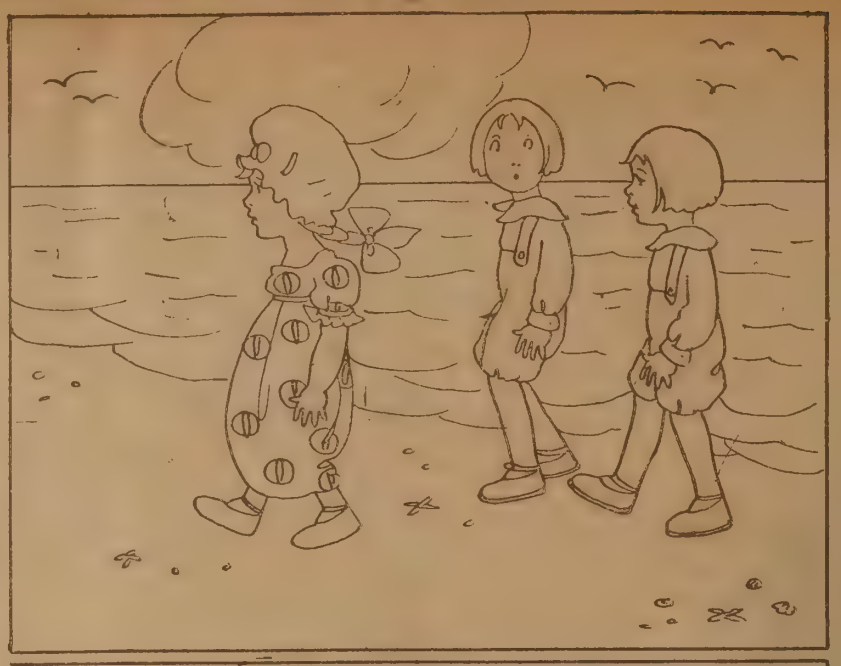
"Thou shalt not make unto thee any graven image, or any likeness of anything that is in the heaven above, or that is in the earth beneath, or that is in the waters under the earth; thou shalt not bow down thyself to them nor serve them; for I, the Lord, thy God, am a jealous God, visiting the iniquity of the fathers upon the children unto the third and fourth generation of them that hate Me, and showing mercy to thousands of them that love Me and keep My commandments." — Exodus 20: 4-6.

We do not bow down and worship graven images here and now, not literally, but the principles on which this second commandment are founded are of as much importance and apply as well today as they did when they were first traced on the tables of stone.



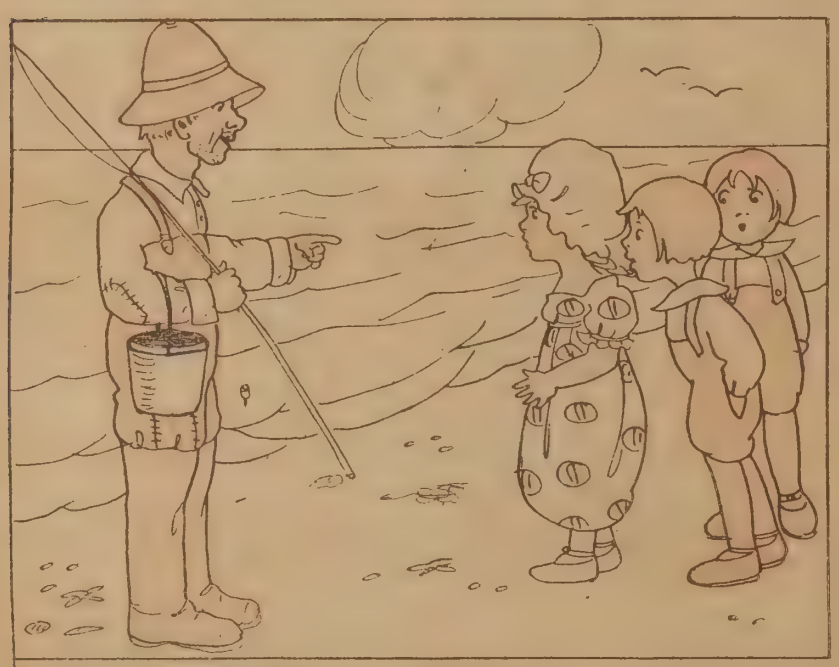
There is but one right and proper attitude of man toward God, and that is an attitude of love and worship. This is just as true and just as necessary as that the bones of our bodies belong in certain positions. If we get a bone out of place—out of joint, we call it—first comes pain and agony, then follows a crooked growth and we are cripples unless we put it back in its right place. It is the same with our position toward the Almighty, and if we persist in not loving and worshipping our souls grow crooked and distorted.

The penalty reaches farther, for it embraces the law of heredity, and our limping and diseased spirits are handed down as a handicap to our children, our grandchildren and our great grandchildren. Bodily tendencies are not the only things inherited.



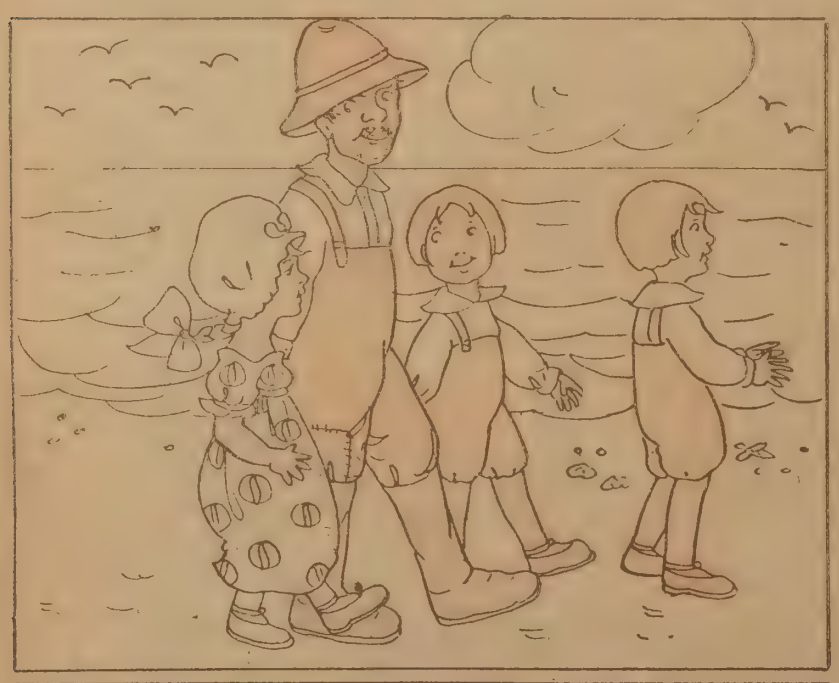
However stern this law appears, the last clause of the commandment indicates that it works for good as well as for evil. A right relationship with God brings a blessing which may be enjoyed by us and handed down to our descendents as a more valuable heritage than lands or money in the bank.

One of the tenets of our human law is that ignorance of law is no excuse. There is no excuse for being ignorant of these great foundation stones of truth and justice—the ten commandments. —H. H. B.

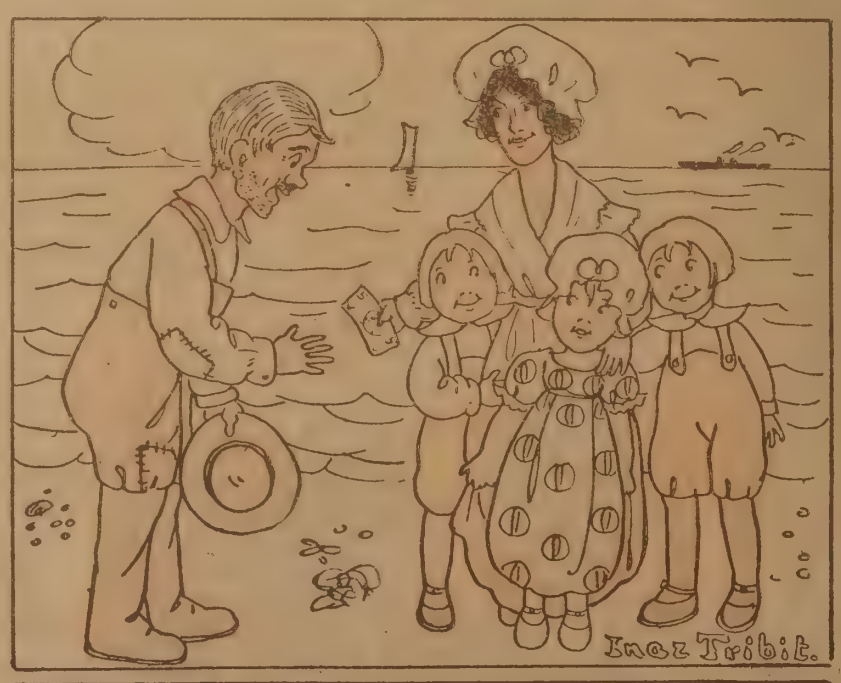


SUSIE AND THE TWINS ARE SHIPWRECKED

The children three were shipwrecked on
A lone and rocky shore,
And now they're climbing down the rocks
The country to explore.

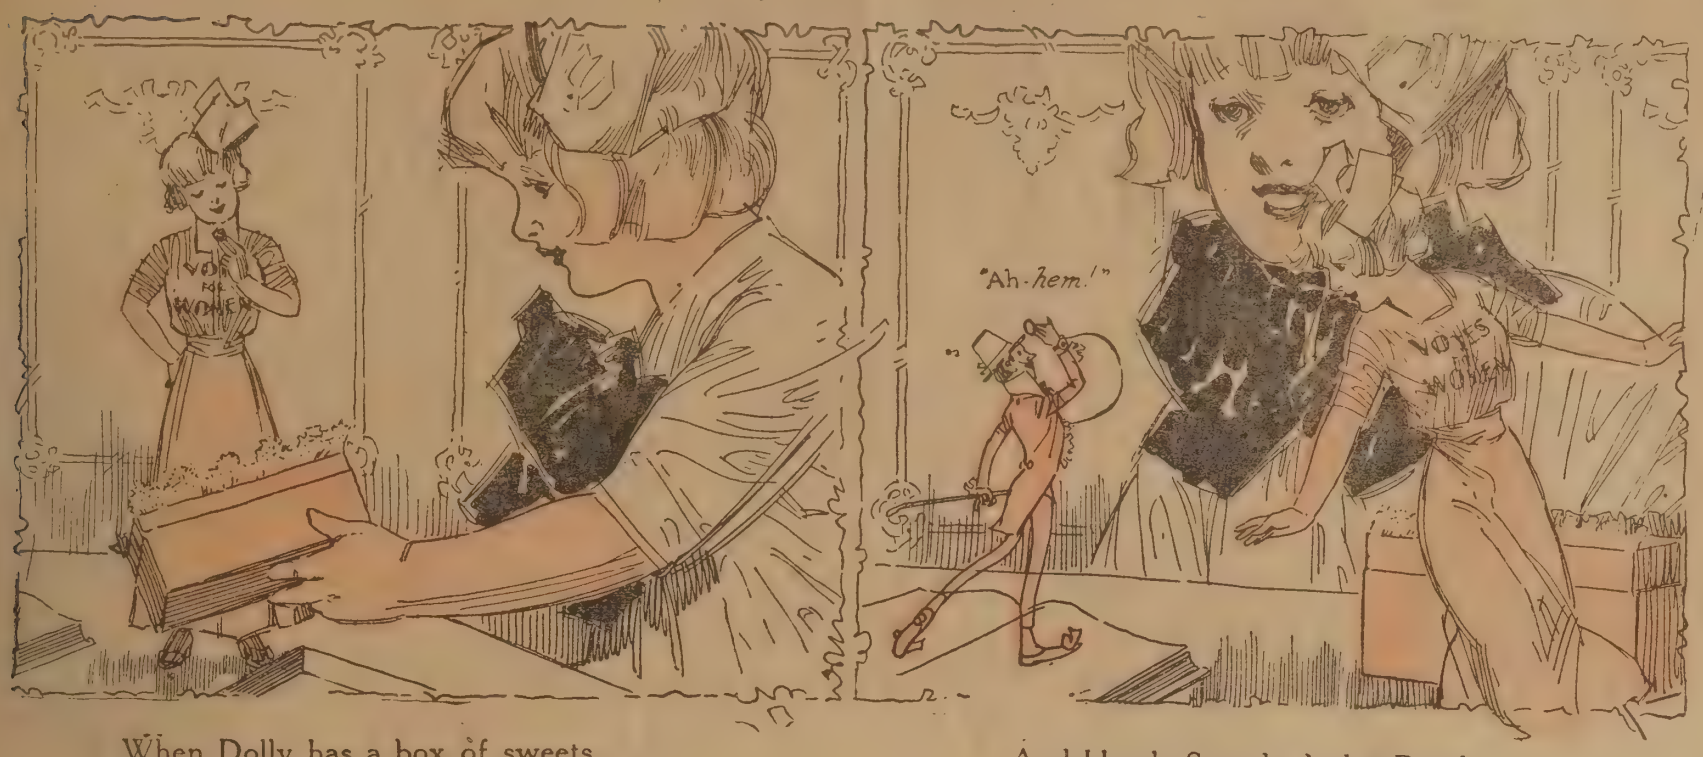


"I wish I was at home again," said Sue.
"And so do I,"
Said Snicks and Snooks, and then the three
Of them began to cry.



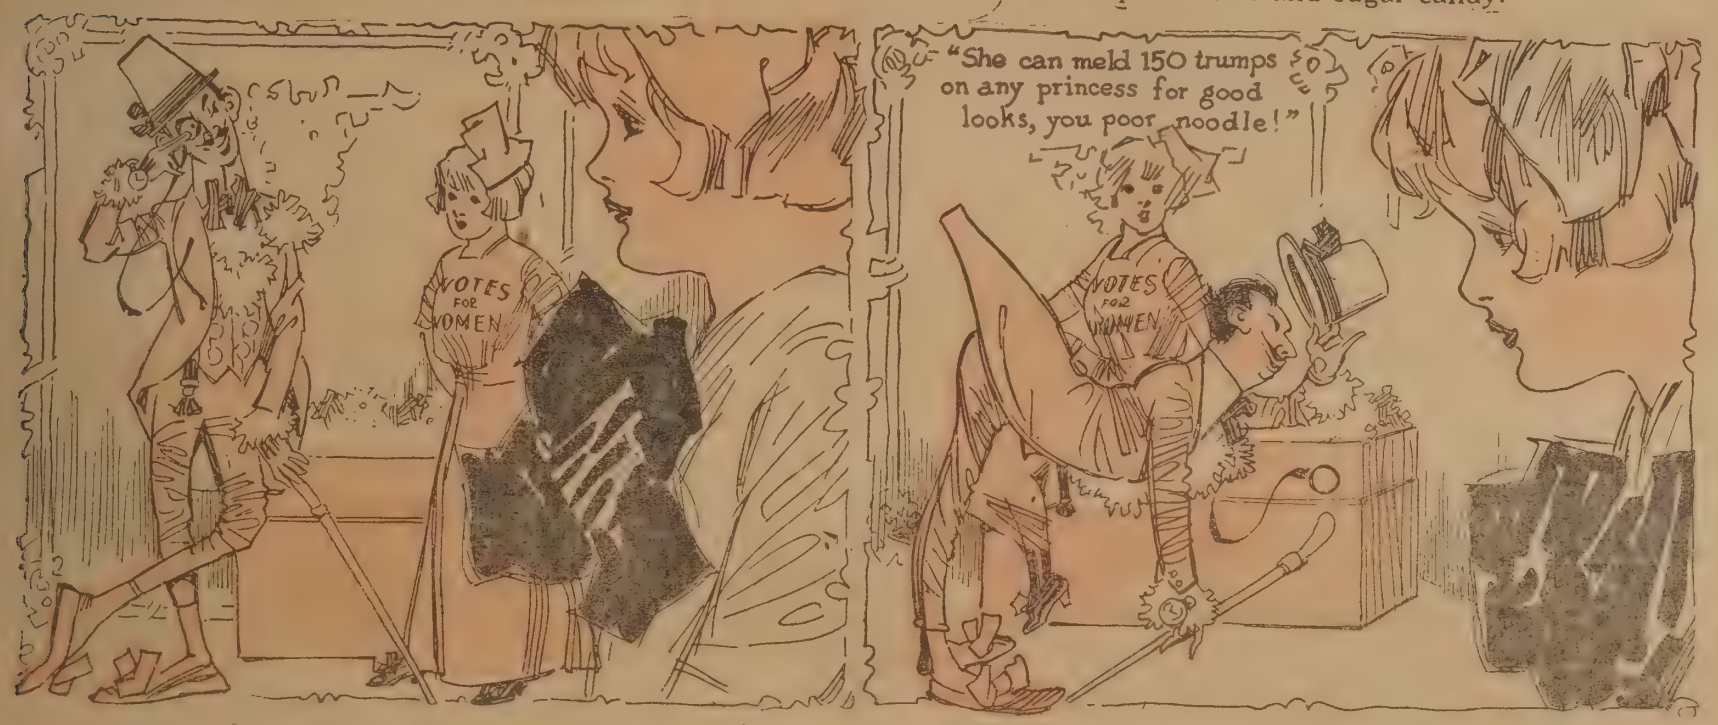
A fisherman soon met them, and
They told their mournful tale.
Said he, "I'll quickly take you to
Your mother without fail."

Now when their mother came to call
The children in for tea
And found that they were lost, alas!
How full of grief was she!



The man then told the children that
Their boat had turned around
And had not brought them far from home—
Soon they'd be safe and sound.

He took them to their mother,
Who rewarded him, and said:
"Oh, thank you, sir! I was afraid
My children dear were dead."



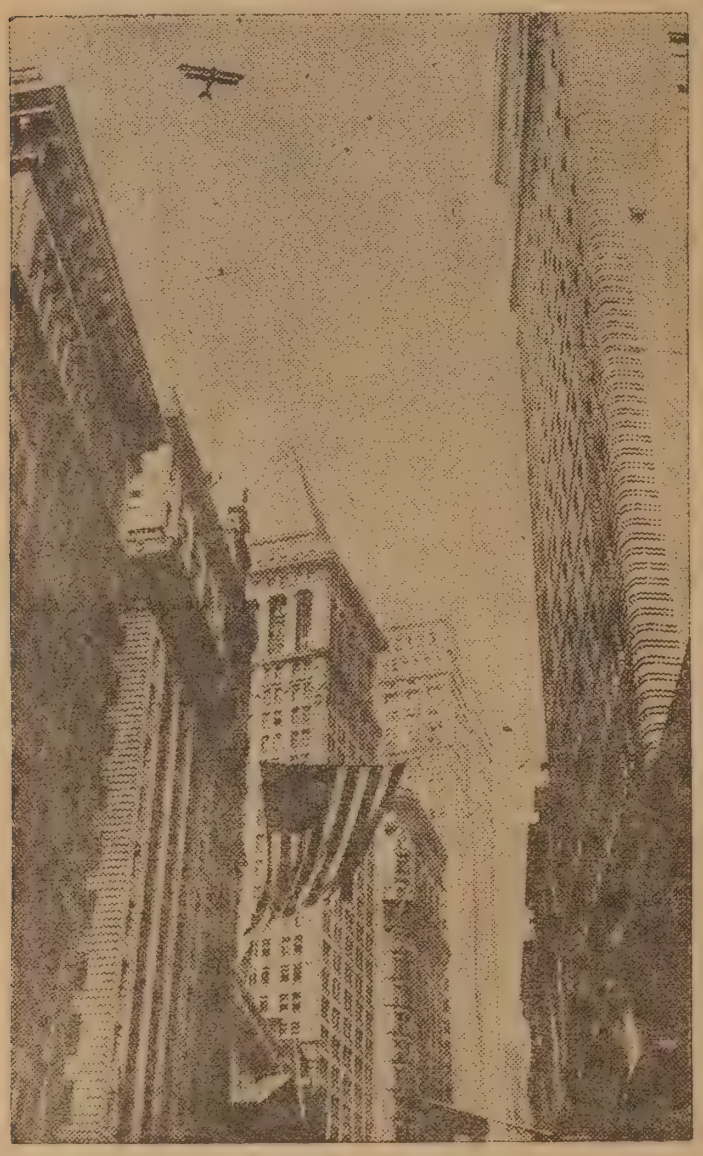
DOLLY DIMPLE LEARNS THAT SPEECH IS OFTEN SUGARY

When Dolly has a box of sweets
She's generous with whom she treats—

And Handy-Spandy Jack-a-Dandy
Loves plum cake and sugar candy.

So out he comes from Dolly's book.
"Why, Dot," he says, "how well you look!

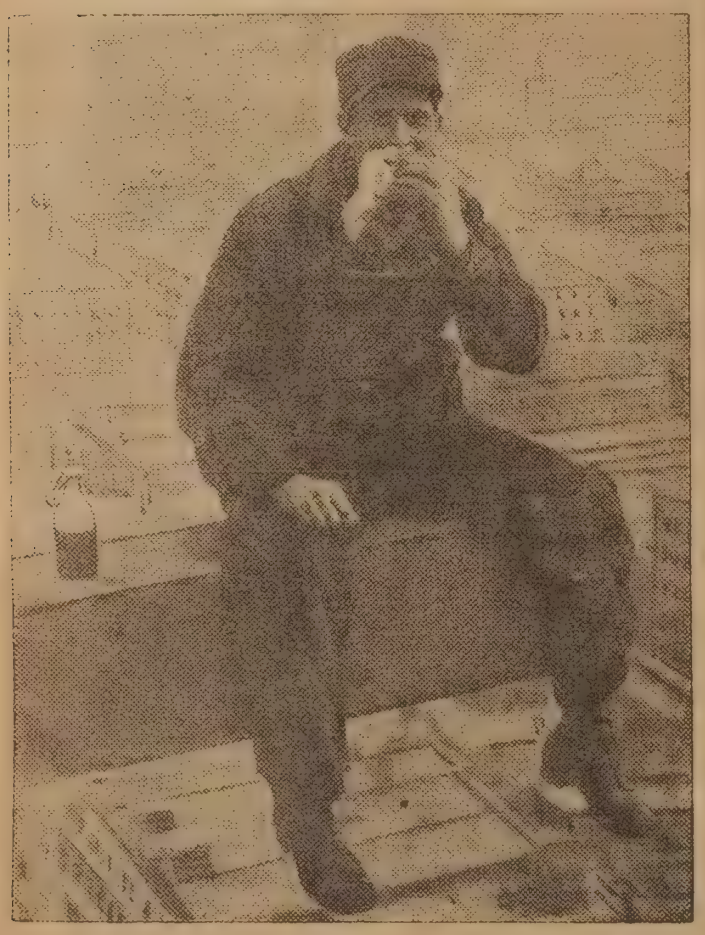
"Quite like a princess fair, I vow."
"The candy's gone," says Dolly, "now.



"Too bad there's nothing left for you.
No sooner said than Jack's gone, too.

Says Dot, "With some who compliment
The speech is not the main intent."

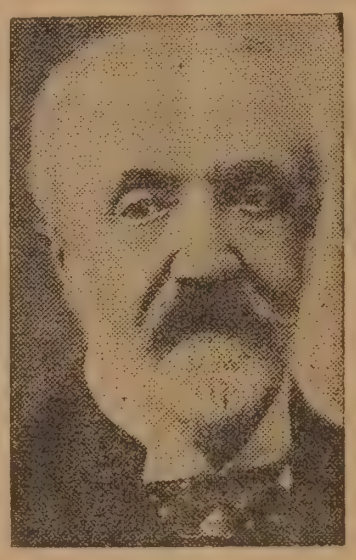
All the World's a Stage, and All the Men and Women Merely Players



The "Modern Paul Revere"

Copyrighted by International Film Service.

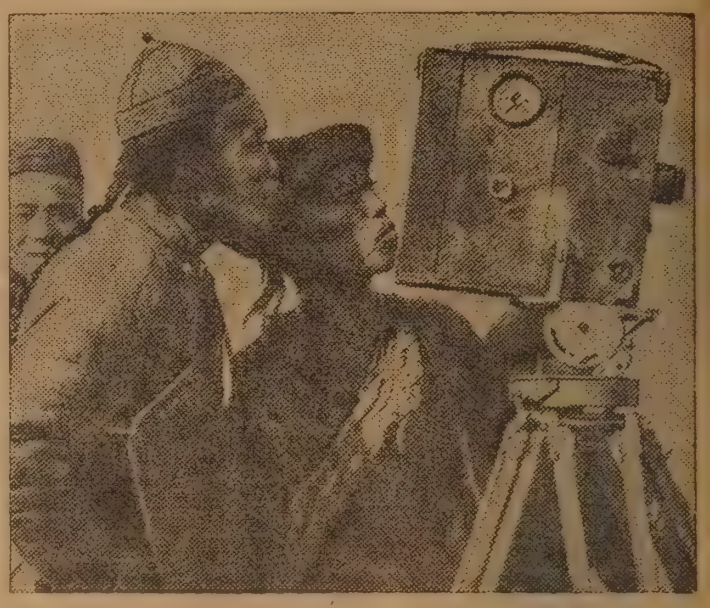
The anniversary of the battle of Lexington was celebrated in many cities throughout the country. In New York a dozen "modern Paul Reveres" rode over the city of skyscrapers in aeroplanes and bombarded the streets with recruiting literature. This picture shows an aeroplane flying over lower Manhattan, far above the skyscraper canyons.



Daredevils of Industry

Copyrighted by International Film Service.

The "Flying McGintys" of "Skinnum's Circus" have nothing on "Fatrick Casey, structural iron worker," when it comes to taking startling risks and performing hair-raising feats. Here you see a structural iron worker calmly seated on a beam 325 feet above the sidewalk of New York's financial district having his lunch.



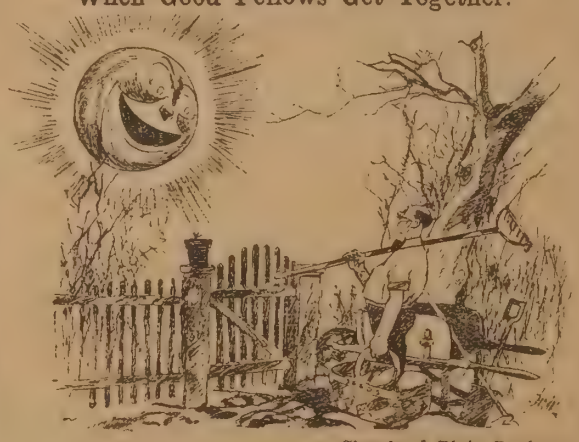
To Be Russian Ambassador

Copyrighted by Purdy, Boston.

Baron Roman Romanovitch Rosen is now on his way to the United States to take up his duties as ambassador representing the new Russian government. Baron Rosen was Russian ambassador to the United States from 1905 to 1911, when he was succeeded by M. Bakhmetieff, who tendered his resignation after the revolution which overthrew the czar.

The "Movies in China"

Copyrighted by International Film Service.



The "movies" have at last invaded China and it is reported that they are making a tremendous hit there. Not only have films which were produced in the United States and other countries been exhibited with Chinese titles, but also films which were produced in China with Chinese actors are now being shown. Wherever the producing companies work the most intense interest is aroused among the local populace. In the above picture is shown two citizens of the Chinese republic in the act of having the mysteries of a moving picture camera explained to them.

Contest's Over; We Still Live

We Congratulate and Commiserate Ourselves and You

By the Contest Editor.

After long delay occasioned by the necessity of conducting a second tie-breaking contest, winners in the figure puzzle have been determined. First prize goes to August Anderson of Pullman, Wash. It amounts to $275, representing the original prize of $200, plus 50 times the amount paid by Mr. Anderson on subscription. Mr. Anderson drew a line through 500 dots in the first tie-breaking puzzle which was participated in by 919 persons who obtained the correct solution of the figure puzzle, 6971.

For second prize Mrs. N. M. Lauby, of Nez Perce, Idaho, and Joseph Vitek, of Northport, Wash., were tied with a total of 491. A letter puzzle, requiring the participants to draw lines around letters and spell as many words as possible, was sent to Mrs. Lauby and Mr. Vitek. Mrs. Lauby succeeded in ringing 109 words and Mr. Vitek 74. This put Mrs. Lauby in second place and entitled her to $145. Mr. Vitek dropped to third place and received $90.

The complete list of prize winners follows, the number first appearing after the name and address being the number of dots pierced and the last figures representing the amount of money received as a prize:

LIST OF PRIZE WINNERS.

August Anderson, route 1, box 70, PULLMAN, Wash., 500, $275; Mrs. N. M. Lauby, NEZ PERCE, Idaho, 491, $145; Joseph Vitek, NORTHPORT, Wash., 491, $90; Mrs. O. C. Ethell, CHENEY, Wash., 490, $65; Asa Simmons, 138 E. Gallaway street, WEISER, Idaho, 489, $40; Willis M. Fisher, COLBERT, Wash., 488, $20; E. C. Martin, box 148, OAKESDALE, Wash., 487, $20; George W. Harris, OAKESDALE, Wash., 486, $7; Roy Grinstead, SILETZ, Ore., 483, $7; Harry L. Bailie, CHENEY, Wash., 482, $7.

James Whitelaw, E211 17th avenue, SPOKANE, Wash., 482, $7; H. C. Foos, 335 S. Cedar street, COLVILLE, Wash., 481, $7; Rufus E. Wood, NORTONS, Ore., 481, $7; Mrs. R. V. Peringer, box 1, BELMONT, Wash., 480, $7; E. F. Pitman, PAISLEY, Ore., 479, $7; E. F. PITMAN, PAISLEY, Ore., 479, $7; E. A. Schilling, WITHROW, Wash., 479, $7; William L. Borthwick, 142 E. 61st street, PORTLAND, Ore., 478, $2; Mrs. John French, box 49, TIETON, Wash., 477, $2; Charles A. Stratton, route 5, box 95, WALLA WALLA, Wash., 472, $2; Charles E. Frey, route 1, box 29, SHERWOOD, Ore., 472, $2; LeRoie Hutchinson, ROCKLAND, Idaho, 472, $2.

G. W. Harlow, box 455, WALLACE, Idaho, 472, $2; J. S. Lee, box 288, GOLD HILL, Ore., 471, $2; J. E. Throw, box 302, LEAVENWORTH, Wash., 470, $2; C. J. Homme, MARSHFIELD, Ore., 467, $2; P. K. Ahlquist, 2409 West Mission avenue, SPOKANE, Wash., 467, $2; N. W. Sine, DIETRICH, Idaho, 467, $2; M. A. Harrison, route 1, DEEP CREEK, Wash., 466, $2; W. G. Greenslade, OAKESDALE, Wash., 466, $2; J. W. Lewis, IONE, Wash., 465, $2; Perry W. Bradley, LOWGAP, Wash., 465, $2; Paul W. Johnson, route 1, BURLINGTON, Wash., 465, $2.

Contestants Enjoyed It.

That the contestants enjoyed the work is proved by the large number of solutions returned on the first tie-breaking contest. Nearly 900 solutions of the dot puzzle were submitted and the totals ran surprisingly high.

To the winners The Farmer extends congratulations. To those who did not win we extend hearty good wishes and believe you all have gained something from the effort. The Contest Editor has enjoyed the fun and has escaped with a whole neck in spite of Arthur Lamb's halter. In fact, he is almost sorry to break up the party.

Following appear the names of those persons who submitetd correct solutions of the figure puzzle and who participated in the dot puzzle contest:

Washington.

ASOTIN—Mrs. George A. Tuttle, K. G. Ramsdell, Harry Palmer; **ALBION**, C. E. Nafzger; **APPLETON**, Carl Anderson; **AMERICAN LAKE**, George A. Southwell; **AUBURN**, J. H. Schwartz; **ANATONE**, Nettie Shearer; **AMBER**, Mrs. Nora L. Shinn.

USE A HOME PRODUCT

AND SAVE MONEY ON YOUR POWDER

VULCAN STUMPING POWDER is manufactured by the only independent powder company in the northwest, and is particularly adapted to suit conditions confronting farmers of the northwest. This powder is low freezing and will clear your land at the lowest cost.

Go to your dealer today and get a box of VULCAN STUMPING POWDER. If he can not furnish you, write to us direct.

PUGET SOUND & ALASKA POWDER CO.

1913 Hewitt Avenue.
Everett, Wash.

THE BULL TRACTOR

Various firms make various claims for different makes of tractors. Some of them are true.

But the only real test is the actual performance under conditions similar to yours.

There are more BULL TRACTORS operating in the northwest today than any other make.

There are more BULL TRACTORS in the United States than any other make.

Does that knowledge mean anything to you?

BULL TRACTOR owners in the northwest are secure in the knowledge that they are always within reach of BULL TRACTOR parts—and BULL TRACTOR service.

Write for our free monthly bulletin.

Player Pianos Shipped on Approval

We will ship you, all charges prepaid, on approval, this wonderful $600 **Bungalow Player Piano and one dozen rolls of music.** If after trying this instrument for ten days, and you are not entirely satisfied in every respect, or think it in any way inferior to any player piano for which your friends have paid $600 or even more, send it back at our expense. Should it prove to be all we claim and prove entirely satisfactory

Pay Us Only $485

Cash or Easy Terms

Why We Can Make This Great Offer

As you no doubt know, the Eilers concern has many big music houses. When we buy we buy in large quantities—we do not order two or three or even a dozen or a carload of instruments at a time, but we, in many instances, buy hundreds of one style and one make of instrument. Naturally, the manufacturer will give us a much lower price. It is our ambition to make the **Bungalow Player Piano** the leading player piano in this section of the country, and we are willing to sacrifice profits to do so.

Description

The **Bungalow Player Piano** is made of the very best material; it is made by the leading piano and player piano manufacturer in the world; it is full size, having seven and a third octaves, copper wound, overstrung bass, composite full metal plate, genuine mahogany, oak or walnut veneers; case highly polished or dull finish as you may desire; genuine ivory keys, late repeating action; Boston hammers; imported music wire; duet swinging music desk; plain panels; automatic pedal lifting device; automatic tracker board; the player action is the standard player action used in player pianos selling for a great deal more; all metal tubing; very easy pumping, and, in fact, high grade in every respect.

Guarantee

Every **Bungalow Player Piano** is fully guaranteed by the manufacturers and ourselves for a term of ten years from the date of purchase, making your investment absolutely safe in every way.

At this time only a limited number of the beautiful Bungalow player pianos are available at the above price. Send in your order now.

Eilers Music House, Spokane, Washington.
Please send us full particulars, telling all about the wonderful **Bungalow Player Piano** that you are offering at the special price of $485.

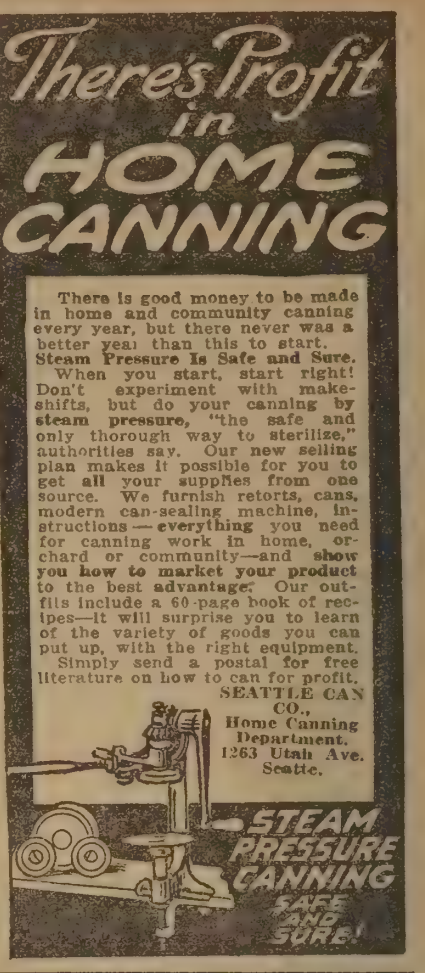
Farm Loan On City Plot?

A. S. Porter writes from Sedro-Woolley, Wash.:

"Can a person borrow money on acreage inside the city limits through the federal land bank? For instance I have a little less than an acre of land in Sedro-Woolley, which I call my poultry ranch, and on which I can carry 1000 head of poultry

I wish to buy more land adjoining this, but have been told that I can not borrow money from the federal land bank on land within the city limits."

While we can not answer this question authoritatively we are of opinion that Mr. Porter would be a qualified borrower. The clear intent of the law is to make loans for agricultural needs and the test is the use to which the land is put, not artificial distinction like town boundaries. There is a great deal of land in the country on which loans could not be made. Lands used, for illustration, as a brickyard or for mining or lumbering could not be made security for loans under this law.



We should think that the owner of a little farm, even though within town limits, would be permitted to join an association and borrow the same as any other member up to 50 per cent of the farm land value of his holdings plus 20 per cent of the insured value of his improvements.

WHEN KNIGHTHOOD WAS IN FLOWER

or, the Love Story of Charles Brandon and Mary Tudor, the King's Sister, and Happening in the Reign of His August Majesty, King Henry the Eighth.

By EDWIN CASKODEN (Charles Major).

Copyright, 1898, The Bobbs-Merril Co.

CHAPTER XVII.—(Continued.)

This failure meant so much to her; it meant that she would never be Brandon's wife, but would go to France to endure the dreaded old Frenchman. At that thought a recoil came. Her spirit asserted itself, and she stamped her foot and swore upon her soul it should never be; never! never! so long as she had strength to fight or voice to cry, "No." The thought of this marriage and of the loss of Brandon was painful enough, but there came another, entirely new to her and infinitely worse.

Hastily arranging her dress, she went in search of Brandon, whom she found and took to her room.

After closing the door she said: "I thought I had reached the pinnacle of disappointment and pain when compelled to leave the ship, for it meant that I should lose you and have to marry Louis of France. But I have found that there is still a possible pain more poignant than either, and I can not bear it; so I come to you—you who are the great cure for all my troubles. Oh! that I could lay them here all my life long," and she put her head upon his breast, forgetting what she had intended to say.

"What is the trouble, Mary?"

"Oh! yes! I thought of that marriage and of losing you, and then, oh! Mary Mother! I thought of some other woman having you to herself. I could see her with you, and I was jealous—I think they call it. I have heard of the pangs of jealousy, and if the fear of a rival is so great what would the reality be? It would kill me; I could not endure it. I can not endure even this, and I want you to swear that——"

Brandon took her in his arms as she began to weep.

"I will gladly swear by everything I hold sacred that no other woman than you shall ever be my wife. If I can not have you, be sure you have spoiled every other woman for me. There is but one in all the world—but one. I can at least save you that pain."

She then stood on tip-toes to lift her lips to him, and said: "I give you the same promise. How you must have suffered when you thought I was to wed another."

After a pause she went on: "But it might have been worse—that 's, it would be worse if you should marry some other woman; but that is all settled now and I feel easier. Then I might have married the old French king, but that, too, is settled; and we can endure the lesser pain. It always helps us when we are able to think it might have been worse."

Her unquestioning faith in Brandon was beautiful, and she never doubted that he spoke an unalterable truth when he said he would never marry any other woman. She had faith in herself, too, and was confident that her promise to marry no man but Brandon ended that important matter likewise, and put the French marriage totally out of the question for all time to come.

As for Brandon, he was safe enough in his part of the contract. He knew only too well that no woman could approach Mary in her inimitable perfections, and had tested his love closely enough, in his struggle against it, to feel that it had taken up its abode in his heart to stay, whether he wanted it or not. He knew that he was safe in making her a promise which he was powerless to break. All this he fully explained to Mary, as they sat looking out the window at the dreary rain which had come on again with the gathering gloom of night.

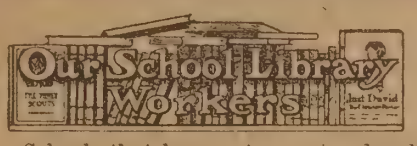
Brandon did not tell her that his faith in her ultimate ability to keep her promise was as small as it was great in his own. Neither did he dampen her spirits by telling her that there was a reason, outside of himself, which in all probability would help him in keeping his word, and save her from the pangs of that jealousy she so much feared; namely, that he would most certainly wed the block and ax should the king get possession of him. He might have escaped from England in the Royal Hind, for the wind had come up shortly after they left the ship, and they could see the sails distinctly through the gloom as she got under way. But he could not leave Mary alone, and had made up his mind to take her back to London and march straight into the jaws of death with her, if the king's men did not soon come.

He knew that a debt to folly bears no grace, and was ready with his principal and usance.

CHAPTER XVIII.

Whether or not Brandon would have found some way to deliver the princess safely home, and still make his escape, I can not say, as he soon had no choice in the matter. At midnight a body of yeomen from the tower took possession of the Bow and String, and carried Brandon off to London without communication with Mary. She did not know of his arrest until next morning, when she was informed that she was to follow immediately, and her heart was nearly broken.

Here again was trouble for Mary. She felt, however, that the two great questions, the marriage of herself to Louis, and Brandon to any other person, were, as she called it, "settled"; and was almost content to endure this as a mere putting off of her desires—a meddlesome and impertinent interference of the Fates who would soon learn with whom they were dealing and amend their conduct.



She did not understand the consequences for Brandon, nor that the Fates would have to change their purpose very quickly or something would happen worse, even, than his marriage to another woman.

On the second morning after leaving Bristol, Brandon reached London, and, as he expected, was sent to the Tower. The next evening Lady Mary arrived and was taken down to Greenwich.

The girl's fair name was, of course, lost—but, fortunately, that goes for little with a princess—since no one would believe that Brandon had protected her against himself as valiantly and honorably as he would against an-

(Continued on following page.)

To The Washington Farmer: "Enclosed find my remittance for $1.50 for three years' subscription to The Washington Farmer.. It has got real life for the present farmers." H. CAUSLAND.
Anacortes, Wash.

Schools that have not as yet ordered books for what subscription credits are due, should not delay too long. A good many books have to be ordered from the publishers direct and this causes from 10 days to three weeks' delay oftimes. So send in your choice of books at the earliest possible date.

Books have gone forward this week to the following teachers: A. D. Plumb, Chewelah, Wash.; Mrs. G. C. Lorenz, Colville, Wash.; May McCorkell, Route. No. 2, Spokane, Wash.; Miss Erma V. Bowman, Turner, Wash.; Clara Philips, Prescott, Wash.; Miss Viola Willey, Richland, Wash.; Clara E. Gollehon, Ford, Wash.; Jennie Neat, Olympia, Wash.; H. W. Blackenburg, Colville, Wash.; F. V. French, Athol, Idaho; Rita Mahoney, Spokane, Wash., route No. 6; Margaret Spicer, Spokane Wash., route No. 4.

The boys and girls have all worked hard and faithfully to get books for their school libraries. We take this opportunity to thank both the members of the Red and Blue teams, as well as the teachers, for the fine spirit of cooperation that has been shown throughout the whole school season, with a hope that we may be able to again work as congenially with them during the coming season.

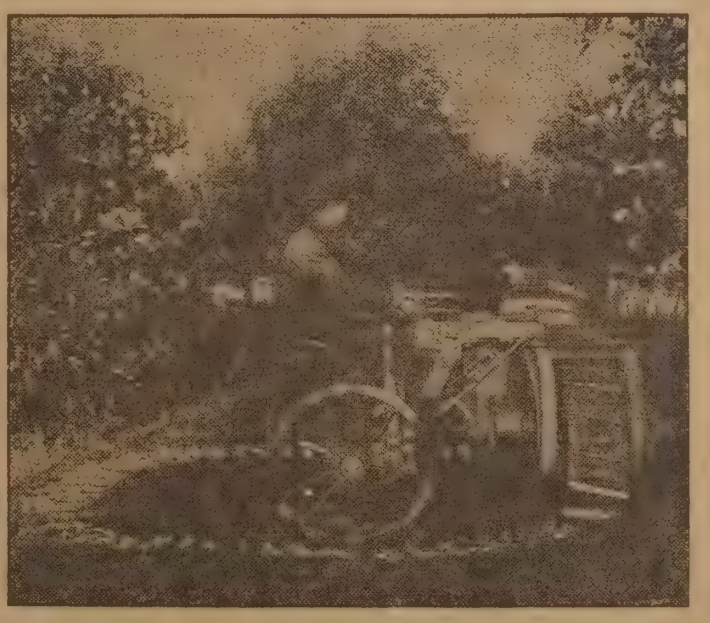
INDIVIDUAL SUBSCRIPTION CONTEST.

This is the last week of the contest. The winner of the $5 in gold will be announced in a coming issue. The three leading candidates have the following subscriptions to their credit:

Dorothy Rauch, Chewelah, 23.
Bessie Webb, Ford, Wash., 14.
Loyal C. R. Snyder, White Swan, Wash., 12.

APPRECIATION.

Ford, Wash., April 10, 1917.
The Washington Farmer,
Spokane, Wash.



Dear Sirs: I am glad to state, not only for myself, but also on behalf of the children of the Ford school, that we are more than pleased with the shipment of books received yesterday. We feel well paid for our work in the school library contest. Very truly,
CLARA E. GOLLEHON,
Teacher.

School Savings Bank.

A savings bank has been started in the school at Lind, Wash., with David Philips as cashier. The children will receive 4 per cent interest, compounded semi-annually, upon their savings. During the first three days that the bank was in operation 15 children made deposits amounting to nearly $12.

Buys Carload Hogs.

Doss Gallaher, one of the Big Bend wheat growers, as well as being a hog king, recently returned from Okanogan, at which place he purchased a carload of porkers. He also bought considerable stock, as well as other holdings belonging to A. Demery of Okanogan. He has shipped between 20 and 30 cars of cattle and hogs from Mansfield recently.

A TrackPULL tractor doing 10-foot circle turn in orchard cultivation. It will be seen that the track is at right angles to the operator.

Five Mutton Breeds

Suitable for Place on the Farm

(Continued from page three.)

than the Shropshire by 25 to 50 pounds. It is more rugged of frame, a little less compact and more upstanding. The ears and face are a characteristic blackish brown. The face is longer than that of the Shropshire. The nose inclines to be Roman and the ears are heavy, carried to the side and facing forward. The necks are a trifle longer than the ideal mutton standard would dictate and the shoulderblades average rather high and prominent. The body is deep, the back strong and broad, the rump long and the leg well developed. The bone is heavy, the entire sheep rugged and vigorous of build. The fleece is lacking in length, density and quality as compared with the Shropshire. The average ewe shears 6 to 9 pounds and the ram 9 to 12.

The Hampshire is now one of our most desirable farm breeds. It has popular size and in prolificacy compares well with the Shropshire. The ewes are good mothers excelling the Shropshire. Idaho experiment station results show that the lambs of this breed make more rapid gains than do the lambs of any of the breeds under investigation. Three years' records of relative gains of lambs comparing five of our leading and more popular breeds, show that Hampshire lambs make daily gains approximately 20 per cent greater than the gains of any of the other breeds in the test. Either as pure bred or grades, Hampshire lambs make the most desirable kinds of feeders.

The Oxford.

The Oxford Down sheep comes from Oxford county in central England and is the result of a Hampshire-Cotswold cross. In some characteristics the Oxford, as might be inferred from its ancestry, resembles the Hampshire. The Oxford, however, is larger, averaging for the rams 275 pounds and 200 pounds for the ewes, is more rangy and bigger framed in every way, the face a lighter brown, the nose with less tendency to Roman and cars smaller and more erect as compared with the Hampshire. The fleece is the longest of the down breeds, covers the body well with a characteristic foretop on the poll of the head.

The Oxford has size over the breeds just described, ranks with them in prolificacy and stands a little above the Shropshire in average weight of fleece. The lambs are good feeders, but hardly rank with Hampshire lambs in growthiness and with the Shropshire in early maturity. The breed makes an excellent sheep for the farm, but is not as popular as the other five mentioned.

Sells Choice Stock.

S. W. Shoemaker of Garfield has sold three head of choice Holstein stock to W. F. Smith, a Colfax dairyman. The stock consisted of two head of milk cows, grade Holsteins, and one registered bull calf, and brought Mr. Shoemaker the neat sum of $260. He sold another Holstein grade cow to a Colfax party for $100.

When Knighthood Was in Flower

BY EDWIN CASKODEN

(Continued from preceding page.)

other. The princess being much more unsophisticated than the courtiers were ready to believe, never thought of saying anything to establish her innocence or virtue, and her silence was put down to shame and taken as evidence against her.

Jane met Mary at Windsor, and, of course, there was a great flood of tears.

Upon arriving at the palace, the girls were left to themselves upon Mary's promise not to leave her room; but, by the next afternoon, she, having been unable to learn anything concerning Brandon, broke her parole and went out to seek the king.

It never occurred to Mary that Brandon might suffer death for attempting to run away with her. She knew only too well that she alone was to blame, not only for that, but for all that had taken place between them, and never for one moment thought that he might be punished for her fault; even admitting there was fault in any one, which she was by no means ready to do.

The trouble in her mind, growing out of a lack of news from Brandon, was of a general nature, and the possibility of his death had no place in her thoughts. Nevertheless, for the second time, Brandon had been condemned to die for her sake. The king's seal had stamped the warrant for the execution, and the headsman had sharpened his ax and could almost count the golden fee for his butchery.

Mary found the king playing cards with de Longueville. There was a roomful of courtiers, and as she entered she was the target for every eye; but she was on familiar ground now and did not care for the glances nor the observers, most of whom she despised. She was the princess again and full of self-confidence; so she went straight to the object of her visit, the king. She had not made up her mind just what to say first, there was so much; but Henry saved her the trouble. He, of course, was in a great rage, and denounced Mary's conduct as unnatural and treasonable; the latter, in Henry's mind, being a crime many times greater than the breaking of all the commandments put together, in one fell, composite act. All this the king had communicated to Mary by the lips of Wolsey the evening before, and Mary had received it with a silent scorn that would have withered any one but the worthy bishop of York. As I said, when Mary approached her brother, he saved her the trouble of deciding where to begin by speaking first himself, and his words were of a part with his nature—violent, cruel and vulgar. He abused her and called her all the vile names in his ample vocabulary of billingsgate. The queen was present, and aided and abetted with a word now and then, until Henry, with her help, at last succeeded in working himself into a towering passion, and wound up by calling Mary a vile wanton in plainer terms than I like to write. This aroused all the antagonism in the girl, and there was plenty of it. She feared Henry no more than she feared me. Her eyes flashed a fire that made even the king draw back as she exclaimed: "You give me that name and expect me to remember you are my brother? There are words which make a mother hate her first-born, and that is one. Tell me what I have done to deserve it? I expected to hear of ingratitude and disobedience and all that, but supposed you had at least some traces of brotherly feeling—for ties of blood are hard to break—even if you have of late lost all semblance to man or king."

This was hitting Henry hard, for it was beginning to be the talk in every mouth that he was leaving all the affairs of state to Wolsey and spending his time in puerile amusement. "The toward hope which at all poyntes appeared in the younge kynge" was beginning to look, after all, like nothing more than the old-time, royal cold fire, made to consume but not to warm the nation.

Henry looked at Mary with the stare of a baited bull.

"If running off in male attire, and stopping at inns and boarding ships with a common captain of the guard doesn't justify my accusation and stamp you what you are, I do not know what would."

Even Henry saw her innocence in her genuine surprise. She was silent for a little time, and I, standing close to her, could plainly see that this phase of the question had never before presented itself.

She hung her head for a moment and then spoke: "It may be true, as you say, that what I have done will lose me my fair name—I had never thought of it in that light—but it is also true that I am innocent and have done no wrong. You may not believe me, but you can ask Master Brandon"—here the king gave a great laugh, and of course the courtiers joined in.

"It is all very well for you to laugh, but Master Brandon would not tell you a lie for your crown—" Gods! I could have fallen on my knees to a faith like that—"What I tell you is true. I trusted him so completely that the fear of dishonor at his hands never suggested itself to me. I knew he would care for and respect me. I trusted him, and my trust was not misplaced. Of how many of these creatures who laugh when the king laughs could I say as much?" And Henry knew she spoke truth, both concerning herself and the courtiers.

Mary was the target for every eye.

With downcast eyes she continued: "I suppose, after all, yo uare partly right in regard to me; for it was his honor that saved me, not my own; and if I am not what you called me I have Master Brandon to thank—not myself."

"We will thank him publicly on Tower Hill, day after tomorrow, at noon," said the king, with his accustomed delicacy breaking the news of Brandon's sentence as abruptly as possible.

With a look of terror in her eyes, Mary screamed: "What! Charles Brandon.....Tower Hill?....You are going to kill him?"

"I think we will," responded Henry; "it usually has that effect, to separate the head from the body and quarter the remains to decorate the four gates. We will take you up to London in a day or two and let you see his beautiful head on the bridge."

"Behead—quarter—bridge! Lord Jesu!" She could not grasp the thought; she tried to speak, but the words would not come. In a moment she became more coherent and the words rolled from her lips, as a mighty flood tide pours back through the arches of London Bridge.

"You shall not kill him; he is blameless; you do not know. Drive these gawking fools out of the room, and I will tell you all." The king ordered the room cleared of everybody but Wolsey, Jane and myself, who remained at Mary's request. When all were gone the princess continued: "Brother, this man is in no way to blame; it is all my fault—my fault that he loves me; my fault that he tried to run away to New Spain with me. It may be that I have done wrong and that my conduct has been unmaidenly, but I could not help it. From the first time I ever saw him in the lists with you at Windsor there was a gnawing hunger in my heart beyond my control. I supposed, of course, that day he would contrive some way to be presented to me * * *"

"You did?"

"Yes, but he made no effort at all, and when we met he treated me as if I were an ordinary girl."

"He did?"

"Yes."

"Horrible."

Mary was too intent on her story to heed the sarcasm, and continued: "That made me all the more interested in him since it showed that he was different from the wretches who beset you and me with their flattery, and I soon began to seek him on every occasion. This is an unmaidenly history I am giving, I know, but it is the truth and must be told. I was satisfied at first if I could only be in the same room with him, and see his face, and hear his voice. The very air he breathed was like an elixir for me. I made every excuse to have him near me; I asked him to my parlor—you know about that and—and did all I could to be with him. At first he was gentle and kind, but soon, I think, he saw the dawning danger in both our hearts, as I too saw it, and he avoided me in every way he could, knowing the trouble it held for us both. Oh! he was the wiser—and to think to what I have brought him. Brother, let me die for him—I who alone am to blame; take my life and spare him—spare him! He was the wiser; but I doubt if all the wisdom in the world could have saved us. He almost insulted me once in the park—told me to leave him—when it hurt him more than me, I am sure; but he did it to keep matters from growing worse between us. I tried to remember the affront, but could not, and had he struck me I believe I should have gone back to him sooner or later. Oh! it was all my fault; I would not let him save himself. So strong was my feeling that I could bear his silence no longer, and one day I went to him in your bed-chamber anteroom and fairly thrust myself and my love upon him. Then, after he was liberated from Newgate, I could not induce him to come to me, so I went to him and begged for his love. Then I coaxed him into taking me to New Spain and would listen to no excuse and hear no reason. Now lives there another man who would have taken so much coaxing?"

No! by heaven! your majesty," said Wolsey, who really had a kindly feeling toward Brandon, and would gladly save his life, if, by so doing, he would not interfere with any of his own plans and interests. Wolsey's heart was naturally kind when it cost him nothing, and much has been related of him, which, to say the least, tells a great deal more than the truth. Ingratitude always recoils upon the ingrate, and Henry's loss was greater than Wolsey's when Wolsey fell.

(To be continued in the next issue.)

The Difference.

"Who was Gladstone?" asked a member of the examining board.

"A statesman," said one boy. "An orator," said another.

"But what is a statesman?" asked the examiner.

"A man who goes around making speeches," answered the small boy.

"That's not just exactly right," said the gentleman, smiling. "Now I go around making speeches once in a while, but I'm not a statesman at all."

"I know," spoke up a bright little fellow. "It's a man who goes around making good speeches."—Tit-Bits.

Getting It Over With.

"Do you believe in the Darwinian theory?"

"Yes."

"Then, so do I. I'd rather believe in it temporarily than have to argue about it."—Washington Star.

What Flower Does This Represent?

Any person sending the correct answer to the above question before May 11th, together with $1.75, in the form of money order, 2-cent stamps or personal check, will receive THE WASHINGTON FARMER for three years and choice of any 30 of the packets of seeds listed below. The retail value of these is 5c per package, or $1.50 for the thirty packages. The correct answer will be found in the list below.

Little Things

That Make Up the Sum of Life

Dear Girls of the Family Circle:

There are so many things I want to say to you this time I hardly know how to begin. No, that is not quite what I mean. There are a few things I want to say to you in such a way that you will always remember them. How I wish I had all of you sitting around in a great, big circle. It would add to the coziness and "chuminess" if we had a big campfire and a lot of pop corn and fudge. My, what a visit we would have! Well, we can't do that so I will gather you about me in imagination.

We have talked much of obedience, of its great importance. Let us not forget that. There are many things all of us should obey instantly. I am not speaking of obedience to parents now as I have emphasized that repeatedly in other letters.

We should each cultivate the habit of obeying instantly every impulse that prompts us to kindly, upright living. If we have an impulse to do a kind deed, say a pleasant word, give a word of encouragement, it should be instantly obeyed. Try this for even one day and see how full of brightness the world will be. This is one of the things, dear girls, I want you to remember and to practice, for it will bring happiness into your lives.

I think we were to talk about ambition and concentration in this letter.

We will take ambition first. The word has two very different meanings. The first is an eager desire for power or distinction just for its own sake, and the second meaning is a worthy eagerness to accomplish something great and good. In one of the art galleries in Italy there hangs a wonderful picture. It represents a handsome youth on a beautiful horse. He is riding at a great rate of speed. Behind him are people he has frightened out of his path. The road he is traveling is bridged by his sweetheart and he urges his steed right over her prostrate form. Childhood, youth, old age are disregarded, thrust aside or trodden upon in his mad course. The name of this picture is "Ambition."

This is not the kind I want to urge you to cultivate, but it is the other, the worthy desire to accomplish something great and good. This sort of ambition is necessary beyond expression almost, for without it one never amounts to much.

Perhaps you would mention some of the world's great men and women, such as great artists like Raphael, great poets like Tennyson, great inventors like Edison, great reformers like Frances Williard. All of these and very many more have gone into history.

What do you imagine made these people great?

I can tell you. They had ambition which spured them on to accomplish something worth while.

These people who attained to such eminence in their several lines of work reached that high standard only by having first an ideal to work up to, then constantly striving toward that mark. Ambition alone, however, is not sufficient to bring about success. It must be balanced with concentration and the faculty to stick to the undertaking. I have in mind a young girl of 15, whom I observed last Christmas. She was very prompt with her Christmas plans. She had some money to spend and six weeks before Christmas she bought material for making gifts. She bought muslin, silk, lace, ribbon and crochet cotton. She was the first of about 30 girls in her school to stock up with material to work with. She began one thing after another, making mistakes, wasting her material, changing her mind, till she had spoiled most of her material and when Christmas arrived not one present did she have ready to give.

There was another girl in that boarding school the same age, who spent about an equal amount of money for materials. She finished up one dainty article after another, so that each member of her family was included in her list for gifts. There was a dainty little wrapper of soft flannel, all beautifully made with much hand work. A pair of pillow cases hemstitched as nicely as possible, and hemstitched handkerchiefs. Each article was as beautifully done as it was possible to make them and all in good time for getting off by mail.

What made the difference in these two girls? Both had equal ambition at the start, but one lacked persistent "sticktoitiveness." There is no such word, but there ought to be. Concentration of mind on the work at hand is also something we should all practice. Did you ever start upstairs for some article and after getting up there find you had forgotten what you went for? That was lack of concentration. Did you ever find you were reading a book or paper without sensing what the thing was all about? That was lack of concentration. One never gets any good from such reading. The way to accomplish something is to set one's mind to the task till it is finished.

As we come to the close of these friendly letters, girls, I feel rather sorry, for as I have written to you week after week, I have imagined I really knew each one of you. Girls are very interesting and dear to me. I want every girl who reads this page to feel that I am her friend and to understand that I feel a personal interest in each one. Let us remember how we build our characters day by day like the laying of a stone wall. Let us get a vision of the beauty and usefulness of people who stand out strong and true for what is right and live up to the highest ideal we have. Let us be faithful in the small duties and patient in the performance of them, for it is the little things that make up the sum of life.

May each of you girls strive to grow up into pure, well educated, useful women, for the world needs you.

ALICE W. BARLAND.

I slept, and dreamed that life was Beauty;
I woke, and found that life was Duty.
Was thy dream then a shadowy lie?
Toil on, poor heart, unceasingly;
And thou shalt find thy dream to be
A truth and noonday light to thee.
—Hooper

Stop Food Waste

How Thoughtful Women Can Help

"What part of the $700,000,000 annual food waste in the American homes is charged to your home?" is the question put to Yamhill county women by Miss Anna M. Turley, state leader in home economics extension. Continuing, she says: "This $700,000,000 is a conservative figure recently made by the secretary of agriculture.

"The interest of the nation demands that every thoughtful woman in Yamhill county give her sober and earnest consideration to this problem of food conservation.

"Every one may serve her country and her family well by establishing a close guard around the following:

"1. Food preparation—cooking inexpensive foods attractively and so they will be palatable.

"2. Store house—that no food spoils in the house.

"3. Paring and trimming of vegetables and meats to save.

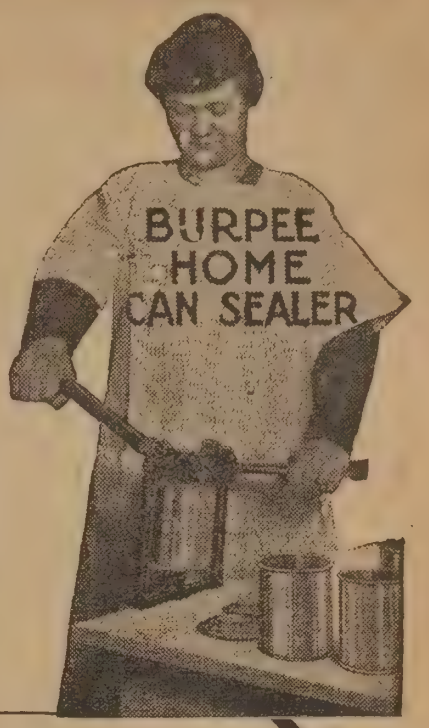
"4. The garbage pail or kitchen sink—that no water in which vegetables are cooked shall go through, and that no left-over scraps get into the garbage.

"5. Food servings—not too much, but enough to meet the needs of the individuals.

"Demonstrate thrift in your home.

"1. By keeping account of expenditures for food and clothing to find out where the leaks are and to stop them.

"2. By planning the meals for your family several days or a week in advance instead of living from 'hand to mouth,' thus providing better balanced meals, saving time and money.



"3. By substituting simpler, less expensive foods, as milk, whole cereals, beans, etc., for the more expensive meats of the same food value, and by using more brown rice instead of the potato, etc.

"4. By keeping your garden working all season by making successive plantings. As fast as the ground is cleared of one crop start a new one.

"5. By canning all you can can of fruits, vegetables and meats in the home.

"If you are not just sure of how to begin work along these various lines, write to your state agricultural college or ask your county agriculturist for instructions and suggestions on vegetable gardening, home canning, household account keeping, meals planning, and the use of less expensive foods.

"Join the army of home guards to conserve our nation's foods."

Script Initials for Embroidery

By WINNIFRED WORTH.

To transfer this design, put some soap in a pint of hot water, stir and remove excess moisture by partially drying design. Place material on a hard, flat surface and lay the design, face down, upon the material, cover with two folds of newspaper and, with a tablespoon, rub, pressing hard, until the design is entirely transferred.

White embroidery floss of a linen quality, or the mercerized, is the best for making letters. Always soap the fabric with white soap under an initial before embroidering. It aids one in washing the color from the finished design.

The new method of fitting "Wellworth" Union suits insures a satisfactory fit. We sell cotton and wool UNDERWEAR, and HOSIERY, HOCKEY CAPS, SWEATERS and RAINCOATS, either by mail or through our Salesmen.

Guaranteed quality, low prices. Goods shipped by Parcel Post, Express or Freight charges paid by us.

SALESMEN WANTED for unoccupied territory. Apply at once.

Reasonable.

Two young women, who had recently become proud mothers, were earnestly discussing the question of milk for infants, when the younger of the mothers asked:

"Do you believe in one cow's milk, Ethel?"

"Well," returned the other, with the excessively patronizing air of one who knows it all, "that depends a great deal on the child. If it's a good, strong, healthy baby and wants it I'd give it two cows' milk; but it does certainly seem that any ordinary infant wouldn't need more than one cow could furnish."—Country Gentleman.
